Mr. MUSKIE. It may well be, may I say to the Senator. All we really need is to have the same kind of examination of the problem on the House side as we give it on the Senate side so that when we get into conference again on this issue, if we ever do, at least as to the basic data they will be in agreement so that we will not have to face arguments about whether or not there is a problem that needs to be dealt with.

Mr. NELSON. I thank the Senator from Maine.

Mr. President, what is the pending business?

The PRESIDING OFFICER. There is no pending business.

LEGAL SERVICES CORPORATION—CONFERENCE REPORT

Mr. NELSON. Mr. President, I submit a report of the committee of conference on H.R. 6666 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. RIEGLE). The report will be stated.

The legislative clerk read as follows:

> The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6666) to amend the Legal Services Corporation Act to provide authorization of appropriations for appropriations for additional fiscal years, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of November 30, 1977.)

Mr. NELSON. Mr. President, the conference agreement on the Legal Services Corporation Act Amendments of 1977 passed the House of Representatives on December 7, 1977, by a vote of 235 to 110.

The conference report was signed by all 10 conferees of the Senate and all 7 conferees of the House of Representatives.

The conference agreement is substantially similar to the bill passed by the Senate on October 12, 1977, by a vote of 77 to 15. The conference agreement, like the Senate-passed bill, extends the Legal Services Corporation Act authorization for 3 years, through the fiscal year ending September 30, 1980. The conference agreement authorizes the appropriation of $205 million for fiscal year 1978 and such sums as may be necessary for the two succeeding fiscal years. And, the conference agreement preserves the Senate-passed restriction on the use of Corporation funds with respect to the undertaking, by grant or contract, of broad general legal or policy research unrelated to representation of eligible clients.

The Senate-passed bill would have authorized legal services programs to use Corporation funds in cases or proceedings relating to the desegregation of any elementary or seconday school or school system. There is a prohibition on such activities under the present law, and the House has voted to retain the current prohibtion on several occasions. Because of this situation, the conference committee agreed to clarify present law, but not to expand it.

Other provisions adopted by the House-Senate conference committee are described hereinbelow.

CONFERENCE REPORT PROVISIONS

Membership of the Board of Directors (sec. 3 and sec. 11).—The conference agreement changes the requirements of present law respecting the composition of a local recipient's board of directors and the composition of the Legal Services Corporation's Board of Directors.

Under present law and Corporation regulations, a local recipient's governing board must be composed of at least one-third eligible clients, or representatives of eligible clients. At least one member is to be an eligible client.

The conferees adopted a Senate provision which would amend current law by providing that representation of eligible clients on recipient boards of directors be increased from at least one eligible client to at least one-third of the membership of such boards and such eligible clients may also be representatives of associations of organizations of eligible clients.

Under present law, the Legal Services Corporation Board of Directors is required to be appointed so that no more than 6 of the 11 members are members of the same political party and so that a majority are members of the bar of the highest court of any State. The conferees agreed to change the requirements for the composition of the Board of Directors.

The Senate bill provided that at least three members of the Corporation's Board of Directors be eligible clients and that membership of the board be generally representative of the organized bar, significant segments of the client community, attorneys providing legal assistance to eligible clients, and the general public. The conferees agreed to a substitute provision in which the membership of the Board of Directors is to be appointed so as to include eligible clients and be generally representative of the organized bar, attorneys providing legal assistance to eligible clients, and the general public.

It is the conferees' intent that at least two members of the Board be eligible clients and that at least one be appointed at the earliest possible date. Client representation on the Board will assure that the community of eligible clients will have a voice in the development of Corporation policies, thereby helping to make the Corporation more sensitive to the needs of those whom they serve.

THE SUNSHINE ACT (SEC. 4)

The conferees adopted a measure included in both the House bill and the Senate amendment which subjects the Corporation and each State advisory council to the provisions of the Government in the Sunshine Act. (Title 5 U.S.C. sec. 522(b).)

Under current law, all meetings of the Corporation are required to be open to the public unless two-thirds of those Board members present vote that an executive session should be held. The House and Senate agreed that there is not adequate justification for the Corporation's board to operate under one set of sunshine rules, while every other agency receiving Federal funds operates under another.

Adequate safeguards in the Sunshine Act would permit the Legal Services Corporation Board to meet in executive session in every instance in which an executive session would be appropriate.

CHALLENGES TO REPRESENTATION OF CLIENTS (SEC. 6(a))

The House bill and the Senate amendment each prohibit challenges to the authority of legal services programs to provide representation in a particular case or to a particular client during a legal proceeding. Although no provision in current law prohibits such collateral challenges, the courts have repeatedly declared that challenges to the authority of the legal services program to provide representation are irrelevant to the resolution of the client's case and should not be raised in that forum, but rather should be taken up with the agency providing funding.

Accordingly, the conference agreement adds a new provision to the Legal Services Corporation Act that provides that no question of whether representation is authorized under the act, rules, regulations, or guidelines promulgated pursuant to the act, shall be considered or affect the final disposition of, any proceeding in which a person is represented by a recipient or an employee of a recipient.

The conference agreement also provides for a process by which questions concerning the appropriateness of representation can be referred to the Corporation for review and disposition, and clarifies the appropriateness of judicial review of such disposition. An appeal process to the Corporation is not specified in present law.

Under the conference agreement, an aggrieved party is authorized to refer questions concerning a client's eligibility to the Corporation. The aggrieved party is not required to do so, however; this is discretionary with the aggrieved party. The Corporation is to review and dispose of any question referred to it promptly, and take appropriate action. This procedure does not preclude judicial review of the Corporation's action or inaction where available under applicable law.

HIRING OF LOCAL ATTORNEYS

Current law requires that a local legal services program give preference in hiring attorneys to qualified persons who reside in the community to be served.

The Senate legislation exempted a recipient from the hiring preference if the recipient certified that the position requires specific legal expertise or language proficiency and that no qualified local attorney is available, but provides that in no case may a program give preference to a person which is not consistent with Federal laws respecting discrimination in employment. Because the Corporation's guidelines on hiring preferences provide for the above exemptions, as well as certain other exemptions in which the hiring of nonlocal attorney is deemed beneficial to the client community, the conferees elected to retain existing law.

LEGAL FEES AND COSTS (SEC. 8)

The House bill included a provision which would have mandated that a court award legal costs and fees to a successful defendant under certain conditions. The House provision required a court to determine, sua sponte, whether the "principal" reason the action was commenced or pursued was to harass the defendant or to abuse the legal process. Costs and fees were to be awarded to a successful defendant where the court made such a finding.

The conferees felt that the House provision would have a chilling effect on legal services programs in the undertaking of meritorious legal claims. Therefore, the conferees agreed to retain the present requirement that an aggrieved party raise the question of cost and fees on his own, and that the defendant establish that the "sole" purpose the client brought or pursued the case was to harass the defendant or to abuse the legal process. If the party establishes these facts, then the court is required to assess legal costs and fees against the Corporation.

LITIGATION BY THE LEGAL SERVICES CORPORATION (SEC. 6(b))

Under present law, the Corporation may not participate in litigation on behalf of clients other than itself. When the Corporation filed an amicus brief in the Bakke case, a question arose as to the propriety of permitting the Corporation to file such a brief. While clearly permitted to do so under present law, the conferees adopted a provision that would preclude the Corporation from filing an amicus brief in a case such as Bakke in the future.

Under the conference agreement, the Corporation will be permitted to undertake litigation when the Corporation is a party to such litigation, in instances where a recipient is a party to the litigation, and when a recipient is representing an eligible client in litigation in which the interpretation of the Legal Services Act or a Corporation regulation promulgated thereunder is an issue.

SUPPORT CENTERS (SEC. 5)

Current law requires that the Corporation undertake directly, and not by grant or contract, research, training and technical assistance, and clearinghouse information activities. Both the House bill and the Senate amendment remove this restriction and permit the Corporation to fund such activities directly or by contract or grant.

The conferees agreed to a restriction in the House bill, however, which would place a limitation on the amount of money the Corporation can expend on such activities to 10 percent of its total appropriation for any fiscal year. As a further limitation, the conferees agreed to accept the Senate provision which would prohibit the undertaking by grant or contract of broad general legal or policy research unrelated to representation of eligible clients.

Funding these various activities by grant or contract may prove more economical or effective than adding staff to carry out the activities within the Corporation, and thereby prevent unnecessary growth of an in-house bureaucracy.

APPOINTMENT OF LEGAL SERVICES ATTORNEYS (SEC. 6 (C))

Both the House bill and the Senate amendment provide that a legal services attorney shall not be appointed by a court unless the attorney is compensated on the same terms as a member of the private bar in the court before which he or she is appearing. Some courts have abused legal services programs and attorneys by appointing legal services attorneys without compensation although they do compensate members of the private bar in similar cases. Such practice is inconsistent with congressional efforts to expand legal assistance to poor people, because federal funds are being used to supplant, rather than to supplement, local funding for legal services for poor people.

ACTIVITIES OF STAFF ATTORNEYS (SEC. 7)

The conferees adopted a provision changing the restrictions under which Legal Services staff attorneys may participate in political activities.

The conference agreement would subject staff attorneys to the same provisions of the Hatch Act which are applicable to Legal Services Corporation, state and local employees. The House bill also included language prohibiting partisan political candidacies by staff attorneys. The conference accepted this provision.

Under current law, Legal Services attorneys are the only group of citizens in the country prohibited from holding nonpartisan positions such as membership on school committees, library boards, and boards of education. Under the conference agreement, such persons are authorized to be candidates for non-partisan offices, but they would not be eligible to run for a partisan position. The current prohibition restricting the use of Corporation funds for political purposes or for political activity by legal services program employees during working hours is not modified by this amendment.

ELIGIBILITY FOR LEGAL SERVICES (SEC. 9(A))

Current law provides that evidence of a prior determination that an individual's lack of income results from refusal or unwillingness, without good cause, to seek or accept an employment situation, shall result in his disqualification as an eligible client. The House bill provided that any evidence that a person's lack of income results from unwillingness to seek or accept employment, without good cause, may be a disqualifying factor. The Senate amendment provided that factors relating to financial inability to afford legal assistance shall include evidence of a prior determination that such individual's lack of income results from refusal or unwillingness, without good cause, to seek or accept an appropriate employment situation.

The conferees agreed to language providing that evidence of a prior determination of an individual's unwillingness to seek or accept an appropriate employment situation may be considered as a factor relating to such individual's financial ability to afford legal assistance. Unlike current law, however, such prior determination will not automatically disqualify a client. Other later considerations, such as an intervening illness, may be considered as relevant to an applicant's current need for legal assistance.

PRIORITIES (SEC. 9(b))

Existing law requires the Corporation to establish priorities to insure that persons least able to afford legal assistance are given preference in the furnishing of such assistance.

The Senate bill modified this provision by requiring that recipients, consistent with goals set by the Corporation, adopt procedures for determining and implementing such priorities taking into account the relative needs of eligible clients including particularly the needs for service on the part of significant segments of the population of eligible clients with special difficulties of access to legal service or special legal problems, including elderly and handicapped individuals, veterans, native Americans, migrants or seasonal farmworkers and persons with limited English-speaking abilities. The Senate amendment further provided that appropriate training and support services be provided in order to assist these persons. The House provision is identical to the Senate language, but includes in its list of persons with special difficulty of access to legal services or special legal problems only handicapped and elderly persons.

The conferees adopted the House proposals, but made clear that the two enumerated groups were not intended to be an exclusive listing, but merely illustrative of those groups which may have special legal problems or difficulties of access to legal services.

In order to provide the Congress with information on the establishment and implementation of the new priorities section, the conferees accepted a Senate amendment requiring that the annual report of the Corporation include a description of the services provided pursuant to the priorities section.

ELIGIBLE CLIENTS SPECIAL NEEDS ASSESSMENT STUDY (SEC. 13)

The Senate bill includes a model projects section which authorized the Corporation to make grants or contracts to develop and operate model projects to expand or improve the deliveery of legal services to segments of the client community with special difficulties of access to legal services or special legal problems.

The conferees agreed that the Corporation shall conduct a study on whether eligible clients who are veterans, native Americans, migrant or seasonal farmworkers, persons with limited English-speaking abilities and persons in sparsely populated areas where a harsh climate and an inadequate transportation system are significant impediments to receipt of legal services have special difficulties of access to legal service or special legal problems which are not being met, and that appropriate recommendations be made and implemented to deal with these problems. The Corporation is to submit the report and accompanying recommendations not later than January 1, 1979.

In receding from its provision on model projects, the Senate conferees did so with the understanding that authority for such projects already exists in sections 1006(a)(1) and 1007(g) of the Legal Services Corporation Act of 1974. The Corporation may implement any recommendations in its report under the authority of sections 1006(a)(1) and 1007(g).

LEGISLATIVE AND ADMINISTRATIVE ADVOCACY (SEC. 9(C))

Current law provides that no corporation funds made available to recipients shall be used at any time, directly or indirectly, to influence the issuance, amendment, or revocation of any executive order or similar promulgation by any Federal, State, or local agency, or to undertake to influence the passage or defeat of any legislation by the Congress of the United States, or by any State or local legislative body unless such activities are undertaken in conjunction with the representation of an eligible client, or where a governmental agency, a legislative body, a committee, or a member thereof requests personnel of any recipient to make representations thereto.

The House bill adds to the list of legislative and executive actions which the recipients are restricted from influencing "State proposals by initiative petition." The conference agreement includes this provision.

The conferees also agreed that an employee of a recipient (paralegals and similar types of employees), other than an attorney, may represent an eligible client in an administrative or legislative proceeding. The use of paralegals and similar employees in appropriate situations would be consistent with the goal of delivering legal services efficiently and effectively.

The House bill specified examples of the types of representation (testifying, drafting, or reviewing measures, or making representation to an agency, body, committee, or member) that may be made by legal services programs in response to a request from a legislative or administrative body or member thereof. The Senate conferees agreed to this provision, but noted that the representations enumerated in the bill are those which are already implicit in current law. This provision in no way precludes a recipient from responding to a general request directed to a recipient by a governmental body or member thereof.

The House bill provided that a legal services program may engage in legislative and administrative advocacy with respect to a measure directly affecting the activities of the recipient program, the Corporation, or (if the local Board votes to take a position on a particular subject) eligible clients. The Senate receded with an amendment, which provides that a recipient may make representations on a measure directly affecting the activities under the Legal Services Act of the recipient or the Legal Services Corporation. This amendment does not permit, without request, the type of advocacy on matters of general concern to poor persons, which would have been authorized under the deleted House language.

LIMITATIONS ON THE USE OF CORPORATION FUNDS (SEC. 10)

The conferees agreed to continue certain limitations on the use of Corporation funds, while agreeing to remove or modify others.

The law currently provides that no Corporation funds may be used to provide legal assistance with respect to any fee-generating case except in accordance with guidelines promulgated by the Corporation. Questions arose under this language, however, as to the appropriateness of undertaking statutory benefit cases such as SSI and social security cases.

The conferees agreed to a Senate amendment which permits legal assistance in a free-generating case in which a client seeks only statutory benefits and where appropriate private counsel is unavailable, and in other situations where authorized by Corporation guidelines. Legal services attorneys have developed an expertise in administrative law cases involving statutory entitlements such as social security and supplemental security income cases, not commonly possessed by attorneys in private practice, as these types of cases generally provide for a small fee and tend to be extremely complex.

Current law prohibits the use of legal services funds for criminal representation. Both the House bill and the Senate amendment provide an exception, however, to authorize legal assistance to a person charged with a misdemeanor or lesser offense in an Indian tribal court. The conferees adopted this provision because legal services attorneys who have an expertise in Indian matters should have the authority to provide representation to such defendants. The defense in these cases may involve a working knowledge of Indian tribal law and customs with which private attorneys are unfamiliar.

The conferees agreed to repeal the prohibition on the representation of juveniles. Current law prohibits the provision of legal assistance to persons under 18 years of age except at the request of the minor's parent, a court of competent jurisdiction, or in certain other limited situations. The complexity of the current statute has caused uncertainty among recipients as how to interpret the law, and they therefore have refrained from handling such cases, in fear that they may be subject to disciplinary sanctions.

The conferees, after considerable debate, decided to continue the prohibition on the preparation of briefs, pleadings, or similar documents, or participating in any other way in any judicial or administrative practices involving school desegregation cases. Though the Senate had voted to repeal the prohibition on cases involving school desegregation, the House conferees were instructed by a vote of 230 to 186 to insist on retaining the prohibition. However, the Senate offered and the House accepted new language which provides that the prohibition does not prevent a legal services attorney from providing legal advice to an eligible client concerning the state of the law, the individual's status and responsibilities under it, how to obtain other representation, or from making a direct referral to another attorney or organization providing assistance in desegregation cases .

Under current law, funds are prohibited from being used to organize, to assist to organize, or to encourage to organize, or to plan for the creation or formation of, or the structuring of, any organization, association, coalition, alliance, federation, confederation, or any similar entity, except for the provision of legal assistance to eligible clients in accordance with guidelines promulgated by the Corporation. The House approved and the Senate conferees accepted a provision which clarifies this prohibition so as to prohibit the use of Corporation funds to initiate the formation of or act as an organizer of any association, federation, or similar entity, while making clear that a legal services program may provide legal assistance to an eligible client who intends to form or organize such an entity and seeks assistance from the recipient.

The conferees agreed to provide an exception in current law involving the prohibition on the expenditure of funds with respect to any proceeding or litigation arising out of a violation of the Military Selective Service Act or of desertion from the Armed Forces of the United States. The House bill repealed the prohibition in its entirety. The Senate amendment modified existing law to permit legal assistance in a civil case arising out of the Military Selective Service Act where a client alleges wrongful denial of his status as a conscientious objector prior to July 1, 1973. The conferees agreed to retain existing law, but to permit legal assistance in those cases in which an eligible client alleges that he was improperly classified prior to July 1, 1973, under the Military Selective Service Act or prior corresponding law. This date was chosen because it was the first day following the expiration of the last military draft.

OTHER PROVISIONS

The conferees adopted an amendment (section 16) proposed by both Houses that an independent hearing examiner be appointed, when requested, to conduct a hearing for purposes of determining whether financial assistance under the act shall be terminated, suspended, or denied.

The conferees accepted a House provision (section 15(b)) which provides that its appropriation shall be paid to the Corporation in annual installments. This provision is consistent with an arrangement made by the Legal Services Corporation and the Department of the Treasury for disbursement of the Corporation's fiscal year 1978 appropriation. Pursuant to that agreement, the Department of the Treasury has issued an irrevocable letter of credit to the Corporation. The appropriation is shown as fully obligated on the accounts of the Treasury Department, although the Corporation draws on the funds only as needed. The rules, regulation, and reporting requirements governing the usual letters of credit issued by Federal agencies for other programs are inapplicable to the letter of credit issued to the Corporation.

Mr. President, following my remarks, I ask unanimous consent that a letter to me from Mr. Thomas Ehrlich, President of the Legal Services Corporation, be included in the RECORD. The letter concerns the matter of the Corporation's policy respecting its annual appropriation.

The PRESIDING OFFICER (Mr. METZENBAUM). Without objection, it is so ordered.

(See exhibit 1.)

Mr. NELSON. The conferees accepted a Senate amendment clarifying (section 2) the congressional intent respecting the scope and purpose of the legal services program by specifying that the program is intended to assist in improving opportunities for low-income persons consistent with the purposes of the Economic Opportunity Act of 1964, as amended.

The conferees agreed to a Senate amendment providing (section 12) that the principal local bar association (if one exists) of the community to be served will be notified at least 30 days prior to an approval of any grant application, contract, or any other project initiating a legal assistance program, and requires that notification of the initiation of legal assistance in a local community include the solicitation of comments and recommendations.

The conference agreement also provides (section 14) a time limitation during which the Corporation must permit the General Accounting Office (GAO) access to Corporation papers, property, or documents which are necessary to facilitate its annual audit. The Corporation is required under the conference agreement to retain such documents for 3 years from the date of initial possession of custody, unless otherwise requested by GAO.

Mr. President, the conference substitute retains the essential elements of the Senate bill which was adopted on October 12. It strengthens the Legal Services Corporation in its attempt to provide efficient and effective legal services to poor persons. I move its adoption.

EXHIBIT 1

LEGAL SERVICES CORPORATION,
Washington, D.C., November 30, 1977.

Hon. GAYLORD NELSON,
Chairman, Subcommittee on Employment, Poverty, and Migratory Labor, Senate Human Resources Committee, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR NELSON: You have asked the Legal Services Corporation to comment on the effects of Section 15 of the Legal Services Corporation Act Amendments of 1977, on our investment practices. The language of this provision is consistent with the arrangements that we have made with the Department of Treasury for the disbursement of our Fiscal Year 1978 appropriation.

In response to a request from Senator Hollings, the Corporation has not invested its FY 1978 appropriation. Instead, we have entered into an agreement with the Department of Treasury for disbursement of the appropriation. Pursuant to that agreement, the Department of Treasury has issued an irrevocable letter of credit to the Corporation. The appropriation is shown as fully obligated on the accounts of the Treasury Department, although the Corporation draws down funds only as needed. The funds appropriated continue to be available to the Corporation until expended, and the rules, regulations, and reporting requirements governing the usual letters of credit issued by federal agencies for other programs are inapplicable to the letter of credit issued to the Corporation.

The agreement preserves the independence of the Legal Services Corporation from control by the Executive Branch, and assures that federal funds will not be withdrawn before needed. I hope this information is of assistance to you.

Cordially,

THOMAS EHRLICH.

Mr. JAVITS. Mr. President, I support the conference report, and hope that the Senate will approve it today. I express my appreciation to the many Members who had very grave questions about the continuance of the Legal Services Corporation, but were finally persuaded that the activity was desirable enough so that even with their reservations, they allowed the action which extended it to take place.

With one notable exception the bill the Senate conferees bring back from our conference with the House of Representatives is substantially the same as the bill approved in this body on an overwhelming vote of 77 to 15.

Senator NELSON has already outlined the agreed-upon bill and hence I shall only highlight a few of the important provisions contained in H.R. 6666.

Mr. President, the Legal Services Corporation activity and the legal services rendered to the poor, it seems to me now, on the basis of experience since Lyndon Johnson's declaration of the war on poverty, very clearly indicate that the poor value dignity even more than money, and that that is the hallmark of why this has been, by all odds, the single most significant innovation in the struggle against poverty in terms of Senate action in that field. Its continuance, therefore, is most welcome.

Mr. President, I wish to comment on only one aspect of the conference report. It relates to the existing law which prohibits legal services lawyers from taking desegregation cases. When the Human Resources Committee considered the original subcommittee bill I moved the amendment to repeal this egregious provision. I explained that its repeal would not in any way prejudge the merits of a party's claim that a school or school system was segregated. Repeal of the prohibition meant solely that poor people would have the access as well as the right to a lawyer in such cases. In my view, this was a matter of elementary justice; of equal access under law for the poor to redress grievances by working within our legal system. By a vote of 10 to 3 the full Human Resources Committee upheld my position and the amendment to repeal the prohibition was agreed to.

When S. 1303 reached the Senate floor, some felt we had gone too far and that the existing prohibition should be restored to the Senate bill. Accordingly, the distinguished Senator from Oklahoma (Mr. BARTLETT) offered an amendment to reinstate the prohibition. Speaking in opposition to the amendment, I said:

> If we really are going to give the poor the feeling that they, just as anyone else, can have a lawyer as a way in which to orient them away from the poverty syndrome, they cannot be denied a lawyer in respect of what is considered a violation of basic constitutional rights, if proven in the courts and courts act.

I went on to say:

> I believe that the hands of the Legal Services Corporation should be freed, and that is all we are doing It is not as to any specific kind of redress, and nobody guarantees that any such suit will be won, but simply that the poor man should have the same right as the one better able to take the case into court.

When the matter reached the Senate floor, there was quite a contest, and, by a vote of 38 to 55, the Senate decided to sustain that position. The House conferees, however, had been instructed by the full House to insist on language in their bill which reinstated the existing prohibition. Though we debated this particular section of the bill for a long period of time, I found the House conferees to be almost totally immovable—they just would not accept the Senate's position, stating that it would jeopardize the conference report in the House.

In the end, the Senate was forced, reluctantly and by a close vote, to recede with an amendment to permit counseling and advising a client with respect to his or her rights and responsibilities. Needless to say, I was deeply disappointed at this result. Clearly, the margin by which the Bartlett amendment was defeated in this body was the same as the margin by which instructions were given to the House conferees. But, Mr. President, we were really perched on the horns of a dilemma: either recede or have no bill—it was that simple. So the Senate conferees receded.

I would ask my Senate colleagues who sustained their committee's position on this section, and who felt as strongly as I did, to try to understand the position in which Senate conferees found themselves in the conference. We really could do no better and still have a bill this year. So I hope that Senators will support this report.

Mr. President, these are just a few other provisions in the conference report I wish to address.

With respect to the support centers, which were a bone of contention on this floor and a part of the compromise reached between the committee and a number of Senators, the Senate bill language remains intact. We persuaded House conferees to recede on this matter because we felt it our duty to defend the Senate bill and, thus, prohibit the Corporation from contracting out for general research purposes where the research does not involve representation of eligible clients. There was concern, which by the way I personally did not share, that the back-up centers could become seedbeds of social agitation unless limitations were placed on such activities. The committee accepted the amendment offered by the Senator from Utah (Mr. Hatch) and insisted that House conferees recede, which they did finally.

Mr. President, one other aspect of this matter engaged a considerable amount of the conferees' time, and that was a very laudable effort by the Senator from Idaho (Mr. McClure) to make very clear in the law the situation respecting a litigant represented by a Legal Services recipient, that is; a Legal Services entity in a particular place, whose right to receive representation by the Legal Services entity in question had been challenged, and whether or not this should be open to collateral attack or whether it should be an incident of the proceeding itself. The concern was expressed to the committee during our hearings on S. 1303 that there were numerous instances where the question of a client's eligibility for representation by a legal services recipient was raised during the course of the subject proceeding. The judgment of the committee was that such questions were collateral in nature and should not interrupt ongoing proceedings.

The Senator from Idaho (Mr. McClure) was concerned that the provisions of the bill which prevented such collateral attacks had the effect of slamming the door on judicial review of Corporation decisions on questions of client eligibility for representation. The committee explained that it was not our intent to cut off any existing avenues of judicial review; that we wished only to prevent such collateral questions from being raised during the course of a case and needlessly and repetitively delaying proceedings on the principal matter. The courts had ruled, furthermore, that questions of eligibility should not be raised during a proceeding in a client's case and are not relevant to the resolution of that case—that they are a matter between the Corporation and the recipient.

I would like, now, to yield to the Senator from Idaho, so that we may make it clear of record exactly what he did and exactly what the conference did, and what is the resulting situation.

Mr. McCLURE. Mr. President, I thank our distinguished colleague from New York for yielding and for giving me the opportunity in this colloquy, to strengthen the legislative record and history of the enactment of this conference report, because it is an important concern of a number of people, not just this Senator from Idaho.

I would like to ask one question of the Senator from New York. As the Senator knows, H.R. 6666 would give the Corporation initial jurisdiction for determining whether a representation decision in a given case complies with the provisions of the act.

Some of us had serious reservations over this type of delegation. However, we reluctantly accepted it on the basis of written and oral representations comparable to that contained in the Senate report. I quote:

> Following such complaint and exhaustion of administrative remedies, an aggrieved person or entity may seek judicial review of any provision of the Act or regulations, or of a Corporation ruling.

As the Senator knows, the Legal Services Corporation claims exemption from the Administrative Procedures Act. As the Senator may also know, the Executive Secretary of the Administrative Conference has stated that it is an open question whether decisions of the Corporation on representation issues would be reviewable in a judicial forum absent the caveat which was added to this bill at my request.

I therefore feel it is doubly important for the record to show that it is the intention of Congress, as expressed by the new section 1006(b)(1)(B) of the act, that determinations made by the Corporation on representation questions be appealable to Federal courts to the same extent and in accordance with the same rules that comparable decisions of other Government entities are appealable under the APA.

Does this comply with the understanding of the Senator from New York?

Mr. JAVITS. First, let me say, Mr. President, that it was my understanding that the Senator from Idaho offered his amendment in order to preserve the right of judicial review available under existing law, not to create new review opportunities. Let me assure him that this provision of the bill is intended solely to prevent issues such as eligibility from being raised in the course of a case in which a recipient is representing a client. Such questions have been raised from time to time since the inception of federally funded legal services, and courts that have been asked to rule upon them have uniformly held that such issues are irrelevant to the resolution of a client's case and should not be raised in that forum. Courts have said that such issues should be taken up with the agency providing funds.

In this respect, I note the cases of Jacobs against Board of School Commissioners of the city of Indianapolis, 349 Federal Supplement 605, decided in 1972, and dismissed as moot and on other grounds by the Supreme Court, and also the case of Mayfield against the Denver District Court decided in Colorado in 1973.

The first sentence of the section to which the Senator refers is thus declaratory of existing law as it has been enunciated by the courts. It was decided because we believe that repetitive litigation of this issue is a needless drain of Federal funds to provide representation for poor people and a waste of time for already heavily burdened courts.

With respect to the question of judicial review, the last sentence in the provision makes clear that existing law on judicial review of corporation decisions is unaffected. We have not closed any existing avenue and we have not opened any new avenues for review. Thus, the provision neither adds to nor detracts from the authority of a court to review a corporation decision.

I might add furthermore it is my understanding that applying the usual rules of standing and justificability, a number of courts have reviewed corporation decisions in the past and the same kind of decisions will remain subject to judicial review in the future. So really we have not done anything to preclude the existing available opportunities for review which I thought was the basis of Senator McClure's original concern, to wit, that in the bill as reported by the Human Resources Committee we had inadvertently thrown a roadblock upon the existing avenue for judicial review of a corporation decision. If there was any such idea that is now disposed of.

Mr. McCLURE. Mr. President, I appreciate the remarks of the Senator from New York and I appreciate his willingness and cooperative attitude in regard to this entire question. It is a very difficult one for us to thread through the thicket of legal decisions and determinations and the passions of people on both sides of the question at various times.

I might only expand briefly on the legislative history of this provision.

As the Senator from New York realizes, and has stated, I had prepared an amendment to S. 1303 which would have struck section 6(a) of that bill on the grounds that it would leave the Legal Services Corporation as the sole and final arbiter of its own jurisdiction.

Senator Nelson took issue with this and he graciously provided us with a copy of the report with the following language:

> Under this amendment, persons or entities feeling aggrieved by alleged noncompliance of legal services programs or their employees with the Act's rules, regulations, or guidelines, *will be required first to complain directly to the Corporation.* Following such complaint and exhaustion of administrative remedies, an aggrieved person or *entity may seek judicial review of any provision of the Act or regulations, or of a Corporation ruling.* The amendment does not change existing law with respect to judicial review of Corporation action; but it does help to ensure

that any legal challenge, to the maximum extent possible, is resolved on its merits rather than delaying the provision of legal assistance to eligible poor people under the Act.

Now, this language suggests to me a recognition and, indeed, a guarantee on the part of the sponsors of the bill that judicial review does currently exist in the case of an appeal of a representation question. Furthermore, it suggests to me that it exists in such a form as to constitute a reasonable remedy to charges that the Legal Services Corporation is not complying with legislative mandates. Otherwise, there is no remedy.

Very knowledgeable people, including the Executive Secretary to the Administrative Conference, are suggesting that this point has, up till now, been in question. But no Federal agency should be the final arbiter of its own decisions. I think we will all agree on that much.

The assertion that it is not readily available to the extent and in the manner available to appellants dealing with other agencies would contradict the language which I have just read and would, it seems to me, represent a deliberate deception on the part of the committee staff. I hope that the Senator from New York agrees that the language in the committee report is appropriate legislative history.

Mr. JAVITS. Certainly, the committee report is appropriate legislative history.

Mr. McCLURE. I thank the Senator.

Mr. JAVITS. Then the key word that the Senator used was the word "seek," that they seek judicial review, and there are the words spoken by Senator NELSON that we are not creating a new remedy but we are certainly not cutting one off.

Mr. McCLURE. I thank the Senator from New York.

Mr. JAVITS. I thank my colleague very much. I appreciate fully his cooperation in this matter.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. NELSON. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. JAVITS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I want to thank the distinguished Senator from Wisconsin, Mr. NELSON as well as the distinguished senior Senator from New York, Mr. JAVITS, who have so skillfully managed the Legal Services bill.

We as Americans are rightfully proud of our system of justice as administered in the United States. But as fine as any judicial system may be it is only as good as the justice it renders to our least fortunate subjects.

Continuation of the Legal Services bill will assure that our poor will be able to receive such assistance.

THE B-1 BOMBER

Mr. ROBERT C. BYRD. Mr. President, the Senate, I believe, has about accomplished all that it is going to do today and for this session, the adjournment resolution already having been adopted.

Earlier today, the leadership indicated that the Senate would take up the social security financing conference report, the legal services conference report, the clean water conference report, and that the Senate would act to extend the emergency authority dealing with natural gas crises that possibly could develop between this date and the time Congress returns, and that the Senate also might take up the matter involving the B-1.

All the foregoing matters have been taken care of, including the black lung problem which I mentioned earlier, with the exception of the issue involving the B-1.

The distinguished manager of the conferees, the chairman of the Armed Services Committee, the chairman of the Appropriations Subcommittee that handled the supplemental appropriation—or at least that part of the supplemental appropriation involving the B-1—will be making a statement; but I should state that, in my opinion, the Senate will be proceeding no further than we have gone and that the B-1 matter will go over until January.

I say this based on my conversations with the distinguished Senator from Mississippi [Mr. STENNIS] and based on my conversations with the Speaker of the House. I called Speaker O'NEILL earlier to inquire as to what the House would do if the Senate should proceed with action on the B-1 today, and he informed me that statements had been made in the House earlier today to the effect that no action would be taken in the House on the B-1 today or in this session.

I related that information to the distinguished chairman of the conferees, Mr. STENNIS; and based on that information and other circumstances, I believe it is his judgment that the Senate should not proceed with this matter at this time and that it should go over until January.

Mr. BAKER. Mr. President, this morning, shortly after the beginning of the session, my good friend and colleague the distinguished majority leader and I had a colloquy about the activities the Senate was likely to engage in during the course of the day. At that time I indicated to him, as he will recall, that we on this side of the aisle hoped most fervently that we would be able to deal with the supplemental appropriations bill and particularly the B-1 bomber issue.

As I pointed out in that colloquy, we have a number of Senators on this side who have substantially rearranged their schedules, who have the strongest convictions with respect to the necessity of going forward with the construction of the B-1 bombers, the next two in particular, and we urged the majority leader to try to bring this matter before us today. I regret, therefore, that it is not the judgment of the majority that that should be done.

Mr. President, we have good attendance. It is my understanding that only four Members are missing on this side of the aisle—only four absentees—which is remarkable at this hour on the last day of the session, when we are about to adjourn sine die.

It is an issue of grave national importance, and I had hoped that we could go forward and consider this matter at this time—not simply because of the inconvenience to a great number of Senators but because it is of extraordinary importance to all of us.

I am happy, however, that there is no effort to deal with this matter piecemeal and that the whole issue will be reserved for final determination next year.

What it means is that $7 billion will not be appropriated in the supplemental appropriation bill this year; and, frankly, I regret that.

Mr. President, fully understanding that, I must say now that I feel certain that there will be a thorough and energetic debate on the whole issue of national security—and the B-1 bomber in particular—when we reconvene next year.

So I thank the majority leader for explaining in detail, as he has just done, his position and the views of the majority in that respect; and I register my disappointment and my distress that we are not able to address that issue at this time, before we adjourn sine die.

Mr. CRANSTON. Mr. President, I should like to express my regret that we are not going to vote on the supplemental appropriation and thus will not have opportunity to come to grips with the issue of the survival of the B-1 bomber.

I fully understand the decision. I have been in touch throughout the day with the distinguished Senator from Mississippi. I think it will be good news for people who presently holds jobs in which they work on the B-1, because obviously the program will not be terminated today and they will not be discharged on Christmas Eve. A decision will come in January.

Having said that, I wish to stress that I do not support the B-1 bomber because of jobs. I support it because of my strong belief that it is essential to our national security and, most of all, to preserving peace through the triad concept of being able to survive any first strike in three ways, by which we could strike back with a devastating second blow. I never would support a military program simply because of jobs, because there are better ways and more productive ways for people to be working if they are not absolutely needed in national defense programs.

I am encouraged by the fact that the decision has been put off, because it is evidence—at least, as I interpret it—of the strength of those who support the B-1. I believe it is quite possible that those of us supporting the B-1 would have won a victory today in the Senate, as supporters won a victory not long ago in the House, had the matter come to a vote today.

I recognize that the decision is made by the opponents of the present approach to the B-1 because of their concern that they might not have carried the vote today.

Also, as the Senator from Mississippi, the distinguished chairman, stated, since the House will not act today no matter what we do, there was less reason for the Senate to act today, and the decision can go over until January.

I recognize that were all Senators present and voting today it would not be quite as likely that the supporters of the B–1 would win. However, I think a trend is moving in the direction of support for the B–1 for a variety of reasons, and I am not at all distressed about a delay in the vote because I think by the time we come to the vote some time early in 1978 a clear majority of the Senate might by then be convinced that it would be wise to postpone this decision to terminate the B–1 program, and complete the fifth and sixth B–1 bombers. This would keep the B–1 bomber team in place while the decision is made in a matter that has arisen since the original decision by the Carter administration to drop the B–1 and go to the strategic air-launched cruise missile.

Following that decision, it became apparent that SALT negotiations with the Soviet Union were leading to restrictions on the range of the cruise missile. That led, in turn, to the realization that restricted range would mean that a certain target could not be reached by the cruise missile and that, therefore, we presumably need what is now termed a penetrating bomber.

The decision as to what plane will be the penetrating bomber will be made sometime next year, presumably.

I received assurances from the Armed Services Committee that when that matter is taken up next spring, presumably, the B–1 along with the FB–111H, a competitive plane, along with any other approaches, will receive full consideration.

In order to receive that full consideration, the maker of the B–1 needs to keep a production and technical team in place to compete effectively with the FB–111H and any other alternative.

I have discussed this matter with the Secretary of Defense. He recognizes the legitimacy of the need, first, to continue spending money until there is a rescission—if there is a rescission; and second, the legitimacy of the need of the B–1 producer to keep its team in place to the degree necessary to enable it to compete on a fair and equal basis.

Thus, with the rescission decision now delayed, it seems to me that the case is even more compelling that when we come to a decision sometime in January that that decision be made in the light of the need to keep a B–1 team in place in terms of production capacity and keep the B–1 in the competition and to make sure that whatever funds are necessary for that purpose are made available in order to insure that when the decision is made as to the penetrating bomber, we have the best possible plane for that purpose, whether it be the B–1 or the FB–111H, or some other plane.

We also now have in abeyance the decision as to whether the B–1 should be carried forward for its original purpose, which was to be the third leg of the triad for deterrance purposes. The other two legs, of course, are missiles in silos and missiles in submarines. This leg would be missiles in B–1 bombers.

As long as we have the Triad in place, it would seem very unlikely that any opponent would risk a first strike against us because they would know they could not knock out enough of our varied retaliatory forces to insure that we could not respond. That is the way we keep the peace presently in the nuclear age.

While the decision will come somewhat later, I look forward to that moment with increasing confidence, although with no flat predictions, of course, as to the outcome. It is still an uphill fight, but it is a fight that might have been won today—the evidence is that it would have been now—and a fight that may be won when we meet again on this matter in 1978.

THE JOHN L. McCLELLAN HOSPITAL

Mr. BUMPERS. Mr. President, in just a moment I shall propound a unanimous-consent request. Before doing so, I wish to say it has been cleared with the chairman of the Veterans' Affairs Committee and by the majority and minority leaders.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. BUMPERS. Mr. President, I ask unanimous consent that the Committee on Veterans' Affairs be discharged from further consideration of S. 2351 and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection?

Mr. STENNIS. Mr. President, reserving the right to object, and I do not expect to object, I say to the Senator from Arkansas that there is someone here who has been waiting for quite a bit of time. Something has come up on this B–1 bomber. And in order to facilitate this Senator, I ask the Senator from Arkansas does he have an extended matter at this time?

Mr. BUMPERS. It will take approximately 1 minute.

Mr. STENNIS. That is a high score.

To that, I do not object.

Mr. BUMPERS. I say the Senator from Mississippi is a cosponsor and he will be more than happy.

The PRESIDING OFFICER. (Mr. (MOYNIHAN). Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 2351), to name the new Veterans' Administration Hospital in Little Rock, Arkansas, the John L. McClellan Hospital.

There being no objection, the Senate proceeded to consider the bill.

Mr. BUMPERS. Mr. President, I send to the desk the names of 78 Senators who are cosponsors of this bill.

Mr. President, I further ask unanimous consent that any Senator who has not signed as a cosponsor be given the opportunity to do so for 24 hours after the adjournment today.

The PRESIDING OFFICER. Without objection, it is so ordered.

The cosponsors are as follows:

Mr. Bumpers, Mr. Eastland, Mr. Hodges, Mr. Abourezk, Mr. Allen, Mr. Anderson, Mr. Baker, Mr. Bartlett, Mr. Bayh, Mr. Bellmon, Mr. Bentsen, Mr. Biden, Mr. Burdick, Mr. Harry F. Byrd, Jr., Mr. Robert C. Byrd, Mr. Case, Mr. Chafee, Mr. Chiles, Mr. Church, Mr. Clark, Mr. Cranston, Mr. Culver, Mr. Curtis, Mr. Danforth, Mr. DeConcini, Mr. Dole, Mr. Durkin, Mr. Eagleton, Mr. Ford, Mr. Garn, Mr. Glenn, Mr. Goldwater, Mr. Gravel, Mr. Griffin, Mr. Hansen, Mr. Hart, Mr. Hatfield, Mr. Hayakawa, Mr. Heinz, Mr. Helms, Mr. Hollings, Mr. Huddleston, Mr. Inouye, Mr. Jackson, Mr. Javits, Mr. Johnston, Mr. Kennedy, Mr. Laxalt, Mr. Leahy, Mr. Long, Mr. Lugar, Mr. Magnuson, Mr. Mathias, Mr. McClure, Mr. McGovern, Mr. McIntyre, Mr. Melcher, Mr. Metcalf, Mr. Metzenbaum, Mr. Morgan, Mr. Muskie, Mr. Nunn, Mr. Packwood, Mr. Pearson, Mr. Pell, Mr. Percy, Mr. Randolph, Mr. Ribicoff, Mr. Riegle, Mr. Sarbanes, Mr. Sasser, Mr. Schmitt, Mr. Schweiker, Mr. Scott, Mr. Sparkman, Mr. Stafford, Mr. Stennis, Mr. Stevens, Mr. Talmadge, Mr. Thurmond, Mr. Wallop, Mr. Williams, and Mr. Young.

Mr. STENNIS. Mr. President, if the Senator will yield, I highly commend him for his measure.

Mr. BUMPERS. Mr. President, I shall just take a moment to say that as to the Veterans Administration hospital, for which money has been appropriated, which is to be built in Little Rock, Ark., and on which ground will be broken hopefully in 1978, this bill will name that hospital the John J. McClellan Hospital.

Senator McClellan told me when I first came to the Senate that there were only two items that he wanted to see be brought to fruition before his term in the Senate expired, and one of them was the appropriation of the money and the construction of this veterans hospital in Little Rock.

Everything was completed, the money was appropriated, the Veterans' Administration had agreed to build the hospital there and everything was completed except the breaking of the ground, and it is most regrettable, of course, that Senator McClellan could not live to see that happy day.

But I thought in recognition of and of his efforts over so many years to see this great hospital built, the finest tribute the Senate and Congress could pay would be to name this hospital, which will alleviate so much suffering, after a man who was indeed concerned about the suffering of those people who have served this country so well.

Mr. President, I yield to my colleague, Senator Hodges.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. HODGES. Mr. President, my presence here, unfortunately, is due to the death of the great Senator John L. McClellan. I think it is most fitting that this hospital be named for Senator McClellan and in his memory so that the citizens of Arkansas will long remember his extensive and distinguished service and the many good things he did for our State.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and passed as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Veterans' Administration replacement hospital to be constructed adjacent to the University of Arkansas Medical Center in Little Rock, Arkansas, for which funds have heretofore been appropriated by the Congress, is hereby designated as the "John L. McClellan Hospital". Any reference in any law, regulation, document, record, map , or other paper of the United States to such building shall be considered to be a reference to the John L. McClellan Hospital.

THE BOMBER

Mr. HAYAKAWA. Mr. President, I, too, would like to express my regret that the discussion of the B–1 has been postponed. So many of us in our party have traveled long distances to be here this 1 day to argue this matter, so I look forward with great pleasure to arguing it in January, but I hoped it could have been done today.

I would like to point out, in expressing my regret, however, that when the President canceled the B–1 program, he also stated that the B–1 would remain as an option for the next few years. This is of some concern, because we cannot have the option of the B–1 without building airplanes 5 and 6, the matter which is before us now.

We must realize that termination of the B–1 program, through the elimination of these two planes, will preclude full-scale production, should it be required, for 5 years or more.

Besides keeping our options open, planes 5 and 6 would be of invaluable service for experimentation and testing. Here again the President has expressed his desire to complete the research and development program on the B–1. The information to be obtained from this program is very important to the development of many future U.S. military aircraft, and the failure to construct 5 and 6 will mean the B–1 research and development will not be completed.

Here is a very important matter to be tested, the structural tests, weapons integration, performance under a wide range of flight conditions, development of cruise missile launch technology, and so forth.

One of the most important research and developmental tests remaining to be conducted on the B–1 will evaluate the aircraft's ability to withstand high intensity bursts of radio wave-like electromagnetic energy that are produced over vast areas by high altitude nuclear explosions. B–1 No. 4 has never been protected against this effect. It is quite different electrically from aircraft Nos. 5 and 6, and 5 and 6 are the ones now at issue and, therefore, I would hope when we come to the discussion of this matter later on we would go into this matter of the experimental results to be derived from 5 and 6, and that we can discuss them more fully.

May I close by saying I am grateful to the distinguished Senator from Mississippi for his courtesy in giving me every chance to muster our forces to have a full discussion of this. I only regret it was not possible to go through with it at this time. However, I look forward to debating the issue with all my colleagues again in the future.

I thank the Senator.

Mr. TOWER. Mr. President, I too am disappointed that we failed to act on the B–1 funding matter today. I know a number of Senators rearranged their schedules to be here for this extremely important matter. I canceled engagements in Texas to come back.

I am, therefore, sorely disappointed, and I am perhaps all the more so because in my travels over my State in recent weeks I find a great deal of concern about the strategic posture of the United States vis-a-vis that of the Soviet Union with specific questions being asked me frequently about the cancellation of the B–1, particularly in that it was a unilateral decision made at a time when we were engaged in strategic arms limitations talks with the Soviet Union.

We have also seen growing comments in the press about the consequences and ramifications of the B–1 cancellation, a notable account having recently appeared in Jane's All the World Aircraft, which says that failing to produce the B–1 will strike a strategic imbalance between the United States and the Soviet Union.

This is an enormously important matter, one that we should deliberate on carefully.

I hope we will act on it at the earliest opportunity in the next session.

Mr. President, evidence continues to mount which reflects that the decision made by the President of the United States earlier this year not to proceed with production of the B–1 strategic bomber was a grave and serious mistake. In announcing and justifying his decision, President Carter ignored realities in the strategic balance between the United States and the Soviet Union which cannot be reconciled with the irrefutable strategic arms requirements of the United States for the remainder of this century.

At the outset, I would point out to my colleagues that it is indeed seldom that I feel compelled to adopt a position on the floor of this body with regard to the national defense that is contrary to that espoused by my good friend, the distinguished chairman of our committee, the Senator from Mississippi. However, it remains my firm conviction that the magnitude of the President's error portends consequences of the gravest nature for the future of American military strength. And it is American military strength which must today and for the foreseeable future bear the burden of sustaining peace and security in our world.

There are three aspects of the President's decision which continue to be particularly disturbing to me which I would today reiterate for my colleagues.

The first involves the new administration's reevaluation of Soviet air defense capabilities, which is a crucial factor in determining how long we can continue to rely on the penetrating capability of the B–52. This is a highly technical matter. It requires a careful assessment of projected Soviet air defense systems and a thorough analysis of how well the B–52 will be able to perform when confronted with these systems.

I am extremely skeptical toward the assurances offered by the administration as to how long we will be able to rely on the B–52 to serve as a manned penetrating bomber. The Committee on Armed Services gave evidence of a similar skepticism by endorsing earlier this year the development of a so-called mixed bomber force that would include a follow-on manned strategic bomber in our arsenal to perform at least in part the missions intended for the B–1. There is overwhelming evidence that some sort of manned bomber that can penetrate future Soviet air defenses is an absolute requirement for our strategic forces. Yet, the administration has equivocated on this vital point and avoided addressing itself to how it proposes to meet this future need.

The Secretary of Defense gave an initial endorsement to the feasibility of studying a modification to the FB–111 for this purpose. Subsequently, however, the President of the United States effectively muddled the position of his administration on this proposal, thereby inferring a lack of interest in the FB–111 program. This was a deliberate effort to solidify wavering opposition to the B–1 in the House.

This occurred, some may recall, just prior to a vote on the House floor as to the disposition of B–1 production funds for the current fiscal year. It is now my understanding that there will be no funds requested for such an alternative manned bomber in the forthcoming defense budget request for fiscal year 1979.

This sequence of events has confirmed in my mind the utter confusion within the administration as to our country's strategic needs. I do not believe the Congress and the American people will permit President Carter to ignore indefinitely the military realites posed by future Soviet air defense systems.

Second, the President and the Secretary of Defense have both emphasized the high costs of producing the B–1. The total program estimates for a reduced fleet of 150 B–1 bombers would have been $15.3 billion beyond that already spent at the time of the President's decision. The unit cost of each aircraft would have been about $100 million. But as the administration has attempted to define the costs of what it refers to as the "cruise missile option" and the so-called cruise missile carrier program, the comparative costs have been largely ignored.

It has not been possible for our committee to precisely define a projected cost for a standoff cruise missile carrier program, but preliminary estimates show that the program unit cost of such an aircraft would be about $93 million each.

The total program cost for such a system could easily be as high as $16.5 billion to include 114 aircraft. These figures are difficult to nail down, however, because the administration does not seem to know what its specific plans are for the deployment of the cruise missile system. But it is highly significant that though the B–1 was allegedly canceled because it was too expensive, the alternative program of so-called cruise missile carriers could very well cost the Government even more, with capabilities far inferior to those of the B–1.

Third, the President's decision to cancel the B–1 ignores the threats to the future integrity of the so-called strategic triad. There is presently raging within the Pentagon a heated debate that addresses the present and future vulnerability of our land-based ICBM systems. A major investment in a new, mobile ICBM, the so-called M–X, may well prove to be necessary to insure our ability to retaliate against a nuclear attack.

While the sea-based arm of our strategic force remains the most secure, the field of underwater detection technology is a high research priority in both the Soviet Union and the United States. The ASW capabilities of both sides can be expected to improve substantially, and though there is no foreseeable threat to the SLBM force, we must not be unprepared for developments which could diminish the security of our undersea forces.

The cruise missile is a new and largely untested system, but it must be assumed that such low-flying, relatively slow vehicles could be destroyed with the properly designed air defense system. The ability to do this, I must add, is well within the state of the art of air defense radar and missile technology.

Thus, the third aspect of the President's decision which disturbs me is that it ignores both existing and developing threats to the other legs of the strategic Triad, threats which we must be prepared to meet by retaining the flexibility afforded only by the manned strategic bomber.

It is my concern that the risks associated with such a major shift in our strategic force structure have been seriously understated by this administration.

In summary, the Carter administration has offered an astoundingly weak and unconvincing case to support its decision to cancel production of the B–1 bomber. Even worse, the responses given to even the most fundamental questions posed by members of our committee have shown evidence that the future of the strategic posture of the United States is in serious disarray. The administration has failed to responsibly address itself to the facts which bear out the need for a new manned bomber. It has espoused rhetoric which advertises the cruise missile as a substitute for manned aircraft, which even the most elementary analysis can show is simply not the case. Nor was it ever intended to be.

This environment of uncertainty and disarray has only been exacerbated by the manner in which the SALT negotiations have been conducted in Geneva. Repeated leaks and disclosures from those involved in the negotiations have generated an uneasiness among the public that could adversely affect the manner in which any forthcoming salt agreement is received by the American people.

This uneasiness is spreading even today as more and more people in this country come to realize how incredible it is that the President of the United States made a unilateral decision to cancel a major U.S. strategic weapons program without requiring a single concession from the Soviets at the Geneva negotiating table.

Mr. President, we are at a critical point in our Nation's history in that we must lay the groundwork today for the future course of our strategic forces. This administration has exhibited no leadership in this vital area. This administration has given no coherent direction to the future of our strategic posture. This administration has offered no realistic solutions to the undeniable strategic military challenge which now confronts the free world. Lamentably, Mr. President, it has done but one thing—and that is to commit a grievous error by making a foolish and shortsighted decision that ignores the hard realities before us today.

I urge my colleagues not to ignore these same realities which have been overlooked by the administration. I urge that the Senate support the expenditure of these previously authorized and appropriated funds in order that the development program for the B–1 strategic bomber might continue.

Should the Congress succeed in denying the President the authority to impound these funds, I earnestly hope he will reconsider his previous decision and permit the Air Force to proceed expeditiously with production of the B–1.

Mr. GARN. Mr. President, during the past weeks, many Members of Congress have expressed grave concern relative to the effectiveness and survivability of the strategic triad and our overall strategic posture. This growing concern stems from concessions offered by the United States in the current SALT negotiations as well as the failure to proceed with our own strategic systems.

You are aware that I strongly encouraged the President for production of the B–1 bomber. Unfortunately, President Carter announced on June 30 that he was canceling B–1 production and in its place we would rely on cruise missiles. Of particular concern is the administration's lack of comment in relation to the current SALT negotiations. Even more alarming was the subsequent action in desiring to rescind the fiscal year 1977 funds for building the B–1 test aircraft Nos. 5 and 6. This is because events since the June 30 announcement have made it clear, even to our Commander in Chief that an effective manned penetrator option must be retained as a part of our strategic force.

Despite the unilateral decision by President Carter to terminate the B–1 production program there continues to exist today the requirement for a manned penetrating bomber in our strategic TRIAD of defense. This fact has been emphasized repeatedly by President Carter, Secretary of Defense Brown, and the Department of the Air Force following the cancellation decision. This if further emphasized by the DOD efforts in adding a sizable quantity of money in Fiscal Year 1978 and 1979 to improve the B–52's penetration capability. The Department of Defense has even proposed buying reworked versions of the FB–111, to add to its penetration capabilities in the late 1980's and 1990's.

The requirement for a manned bomber has not gone away with the Carter decision, and it is still a fundamental factor in strategic planning for the following reasons:

It forces large expenditures of adversary resources to counter the penetration bomber capability. These are resources that might otherwise be concentrated on negating other elements of the TRIAD.

It provides full assurance of coverage of hard targets, deep inside enemy territory.

It provides real time onsite damage assessment of primary and secondary targets.

President Carter on June 30, 1977 made two points in his decision to discontinue plans for production of the B–1. First, "the existing testing and development program now underway on the B–1 should continue to provide us with the needed technical base in the unlikely event that more cost-effective alternative system should run into difficulty. Continued efforts at the research and development stage will give us better answers about the cost and effectiveness of the bomber support system, including electronic countermeasures techniques." The President's second point was:

But this is a matter that is of so very great importance, and if, at the end of a few years, the relations with the Soviets should deteriorate drastically, which I don't anticipate, then it may be necessary for me to change my mind. But I don't expect that to occur."

The B–1 base production should remain a realistic option. If the President does change his mind, we will have the continuity of manufacturing skills, the subcontractor team, and the ability to meet in a timely and cost-effective fashion the option to restart. Procurement of planes 5 and 6, as the House has voted to do, will allow us flexibility while we evaluate the yet unproven cruise missile development and the outcome of SALT II.

In order to see why the manufacturing base for B–1 must be kept viable for the next 2 years until SALT II is reviewed and approved by Congress, several factors must be considered:

Fifty-four percent of the total U.S. nuclear throw weight is carried by bombers.

SLBM's do not have a hard target kill capability.

Minuteman force is estimated to be highly vulnerable to a new series of Soviet ICBM's by early-mid 1980's.

B–52's average 16 years in age, some as old as 25 years; estimated to be highly vulnerable by mid 1980's because of size, speed, age.

Soviets have 10,000 to 12,000 radar guided air defense systems; the United States has virtually none.

Soviets have eight times more medium range bombers than the United States.

Soviets have twice the throw weight as the United States.

Soviets have 94 percent more nuclear tonnage than United States.

Soviets have 78 percent more SLBM submarines than United States.

Soviets have 51 percent more ICBM's than United States.

Soviets have four new strategic missile

systems in production and four more in R. & D.

Soviets are developing a new super Delta submarine for deployment.

Soviets are producing the Backfire bomber at a rapid pace—approximately 200 or more already produced/deployed.

Backfire bomber has more range than B–1 and 8 percent more range than B–52, with one refueling.

Soviet cruise missiles—three or four versions are deployed; United States cruise missiles: ALCM–A is canceled, ALCM–B is in R. & D.; Tomhawk is in R. & D. and would not be operational until approximately 1982.

The B–1 is the most thoroughly tested aircraft ever flown—over 811 flight test hours and over 25 hours at supersonic speeds.

Costs, studies, recommendation, and other factors:

Although individual cost of each B–1 seems high, its mission effectiveness/cost effectiveness are higher than all alternatives.

GAO told Chairman Stennis—and apparently no one else—than for threat envisioned for the 1980's, the B–1 was more cost effective than B–52's, FB–111's and wide body cruise missile carriers. If anything, the threat envisioned has worsened.

SecDef and Chief of Staff Air Force last spring acknowledged higher cost effectiveness of B–1.

SecDef's recommendation to President was for a MIX of B–1's and cruise missiles—not for cruise missiles without the B–1.

The Joint Chiefs of Staff recommended that the cruise missile be used in conjunction with a manned penetrating bomber.

FB–111H and B–1 costs, 20-year life cycle costs are estimated at $17 billion for the FB–111H versus $13 billion for the B–1 by House Appropriations Committee study.

Wide body cruise missile carriers would have to be complemented by some kind of penetrating bomber—the combined cost of which would easily exceed the B–1 program.

747 today costs about $40 to $42 million a copy.

Additional costs for racks, computers, BMP, guidance and control, communications and defensive measures will result in a 747/CMC which was estimated by DOD to cost $92 to $98 million unit cost.

Continuing B–1 production would result in an average cost of $85.9 million per aircraft—noting that comparisons are for money to be spent in the future.

Where the TRIAD stands:

ICBM's. From now until the early to mid–1980's the U.S. force appears viable. It becomes vulnerable as the new, high accuracy generation Soviet ICBM's are deployed as announced by SecDef. By L982–L985, as high as 80 to 90 percent of U.S. ICBM's will be vulnerable.

The U.S. answer is the mobile MX just now being put into R. & D. OMB has recently recommended only $160 million and slipping Full Scale Development (FSD).

SLBM's. First U.S. Trident submarine is proceeding very slowly and most likely will not be completed until 1981—Program continues to slip. Has already suffered overrun of about $400 million. Current SLBM's do not have a hard target kill capability. Soviet Union has more SLBM's and SLBM submarines than United States. If the TRIAD is not maintained, Soviet Union resources required for air defense against B–1/cruise missile/SRAM combination would probably be diverted to work on submarine vulnerability problem. If successful within next 8 to 10 years, United States could be in serious jeopardy.

Manned bombers. As B–52 fleet continues to age, they must be replaced.

For near time frame until about 1982, they are estimated to remain capable of beating Soviet Union Air Defenses. New Soviet efforts with SS–10 could drastically change the balance, requiring introduction of a high speed, near-supersonic, on-the-deck penetrator, to force Soviet expenditures on a broad range of defensive problems involving MX, Trident, cruise missiles and the B–1 itself. Any manned aircraft having strategic missions must have the following characteristics—whether a B–1, B–52, wide body transport, et cetera:

Prelaunch survivability.

Hardening against nuclear effects (Blast, EMP, et cetera).

Penetrate close enough to launch or drop weapons.

Large enough to carry effective load.

Self-capable to penetrate defenses and protect itself.

Weapons accuracy sufficient to kill target.

The FB–111H has been proposed as a candidate for the penetrating bomber role, although it is a less capable aircraft and almost as expensive as the B–1 would have been. However, President Carter has stated that he did not cancel B–1 production just to build a less capable bomber for the penetrating role.

These are important considerations when evaluating the need for B–1 bomber planes 5 and 6:

First. President Carter stopped the B–1 in favor of cruise missiles which must also penetrate pronounced enemy defenses (without the benefit of defensive avionics) and which have not undergone the extensive testing that the B–1 has accomplished.

Second. Continuing aircraft 5 and 6 provides the time necessary to be absolutely sure that the cruise missile concept can adequately fulfill the role intended for the B–1 bomber.

Third. From all accounts of the SALT II agreement and the U.S. concessions in the agreement, the United States is accepting range limitations on the cruise missile. The full impact and final SALT agreement is not known and until these considerations are quantified, a B–1 production option is necessary.

Fourth. The United States gave up the B–1 strategic capability with no like concessions from the Soviets.

Fifth. Retaining the production option while finalizing SALT II is the most reasonable course of action.

Perceptions are crucially important, and I am concerned about the clear signal we are sending to Moscow concerning the strength of our TRIAD—both now and beyond. With the Soviets developing and deploying new weapons at an undiminished rate, the time has come to reconsider the practice of unilateral arms restraint.

Mr. President, I believe the President made a very drastic decision last June when he stopped production of the B–1 bomber. Events since that time have only confirmed my judgment, particularly in light of what the senior Senator from California mentioned in what we are doing in SALT.

The President talked about making the cruise missile a substitute for the B–1. As a pilot, I know that is not possible. You simply cannot turn a B–1 or exchange it for a cruise missile. The range limitations that have been placed or proposed of 2,500 kilometers on air-launched missiles, and 600 kilometers on sea-launched or ground-launched cruise missiles, make those almost ineffective, so the combination, in my opinion, is eliminating one leg of the TRIAD.

We are slowing down the decision on the R. & D. funds on the MX mobile missile; the Trident is in difficulty and is running great cost overruns, and I believe that the combination of these decisions is seriously weakening the entire TRIAD. But I am not going to go any further on that today other than to say that I more strongly believe it was a mistake to eliminate the B–1.

I am going to, however, talk about something else that is not brought up too much. I believe the President of the United States is violating the Impoundment Control Act. Several years ago Congress was very upset with President Nixon, because Mr. Nixon refused to spend some money appropriated by the Congress of the United States.

As a direct result of those impoundments and rescissions, Congress passed Public Law 93–344 in 1974 which tried to correct this situation and let the executive branch of Government know that Congress has the power to appropriate money and the President cannot rescind those funds without the agreeement of Congress.

So when the President announced that he did not want the B–1 continued in production, that was for fiscal 1978 funds, and he, in addition, sent a rescission order to the Congress saying he wanted to deappropriate or rescind the remaining funds to build aircraft 5 and 6 out of 1977 funds.

First of all, I think it would make sense for this President or any other not to issue stop-work orders until such time as he finds out if the Congress does agree. I think there was a deliberate subversion of Congress' authority in this matter.

I also use as an example Minuteman III. He issued a stop-work order on further production of Minuteman IIIs in the 1977 buy.

It happened that under the terms of this law both the House and the Senate must agree with the rescission. It must be a positive agreement. They must take action to agree with that rescission. If it is not done within 45 days, the law is very specific. It says:

> Any amount of budget authority proposed to be rescinded or that is to be reserved as set forth in such special message shall be made available for obligation unless within

> the prescribed 45-day period the Congress has completed action on a rescission bill rescinding all or part of the amount proposed to be rescinded.

It is not ambiguous. It is not like a lot of laws we write. It says when 45 days of continuous session of the Congress end and the Congress has not acted, the President must obligate those funds.

So he sent up his rescission order on Minuteman III. The House of Representatives specifically disagreed with the rescission.

I sent a telegram signed by 14 other Senators from this body saying:

> Mr. President, the House of Representatives has disagreed. It is costing $.5 million a day every day that you delay.

Weeks went by. We passed the 45 days on the 13th of October. Finally, the President acknowledged that Congress disagreed with him. He obligated the funds. The Minuteman III production line is back in operation.

However, there was $105 million of funds left for Minuteman III construction in 1977. Because of the President's exceeding his authority, issuing a stop-work order before he found out whether Congress agreed, $58 million of that $105 million is being spent in start-up costs. Rather than getting 50 more ICBMs, we are getting 30.

Simply as a matter of fact—and it has not been published—the President, who is so interested in saving money on these weapons systems, because he did not abide by the Impoundment Control Act, cost the taxpayers of this country $58 million for nothing, for absolutely nothing.

Now we have the same situation on the B-1. We can argue all we want to about what the House did last week or whether we take it up today or not. The 45-day period under this act expired on October 4. Now I am sure that in the Justice Department they can probably find some attorney over there who, by dribbling out some obligated funds for close-down costs, they can say they technically are complying with this law. But the spirit of the law is certainly not being complied with, and I want to make that point very strongly.

Regardless of who is for the B-1 or against or whether we should continue 5 and 6 or not, the fact of the matter is the Impoundment Control Act of 1974 is very clear, and the President of the United States is subverting it.

Richard Nixon was on TV a few weeks ago and talked about how he thought he was above the law, and President Carter gave a speech and said that no President is above the law, and I agree with President Carter.

So I suggest he and his staff ought to read the Impoundment Control Act, and those funds should be obligated.

I ask anybody on the Senate floor to read the act, and there is not any ambiguity in it. The 45-day period expired.

Beyond this argument, I am going to go to another section which talks about the General Accounting Office. The Comptroller General is expressly empowered, through attorneys of his own selection, to bring a civil action in the U.S. District Court for the District of Columbia to require such budget authority to be made available for obligation.

Now, we will just see about that. I am going to press the Comptroller General to follow the law and to look into filing civil suits against the administration for not following it. Again, we can argue all we want to about the arguments for and against the B-1, but this Congress did pass an Impoundment Control Act in 1974, and President Carter had better read it and abide by the letter of that law, and not just the spirit. Those funds under 5 and 6 ought to be obligated now. They should have been obligated 2 months ago, because this Congress did not take action during that 45-day period.

The **PRESIDING OFFICER**. The Senator from Arizona is recognized.

Mr. **GOLDWATER**. Mr. President, I yield to my friend from North Dakota.

Mr. **YOUNG**. Mr. President, I understand there will not be a vote on the B-1 until January. I would have strongly favored taking up the B-1 today, especially since the report from London by the editor of Jane's "All the World's Aircraft" was published in the news.

Mr. President, how far are we going to go in this country in unilateral disarmament and waste of taxpayer money? The taxpayers have put up with a waste of over $12 billion of canceled programs in the last 10 years. I would like to just enumerate these programs for everyone to understand what we are doing when we cancel the B-1 program.

Mr. President, through fiscal year 1977 the Congress has appropriated $4.4 billion for the B-1. When we add this to the $5.3 billion that was spent on the ABM system, $1.5 billion that was spent on the B-70 aircraft, and $1.0 billion that was spent on the SST, the total amounts to $12 billion.

I am sure most of my colleagues are familiar with recent comments that were made by the editor of Jane's "All the World's Aircraft" in an Associated Press article dated December 7, 1977. I have followed with interest the aircraft and ship articles that Jane's has published for many years. They are reowned in their accuracy in describing the ships and aircraft of the various nations of the world as well as the numbers of ships and aircraft the various countries have in their inventory. The comments of Mr. John W. R. Taylor, editor of Jane's, are very persuasive in favor of the B-1 program.

Mr. Taylor appropriately points out that cancellation of the B-1 program in favor of the older B-52 bomber and the new cruise missile severely weakens not only the position of the United States but of our Western allies. I hope that all of our Members will have had the opportunity to read this article before they vote today. Mr. President, I ask unanimous consent that the article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JANE'S EDITOR SAYS B-1 DECISION MAY DOOM THE WEST

LONDON, December 7.—President Carter's decision to scrap the B-1 strategic bomber may help bring about a Western defeat if a general nuclear war breaks out, according to the editor of "Jane's All the World's Aircraft" in a preface to the 1977-78 edition.

The editor, John W. R. Taylor, writes in the authoritative annual that rejection of the bomber, which Mr. Carter considered too costly, may endanger the military balance that has prevented war between the two major powers for a generation. The new 900-page edition, is being published tomorrow by Jane's Yearbooks of London.

The Soviet leaders "must be surprised beyond belief that the U.S. President has disposed of the B-1 without asking any Soviet concession in return," Mr. Taylor wrote. "If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown."

President Carter decided earlier this year to cancel the B-1 program, after four test planes had been built. He said that the United States armed forces should rely on the older B-52 bomber and the new cruise missile. The Senate then voted to cut off funds for new B-1's, but the House voted yesterday to appropriate money for two more test planes. The Senate must now vote again on the issue.

CITES MISSILES' LIMITED ABILITY

Mr. Taylor said that cruise missiles, which travel slower than the speed of sound, were incapable of jamming enemy defense radar and were intended primarily for use against undefended targets.

Only one military leader in history, Adolf Hitler, has put his confidence in such a weapon, wrote Mr. Taylor, who is a world aviation authority. And that device, the V-1 missile that was known as the "buzz bomb" caused Britain little difficulty in World War II, he said. Mr. Taylor suggested that Mr. Carter's unilateral action probably was the reason the Soviet Union did not stage its usual display of air power at celebrations in October marking the 60th anniversary of the Russian revolution.

Mr. Taylor said that perhaps only West Europeans, living within range of two powerful Soviet aircraft, the Tupolev bomber, known in the West as the Backfire, and the Sukhoi Su-19 attack plane, felt strongly apprehensive when their own aircraft were ranged alongside the Soviet arsenal. That force includes about 1,400 intercontinental ballistic missiles, 600 intermediate- and medium-range missiles, 950 submarine-launched missiles and 200 older long-range bombers, "each capable of annihilating a city in a second of time," he wrote.

DEFENDS LIMITED B-1 PRODUCTION

Mr. Taylor said the United States did not need to base its B-1 decision on a previously estimated full fleet of 244, with an initial cost of $28 billion. "Even 100 B-1's would have compelled the Soviet Union to expend huge sums of money and immense effort on developing, producing and maintaining defenses against air attack," he wrote.

The editor warned that the United States also was delaying replacement of its interceptors and other aircraft, while the Soviet Union had given its squadrons a 500 percent increase in both radius of action and weapon load within a decade. "At the same time," he said, "the amount of advance warning of an impending attack that NATO units can expect, even on the basis of highly efficient monitoring, has diminished from an estimated 30 days to four of five days."

Mr. **YOUNG**. Mr. President, the news media have indicated recently that our arms strategists are tending to advise the President and the Congress that we should retain our current strength and capability and not proceed with improved weapons for the future. As evidence of this trend I ask unanimous consent to have printed in the RECORD an article by syndicated columnists, Evans and Novak, that appeared in the Washington Post on December 9, 1977.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "FIXED THEOLOGY" OF CARTER'S ARMS ADVISERS

(By Rowland Evans and Robert Novak)

A White House task force of scientists, whose members and findings reflect the administration's dominant arms-control philosophy, has recommended that President Carter kill Defense Department plans for full development of the proposed MX mobile missile.

What makes this recommendation remarkable is a top-secret Defense Department study in October rejecting the possibility that *any* arms-control agreement could conceivably protect the U.S. land-based Minuteman missile—a finding fully endorsed by Secretary of Defense Harold Brown. Moreover, new tests show the Soviet SS–18 missile to be more accurate than ever, further increasing the vulnerability of U.S. Minuteman silos.

Why, then, would a panel of distinguished scientists not urge the President to move rapidly toward deployment of a mobile missile? Because the key figures on the task force subscribe to a fixed theology of arms control that deplores any new weapons system as a destabilizing sin and preaches that striving for U.S.-Soviet strategic parity is no salvation.

The makeup of the task force was guaranteed to oppose the MX, reflecting the arms-control theology prevailing among the White House officials who selected the panel. This, in fact, is what the current SALT debate is about: Can national safety be found in a policy that automatically bans new weapons, or through a policy that insists on strategic parity?

The MX panel was headed by chemist John Deutch, chief scientist for the Energy Research and Development Administration (ERDA) who is respected by hard-liners. But the mild-mannered Deutch is not assertive enough to win against the stacked deck: Richard Garwin (IBM), Wolfgang Panofsky (Stanford), Marvin Goldberger (Princeton) and Saul Buchsbaum (Bell Laboratories), all physicists, and Engineer Jack Ruina (MIT). All are ardent arms controllers.

The stacked deck, with Garwin on top as the ace, foretold the outcome. During the week of Nov. 28, a report went to the President's desk denying urgent need to do anything about the vulnerability of Minuteman silos. The scientists claimed that the Air Force, instead of seeking deterrence, is pushing the MX for a war-fighting, war-winning capability.

Accordingly, the task force reached its verdict: It is premature to begin full-scale development of the MX in fiscal year 1978–79 as proposed. At the Pentagon, this recommended delay is viewed as a ploy to kill the MX, already delayed two years from the original Ford administration scheme.

Yet without a mobile missile, there will be no secure land-based leg in the U.S. retaliatory triad (land-sea-air). A recent test of the Soviet SS–18 suggests, according to Defense officials, a dramatic break-through in accuracy further threatening the Minuteman. Even before the news of this test, the October Defense Department study presented bleak news for its top-secret readership.

While supporters of the Carter administration's SALT proposals had boasted that they could limit the big Soviet missile system to guarantee security of the Minuteman, the Defense Department report emphatically disagreed. Nothing in the SALT proposals could prevent the Soviet Union from achieving enough accuracy to destroy the Minuteman force.

Soon after reading this report, Secretary Brown—not permitting direct quotation—talked bluntly to reporters Nov. 6: "People who say we have to have Minuteman survive are going to have a hard time with lots of SALT agreements . . . a SALT agreement that will ensure the survivability of Minuteman is very different from any that has ever been discussed by both sides."

Yet, more than two weeks later, a leading congressional SALT enthusiast was putting out precisely the opposite information. Rep. Bob Carr (D-Mich.) an observer at arms-control negotiations in Geneva, told Aerospace Daily on Nov. 23 that "if a SALT agreement is as effective as I think it will be, Minuteman will not grow in vulnerability."

If the Minuteman is not vulnerable, there is no need for the MX in the view of the arms-control lobby. So, Sen. Thomas McIntyre (D-N.H.), a leading congressional foe of the MX, signed a Nov. 29 letter to the President from like-minded senators declaring it is necessary to limit Soviet missile development to protect the Minuteman.

But the invulnerability that the senators want through negotiated limitations on Soviet missilery is deemed unattainable by Brown and his experts. Their alternative is the MX mobile missile, but that violates the theology of arms controllers in the Senate, in the administration and now on the President's special scientific task force. It is Jimmy Carter who must consider whether these theologians know where the nation's safety lies.

Mr. YOUNG. Mr. President, there is every evidence that the Soviet Union is continuing to develop new weapons systems with greater accuracy and capability than their present weapons and they are refusing to agree in SALT negotiations to limitations on such development and deployment of these new weapons in their forces.

If we continue with the trend that is so apparent in canceling of the B–1 program and slowing down the development of our other defense programs, there will be no doubt that the advantage will lie in any future negotiations with the U.S.S.R. I know that all of us want a strategic arms agreement, but we would be highly dissatisfied, to say the least, if such agreement were reached that left this country as a second-rate power subject to our bending to the will of the U.S.S.R. as the one single first-rate power in the world.

Mr. President, history is full of examples of the principle that a nation must negotiate from strength rather than weakness. The editor of Jane's "All the World's Aircraft" has sounded the alarm and indicated the consequences if this country does not sustain its position as a first-rate power equal to the Soviet Union.

The issue before us today is the rescission of $462.0 million of fiscal year 1977 appropriations. This money will not affect the Congress decision to terminate production of the B–1, but will allow the full development of the B–1 including the building and testing of the seven development aircraft. The continuation of the full development of the B–1 will provide a more logical and complete basis for decision concerning a follow-on bomber. The Defense Department and the administration must face up to the replacement of the aging B–52 in the near future if the bomber leg of the strategic triad is to be retained in our deterrent forces.

I urge my colleagues to support the distinguished Senator from California's (Mr. HAYAKAWA) motion to agree with the action of the other body not to rescind the money for the B–1 when it comes to a vote. I regret the vote on the B–1 will go over till January.

Mr. GOLDWATER. Mr. President, during the many years I have served in this body and have had the signal honor to serve with the distinguished Senator from Mississippi, I think this is probably on the very few times we have ever disagreed. Yet I find myself having to admit that I was in agreement with him when the action first came up about a month and a half or 2 months ago. But things have happened since that time, Mr. President, that have caused me to change my mind, and I so informed my friend from Mississippi, that I was going to plead on behalf of the B–1.

I think this is another indication of what is happening to the United States in the eyes of the world, with a President who cannot make up his mind. He reminds me of a Mexican jumping bean: You put it on a hot platter and it jumps, and never comes down in the same place twice.

He said he was not going to go ahead with the B–1 bomber. That was a campaign promise, and I have to admire him for keeping that campaign promise; it must have been a tough one to keep.

But, Mr. President, we have not had any follow-on. We have had no sound reasoning from the White House as to why he wants to stop the B–1. We have had no suggestion from the President as to what he would substitute in the way of a pentrating bomber; and I might say for the information of my colleagues, if they do not understand that term, a penetrating bomber flies about 200 to 300 feet above the ground, not 50,000 feet, and at that speed it flies at mach 0.85, which is 650 miles an hour.

The equipment we have today, the B–52, cannot take that kind of punishment. I have a little inside knowledge on this subject; I have flown both aircraft, and while the B–52 can be flown at about 350 miles an hour at low altitude, it takes a terrible beating from the turbulence flying that low and that fast.

The Senator from Utah (Mr. GARN) put the subject very well, and put it on the President's back to do something about the action the Senator from Utah had charged him with.

The reason why I have become more vitally concerned since talking with my friend from Mississippi some time ago is that there is not only a report from our own strategic institute, but there is also a report from London placing this country in a different position without the B–1. When bodies like that, particularly the London-based strategic institute and the editor of "Jane's All the World's Aircraft," makes a statement like that, it has got to cause people concerned with the military position of this country to be worried. They are seldom wrong; they have been the bible on weaponry for many years.

Then, when I sat in a discussion with Senator JACKSON and Mr. Vance, the Secretary of State, I began to worry about what we were giving away in the SALT talks. I read one day in a newspaper at home that Dr. Brown, the Secretary of Defense, had made some further suggestions as to the limitations of our cruise missiles.

Mr. President, I repeat what I have said before: It will not be long before our negotiators in the SALT talks will give away the only weapons system we have left on the boards today that the Russians really fear, and that is the cruise missile.

Those things, Mr. President, cause me to take a strong stand on this floor in support of the action taken by the House, so that we can proceed with these two extra bombers. Not that they will make a fleet; they will not. I could even argue against them, because we do not need them for test purposes; we have enough test aircraft, but I think the time is close at hand when the President will have to make up his mind concerning the safety of our country. We either move for a new strategic bomber, or stand absolutely naked in this world as far as strategic forces are concerned.

It will take us 4 to 8 years to modify all the B–52's, and even then it will not be a bomber worthy of the modern name. The President is going to be forced to do that, in my opinion, and may be forced to do it very shortly, because the SALT talks, in my humble opinion, will either be concluded, and this body will not approve what they conclude with, or they will just fall on their face, due to the fact that our negotiators were not up to the task when they were there before, and they are not up to the task now.

I think it is necessary, therefore, that we keep at least a skeleton staff on at the factories that are making parts for this bomber, that we keep them close together. There are some 8,000 people involved, and I repeat what the senior Senator from California said: I would not be tempted for one moment to vote for any weapon because it involves jobs. As far as I am concerned, those 8,000 people can go home. But, as far as I am concerned in the next breath, we need them to build the bombers; we need them there when the President is forced to change his mind and go ahead with the construction of a bomber that will make our fleets modern and superior to those of the potential enemy.

Mr. President, I have prepared additional remarks on this subject. I know the hour is getting late. I know many Senators traveled, as I did, and as the junior Senator from California did, all night long getting here from the western part of the United States, expecting to vote on this issue. I fully understand the reason for not voting today, but I wish sometimes the other side of the aisle would have that consideration for us poor Republicans when we know darn well we do not have the votes, but there is nothing we can do about it. Here we find them without the votes, wanting to back up a little bit.

It is all right with me, because as far as I am concerned it is a victory for the side that wants the B–1.

When the President made his decision last June not to produce the B–1, I said he was wrong and that such a decision was not in the best interest of our national security. Nothing has happened since that time to cause me to change my mind. The Senate should recede to the House on this point and the administration should be directed to build these two aircraft.

Mr. President, let us examine what has taken place in the strategic area since last June.

A most important issue is the ongoing SALT II negotiations which, in their present state, are unlikely to result in a treaty that the Senate will ratify. Thus far in its negotiations with the Soviet Union the administration has made at least two serious blunders.

First is our unilateral declaration that 2500 kilometers would be a satisfactory range for the cruise missile, without a specific understanding of what the operational range would be. Even though the administration has stated the cruise missile will be the "senior partner" in our future strategic force, the Department of Defense is currently struggling to insure that its requirement for a definite operational range is protected.

It is terribly ironical that on the one hand, the administration has elected to rely on cruise missiles in the future, while on the other hand, the steps it has taken during the SALT negotiations on the range of the cruise missile make one wonder. A situation like this hardly inspires confidence and certainly it does not reflect a coordinated strategic policy within the administration.

Second, President Carter made a mistake by unilaterally giving up the B–1 when he could have used it first for bargaining leverage at the negotiating table. As things stand now, we really have no negotiating leverage other than cruise missile range and number of cruise missile carriers. Here we have apparently already agreed to a limit of 120 cruise missile carriers, which pretty well determines the total number of cruise missiles we will have. Yet, during our hearings this summer on the fiscal year 1978 supplemental bill, strategic air command witnesses and members of the joint strategic target planning staff were unable to tell us what impact such a force would have on the SIOP. In fact, no senior member of the Department of Defense or National Security Council from the Carter administration prior to the President's decision ever bothered to receive a briefing on the SIOP and examine how such a cruise missile oriented force would work.

Thus far, the United States' performance at the SALT II negotiating table reflects a very serious lack of understanding of how to deal with the Soviet Union. Our negotiators are too eager to make concessions early or of a magnitude not required.

Mr. President, there are other factors that bear on the need to proceed with the production of these two B–1's.

We are facing two serious deficiencies in the 1980's. The first will occur when our present B–52 bomber capability will be seriously degraded as Soviet air defenses improve and expand. The second will occur when our own land-based ICBM force becomes unacceptably vulnerable to Soviet ICBM's as their SS–18's and SS–19's are brought on line.

In my opinion, we are not doing the right thing in either research and development or procurement to overcome these two deficiencies. Production of the B–1 and a return to the original MX development schedule is the way to assure that these deficiencies will not be realized.

Mr. President, there are also international political reasons for building these two aircraft.

For the immediate future, beginning production of these two aircraft now could have a favorable effect on the ongoing SALT negotiations by providing bargaining leverage that our negotiators are now so sorely lacking. The net result could be a treaty more equitable to the United States and one that the Senate could ratify.

Additionally, the Soviet Union is put on notice that throughout the period of the protocol of any SALT II treaty, we will have the continuous option of increasing B–1 production if required. The ongoing production of these two aircraft will provide visible evidence that the United States has a significant option ready at hand and that possibly the Soviet Union, by its adherence to the terms of any protocol or treaty, could have an influence on the total number of B–1's built.

Beginning now facilities additional production that could be funded in the fiscal year 1980 budget. While it is possible to start cold in fiscal year 1980 and still make a 1986 IOC for the 65th B–1, such a start assumes the entire production team of skilled people would be immediately available for rehire. That is an assumption I cannot accept since it is totally unreasonable to expect these skilled craftsmen to be around and available. Anyone in the aircraft business will tell you that a reliable and competent production team is not put together overnight.

Mr. President, contrary to what some say, it is not a waste of $462 million to build these two aircraft. It is a justifiable expense that buys us a badly needed option for our strategic force structure. In fact, if the Senate believes that a 747-type cruise missile carrier is less expensive than what we were going to pay for each B–1 under the original program, it should examine our research and development Subcommittee hearings on the fiscal year 1978 supplemental bill. In response to a question for the record, DOD indicated that each 747-type cruise missile carrier would cost about $93 million. This is hardly a less expensive system than the B–1 and certainly it is far less capable.

Finally, Mr. President, I reiterate that proceeding with these two aircraft will give us additional leverage at SALT II and will greatly enhance the chances of the administration giving us a treaty we could ratify.

I urge the Senate to recognize the need to proceed with this program.

Mr. STENNIS. Mr. President, I shall not detain the Senate, but a very, very few minutes, maybe not over 2 or 3.

Yesterday, last night, and today I did what I could, with the help of others, in trying to get this matter to a vote. But, as is always true when a great deal is to be done in a short time on an important matter, it is very difficult to get fully prepared.

I have been around the B–1 bomber program a good while, and we have had many votes about it before this year; and then this year we have had an unusual number, and I voted in the Appropriations Committee as well as the Armed Services Committee, and I am really disappointed that this matter could not be decided today.

I think it is a highly important matter, and, frankly, it is none too good a situation to see a matter of this importance and consequence decided, at the very least, as a part of a very large bill.

Mr. President, I would like to have quiet in the Chamber, if I may.

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. So, Mr. President, I was saying that this matter is of such consequence I hate to see it decided in a hurried vote as a part of a much more voluminous bill. This bill carries over $7 billion for other matters.

In spite of real efforts to be here, though many came and had to leave, with others making a special effort to be here, this is not too wholesome a time this afternoon, with almost one-fourth of the membership necessarily away, to take this important vote.

The main matter now in my mind, and I say this with all deference to the House and its membership, is that they said they were not going to take up this bill on this day or in this week. They really had other highly important matters. That fact made it clear to me that we could not settle anything today on this matter, I thought, because there would have to be further consideration of the matter. One House can never finalize a bill.

As evidence of preparation, I was thinking very strongly that we would have a vote, until we learned of the situation in the House. I had already sent out a Dear Colleague letter, trying to summarize briefly on one page the high points of what was involved.

But things went the other way. I believe it would be a more wholesome thing for the country, and its defense as a whole, for us to decide this matter in January, I hope, with a good debate on it in each body, and then reach a decision.

Just for the record, I state that the money we are talking about today is what I call old money. We have already left the B–1 money out of the 1978 budget. The President has said he is not going to recommend any procurement funds for the 1979 budget, which makes it almost conclusive that there will not be anything voted for deployment of the B–1 bomber.

We have already voted a very liberal sum for continued research and development on the B–1. As an advocate of the B–1, I think the sound position is to say, "Well, as to this old money we will rescind it" and that is what the amendment says and it is all it says, "And with the President's assurance and his written statement that the B–1 is still a part of the options before him and others, we will save time in the long run by moving along and making some choices among alternatives and get weaponry on the way which will better fortify our position."

That is why I have been urging that we settle this whole issue in a proper way.

I will not go into the facts of this matter at this time. It is carried over without prejudice, of course, as far as our proceedings today are concerned. I hope it can come up when we will not have the pressure of time so we can debate the issue and get a vote on the B–1 matter, not as part of a voluminous bill which has other things in it which some might vote for in the other part of the bill rather than the B–1 issue alone.

I thank those who have been so considerate, those on the other side of my position on this matter, and I thank the leadership, too, for their long patience as we gathered these facts from the people at the Pentagon, the civilian secretaries, the uniformed men, and so on. Even the President of the United States has been trying to get the facts out where we could proceed. Mr. President, I yield the floor.

REJECTING THE RESCISSION OF FISCAL YEAR 1977 PROCUREMENT FUND FOR THE B–1

Mr. HELMS. Mr. President, I disagree with the distinguished Senator from Mississippi (Mr. STENNIS), chairman of one of the committees on which I serve. Frankly, I never feel comfortable when I do not agree with him entirely.

I will say, Mr. President, that I am disappointed that the vote on the B–1 obviously will not be conducted this afternoon, because I think the American people need to have some reassurance from Congress, specifically the Senate, that we have the defense capability of this Nation before us constantly.

Mr. President, I strongly support the position of the House on maintaining production capability of the B–1 bomber. The President's decision to cancel the B–1 amounts to a unilateral concession to the Soviets in the midst of ongoing negotiations on strategic arms limitation. Under the circumstances, this decision is unfathomable. It may be that the President's advisers thought that a show of supposed "good will" on the part of the United States would enhance the negotiating process. I frankly do not understand that kind of reasoning; but let us, for the sake of argument, give it the benefit of the doubt. What has it accomplished in the intervening months?

The answer, Mr. President, is nothing. In fact, it has apparently weakened our bargaining position, and made us more desperate to achieve an agreement at any cost, while the Soviets have conceded virtually nothing. We know enough about the U.S. negotiating posture to see both the general outlines and the particular details of the agreement. There is no need to go into specifics this afternoon, because the detailed criticisms of such capable and objective analysts as Paul Nitze, T. K. Jones, Fred Ikle, John Lehman, and Seymour Weiss have already received wide publicity. But the sum, however, is clear: we are coming closer and closer to an agreement which is neither symmetrical, nor balanced in terms of opposing forces, nor equivalent in terms of supporting strategies appropriate to the contrasting geographic situations of the two superpowers. There is even doubt that key elements of the proposed agreement will be verifiable.

So if we examine the strategic advantages that accrue to the United States as a result of the cancellation of the B–1, if we ask what it has gained for us, the answer, I repeat, is nothing. The disadvantages, however, are enormous. Only a week ago, the editor of "Jane's All the World's Aircraft," published in London, placed the consequences in a context far more stark than anyone in the United States has so far dared. "Jane's" is noted for its objectivity and its impartial analysis. The publication is not affected by the political pressures and image-building of Washington, D.C. And "Jane's" says simply that the President's decision may doom the West.

Writing in the new edition of the authoritative yearbook, Mr. John W. R. Taylor, the editor of "Jane's," says:

> If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown.

Mr. President, I ask unanimous consent that an article from the New York Times, December 8, 1977, entitled "Jane's Editor Says B–1 Decision May Doom the West," be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HELMS. Mr. President, we have a chance, however, to give ourselves a reprieve. We have seen that the President's decision to cancel the B–1 has gained us nothing; I think we must also admit that it would be politically difficult for the President to turn around on the decision on his own initiative. What we must do today is to provide him the political base in Congress to assure him that Congress will support the continuation of the B–1 now that it has been demonstrated that the cancellation has not helped our strategic objectives in SALT. The House has already acted to give him that support; the Senate must do the same to give him a graceful way out.

Mr. President, I think we should also recognize that our decision here today should basically be a decision to keep our production capability open. The funds we are talking about here would procure two B–1's; it is not a total commitment to the whole program. It would be just plain foolish to phase out these aircraft—it would cost an estimated $700 million to terminate procurement on these three alone. But for an estimated $300 to $400 million more, the taxpayers will get sophisticated bomber aircraft, and maintain production lines so that we can move to rapid procurement of additional aircraft when needed. If our relations with the Soviets continue to deteriorate, we must maintain that option.

Indeed, even if the present SALT proposals are accepted, we will need to have that option. Authoritative reports say that the U.S. negotiating team has accepted serious range limitations on the cruise missile. Yet President Carter, in canceling the B–1, said that we could rely on the cruise missile for strategic defenses and, therefore, we did not need the B–1. It would follow, therefore, that if we can't rely on the cruise missile to the maximum extent, then we need the B–1.

Mr. President, the B–1 bomber is designed to penetrate into the enemy's defense system and threaten its very heartland. It is a far more formidable weapon than our aging B–52's. It can fly faster than the speed of sound. It can penetrate enemy territory at tree-top level. It can fly as high as 50,000 feet. It has the longest range of any bomber ever designed and refuel in midair, if necessary, with existing military tankers. Moreover, it can withstand the effects of nuclear blasts, evade enemy radar, and jam enemy radar systems.

By contrast, the B–52's are now more than 25 years old, and even with expensive retrofitting, will not be able to match the performance of the B–1.

Mr. President, a lot has happened since June when the President made his decision to halt the B–1. We have the unique opportunity to rethink this decision and to assure our strategic security for years to come.

EXHIBIT 1

[From the New York Times, Dec. 8, 1977]

JANE'S EDITOR SAY'S B–1 DECISION MAY DOOM THE WEST

LONDON, December 7.—President Carter's decision to scrap the B–1 strategic bomber may help bring about a Western defeat if a general nuclear war breaks out, according to the editor of "Jane's All the World's Aircraft" in a preface in the 1977–78 edition.

The editor, John W. R. Taylor, writes in the authoritative annual that rejection of the bomber, which Mr. Carter considered too costly, may endanger the military balance that has prevented war between the two major powers for a generation. The new 900-page edition is being published tomorrow by Jane's Yearbooks of London.

The Soviet leaders "must be surprised beyond belief that the U.S. President has disposed of the B–1 without asking any Soviet concession in return," Mr. Taylor wrote. "If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown.'

President Carter decided earlier this year to cancel the B–1 program after four test planes had been built. He said that the United States armed forces should rely on the older B–52 bomber and the new cruise missile. The Senate then voted to cut off funds for new B–1's, but the House voted yesterday to appropriate money for two more test planes. The Senate must now vote again on the issue.

CITES MISSILES' LIMITED ABILITY

Mr. Taylor said that cruise missiles, which travel slower than the speed of sound, were incapable of jamming enemy defense radar and were intended primarily for use against undefended targets.

Only one military leader in history, Adolf Hitler, has put his confidence in such a weapon, wrote Mr. Taylor, who is a world aviation authority. And that device, the V–1 missile that was known as the "buzz-bomb," caused Britain little difficulty in World War II, he said. Mr. Taylor suggested that Mr. Carter's unilateral action probably was the reason the Soviet Union did not stage its usual display of air power at celebrations in October marking the 60th anniversary of the Russian revolution.

Mr. Taylor said that perhaps only West Europeans, living within range of two powerful Soviet aircraft, the Tupolev bomber, known in the West as the Backfire, and the Sukhoi Su–19 attack plane, felt strongly apprehensive when their own aircraft were ranged alongside the Soviet arsenal. That force includes about 1,400 intercontinental ballistic missiles, 600 intermediate- and medium-range missiles, 950 submarine-launched missiles and 200 older long-range bombers, "each capable of annihilating a city in a second of time," he wrote.

DEFENDS LIMITED B–1 PRODUCTION

Mr. Taylor said the United States did not need to base its B–1 decision on a previously estimated full fleet of 244, with an initial cost of $28 billion. "Even 100 B–1's would have compelled the Soviet Union to expend huge sums of money and immense effort on developing, producing and maintaining defenses against air attack," he wrote.

The editor warned that the United States also was delaying replacement of its interceptors and other aircraft, while the Soviet Union had given its squadrons a 500 percent increase in both radius of action and weapon load within a decade. "At the same time," he said, "the amount of advance warning of an impending attack that NATO units can expect, even on the basis of highly efficient monitoring, has diminished from an estimated 30 days to four or five days."

Mr. DOLE. Mr. President, I was disappointed to learn that the Senate will not be voting on the B–1 today. I know many of my colleagues made a special effort to be present for the debate and vote on this very important matter.

Mr. President, today the Senate was to have determined whether or not our Government should keep the B–1 manned bomber as a practical option in our strategic triad defense. The Senator from Kansas would like to note that this is the same option that President Carter stated he would maintain until the role and type of a manned penetrating bomber is finally decided and until the cruise missile has, in fact, proven itself.

A NECESSARY DETERRENT

Mr. President, the Senator from Kansas has supported the development of preliminary procurement of the B–1 in the past. In May of 1976, during consideration of authorizations for procurement, I expressed judgment that the B–1 is a necessary element of our strategic deterrent and that would help insure the Nation's essential second-strike capability. Mr. President, I continue to maintain this position today.

MAINTAINING THE TRIAD

As most of us realize, the triad concept states that the United States will maintain three independent, but interdependent strategic nuclear forces consisting of land-based missiles, sea-launched missiles, and manned strategic bombers. Each of these components supports and complements the others in an attempt to complicate an enemy's defense planning and reduce his ability to launch a successful strike against the United States. If we diminish or eliminate any one "leg" of this three-prong defense system, we place a greater burden on the other two and increase our vulnerability.

Our strategic policy is designed to deter nuclear war, to discourage conventional acts upon Western Europe or elsewhere, and to defend against coersive diplomacy. It is also designed to conclude any future wars on terms acceptable to the United States. Mr. President, the triad system is an essential basis for this policy, and the B–1 bomber, I am convinced, is an essential component of the triad that must be developed to its fullest potential.

A WEAK TRIAD

Mr. President, in recent months we have repeatedly been warned by experts that our Minuteman missile force is becoming increasingly vulnerable to the improved Soviet first-strike capability. The MX missile, a ground-launched missile expected to strengthen the triad, is years away from production. With respect to our submarine-launched ballistic missile component of the triad, it has been reported the delivery of the first of our Trident submarines will be delayed until 1981.

Then we have the manned bomber, the B–1, whose fate will be determined by this congressional body today. Far from being an "outmoded weapon system," the B–1 remains a reliable component of our overall defense network. Of the three components of the triad, the manned bomber remains the most flexible and controllable system. In the ever-increasing nuclear environment, these qualities are particularly important.

IMPORTANCE OF THE MANNED BOMBER

In the final analysis, a manned bomber is the most accurate, proven military system. In fact, it is the only U.S. weapon system that has actually been used under combat conditions, where it demonstrated its effectiveness and capabilities.

Mr. President, the Senator from Kansas believes it is vital that the manned bomber be retained as a principal component of the triad.

The question as to why we should revive the B–1 program can be answered very easily in light of the uncertainties surrounding the SALT II negotiations. Mr. President, it is no secret that the SALT II talks are not doing very well. Every day we read in the newspapers that the negotiations are not in favor of the United States. Why should we further jeopardize our position in the SALT talks by discontinuing the B–1 program?

Mr. President, we do not know what will happen to the strategic balance of power in the coming years. Because of this uncertainty, the Senator from Kansas is convinced that we must insure, for the American people, an effective national defense—the B–1 bomber can help provide that capability.

OUR NATIONAL DEFENSE

Mr. President, it is difficult to plan for a nation's future security when there is such a variety of professional opinions about the nature and size of our defense needs. A nation's strategic weapons force is something you plan for, hoping never to have to utilize it. And the only real test of your planning success rests with the ultimate ability to stabilize peace, or to win a final victory in wartime. It is not a pleasant responsibility.

Mr. President, this is an issue that goes beyond simple consideration of costs or special interests—it is an issue that bears directly on national survival. My own reasoning, and that of many of my colleagues leads to the conclusion that our defense interests are best served by maintaining our manned bomber system.

Mr. President, as in the past the Senator from Kansas strongly supports the action of our colleagues in the House to keep the B–1 as a practical option in our strategic triad defense.

RECOGNITION OF THE CITY OF MEMPHIS, TENN., AS THE HOME OF THE BLUES

Mr. HAYAKAWA. Mr. President, it is a shame to devote our closing minutes and hours in the Senate to deliberation of a dreadful subject such as the B–1 bomber, the cruise missile, and other instruments of destruction. I would like to close the session on a happier note, with two resolutions. They happen to do with jazz, with music. I am happy to announce that Senators BAKER and SASSER are joining me in sponsoring this resolution.

The resolution is as follows:

Whereas, the seeds of the Blues came from the work songs and "field hollers" of the American Negro throughout the South and

Whereas, these songs and "hollers" eventually coalesced in unwritten form, into melodies, and

Whereas, these melodies came to be sung in urban centers by those freed from the unjust yoke of slavery, and

Whereas, these songs struck a responsive chord in the hearts of many, and came to be known as "Blues", and

IN THE SENATE OF THE UNITED STATES

Whereas, William Christopher Handy, himself the son of a former slave and a classically trained musician, began to document these blues by writing musical arrangements of them, so that the melodies and structure of the "Blues" could be performed and enjoyed by others and preserved for posterity, and

Whereas, W. C. Handy composed a "Blues" song for E. H. Crump's 1909 mayoralty campaign, and eventually published it in Memphis in 1912, under the title "Memphis Blues", and

Whereas, the publication of "Memphis Blues" by Handy Music Co. of Memphis "crystallised the music into a coherent form, using the twelve-bar structure by which it is still best known", and

Whereas, W. C. Handy continued to compose and arrange the Blues while living for many years at 659 Jennette Street, Memphis, and encouraged and supported others in the same endeavor, thereby earning for himself the title of "Father of the Blues", and

Whereas, the City of Memphis has been the birthplace or starting place for hundreds of notable performers, composers, arrangers and publishers of the blues, such as Gus Cannon, Furry Lewis, Memphis Minnie, Memphis Slim, Lil Hardin, Alberta Hunter, B. B. King, Bukka White, Roosevelt Sykes, Frank Stokes, Will Batts, Will Shade, Little Lara Dukes, Ma Rainey II, Sun Smith, Charlie Banks, Mose Vinson, Big Sam Clark, Sonney Blake, Jim Jackson, Robert Wilkins, Nathaniel Beauregard, Joe Dobbins, Houston Stackhouse, Joe Willie Wilkins, L. T. Lewis, Son Burse and countless others, and

Whereas, the City of Memphis has become known throughout the world as the fertile ground from which this uniquely American musical form finally and definitely presented itself to music lovers everywhere:

Be it therefore resolved: that the City of Memphis, Tennessee, be officially proclaimed by this body as

"THE HOME OF THE BLUES"

a title it has for decades unofficially held and richly deserves.

Mr. BAKER. Mr. President, I take this opportunity only briefly to congratulate the distinguished Senator from California for his perceptive evaluation of one of the many merits and assets of a great city. I am sure Memphis is as grateful to him for this recognition as I am to him for bringing it to our attention. I would like to associate myself with his remarks.

Mr. HAYAKAWA. I thank the Senator from Tennessee.

Mr. HELMS. Mr. President, inasmuch as Tennessee was once part of North Carolina, like the distinguished Senator from Tennessee I want to be associated with the remarks of the distinguished Senator from California.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 335), recognizing the city of Memphis as "the home of the blues."

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 335) was agreed to.

The preamble was agreed to.

Mr. HAYAKAWA. I am very grateful to the Senator from North Carolina.

Mr. BAKER. Mr. President, I might say, if I may, for a moment, I was in North Carolina recently, where I lavished on my audience great praise for the distinguished Senator from North Carolina, which he richly deserves. In the course of things, I tried hard to disavow the allegation that he makes regularly, that all of us in Tennessee are those who were expelled from North Carolina.

RECOGNITION OF "MEMPHIS SLIM" AS AMBASSADOR AT LARGE OF GOOD WILL OF THE UNITED STATES

Mr. HAYAKAWA. Mr. President, this resolution is also cosponsored by Senator BAKER and Senator SASSER. It deals with a famous jazz musician known as Memphis Slim. The resolution reads in part as follows:

Whereas, on the 3d day of September 1915, there was born in Memphis, Tennessee a boy—Peter Chatman—who was destined to become a great folk and blues artist, and

Whereas, this same lad became very early in life, proficient at piano, singing the Blues, and song-writing, winning recognition and high honors from the start, and

Whereas, he spread his wings at an early age, far and wide, capturing the attention of music-lovers everywhere and causing sensations in Chicago and New York, and

Whereas, he became know all over our nation and thereafter the entire world, as "Memphis Slim", and

Now therefore, in recognition of his position in our nation as entertainer, authentic folk and Blues artist, spreading good cheer throughout a world that can use a little more good cheer,

We, the Senate of the United State of America resolve and proclaim that Memphis Slim has earned and does indeed have, the title of "Ambassador-at-large of Good Will of the United States," and with this title go the good wishes of our people everywhere.

Also with this title go the good wishes of the Senate.

I ask unanimous consent for immediate consideration of the resolution.

Mr. ROBERT C. BYRD. Reserving the right to object, the Senator has cleared the resolution on this side of the aisle. I state that I have no objection.

The PRESIDING OFFICER. The clerk will state the resolution by title.

The legislative clerk read as follows:

A resolution (S. Res. 336) recognizing "Memphis Slim" as ambassador at large of good will for the United States.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 336) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, is as follows:

Whereas, On the 3d day of September 1915, there was born in Memphis, Tennessee a boy—Peter Chatman—who was destined to become a great folk and blues artist, and

Whereas, This same lad became very early in life, proficient at piano, singing the Blues, and song-writing, winning recognition and high honors from the start, and

Whereas, He spread his wings at an early age, far and wide, capturing the attention of music-lovers everywhere and causing sensations in Chicago and New York, and

Whereas, He became known all over our nation and thereafter the entire world, as "Memphis Slim", and

Whereas, In 1959 he received standing ovations for his performances at the Newport Folk Festival and at Carnegie Hall, and

Whereas, He then proceeded to take Paris by storm; and one by one the cities of Europe, Africa and Asia, continuing to this present day as an artist of international calibre, and

Whereas, He, Memphis Slim, representing the pinnacle of musicianship, has worked tirelessly and continuously in presenting the finest programs of his chosen profession, in a manner of which the United States can be justly proud, and

Whereas, He has in the course of his life all over this world, conducted himself in courteous, gentlemanly, fashion, and continued to be an admirable representative of this country, winning high honors for his music everywhere,

Now therefore: In recognition of his position in our nation as entertainer, authentic folk and Blues artist, spreading good cheer throughout a world that can use a little more good cheer,

We, the Senate of the United States of America resolve and proclaim that Memphis

> Slim has earned and does indeed have, the title of 'Ambassador-at-large of Good Will of the United States,' and with this title go the good wishes of our people everywhere.

The PRESIDING OFFICER (Mr. MOYNIHAN). The Chair cannot forfend noting that we have just congratulated a blues singer for spreading good cheer.

Mr. HAYAKAWA. I thank the Chair.

AMENDMENT OF PARAGRAPH 6(j) OF RULE XXV OF THE STANDING RULES OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The legislative clerk read as follows:

> A resolution (S. Res. 337) amending paragraph 6(j) of rule XXV of the Standing Rules of the Senate.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. ROBERT C. BYRD. Mr. President, by way of explanation of this resolution, it amends the action that was taken earlier this year by the Senate in reorganizing its committee system so as to permit Mr. HATHAWAY and, I believe, Mr. MATHIAS, to continue to serve another year on the Intelligence Committee. Under the legislation that was passed earlier this year, which bears the name of the distinguished Senator from Illinois (Mr. STEVENSON), it would have been necessary for Mr. HATHAWAY to have given up his membership on either the Small Business Committee or on the Intelligence Committee at the close of the present session. But in view of the fact that he is the chairman of the Intelligence Committee's Subcommittee on Budget Authorization and that that committee has done a pioneering job this year in reviewing a line-by-line review of every item in the intelligence community's budget for fiscal year 1978, something that has never been done before, and in view of the fact that that committee needs his continuing talents on the committee, I have offered this resolution today, after discussing it with Mr. HATHAWAY and urging him, of course, to stay on the committee for another year.

I have offered this resolution which would repeal our earlier action only to the extent that it would allow Mr. HATHAWAY to retain his membership on both of those committees and also allow Mr. MATHIAS, on the Republican side, the same privilege.

Mr. BAKER. Mr. President, I join with the majority leader in urging that the Senate adopt this measure. For some time, now, we have discussed the possibility of arranging for both the distinguished Senator from Maine and the distinguished Senator from Maryland to remain on the Intelligence Committee because of their special situations and special obligations, and special opportunities to be of further service. I am delighted that the difficulties have been worked out in this manner. I think it is not only an appropriate way to handle this special circumstance, but will add significantly to the value of the Intelligence Committee's future activities. I am happy to join the majority leader in urging its adoption.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader. I have cleared this resolution with Mr. STEVENSON and have cleared it with Mr. CANNON, the chairman of the Committee on Rules. I have talked with most of the members of the Democratic Steering Committee today, those members I have been able to contact, and all of these members are unanimous in believing that it is important that this resolution be passed which will enable Mr. HATHAWAY to continue his chairmanship for another year and prevent the interruption of the changing chairmanship which would otherwise occur if it were not for the enactment of this resolution.

Mr. STEVENSON. Mr. President, I commend the Senator from Maine for his willingness to serve another year as chairman of the Intelligence Committee's Subcommittee on Budget Authorization and endorse this resolution which enables him to do so. I am pledged to police the Senate reorganization and would ordinarily be reluctant to support such a concession for fear of inviting more and a repetition of the indulgences which necessitated reorganization. This resolution, however, not only permits Senator HATHAWAY to continue his work on the Intelligence Committee; it does so on terms that were granted to other members on other committees. They were given this Congress to complete their work and make their choice of committees to give up. It would not be fair to do less for Senator HATHAWAY, and his work is important.

Mr. President, under the leadership of the Senator from Maine, the Intelligence Committee, on which I also serve, has recently concluded a pioneering effort in reviewing a line by line review of every item in the intelligence community's budget for fiscal year 1978. The product of that effort was a report made which enables each member to know precisely how much is being spent for intelligence efforts and what those efforts will be during the coming months.

Never has such an effort been attempted. It demonstrates that the secret intelligence activities of the Government can be subject to responsible congressional scrutiny without jeopardizing the confidentiality of highly sensitive operations vital to our national security.

Mr. President, it is important that the budget authorization process go forward for 1 more year without the interruption of a change in chairmanship. We are all breaking new ground in our intelligence oversight responsibilities. The process of education alone has been an enormous task, requiring many days of briefings, inspections and hearings and markups. It would be a mistake to jettison the unique expertise of the Senator from Maine, who has devoted great amounts of his time and energy to this task prematurely.

The Executive is now in the process of responding to numerous requests which the Senator's subcommittee has levied months ago for reports, fuller explanations and responses to intelligence budget changes and recommendations desired by the committee and the Senate. Committee follow-up to these first Executive responses will benefit from the knowledge of the Senator from Maine. The Executive is also in the process of implementing reorganization of the intelligence community, and the Senator's knowledge of the arcane intelligence budget will be of value to the Senate as it attempts in this session to fashion legislative charters for the intelligence community.

So, I endorse this resolution, Mr. President. It provides a limited exception to the provisions of Senate resolution 4 by permitting his service on four committees for 1 additional year. But this sets no precedent. It was done in other instances. It is appropriate and warranted in this case by the importance of the continuity to the Senator's work on the Intelligence Committee. I understand that this resolution has the approval of the Senate's leaderships.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to as follows:

> *Resolved*, That paragraph 6(j) of rule XXV of the Standing Rules of the Senate is hereby amended by striking the word "first" and inserting in lieu thereof the word "second".

Mr. ROBERT C. BYRD subsequently said: Mr. President, I move to reconsider the vote by which Senate Resolution 337 was adopted earlier.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are various nominations which have been reported earlier today from the Committee on the Judiciary, the Committee on Banking, Housing, and Urban Affairs, the Committee on Governmental Affairs, and the Committee on Human Resources. I believe that these have been cleared on the other side of the aisle.

Mr. President, I ask unanimous consent that the Senate go into executive session to consider these nominations and that the 1-day rule be waived.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving

the right to object, and I will not object, as usual the distinguished majority leader has correctly reflected our consultation on this matter and we are pleased to report that the nominations have been cleared by the relevant and responsible Members on this side, and we have no objection to proceeding to their consideration.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nominations will be stated.

The nominations considered en bloc are as follows:

DEPARTMENT OF JUSTICE

Louis G. Villaescusa, Jr., of California, to be U.S. marshal for the central district of California for the term of 4 years vice Gaylord L. Campbell, term expired.

Donald J. Kindt, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years vice Robert G. Wagner, term expired.

Mack Burton, of Arkansas, to be U.S. marshal for the western district of Arkansas for the term of 4 years, vice Lee R. Owen.

Robert M. Thompson, of Wisconsin, to be U.S. marshal for the western district of Wisconsin for the term of 4 years, vice Leonard E. Alderson, resigned.

SUPERIOR COURT OF THE DISTRICT OF COLUMBIA

Carlisle Edward Pratt, of the District of Columbia, to be an Associate Judge of the Superior Court of the District of Columbia for a term of 15 years, vice Orman W. Ketcham, retired.

Frederick Howard Weisberg, of the District of Columbia, to be an Associate Judge of the Superior Court of the District of Columbia for a term of 15 years, vice Charles W. Halleck, term expired.

POSTAL RATE COMMISSION

Simeon Miller Bright, of West Virginia, to be a Commissioner of the Postal Rate Commission for the term expiring November 22, 1982, vice Paul A. Miltich.

EXPORT-IMPORT BANK OF THE UNITED STATES

Thibaut de Saint Phalle, of New Jersey, to be a member of the Board of Directors of the Export-Import Bank of the United States, vice R. Alex McCullough, resigned.

NATIONAL SCIENCE FOUNDATION

Joseph Mayo Pettit, of Georgia, to be a member of the National Science Board, National Science Foundation, for a term expiring May 10, 1982, vice Robert Henry Dicke, term expired.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc and that they be shown in the RECORD as having been considered en bloc.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to reconsider en bloc the votes by which the nominations were confirmed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the votes.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

DONALD J. KINDT

Mr. METZENBAUM. Mr. President, I rise today to urge the confirmation of Donald J. Kindt, of Mansfield, for the post of U.S. marshal for the northern district of Ohio.

I have known Mr. Kindt for many years and can personally vouch for his capabilities as an administrator. For all of his adult life, he has been in public service, including a term as director of personnel for the Ohio Department of Transportation, one of the largest agencies in Ohio State government, with more than 12,000 employees under his immediate jurisdiction.

He is a devoted family man and a man who has proven his love of country by the sacrifices he made as an infantryman in the U.S. Army in Korea where he was awarded the Bronze Star for his courage.

When it became known that Mr. Kindt was being considered for this important post, my office was deluged with letters of recommendation from throughout the State of Ohio. The depth of feeling was evident in these letters. Running through all the letters were words such as ability, leadership, commonsense, integrity, honesty, and dedication.

The words were never more aptly used than in reference to Donald Kindt. I urge my colleagues to vote to confirm his appointment, an appointment that will do credit to the Department of Justice, the State of Ohio, and the United States of America.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

There being no objection, the Senate resumed the consideration of legislative business.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUSPENSION OF PARAGRAPH 6 OF RULE XXXVIII RELATING TO NOMINATIONS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that paragraph 6 of rule XXXVIII of the Standing Rules of the Senate, relating to proceedings on nominations, be suspended with respect to nominations unacted upon during the present session, except those nominations enacted upon by the Committee on Energy and Natural Resources, and the status quo of nominations not to be affected by the sine die adjournment of the 1st session of the 95th Congress, except for those nominations unacted upon by the Committee on Energy and Natural Resources.

Mr. BAKER. Mr. President, reserving the right to object, I must say that it is not possible for me to submit to those Members on this side the question of clearance of a unanimous-consent agreement of this type. Therefore, it is with reluctance, but nonetheless necessary, that I object, and I do now object.

The PRESIDING OFFICER. Objection is heard.

APPEARANCE OF THE SECRETARY OF THE SENATE AS AMICUS CURIAE

Mr. ROBERT C. BYRD. Mr. President, I sent to the desk a resolution on behalf of myself and Mr. BAKER, and I ask that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 338) authorizing the Secretary of the Senate to appear on behalf of the Senate as amicus curiae in certain cases challenging the constitutionality of the legislative veto.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. Res. 338) was considered and agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

SENATE RESOLUTION 338

Whereas, the Constitution vests in the Congress the power to make all laws which shall be necessary and proper for carrying into execution the powers vested in Congress and all other powers vested by the Constitution in the Government of the United States or in any department or officer thereof;

Whereas, the Congress has determined, in some instances, that it is necessary and proper that laws contain provisions commonly known as a "legislative veto"; and

Whereas, the constitutionality of legislative veto provisions is challenged in *Atkins, et al.* v. *United States*, now pending before the Supreme Court of the United States, No. 72-214, on petition for writ of certiorari, and in *Chadha* v. *Immigration and Naturalization Service*, now pending before the United States Court of Appeals for the Ninth Circuit, No. 77-1702: Now, therefore, be it

Resolved, That the Secretary of the Senate is authorized and directed to take the necessary steps to appear on behalf of the Senate as amicus curiae in *Atkins, et al.* v. *United States* and in *Chadha* v. *Immigration and Naturalization Service* in order to defend the constitutionality of the legislative veto provisions involved in such cases and the power of Congress to make all laws as it shall determine to be necessary and proper for executing its constitutional powers.

SEC. 2. Expenses incurred under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the Secretary of the Senate.

SEC. 3. The Secretary of the Senate shall transmit a copy of this resolution to the Supreme Court of the United States and to the United States Court of Appeals for the Ninth Circuit.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR CERTAIN ACTION BY OFFICERS OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, notwithstanding sine die adjournment of the two Houses, the President of the Senate, the President pro tempore, the Deputy President pro tempore, or the Acting President pro tempore be, and they are hereby, authorized to sign enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled, and that the Secretary of the Senate be, and is hereby, authorized to receive messages from the House of Representatives.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR RECORD TO REMAIN OPEN UNTIL 7 P.M. TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the RECORD remain open until 7 p.m. today for Senators to introduce statements, petitions, memorials, bills, and resolutions, if they so wish.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MELCHER. Mr. President I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MATSUNAGA). Without objection, it is so ordered.

FARMERS' AND RANCHERS' MESSAGE TO THE COUNTRY

Mr. MELCHER. Mr. President, I am aware of the grave message American agriculture is sending to the country. Here is my response to them.

Farmers and ranchers of America—though there are not many of you left—thousands of surviving American agriculture producers came to Washington last Saturday with tractors, trucks and pickups.

As a Senate advocate for the 2½ million American farm and ranch operators I welcomed those of you who came to our Nation's Capitol to protest low commodity prices. I join with you in that protest and have waited all of the 9 years I have been in Congress for your case to be made here—where so many decisions and policies are adopted which affect the prices you receive for your products that supply both American consumers and increasingly supply consumers around the world.

It is a gift of God that in America you can grow food and fiber in abundance. But it is only through your toil and sweat and at your own risk that you bring from the Earth the annual abundance of food and fiber that is America's great asset. Yet here in Washington in almost all policymaking instances, your prices are damaged in ways that hurt you, cripple you financially, and in too many cases Government policies set the high costs that you must pay to stay in business, putting you in the hole with the bankers.

Saturday was a cold, blustery day—and the woolen clothing I wore along with my sheepskin coat were the products of a vanishing American resource. Our sheep numbers have declined from 33 million in 1950 to 12 million this year while Americans become more reliant on lamb and wool imports.

Round steak choice grade, yield two, cost us $1.30 per pound this weekend from steers for which you received less than 40 cents per pound—so we get a bargain and you have a loss from what has become a high risk venture—feeding of livestock. On January 1 this year we had 123 million head of cattle in the United States, so many as to make you and me scratch our heads about why we import 2 billion pounds of red meat from foreign countries that do not have our abundance. Yet that is the policy established here in Washington by our own representative government.

American grain, produced in surplus and consumed around the world more than ever before, is sold at prices below cost of production to countries that have set much higher prices on their own products. Grain-short Arab oil countries set their price on oil at $14 per barrel—500 percent of the price in 1972—and buy our wheat at 50 percent of 1974 prices. Almost all beef-producing countries refuse to buy beef from us but our trade policy is to buy beef from them when we do not need it. As a result, you, the livestock producers, suffer from a depressed market.

Costs of $3.50 per bushel for wheat, and $2.10 per bushel for corn are documented by numerous land grant colleges. But under administration pressure Congress set much lower price support loan levels which quickly become the world price and you go broke because your costs are hard and the market is soft.

We are told by the administration that food costs need to be stabilized to hold down inflation. They tell us consumers cannot stand any more inflation but that is exactly what has happened to you, as you well know. Inflation has driven farm and ranch production costs so high that your operations are sinking.

In 1970 total production costs for America's agriculture producers was $44.4 billion and rose to $81.7 billion in 1976.

You know it in your pocketbook, and collectively on the producing end you have almost doubled your bank mortgages from $53 billion to $102.1 billion in the same 6-year period. And during that time there are 202,000 fewer of you producing as total numbers of American farmers and ranchers shrunk from 2,954,000 to 2,752,000.

It is apparent that total production of agricultural products has not dwindled from fewer producers but has increased. When the calendar rolls out 1977 these statistics will be even more staggering. But greater efficiency from fewer farm and ranch operators does not save your economic hide.

Your costs, which have almost doubled, have not been matched by increased commodity prices.

Wheat prices of 1970 at $1.33 per bushel compare to $2.00 this July. Corn in 1970 at $1.33 per bushel now sells for $1.91. Choice steers at Omaha in 1970 at 30 cents per pound now bring 40 cents.

For American consumers 1970 food costs were 17.3 percent of the total disposable income. That percentage dropped to 16.3 percent in 1972 and 1973, and then went back up to 17.1 percent in 1975. But it fell again in 1976 to 16.8 percent and is running at 16.8 percent now. That is no more, and for most families less, than is spent owning and running the family car or cars. Food costs for Americans are at a lower percent of total disposable income than any other developed country in the world.

The plight with which you struggle is not just your problem. It is America's problem. Our whole economy suffers. And that suffering is not addressed adequately by our Government. You are not organized but you must be in a country where virtually every segment of our economy is organized. You sell in a competitive world while agricultural producers in other countries such as the European Community are either protected against imports or are favored by one-sided government-negotiated exports to us such as cattle or beef from Australia, New Zealand, or Mexico.

The imbalance between your costs and the prices you receive is entirely heartless for you and your families and is destructive of a stable American economy. This imbalance must be understood by the public and addressed by the Government.

Your protest is real, and without better prices your production cannot continue. The stage is set for further economic disaster to you and the rest of us. Before it is too late we must resolve the inequity of commodity prices.

I am glad that some of you came to Washington and that others of you went to cities throughout the country last Saturday. You and I know the national economy is in bad shape because the agriculture economy has been pulverized.

Your message is loud and clear. Correct the farm price situation before it is too late. America cannot be on the move until American agriculture is made solvent again.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. SCOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE AMERICAN LEGION SPEAKS ON THE PANAMA CANAL ISSUE

Mr. SCOTT. Mr. President, within a few months after the Senate reconvenes we will probably be called upon to pass upon the treaties negotiated between the executive departments of our government and the Government of Panama. In this connection, the National Commander of the American Legion, in the December issue of the American Legion magazine, has again expressed his opposition to ratification. As some Senators may not have read the national commander's statement. I ask unanimous consent that it be printed in the Record for the information of the Senate.

There being no objection, the statement was ordered to be printed in the Record as follows:

We Have Again Studied the Treaty; We Still Say "No"

Why is The American Legion so vehement in its opposition to the Panama Canal Treaty? Does it want to alienate all of Latin America? Does it want to invite sabotage against the canal? Does it really believe the canal is still vital to U.S. security?

The questions have dogged me in my first months as your national commander. I believe I should use this forum to reply so every American Legion member understands our position before Senate debate.

First, our opposition is directed at the treaty, not at the people of Panama. The American Legion has consistently supported fair and equitable payments to Panama for the canal, generous social and material assistance for its people and constant modernization of the canal for the economic and military well-being of the entire Western Hemisphere.

Debaters avoid these economic and security factors.

Isn't it disturbing that although this treaty has been negotiated by four U.S. administrations, the text was not made public until the eve of the gala signing ceremony at the White House? We were treated to a spectacle in which virtually every hemisphere chief of state signed a protocol for a treaty they had not read!

Subsequently, it became apparent that Washington and Panama City did not even agree what the text meant. Worse, the controversy has centered on circumstances under which the United States could exercise its military might to protect the canal and the hemisphere. President Carter and President Torrijos finally met and announced that they agreed on the interpretation of the treaty's vague language—but they did not clarify the language in the treaty.

An "understanding" between two heads of state is fine, but it lacks the force of law. What happens when Mr. Carter and/or Gen. Torrijos have left office? The American Legion does not believe such questions should rest on a reed called "understanding."

In 1975 alone, 14,000 ships transited the canal. Forty-five percent of these voyages originated in the United States. These ships were loaded with the agricultural and manufactured exports vital to our balance of trade and payments. Any increase in tolls by Panama could have devastating effect on the world market position of the American farmer, laborer, businessman. The Mississippi Valley, Plains States and the east coast are vulnerable.

Should the canal ever be closed to U.S. ships, the Commerce Department estimates a $932 million jump in the price of U.S. exports, a $583 million jump in the price of imports. The impact would be chaotic.

On military issues there have been honest differences of opinion between highly qualified men who have debated the importance of the canal, but none has denied that loss of the canal in a time of emergency could be disastrous. Yet the very provisions of the treaty that are supposed to guarantee our right of intervention are those that cause anguish among left-wing Panamanians.

It's true that our biggest aircraft carriers cannot transit the canal. But 95 percent of U.S. fighting ships can, including powerful nuclear forces. There's a lot more to the Navy than its giant flattops.

And what about Panama, this government headed by Gen. Torrijos?

His friendship for Castro is disquieting. His henchmen and propagandists have flayed the United States for years with phoney "colonialism" charges. Yet who has advertised the human rights survey of Panama by the respected Freedom House? That survey ranks Panama as the most dictatorial regime in the Hemisphere.

When Torrijos seized power in Panama in 1968, the country had a debt of $167 million. Today it owes over $1.5 billion and there has been precious little improvement in the lot of the average Panamanian. Under the treaty, the United States—in addition to huge annual payments to Panama—would encourage banks to loan Torrijos another $300 million.

Faced with all this, we are asked to endorse:

1. Surrender of control over a vital waterway built by American ingenuity and American money on land fairly purchased by the United States.
2. Surrender of all defense rights within 22 years, sooner should Panama exercise full sovereignty.
3. Surrender of U.S. sovereignty over the canal and the Canal Zone and the exposure of the human rights of U.S. citizens to Torrijos' law.
4. Granting veto power to Panama over any potential U.S. plan to build another Atlantic-Pacific canal anywhere in Central America.
5. Acceptance of nebulous language—backed by imprecise personal agreements—that U.S. warships would have priority use of the canal during any emergency.

The American Legion cannot endorse such a treaty. We pray that the Senate shares our fears.

FISHERY CONSERVATION ZONE TRANSITION ACT

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 9794.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the House recede from its disagreement to the amendment of the Senate to the bill (H.R. 9794) entitled "An Act to bring the governing international fishery agreement with Mexico within the purview of the Fishery Conservation Zone Transition Act", and concur therein with the following amendment:

In lieu of the matter inserted by the Senate amendment, insert:

Sec. 3 (a)(1) Section 2 of Reorganization Plan Numbered 4 of 1970 (relating to the National Oceanic and Atmospheric Administration, 84 Stat. 2090) is amended to read as follows:

"(e)(1) There shall be in the Administration a General Counsel and five Assistant Administrators, one of whom shall be the Assistant Administrator for Coastal Zone Management and one of whom shall be the Assistant Administrator for Fisheries. The General Counsel and each Assistant Administrator shall be appointed by the Secretary, subject to approval of the President, and shall be compensated at a rate now or hereafter provided for level V of the Executive Schedule Pay Rates (5 U.S.C. 5316).

"(2) The General Counsel shall serve as the chief legal officer for all legal matters which may arise in connection with the conduct of the functions of the Administration.

"(3) The Assistant Administrator for Coastal Zone Management shall be an individual who is, by reason of background and experience, especially qualified to direct the implementation and administration of the Coastal Zone Management Act of 1972 (16 U.S.C. 1451 et seq.).

"(4) The Assistant Administrator for Fisheries shall be responsible for all matters related to living marine resources which may arise in connection with the conduct of the functions of the Administration.".

(2) Subsection (a) of section 15 of the Coastal Zone Management Act Amendments of 1976 (15 U.S.C. 1511a) is repealed.

(b) Section 5316 of title 5, United States Code, is amended by striking out paragraph (140) and inserting in lieu thereof the following new paragraphs:

"(140) Assistant Administrator for Coastal Zone Management, National Oceanic and Atmospheric Administration.

"(141) Assistant Administrator for Fisheries, National Oceanic and Atmospheric Administration.

"(142) Assistant Administrators (3), National Oceanic and Atmospheric Administration.

"(143) General Counsel, National Oceanic and Atmospheric Administration."

(c) Section 5108(a) of Title 5, United States Code, is amended by striking out "3293" and inserting in lieu thereof "3301".

Mr. STEVENS. Mr. President, I am disturbed that the House of Representatives saw fit to delete our right to confirm one of the appointments in the National Oceanic and Atmospheric Administration. We do need this bill passed. There is a time problem involved. I intend to take up the subject again next year with my good friend from South Carolina. It was at his request that we seek the clearance of this House amendment at this time with the understanding that I feel the Senate should not allow this to be a precedent, that we are going to permit the House to delete our powers of confirmation which have been previously established by prior law. I move that the amendment be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

ROUTINE MORNING BUSINESS

(Routine morning business transacted and additional statements submitted today are as follows:)

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate, messages from the President of the United States submitting the nomination of Louis G. Villaescusa, Jr., of California, to be United States marshal for the central district of California was received on December 3, 1977, and was referred to the Committee on the Judiciary.

On December 9, 1977, messages were received submitting sundry nominations, which were referred to the appropriate committees.

On December 8, 1977, a message was received withdrawing the nomination of Frank M. Johnson, Jr., of Alabama, to be Director of the Federal Bureau of Investigation.

On December 12, 1977, messages were received submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received during adjournment are printed at the end of today's proceedings of the Senate.)

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate a message from the President of the United States submitting the nomination of Alvin Harry Gandal, of Maryland, to be a Commissioner of the Postal Rate Commission, which was referred to the Committee on Governmental Affairs.

PRESIDENTIAL APPROVAL

A message from the President of the United States stated that on December 13, 1977, he had approved and signed the following act:

S. 1131. An act to authorize appropriations for the Nuclear Regulatory Commission for the fiscal year 1978, and for other purposes.

REPORT ON INTERNATIONAL SECURITY ASSISTANCE DEFERRALS—MESSAGE FROM THE PRESIDENT—PM 135

The **PRESIDING OFFICER** laid before the Senate the following message from the President of the United States, which was referred to the Committee on Appropriations, the Committee on the Budget, the Committee on Foreign Relations, and the Committee on Finance, jointly, pursuant to the order of January 30, 1975:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report three new International security assistance deferrals totalling $806.4 million in budget authority and one new deferral of $3.4 million in outlays for the Antirecession financial assistance fund in the Department of the Treasury.

In addition, I am reporting routine revisions to four deferrals previously transmitted. A deferral for the Emergency refugee and migration assistance fund is increased by $5.8 million in budget authority. Three deferrals of funds provided to the Department of the Treasury are increased by a total of $13.3 million of which $11.9 million is deferred budget authority and $1.3 million is an increase to a deferral which only affects outlays.

The details of each deferral are contained in the attached reports.

JIMMY CARTER.

THE WHITE HOUSE, *December 15, 1977.*

MESSAGES FROM THE HOUSE

At 11:08 a.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the House has passed the following joint resolution, in which it requests the concurrence of the Senate:

H.J. Res. 674. Joint resolution relative to the convening of the second session of the Ninety-fifth Congress, and for other purposes.

The message also announced that the House has agreed to the following concurrent resolutions, in which it requests concurrence of the Senate:

H. Con. Res. 442. Concurrent resolution providing for the sine die adjournment of the first session of the Ninety-fifth Congress.

H. Con. Res. 443. Concurrent resolution requesting the President to return the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency, and providing for its reenrollment with technical corrections.

At 4:53 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes.

The message also announced that the House agrees to House Resolution 938, a resolution that a committee of two Members be appointed by the House to join a similar committee appointed by the Senate, to wait upon the President of the United States and inform him that the two Houses have completed their business of the session and are ready to adjourn, unless the President has some other communication to make to them.

ENROLLED BILL SIGNED

The message further announced that the Speaker has signed the following enrolled bill:

H.R. 3199. An Act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

The enrolled bill was subsequently signed by the President pro tempore.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The **PRESIDING OFFICER** laid before the Senate the following communications, which were referred as indicated:

EC-2410. A communication from the Acting Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, the cumulative report on rescissions and deferrals for the month of December 1977, pursuant to the Congressional Budget and Impoundment Control Act of 1974 (with accompanying papers); pursuant to the order of January 30, 1975, jointly referred to the Committee on Agriculture, Nutrition, and Forestry; the Committee on Appropriations, the Committee on Armed Services; the Committee on Banking, Housing, and Urban Affairs, the Committee on the Budget, the Committee on Commerce, Science, and Transportation, the Committee on Energy and Natural Resources, the Committee on Finance; the Committee on Foreign Relations, the Committee on Governmental Affairs, the Committee on Human Resources, and the Committee on the Judiciary.

EC-2411. A communication from the Secretary of Agriculture, transmitting a draft of proposed legislation to amend the Act of July 2, 1962, to authorize intrastate quarantines under extraordinary emergency conditions, to authorize U.S. Marshals to serve warrants under the Act, and for other purposes (with an accompanying paper); to the Committee on Agriculture, Nutrition, and Forestry.

EC-2412. A communication from the Secretary of Agriculture, transmitting, pursuant to law, the annual report on Public Law 480 activities for fiscal year 1976 and the transitional quarter (with an accompanying paper); to the Committee on Agriculture, Nutrition, and Forestry.

EC-2413. A communication from the Acting Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a report on the reapportionment of the appropriation "Salaries and Expenses", Agricultural Stabilization and Conservation Service, on a basis which indicates the necessity for a supplemental estimate of appropriation (with an accompanying paper); to the Committee on Appropriations.

EC-2414. A communication from the Deputy Assistant Secretary of Defense (Manpower, Reserve Affairs and Logistics) (Military Personnel Policy), transmitting, pursuant to law, a report on aviation career incentive pay for the period July 1, 1976 through August 31, 1977 (with accompanying papers); to the Committee on Armed Services.

EC-2415. A communication from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting, pursuant to law, a report on the nature, location, and estimated cost of sixteen construction projects proposed to be undertaken by the Air National Guard (with an accompanying paper); to the Committee on Armed Services.

EC-2416. A communication from the Secretary of Housing and Urban Development, transmitting, pursuant to law, a report on a study of home inspection and warranty programs, as of June 1977 (with accompanying reports); to the Committee on Banking, Housing and Urban Affairs.

EC-2417. A communication from the

Chairman of the National Market Advisory Board, transmitting, pursuant to law, a report to the Securities and Exchange Commission entitled "Next Steps to be Taken to Facilitate the Establishment of a National Market System", as of December 6, 1977 (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC-2418. A communication from the Vice President for Government Affairs of the National Railroad Passenger Corporation, transmitting, pursuant to law, a report, for the months of June, July, and August 1977 on the average number of passengers per day on board each train operated, and the ontime performance of each train operated (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC-2419. A communication from the Vice President for Government Affairs, National Railroad Passenger Corporation, transmitting pursuant to law, a report for the months of July and August, 1977, on the total itemized revenues and expenses of each train operated (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC-2420. A communication from the Assistant Secretary of Interior, transmitting, pursuant to law, a report on the department's study of the El Camino Real Trail (Florida) (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-2421. A communication from the Chief, Forest Service, Department of Agriculture, transmitting, pursuant to law, a report on the Classification, Development Plan, and Boundaries for the Flathead Wild and Scenic River in Montana (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-2422. A communication from the Acting General Counsel, Department of Energy, reporting, pursuant to law, a voluntary agreement and plan of action to implement the International Energy Program (with an accompanying paper); to the Committee on Energy and Natural Resources.

EC-2423. A communication from the Acting Administrator, Energy Information Administration, Department of Energy, transmitting, pursuant to law, a report on gasoline service station market shares, August 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-2424. A communication from the Acting Administrator, Energy Information Administration, Department of Energy, transmitting, pursuant to law, a report on Sales of Refined Petroleum Products, August 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-2425. A communication from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within sixty days after execution thereof (with accompanying papers); to the Committee on Foreign Relations.

EC-2426. A communication from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting, pursuant to law, a report on AID, November 1977 (with an accompanying report); to the Committee on Foreign Relations.

EC-2427. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "A Better Way for the Department of Agriculture to Inspect Meat and Poultry Processing Plants," December 9, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2428. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "The Army's Proposed Close Combat Armored Vehicle Team," December 12, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2429. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Credit Programs for Small Farmers in Latin America Can be Improved," December 9, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2430. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "Potential Effects of a National Mandatory Deposit on Beverage Containers," December 7, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2431. A communication from the Chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council on November 8, 1977, which would provide additional compensation for the Chairman of the District of Columbia Board of Elections and Ethics, and for other purposes (Act 2-106) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2432. A communication from the Chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council on October 25, 1977, which would order the closing of a north-south public alley in Square 2558, bounded by Champlain Street, 18th Street, California Street, Kalorama Road, and Florida Avenue, N.W. (Act 2-110) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2433. A communication from the Secretary of Transportation, transmitting, pursuant to law, a report of disposal of excess property, fiscal year 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2434. A communication from the U.S. Commissioner of Education, Department of Health, Education, and Welfare, transmitting, pursuant to law, a report on the Education Professions, 1975-76 (with an accompanying report); to the Committee on Human Resources.

EC-2435. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, Final Regulations for Part 171—Instructional Equipment Grants for Institutions of Higher Education (with accompanying papers); to the Committee on Human Resources.

EC-2436. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports covering the period November 16 through November 30, 1977 concerning visa petitions which have been approved according the beneficiaries of such petitions third- and sixth-preference classification (with accompanying papers); to the Committee on the Judiciary.

EC-2437. A communication from the Chief Justice of the United States, transmitting, for the information of the Senate, a report of the proceedings of the Judicial Conference of the United States, September 15-16, 1977 (with an accompanying report); to the Committee on the Judiciary.

EC-2438. A communication from the Assistant Secretary of Defense, reporting, pursuant to law, the intent to obligate $44.7 million of funds available in the Defense Stock Fund for war reserve stocks of bulk fuels; to the Committee on Appropriations.

EC-2439. A communication from the Assistant Secretary of the Army (Installations, Logistics and Financial Management), Department of the Army, transmitting, pursuant to law, a report of the Army architect-engineer contracts awarded to the 10 A-E firms receiving the largest dollar total of contracts in the categories of civil works, military construction and work for foreign governments (with an accompanying report); to the Committee on Armed Services.

EC-2440. A communication from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend the National Trails System Act by designating the Lewis and Clark Trail, located in portions of Missouri, Kansas, Nebraska, Iowa, South Dakota, Montana, Idaho, Oregon, and Washington as a component of the National Trails System (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-2441. A communication from the Deputy Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed contract with Woodward Associates, Inc., San Diego, California, for a research project entitled "Develop and Demonstrate Improve Truck Ladders," (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-2442. A communication from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a follow-up report on the recommendations of the National Advisory Council on Adult Education (with an accompanying report); to the Committee on Governmental Affairs.

EC-2443. A communication from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a follow-up report on the recommendations of the National Advisory Council on the Education of Disadvantaged Children (with an accompanying report); to the Committee on Governmental Affairs.

EC-2444. A communication from the General Counsel, Copyright Office, Library of Congress, transmitting, pursuant to law, a report on recorded documents file (with an accompanying report); to the Committee on Governmental Affairs.

EC-2445. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report covering personal property donated to public health and educational institutions and civil defense organizations, October 1, 1976, through September 30, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2446. A communication from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, submitting, pursuant to law, a report on disposal of foreign excess property (with an accompanying report); to the Committee on Governmental Affairs.

EC-2447. A communication from the Assistant Secretary for Administration, Department of Agriculture, transmitting, pursuant to law, a report on change in computer installation processing systems or records (with an accompanying report); to the Committee on Governmental Affairs.

EC-2448. A communication from the District of Columbia Auditor, transmitting, pursuant to law, a report on "Failure of Agencies to Give Timely Notice to ANC's," and a report on "Lack of Enforcement of Health and Safety Requirements at Elderly Feeding Sites," (with accompanying reports); to the Committee on Governmental Affairs.

EC-2449. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "The Consumer Product Safety Commission Needs to Issue Safety Standards Faster" (with an accompanying report); to the Committee on Governmental Affairs;

EC-2450. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "The New National Liquefied Natural Gas Import Policy Requires Further Improvements" (with an accompanying report); to the Committee on Governmental Affairs.

EC-2451. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Opportunities for Large Savings By Altering Some Inland Waterway Operations" (with an accompanying report); to the Committee on Governmental Affairs.

EC-2452. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "The Federal Crop Insurance Program Can Be Made More Effective" (with an accompanying report); to the Committee on Governmental Affairs.

EC-2453. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Methods of Setting Pay for Nonappropriated Fund Employees Should Be Improved" (with an accompanying report); to the Committee on Governmental Affairs.

EC-2454. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Better Management of Defense Communications Would Reduce Costs" (with an accompanying report); to the Committee on Governmental Affairs.

EC-2455. A communication from the Chairman of the United States Civil Service Commission, transmitting a proposed amendment to a bill to amend Title 5, United States Code, to provide for retention of grade and pay for certain employees and other purposes (with an accompanying paper); to the Committee on Governmental Affairs.

EC-2456. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, a report on certain published regulations regarding various aid to education programs administered by the Department (with an accompanying paper); to the Committee on Human Resources.

EC-2457. A communication from the Assistant Secretary of Interior for Indian Affairs, transmitting, pursuant to law, a report on a proposed plan for the use and distribution of the judgment funds awarded in Docket 22-C to the Lipan Apache Tribe and the Mescalero Apache Tribe of Indians before the Indian Claims Commission (with an accompanying paper); to the Select Committee on Indian Affairs.

EC-2458. A communication from the Chairman of the Federal Election Commission, transmitting, pursuant to law, a report on correspondence which it has sent to the Office of Management and Budget (with accompanying papers); to the Committee on Rules and Administration.

PRESENTATION OF PETITIONS

Mr. BAKER. Mr. President, I have received petitions requesting repeal of the Federal withholding tax from my constituents, Mr. and Mrs. Terry Lynn Roller of Unicoi, Tenn. Mr. and Mrs. Roller have requested that I present their petitions to the Senate, and I now submit them for appropriate referral.

The PRESIDING OFFICER. The resolutions will be received and appropriately referred:

POM-427. A petition to repeal the withholding tax law; to the Committee on Finance.

POM-428. A petition to repeal the withholding tax law; to the Committee on Finance.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

POM-429. A bill enacted by the City Council of Baltimore, Maryland, requesting adoption of S. 1882 and H.R. 9410; to the Committee on Human Resources.

POM-430. A concurrent resolution adopted by the Legislature of the State of Mississippi; to the Committee on Foreign Relations:

"SENATE CONCURRENT RESOLUTION No. 502

"Whereas, on September 7, 1977, President Jimmy Carter of the United States of America and Brigadier General Omar Torrijos Herrera of the Republic of Panama signed two treaties relating to the Panama Canal Zone; and

"Whereas, these treaties provide for the complete relinquishment of American control of the Panama Canal Zone by the year 2000; and

"Whereas, these treaties will place the Canal Zone under general Panamanian jurisdiction six months after the instruments of ratification are exchanged; and

"Whereas, the Hay-Bunau-Varilla Treaty in 1903 provided that the United States would have perpetual possession, use and control of the Canal just as if "it were the sovereign of the territory"; and

"Whereas, as one of the most strategic man-made waterways in the world, the Panama Canal is a vital link in the defense of the United States and the Western Hemisphere; and

"Whereas, $387,000,000 was spent and American lives were lost in constructing the Canal; and

"Whereas, the United States' net investment in the Panama Canal operation is over $5,000,000,000; and

"Whereas, the free flow of the commerce of the United States and other nations depends on the Panama Canal being open and properly operated; and

"Whereas, 14 United States military bases are located within the Canal zone; and

"Whereas, the continued, rightful control by the United States over the Panama Canal is needed to maintain the peace and security of the Canal Zone, which is located on a politically unstable part of the world; and

"Whereas, two-thirds of the members of the United States Senate must consent to these treaties before they can be effective; and

"Whereas, our Mississippi Democratic Senators James O. Eastland and John C. Stennis have led the fight against the adoption of the Panama Canal treaties by the United States Senate and should be commended for their leadership in this regard:

"Now, therefore, be it resolved by the Senate of the State of Mississippi, the House of Representatives concurring therein, That we do hereby applaud the foresight and leadership of our United States Senators from Mississippi in opposing the Panama Canal treaties, and do hereby give Senator James O. Eastland and Senator John C. Stennis a vote of confidence for taking the lead in opposing the Panama Canal treaties,

"Be it further resolved, That copies of this Resolution be forwarded to the United States Senators from Mississippi, the Honorable James O. Eastland and the Honorable John C. Stennis, and to the Secretary of the United States Senate."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. LONG, from the Committee on Finance, without amendment:

S. 2352. An original bill to amend the Internal Revenue Code of 1954 and the Employee Retirement Income Security Act of 1974 to make compliance with Federal employee benefit plan requirements easier by eliminating dual Treasury Department and Labor Department jurisdiction over certain requirements and reducing the number of reports and other paperwork required, and for other purposes (Rept. No. 95-613).

By Mr. SASSER, from the Committee on Governmental Affairs, without amendment:

H.R. 5054. An act to repeal section 3306 of title 5, United States Code, to eliminate the requirement of apportionment of appointments in the departmental service in the District of Columbia (Rept. No. 95-614).

By Mr. RANDOLPH, from the Committee on Environment and Public Works, without amendment:

S. Res. 339. An original resolution authorizing increased allotment for consultants for the Committee on Environment and Public Works; referred to the Committee on Rules and Administration.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

Mr. ROBERT C. BYRD. Mr. President, as in executive session, on behalf of the Senator from Washington (Mr. MAGNUSON), I report favorably from the Committee on Commerce, Science, and Transportation sundry nominations in the Coast Guard which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of December 6, 1977, at the end of the Senate proceedings.)

By Mr. ROBERT C. BYRD (for Mr. MAGNUSON), from the Committee on Commerce, Science, and Transportation:

Andrew E. Manatos, of Maryland, to be an Assistant Secretary of Commerce.

Howard A. Heffron, of Maryland, to be Director of the Office of Rail Public Counsel.

(The nominations from the Committee on Commerce, Science, and Transportation were reported with the recommendation that they be confirmed, subject to the nominees' commitment to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROBERT C. BYRD (for Mr. WILLIAMS), from the Committee on Human Resources:

Leila I. Kimche, of Maryland, to be Director of the Institute of Museum Services.

(The nomination from the Committee on Human Resources was reported with the recommendation that it be confirmed, subject to the nominee's commitment to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROBERT C. BYRD (for Mr. EASTLAND), from the Committee on the Judiciary:

Robert M. Thompson, of Wisconsin, to be U.S. Marshal for the Western District of Wisconsin.

(The nomination from the Committee on the Judiciary was reported with the recommendation that it be confirmed, subject to the nominee's commitment to appear and testify before any duly constituted committee of the Senate.)

By Mr. JACKSON, from the Committee on Energy and Natural Resources:

Lincoln E. Moses, of California, to be Administrator of the Energy Information Administration.

(The nomination from the Committee on Energy and Natural Resources was reported with the recommendation that it be confirmed, subject to the nominee's commitment to appear and testify before any duly constituted committee of the Senate.)

Mr. JACKSON. Mr. President, on Tuesday the Senate Committee on Energy and Natural Resources approved the nomination of Dr. Lincoln E. Moses to be the first Administrator of the Energy Information Administration. Prior to action on the nomination, the committee held a hearing at which Dr. Moses testified. I ask unanimous consent that his statement to the committee be printed in the Record at this time.

I also ask unanimous consent that the biography and financial statement of Dr. Moses, together with a letter from the Acting General Counsel of the Department of Energy indicating the divestiture actions required to be taken by Dr. Moses pursuant to the Department of Energy Organization Act be included in the Record at this point.

There being no objection, the material was ordered to be printed in the Record, as follows:

Statement of Lincoln E. Moses

Mr. Chairman and Members of the Committee:

It is a privilege to appear before you as the Administration's nominee for Administrator of the Energy Information Administration.

My background is briefly as follows: I am a lifelong Californian who was educated at Stanford University. My career has been spent largely in the application of statistics in various disciplines, including social sciences, biology and medicine. Curiously, I have done no serious work in economic statistics, but my undergraduate work included training in accountancy and economics. Thus, I began as a theoretical statistician, but probably should be thought of now as a statistician of the data analystic type.

I have had no connections with the energy industry as employee, or consultant; my only financial relations with the industry (other than as a consumer of gasoline, electricity, etc.) consist in the ownership of certain securities, of which I shall divest myself, if confirmed, before taking office.

My conception of the task of the EIA is to develop and publish trustworthy information about energy in its many connections. Information is needed by the Administration, by the Congress and by the many diverse segments of the public who are concerned with energy issues. I suppose that the incumbent in this position must take alarm if he should find himself criticized from only one corner of the energy field.

Reliable data are needed about many energy sources: oil, gas, coal, electricity, uranium, solar and yet others, and for each of these energy sources, information is required about some or all of: resources, reserves, development, production, transportation, distribution, market structures, end use, and conservation. Arranging to deal successfully with this entire matrix will be a challenging task (and too large to accomplish all at once).

Among the early priorities which I see are: (1) estimation of oil and gas reserves, (2) establishing systems for data validation and for model validation, (3) end use measurement, and (4) financial resporting.

If appointed, I expect to bring into the EIA a large measure of statistical expertise. I speak here not of my own personal background but rather of my intention to increase the number of expert statisticians on the staff, and to make use of advisory committees in which statistical expertise is well represented. I further expect that the judicious use of scientifically drawn samples will be very important to the operations of EIA. Not every question, particularly not every regulatory question, is answerable by samples; but samples can greatly enhance the development of carefully audited data; they can enable the accurate measurement of the uncertainties of estimates; and they can aid in producing timely reports. Thus, I expect to see advantages to the work of EIA accruing from the studied use of sampling methods as appropriate.

Another expectation I have is to infuse a certain openness into the energy information area. Some have advocated an adversary process with respect to economic modeling and forecasting. Although I am unable to say whether that idea is precisely correct, the notion of intellectual competition is in keeping with the spirit of openness to public scrutiny and expert criticism which I hope will lead to a strong, sound energy information system within reasonable time.

In closing let me say that I regard the mission of the Energy Information Administration to be a non-political one. Finding wise and practical ways of dealing with the many problems in the energy area will be assisted by having facts which can be depended upon. Developing such facts demands a disinterested approach. It also provides abundant professional challenge.

Lincoln E. Moses, Professor of Statistics

Address: 830 Escondido Way, Stanford, California 94305; (415) 329-0229.

Born: December 21, 1921, Kansas City, Missouri.

Citizenship: U.S.A.

PERSONAL

Education: Midland School, 1932 to 1935; San Bernardino High School, Graduate 1937; Stanford University, A.B., 1941 (Social Sciences); Stanford University, Ph.D., 1950 (Statistics).

Ph.D. Title: An Iterative Construction of the Optimum Sequential Decision Procedure When the Cost Function is Linear

Employment: Assistant Professor of Education, Teachers College, Columbia University, 1950 to 1952; Assistant Professor of Statistics, Department of Statistics and Department of Preventive Medicine, Stanford University, 1952 to 1955; Associate Professor of Statistics, Department of Statistics and Department of Preventive Medicine, Stanford University, 1955 to 1959; Professor of Statistics, Department of Statistics and Department of Preventive Medicine, Stanford University, 1959 to present; Executive Head, Professor, Department of Statistics, Professor, Department of Preventive Medicine, Stanford University, 1964 to 1968; Associate Dean, Humanities and Sciences, Stanford University, 1965 to 1968; Dean of Graduate Studies, Stanford University, 1969 to 1975.

Professional Activities: Member, Special Review Team, Research Grants Review Branch, Division of Research Grants, National Institutes of Health, 1963 to 1969; Member of Subcommittee on Halothane of Committee on Anesthesia of NAS-NRC, 1963 to 1968; Consultant to San Mateo County Mental Health Services, 1964 to 1968; Member of Committee on Statistics, Division of Mathematics, NAS-NRC, 1965 to 1966; Member of Committee (to study Biostatistics Program) for Dean of Graduate School, University of Washington, Seattle, 1964 to 1969; Visiting Lecturer in Statistics (sponsored by Institute of Mathematical Statistics) 1963 to 1966; Subpanel on Health Effects of Environmental Pollution, Environmental Pollution Panel, President's Science Advisory Committee, 1964 to 1965; Member, Automated Multiphasic Screening Committee on Study Design; Kaiser Permanente Foundation, 1965 to 1970; Member Health Care Systems Study Section, Health Services and Mental Health Administration, 1970 to 1972; Member, Graduate Record Examination Board and its Executive Committee, and Chairman of its Research Committee, 1971 to 1975; Member, Panel on Alternative Approaches to Graduate Education (joint with Council of Graduate Schools and GRE Board), 1972 to 1973; Member, National Manpower Advisory Committee's Subcommittee on Professional, Scientific and Technical Manpower, 1973 to 1974; Member, Visiting Committee to Department of Statistics, Harvard University, 1974—; Member, Council for the Progress of Nontraditional Study 1974 to 1975; Association of Graduate Schools in the AAU, Vice President 1973 to 1974, President 1974 to 1975; Committee on a Study of National Needs for Biomedical and Behavioral Research Personnel, 1974—; Member, Institute of Medicine (NAS-NRC), 1975—: Member, Analysis Advisory Committee, National Assessment of Educational Progress, 1974—; Member, Environmental Health Advisory Committee, (Advisor to Administrator), U.S. Environmental Protection Agency, 1974—; Member, Committee on National Statistics, NAS-NRC, 1976—.

Total			39, 023
Seatrain convertible bond ($10,000)		66½	6, 650
Total			45, 673

REAL ESTATE INTERESTS

House: 270 Corte Madera Road, Portola Valley, CA, $90,000.

Trinity County, CA, one-half interest in 11 acres, $3,000.

Riverside County, CA, one-third interest in 280 acres, $14,000.

Sonoma County, CA, 3 acres, $7,900.

Long Ridge Ranch, 20 shares (=20 acres), $20,000.

Total real estate interests, $134,900.

MORTGAGES

Home: 274 Corte Madera Road, $10,048.

Schedule of assets of sons of Mary Louise Moses on which she is registered as custodian.

A. 800 shares, Ametek, Inc. at 31¼ $25,000, 27 Sept. 1977.

B. 6 shares, SCU Inc. at 20½ $123.00, 27 Sept. 1977.

Transfer of (B) to Franklin S. Coale, Jr. and of ¼-shares of (A) to Franklin and Kenneth (who are no longer minors) is in process.

2. Are any assets pledged? (Add schedule.) None.

3. Are you currently a party to any legal action? No.

4. Have you ever declared bankruptcy? No.

5. Has the Internal Revenue Service ever audited your Federal tax return? If so, what resulted from the audit? Yes, 1973 return. Audited, and no additional payment was required.

STATEMENT FOR COMPLETION BY PRESIDENTIAL NOMINEES

Name: Moses, Lincoln Ellsworth.

Position to which nominated: Administrator, Energy Information Administration.

Date of birth: 21 Dec. 1921.

Place of birth: Kansas City, Mo.

Marital status: Married.

Full name of spouse: Mary Louise Price Moses.

Names and ages of children: Katherine Moses, 33; James Moses, 30; William Moses, 28; Margaret Moses Siegel, 25; Elizabeth Moses, 20; Franklin Coale,* 23; Kenneth Coale,* 22; David Coale,* 20; James M. Coale,* 20.

EDUCATION

Institution, dates attended, degrees received, and dates of degrees:

San Barnardino JC, 1937–9, AA, 1939.

Stanford Univ., 1939–41, AB, 1941.

Stanford Univ., 1947–50, Ph.D., 1950.

Employment record: List below all positions held since college, including the title and description of job, name of employer, location, and dates.

United States Civil Service Commission (San Francisco & New York) 1942.

Position: Rating Examiner and Recruiting Repr. (CAF5,7) U.S. Naval Reserve (Supply Officer), 1943–46.

War Assets Administration (San Francisco) 1946–7, Administrator (CAF–9,11), Assistant Professor of Education, Teachers College 1950–52; Asst. Prof. (1952–5–; Assoc. Prof. (1955–9); Professor (1959–1977) of Statistics, Stanford University.

While a professor at Stanford, I served in administrative roles:

Associate Dean, Humanities & Sciences, 1965–8: Dean of Graduate Studies, 1969–75.

Honors and awards: List below all scholarships, fellowships, honorary degrees, military medals, honorary society memberships, and any other special recognitions for outstanding service or achievement.

Phi Beta Kappa; Sigma Xi; AB with great distinction; Guggenheim Fellow (1960–1); L.L. Thurstone Distinguished Fellow, Univ. of North Carolina (1968–9); Fellow, Center for Advanced Study in Behavioral Sciences (1975–6); Fellow, Institute of Math, Statistics; Fellow, American Statistical Association.

Memberships: List below all memberships and offices held in professional, fraternal, business, scholarly, civic, charitable and other organizations.

---

* Wife's sons.

Organization, Office held (if any), and Dates.

American Assoc. Univ. Profs., None, 1949–1977.

American Statistical Assoc., Member of Council, 1947–1977.

International Stat. Institute, None, ?–1977.

Institute of Math. Stat., Member of Council, 1950–1977.

Biometric Society (WNAR), President (1969), ?–1977.

Common Cause, None, 1973(?)–1977.

Sierra Club, None, 1967–1977.

Fellowship: Reconciliation, None 1977.

American Civil Liberties Union, None 1948–1977.

Audubon Society, None 1970(?)–1977.

Friends Committee on Legislation, None, 1954–1977.

Published writings: List the titles, publishers and dates of any books, articles, or reports you have written. See 3 pages attached.

Qualifications: State fully your qualifications to serve in the position to which you have been named.

Future employment relationships: 1. Indicate whether you will sever all connections with your present employer, business firm, association or organization if you are confirmed by the Senate.

I will take leave without pay from Stanford.

2. As far as can be foreseen, state whether you have any plans after completing government service to resume employment, affiliation or practice with your current or any previous employer, business firm, association or organization.

Yes. I expect to return to Stanford.

3. Has anybody made you a commitment to a job after you leave government?

No.

4. Do you expect to serve the full term for which you have been appointed?

I was told at the outset that I would be expected to serve two years. I expect to serve for that period.

Potential conflicts of interest: 1. Describe any financial arrangements or deferred compensation agreements or other continuing dealings with business associates, clients or customers who will be affected by policies which you will influence in the position to which you have been nominated.

There are none.

2. List any investments, obligations, liabilities, or other relationships which might involve potential conflicts of interest with the position to which you have been nominated.

I hold certain listed securities, shown on my financial statement. I am willing to sell any of them.

3. Describe any business relationship, dealing or financial transaction (other than taxpaying) which you have had during the last 10 years with the Federal Government, whether for yourself or relatives, on behalf of a client, or acting as an agent, that might in any way constitute or result in a possible conflict of interest with the position to which you have been nominated:

There are none.

4. List and describe any lobbying activity during the past 10 years in which you have engaged for the purpose of directly or indirectly influencing the passage, defeat or modification of any legislation at the national level of government or for the purpose of affecting the administration and execution of national law or public policy.

There are no such activities, other than writing to elected representatives.

5. Explain how you will resolve any potential conflict of interest that may be disclosed by your responses to the above items.

See two above.

DEPARTMENT OF ENERGY,
Washington, D.C., December 9, 1977.

Hon. HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for an opinion as to the effect of the conflict of interest provisions contained in Title VI of the Department of Energy Organization Act (Pub. L. 95-91) on the financial holdings of Lincoln E. Moses, who has been nominated to be Administrator of the Energy Information Administration in the Department of Energy.

Section 602(a) of the Department of Energy Organization Act ("Act") prohibits supervisory employees of the Department of Energy from knowingly receiving compensation from, holding any official relation with, owning the stocks or bonds of, or having any pecuniary interest in, any energy concern. "Energy concern", defined in Section 601(b) of the Act, is described in terms of entities "significantly engaged in the business" of a variety of activities related to energy production, distribution, sale, research and development, as well as entities engaged in such research and development functions pursuant to DOE-funded programs irrespective of whether they otherwise are engaged in such "business." The precise boundaries of that term are currently being explored. Nonetheless, it is possible to make some initial determinations with respect to identifying energy concerns within the meaning of the statute.

As you know, a list of the financial holdings of Mr. Moses has been provided to the Committee. If confirmed, Mr. Moses will divest the following interests in energy concerns in connection with his assuming the position of Administrator of the Energy Information Administration.

CORPORATION

ASARCO; Bethlehem Steel; Santa Fe Industries; Southern-Pacific Company; Standard Oil of California; Texaco; Union Pacific; United States Steel, and Seatrain.

The list of energy concerns required by Section 601(c)(1) of the Act is presently being prepared and will be published upon completion. At that time it may be determined that additional financial holdings of Mr. Moses may have to be divested.

If I can be of further assistance, please do not hesitate to contact me.

Sincerely,

ERIC J. FYGI,
Acting General Counsel.

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

Thibaut de Saint Phalle, of New Jersey, to be a member of the Board of Directors of the Export-Import Bank of the United States.

(The nomination from the Committee on Banking, Housing, and Urban Affairs was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROBERT C. BYRD (for Mr. WILLIAMS), from the Committee on Human Resources:

Joseph Mayo Pettit, of Georgia, to be member of the National Science Board, National Science Foundation.

(The nomination from the Committee on Human Resources was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constitutional committee of the Senate.)

Mr. ROBERT C. BYRD. Mr. President, for Mr. WILLIAMS, Committee on Human Resources, and as in executive session, I also report favorably sundry nominations in the Public Health Services which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of November 29, 1977, at the end of the Senate proceedings.)

By Mr. RIBICOFF, from the Committee on Governmental Affairs:

Simeon Miller Bright, of West Virginia, to be a Commissioner of the Postal Rate Commission.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Carlisle Edward Pratt, of the District of Columbia, to be an Associate Judge of the Superior Court of the District of Columbia.

Frederick Howard Weisberg, of the District of Columbia, to be an Associate Judge of the Superior Court of the District of Columbia.

By Mr. EASTLAND, from the Committee on the Judiciary:

Mack Burton, of Arkansas, to be U.S. Marshal for the Western District of Arkansas.

Donald J. Kindt, of Ohio, to be U.S. Marshal for the Northern District of Ohio.

Louis G. Villaescusa, Jr., of California, to be U.S. Marshal for the Central District of California.

(The above nominations from the Committee on the Judiciary were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. LONG, from the Committee on Finance:

S. 2352. An original bill to amend the Internal Revenue Code of 1954 and the Employee Retirement Income Security Act of 1974 to make compliance with Federal employee benefit plan requirements easier by eliminating dual Treasury Department and Labor Department jurisdiction over certain requirements and reducing the number of reports and other paperwork required, and for other purposes; placed on the calendar.

By Mr. KENNEDY:

S. 2353. A bill entitled the "Indian Cyclone Rehabilitation Act of 1977"; to the Committee on Foreign Relations.

By Mr. DOMENICI (for himself and Mr. Nelson):

S. 2354. A bill to provide for equal access to courts; to the Committee on the Judiciary.

By Mr. GLENN (for himself, Mr. Heinz, Mr. Hollings, Mr. Johnston, Mr. Morgan, Mr. Schweiker, Mr. Muskie, Mr. Randolph, and Mr. Sasser):

S. 2355. A bill to extend the Emergency Natural Gas Act of 1977; considered and passed.

By Mr. CLARK:

S. 2356. A bill for the relief of Margaret Duff; to the Committee on the Judiciary.

By Mr. ROBERT C. BYRD (for Mr. Sparkman) (by request):

S. 2357. A bill to repeal sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199); to the Committee on Foreign Relations.

By Mr. DOMENICI:

S. 2358. A bill to declare that the United States holds in trust for the Pueblo of Zia certain public domain lands; to the Select Committee on Indian Affairs.

By Mr. PACKWOOD:

S. 2359. A bill for the relief of Chong Hui Schrein; to the Committee on the Judiciary.

By Mr. MOYNIHAN:

S. 2360. A bill to authorize an appropriation to reimburse certain expenditures for social services provided by the States prior to October 1, 1975, under titles I, IV, VI, X, XIV, and XVI of the Social Security Act; to the Committee on Finance.

By Mr. ROBERT C. BYRD (for Mr. Magnuson, for himself, Mr. Pearson, and Mr. Long) (by request):

S. 2361. A bill to revise, codify, and enact without substantive change the Interstate Commerce Act and related laws as subtitle IV of title 39, United States Code, "Transportation"; to the Committee on Commerce, Science, and Transportation. Subsequently the referral of the bill was changed to the Committee on the Judiciary.

By Mr. NELSON (by request):

S. 2362. A bill for the protection of the employees and persons assisting the employees of the U.S. Small Business Administration; to the Committee on the Judiciary.

By Mr. BENTSEN:

S. 2363. A bill to amend the Internal Revenue Code of 1954 to provide tax incentives to encourage the creation and growth of new and innovative firms; to the Committee on Finance.

By Mr. ABOUREZK:

S. 2364. A bill to provide parity to farmers and to prevent interruptions in the supply of food to American consumers; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. ROBERT C. BYRD (for Mr. Eagleton):

S. 2365. A bill to amend the Federal Food, Drug, and Cosmetic Act with respect to cosmetic safety; to the Committee on Human Resources.

By Mr. ROBERT C. BYRD (for Mr. Anderson):

S. 2366. A bill for the relief of Keum Sun Lee; to the Committee on the Judiciary.

By Mr. NELSON:

S. 2367. A bill to declare a national policy on small business and free enterprise, and for other purposes; to the Committee on Governmental Affairs.

By Mr. INOUYE:

S. 2368. A bill to amend the Public Health Service Act to provide for a national program of medical injury compensation insurance; to the Committee on Human Resources.

By Mr. ROBERT C. BYRD (for Mr. Anderson) (for himself and Mr. Humphrey):

S. 2369. A bill to provide Federal assistance for the control of Dutch elm disease; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. JACKSON (for himself and Mr. Magnuson):

S. 2370. A bill to remove the limitation on the amount authorized to be appropriated under the Volunteers in the National Forests Act of 1972; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. ROBERT C. BYRD (for Mr. Anderson):

S. 2371. A bill to amend title 39 of the United States Code to provide that pledge reminders of charitable organizations may be mailed at third class rates; to the Committee on Governmental Affairs.

By Mr. ABOUREZK:

S. 2372. A bill to amend the Indian Self-Determination and Education Assistance Act; to the Select Committee on Indian Affairs.

By Mr. INOUYE (for himself and Mr. Matsunaga):

S. 2373. A bill to provide for the establishment of a Division of Minority Mental Health Programs; to the Committee on Human Resources.

By Mr. ROBERT C. BYRD (for Mr. Magnuson) (for himself, Mr. Long, and Mr. Pearson) (by request):

S. 2374. A bill to amend the Interstate Commerce Act to establish expeditious Interstate Commerce Commission procedures, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. ABOUREZK:

S. 2375. A bill to establish an administrative procedure and guidelines to be followed by the Department of the Interior in its decision to acknowledge the existence of certain Indian tribes; to the Select Committee on Indian Affairs.

By Mr. BAKER (for Mr. Mathias) (for himself and Mr. Sarbanes):

S. 2376. A bill to authorize withholding from salaries disbursed by the Secretary of the Senate and the Architect of the Capitol for contributions to certain charitable organizations; to the Committee on Governmental Affairs.

By Mr. HELMS:

S. 2377. A bill for the relief of Muradali P. Gillani; to the Committee on the Judiciary.

By Mr. INOUYE (for himself and Mr. Matsunaga):

S. 2378. A bill to increase the amount of funds available for Native American employment and training programs; to the Committee on Human Resources.

By Mr. EASTLAND:

S. 2379. A bill for the relief of Jesusa Novario Romero and Antonio Angeles Romero; to the Committee on the Judiciary.

By Mr. ROBERT C. BYRD (for Mr. Magnuson, for himself and Mr. Pearson) (by request):

S. 2380. A bill to amend the Intervention on the High Seas Act to implement the Protocol Relating to Intervention on the High Seas in Cases of Marine Pollution by Substances Other Than Oil, 1973; to the Committee on Commerce, Science, and Transportation.

By Mr. JAVITS:

S. 2381. A bill for the relief of Joseph J. Martin; to the Committee on the Judiciary.

By Mr. TOWER:

S. 2382. A bill to amend the Internal Revenue Code of 1954 to provide tax reform for small businesses; to the Committee on Finance.

By Mr. DURKIN:

S. 2383. A bill to amend the Tax Reform Act of 1976 to delay for one year the effective date of changes in the exclusion for sick pay; to the Committee on Finance.

By Mr. CRANSTON (for himself, Mr. Stafford, Mr. Talmadge, Mr. Randolph, Mr. Stone, Mr. Durkin, Mr. Matsunaga, Mr. Thurmond, Mr. Hansen, and Mr. Williams:

S. 2384. A bill to amend title 38 of the United States Code in order to provide a security pension program for nonservice-connected disabled veterans of a period of war who are in need, for surviving spouses of veterans of a period of war who are in need, and for surviving children of veterans of a period of war who are in need; to provide for annual automatic cost-of-living adjustments in the security pension program; to prevent reductions in security pension benefits solely attributable to costs-of-living increases in social security benefits; and for other purposes; to the Committee on Veterans Affairs.

By Mr. ROBERT C. BYRD (for Mr. Humphrey, for himself, Mr. Leahy, Mr. Clark, Mr. McGovern, Mr. Pearson, Mr. Melcher, Mr. Young, Mr. Curtis, Mr. Bellmon, Mr. Domenici, Mr. Church, Mr. Eastland, Mr. Morgan, Mr. Hollings, Mr. Matsunaga, Mr. Burdick, and Mr. Culver):

S. 2385. A bill to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities and to authorize nonmarket economy countries to participate in certain programs of the Commodity Credit Corporation; to the Committee on Agriculture, Nutrition, and Forestry, and the Committee on Finance, jointly, by unanimous consent.

By Mr. LONG:

S. 2386. A bill to amend the Shipping Act, 1916, as amended, to provide for the prompt and effective implementation of certain equal access, pooling, rationalization, apportionment and related reciprocal ocean transportation agreements entered into between carrier of the flags of the United States and of the nations with which we trade and to provide immunity for such agreements from the application of the antitrust laws; to the Committee on Commerce, Science, and Transportation.

By Mr. PELL:

S. 2387. A bill to extend for 1 year the authority of the Commissioner of Education to waive provisions of title I of the Elementary and Secondary Education Act for certain local educational agencies; to the Commission on Human Resources.

By Mr. ABOUREZK (for himself, Mr. Humphrey, Mr. Kennedy, Mr. Inouye, Mr. Matsunaga, Mr. Hatfield, Mr. Stevens, Mr. Gravel, and Mr. Goldwater):

S.J. Res. 102. A joint resolution relating to American Indian religious freedom; to the Select Committee on Indian Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. KENNEDY:

S. 2353. A bill entitled the "Indian Cyclone Rehabilitation Act of 1977"; to the Committee on Foreign Relations.

DISASTER ASSISTANCE FOR INDIA

Mr. KENNEDY. Mr. President, late last month one of the most devastating cyclones of this century struck the coastal States of southern India, leaving in its wake a massive trail of destruction and an incredible loss in life. The final toll is almost beyond comprehension—

with some 20,000 presumed dead, over 2 million made homeless, and close to $700,000,000 in lost crops and damage.

Emergency relief needs have now largely been met through the urgent action of the Government of India, with the active support of many voluntary agencies, including several American agencies. To date, the United States has provided, in support of these efforts, nearly $3 million in immediate relief assistance. However, the full scope of longer term rehabilitation and reconstruction needs have yet to be established by the Government of India.

But there can be little doubt today that they will be massive. And it is equally clear that they will likely exceed the scope and the availability of funds currently authorized under the international disaster assistance provisions of the Foreign Assistance Act.

It is for this reason, Mr. President, that I am introducing today a special bill to remove any obstacle that may exist in the current authorizing language of the Foreign Assistance Act that might inhibit our ability to provide a significant contribution to the longer term rehabilitation and reconstruction programs in southern India. It will also give the President greater flexibility in responding to disaster needs, once they are fully assessed.

This is a working bill, to begin the legislative process. The precise dollar amount will be defined during the appropriations process, after the Government of India has established its needs and the United States has determined what it can most appropriately contribute.

I am hopeful that the Foreign Relations Committee will urgently consider necessary legislation to clear the way for a substantial U.S. contribution to help the disaster victims in southern India.

Mr. President, I ask unanimous consent that the text of my bill, as well as the latest situation report prepared by the Agency for International Development on the disaster in India, be printed at this point in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2353

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Indian Cyclone Rehabilitation and Reconstruction Act of 1977".

SEC. 2. Chapter 9 of the Foreign Assistance Act of 1961 is amended by adding at the end thereof the following new section:

"SEC. 495E. Indian Cyclone Rehabilitation and Reconstruction.—

(a) The Congress, recognizing that United States assistance to alleviate human suffering caused by natural disasters is an important expression of the humanitarian concern and tradition of the people of the United States, affirms the willingness of the United States to provide assistance for rehabilitation and reconstruction of the disaster-stricken areas of southern India.

"(b) There is authorized to be appropriated to the President such sums as may be necessary to provide a United States contribution to the rehabilitation and reconstruction programs for the disaster-stricken areas of southern India.

"(c) Not later than 30 days after the date of enactment of appropriations to carry out this Section, and at the end of each quarter thereafter, the President shall transmit reports to the Committees on Foreign Relations and Appropriations of the Senate and to the Speaker of the House of Representatives regarding the programming and obligation of funds under this Section.".

[From the Department of State, Agency for International Development, Washington, D.C., Situation Report No. 5, Dec. 1, 1977]

INDIA—CYCLONES

DATA

Date: November 12, November 19, November 22–23.

Location: Tamil Nadu State, Andhra Pradesh State, Kerala and Karnataka States.

Intensity: Winds of about 60 miles per hour; "tidal" wave in Andhra Pradesh 19 feet high, 50 miles long, 10 miles wide, speed of 120 mph.

People Affected:

Tamil Nadu—officially 510 dead; 165 missing; at least 317,000 homeless (figure probably much higher).

Andhra Pradesh—officially 10,519 dead; 4,000 missing; 2,000,000 reported homeless; some 65 villages devastated of which about 21 washed away; over 7,000,000 in 2,300 villages affected (i.e., lost property).

Kerala—80 dead; 62 missing.

Karnataka—not reported as yet.

Note: press reports indicate that more than 20,000 people have been killed.

Damage:

Tamil Nadu—352,000 houses damaged; 510,000 acres (estimated) crops damaged; road, rail, power, and telecommunications networks heavily damaged; 25,000 head cattle lost; value of damage about $130 million.

Andhra Pradesh—about 2,750,000 acres crops damaged; value estimated at $353 million; reported widespread damage over 250-mile stretch of coastline; damage to government buildings and electric installations estimated at $20 million; over 350,000 houses in Guntur District destroyed; 250,000 cattle lost; 700,000 other farm animals lost; total damage valued at about $750 million.

Kerala—27,000 houses damaged/destroyed; 36,000 acres crops destroyed; 51,000 acres crops damaged; 600 fishing vessels damaged and many lost; damage estimated at $10.3 million.

Karnataka—not reported as yet.

GENERAL SITUATION

(First Cyclone—Tropical Cyclone 21–77)—

On November 12, 1977, a cyclone originating in the Bay of Bengal struck the central coast of Tamil Nadu State in southern India. Hardest hit by the resulting floods were the areas of East Tanjore, Dindiqul, Vedasandur, and Chidambaram. Apparently people had heeded early warnings and moved to higher ground, thus limiting the number of casualties.

20,000 acres of paddy were totally destroyed and another 190,000 acres of paddy 25–75% damaged in the area which is called Tamil Nadu's "rice bowl of the South." Ironically, the storm filled reservoirs and tanks with enough water to irrigate a new crop of paddy which could replace the damaged one. A new crop could not, however, be harvested before next soring.

(Second Cyclone—Tropical Cyclone 22–77)—

On November 19, 1977, a second cyclone, which had been expected to hit Tamil Nadu, instead struck the central coast of Andhra Pradesh State in the Krishna-Godavari Delta. Lack of much advance warning accounts for the large numbers of deaths. Twelve to twenty-foot high waves engendered by the storm destroyed some 65 villages about 21 of which were completely washed away. Damage was heavy in the city of Guntur where roofs were blown off warehouses, exposing the contents to ten hours of steady rain.

About 1,500,000 acres of paddy were damaged in Andhra Pradesh. About half of the crop had been harvested and not all of this was lost. Spice, tobacco, sugar-cane and cotton crops were also damaged. Banana plantations were a total loss. There is fear that flooding by sea water will raise the salinity of the soil and spoil it for cultivation. Normally, cyclones cause flooding upstream which brings topsoil to lower areas, but, in this case, downstream flooding left saline silt in low areas. Reclamation of agricultural land will probably be a major element of rehabilitation both in Andhra Pradesh and Tamil Nadu.

Previous crop predictions for South India had been quite optimistic but these may have to be revised following this disaster.

Bamboo and thatch, the local building materials, are in short supply after wave damage.

(Third Cyclone—rejuvenated Tropical Cyclone 21–77)—

Passing into the Arabian Sea, this cyclone gained strength and turned landward again. It moved northward along the western coast lashing northern Kerala State and the Lakshadweep Islands before hitting the Karnataka coast just north of Mangalore on November 23, 1977.

The island of Kiltan was almost submerged and coconut palms, the products of which are the main source of revenue for inhabitants of the Lakshadweep Islands, were heavily damaged. Many of the inter-island boats were lost.

ACTION TAKEN BY THE GOVERNMENT OF INDIA (GOI) AND BY THE STATE GOVERNMENTS

The first stage of relief in Tamil Nadu—rescuing the marooned, feeding and sheltering the homeless, restoring skeleton public transport and utilities—has been completed. The second stage of rehabilitationg the homeless has begun. Money and utensils, instead of food, are being distributed since market supplies are returning to normal.

The government of Gujarat has announced the allocation of $23,256 (Rs 200,000) from the Chief Minister's Relief Fund for flood victims in Tamil Nadu.

Andhra Pradesh has released $17,442 (Rs 150,000) from the state Chief Minister's Relief Fund. Manpower and supplies have been diverted to the affected areas. Some 200 relief camps have been set up to shelter about 200,000 people. The Chief Minister has requested $227 million (Rs 227 crores; 1 crore=10 million Rupees approximately $1 million) in assisance from the central government.

The state government of Kerala has requested $5 million from the central government.

Prime Minister Desai has released $23,256 (Rs 200,000) from the Prime Minister's Relief Fund.

The GOI has advanced $5,814,000 (Rs 5 crores) to the state governments of Tamil Nadu and Andhra Pradesh. Medicines, blankets, cloth, and utensils worth $58,140 (Rs 500,000) have also been released from central relief stores.

The Central Social Welfare Board of the Ministry of Social Welfare held a meeting with UNICEF and voluntary agencies to discuss relief needs. Continuing needs are for potable water, clothing, utensils, medications (cholera vaccine and gastrointestinal medicines), and temporary shelter.

The Indian Army, Navy, and Air Force have been mobilized to airdrop food to marooned people and to assist in emergency medical efforts. Helicopters making about 50 sorties per day have dropped approximately 10 MT of food. Some 20 medical teams are operating in Andhra Pradesh along with almost 200 civilian teams.

The Army has been given primary responsibility for the following tasks in order of priority: dispose of bodies and carcasses; inoculate victims; disinfect water sources; provide drinking water; supply medicine and clothing to victims; clear up debris and restore communications.

The Indian Red Cross is very active in the relief ecorts. It is planning to take responsibility for the care of 80 villages around the towns of Guntur and Vijayawada.

ASSISTANCE PROVIDED BY THE U.S. GOVERNMENT

While the GOI has not requested direct assistance from the United States, the Indian Government does welcome assistance from the voluntary agencies already engaged in relief work in the affected areas. The USG has, therefore, provided:

$25,000 to the Cooperative for American Relief Everywhere (CARE) in order to provide clothing, temporary shelter, and refugee camps for cyclone victims.

Authorization for the transfer of PL 480 Title II commodities from regular voluntary agency programs to emergency programs. The value of these commodities is approximately $300,000;

Cash grants to assist the voluntary agencies already active in southeastern India; CARE will receive $1,158,960; Catholic Relief Services (CRS) $595,260; and Church World Service (CWS) $115,653 for a total of $1,869,873. These grants will provide temporary shelter, clothing, blankets, cooking utensils, food, and medicines for cyclone victims.

$200,000 to the International League of Red Cross Societies (LICROSS).

Total USG assistance to date—$2,394,873.

ASSISTANCE PROVIDED BY U.S. VOLUNTARY AGENCIES

The American National Red Cross has contributed $50,000 through the International League of Red Cross Societies.

The Baptist World Alliance has contributed $10,000 to the Samavesam of Telugu Baptist Churches for relief in Tamil Nadu and Andhra Pradesh. American Baptists, a BWA affiliate, have donated $12,000 to the same organization.

CARE is transferring 1,300 tons of PL 480 soy-fortified bulgur, vegetable oil, and bulgur to relief operations in Tamil Nadu (areas of Madras, Trichi, Pudukottai, Nagappatinam, Madurai, and Tirunelveli) and Andhra Pradesh.

A CARE-operated bakery in Andhra Pradesh is turning out 7 to 8 MT of bread per day (50,000 rations) which is to be airdropped to cyclone victims. Another food processing plant in Guntur, which has been recently constructed by CARE/UNICEF/AID, is producing 18 to 20 MT of Mukuru (glucose biscuits) per day for distribution.

CARE is distributing blankets and clothing as well as foodstuffs to some 75,000 cyclone victims in Tamil Nadu and some 80,000 in Andhra Pradesh. Funds allocated for this purpose amount to $280,000.

CARE has also temporarily transferred many field personnel to the disaster sites, and permission has been received from the government to assist in rebuilding up to 340,000 houses.

The Comunity Development Foundation/Save the Children Federation will send $1,000 to the British Save the Children fund to help finance the British volag's shipment of medicines to India. In addition, $5,000 has been contributed to the Save the Children Alliance which groups the Save the Children Funds of the U.S., U.K., Canada, Norway, and Denmark.

CRS is transferring 77 tons of PL 480 rice to relief programs in the following cities in Tamil Nadu: Salem, Tanjore, Kumbakonam, Madurai, Dindigul, and Trichi. CRS will also distribute 3,500 tons of food received from the Food Corporation of India and food from its own stocks.

CRS has allocated $100,000 for emergency expenditures and Caritas/India, CRS's counterpart, has released $35,797 (Rs 310,000) for purchase of clothing, medicines, blankets, utensils, and temporary shelter for victims in both Tamil Nadu and Andhra Pradesh. In addition, 731 cartons of medicine valued at $488,000 have been released from CRS stocks.

CWS/LWR, via their counterpart agency, Church's Auxiliary for Social Action (CASA) are establishing feeding centers in Tamil Nadu and Andhra Pradesh to serve prepared meals to approximately 70,000 victims for 7 days. P.L. 480 Title II commodities will be used on a non-replacement basis. Other relief includes clothing, medicines, 1 million water purification tablets, utensils, and pumping out wells.

CWS has cabled $35,000 to CASA.

The Foreign Mission Board of the Southern Baptist Convention has cabled $10,000 to the American Baptist Mission in Tamil Nadu and the India Baptist Mission has sent $5,000 for relief in Andhra Pradesh.

Medical Assistance Programs International has donated $2,500 in cash and medical and hospital supplies to its Indian contact, the Emmanuel Hospital Association.

The Salvation Army has contributed $9,090.

The Seventh-day Adventist World Service has sent 75,000 lbs. of clothing, 500 first-aid kits, and 1,200 lbs. of blankets to Tamil Nadu. SAWS has also remitted $64,500 in cash for the emergency.

The World Relief Commission has made cash contributions to the following groups: $2,500 to the Evangelical Fellowship of India Council on Rehabilitation; $2,500 to the Society for Economic and Vocational Assistance; $35,000 to the Brethren Church in Andhra Pradesh.

World Vision International has allocated $125,000 and two pallets of medical supplies. Its personnel in India is working with relief teams of the Church of Southern India, the Baptists, the Lutherans, and the Salvation Army.

Total U.S. Volag Assistance Reported to date—$1,250,387.

ASSISTANCE PROVIDED BY THE INTERNATIONAL COMMUNITY

The Office of the United Nations Disaster Relief Coordinator (UNDRO) has announced the following contributions (cash unless otherwise noted) to the emergency relief effort:

Australian Catholic Relief—$11,000.

Australian Prime Minister—$50,000.

Australian Red Cross through the International League of Red Cross Societies (LICROSS)—$11,236.

Belgian Red Cross through LICROSS—$5,634.

Canadian Catholic Organization for Development and Peace through Caritas—$50,000.

Canadian Government through LICROSS—$200,000.

Canadian Red Cross through LICROSS—$20,000.

Caritas Belgium—$10,000.

Caritas Denmark—$5,000.

Caritas Germany—$85,000.

Caritas Netherlands—$61,302.

Caritas Switzerland—$23,255.

Catholic Fund for Overseas Development (UK)—cash, medicines—$14,240.

Danchurchaid to Lutheran World Federation (LWF)—$24,590.

Federal Republic of Germany, Government (planned in conjunction with Caritas, Diakonisches Werk, and German Red Cross) to Prime Minister's Relief Fund, Tamil Nadu State, Andhra Pradesh State, supplies, airlift—$884,956.

Finnish Red Cross through LICROSS—cash, supplies—$24,212.

French Red Cross—7 tons baby food—(Not reported).

Holy See—$25,000.

International Confederation of Free Trade Unions—$1,000.

Japanese Red Cross through LICROSS—$4,000.

Oxfam to field representative—$127,273.

Netherlands Government through LICROSS—$205,761.

Netherlands Red Cross through LICROSS—$20,576.

New Zealand Red Cross through LICROSS—$4,902.

Norwegian Church Relief to LWF—$36,360.

Norwegian Red Cross through LICROSS—$91,575.

Save the Children Alliance—100 tons clothing, 200 tons food—Not reported.

Secours Catholique Français—$10,150.

Swedish Government to Swedish Red Cross—$209,205.

Swedish Red Cross through LICROSS—$52,301.

United Kingdom Christian Aid—1 land rover—Not reported.

United Kingdom Government, Save the Children Fund, voluntary agencies—vehicles, drugs, water purification tablets, freight—$109,091.

United Kingdom Government—cash to GOI, medicines, airlift—$121,814.

United Kingdom Government to British Red Cross—$454,545.

United Kingdom Government to UNICEF—$45,454.

United Kingdom Red Cross—supplies, 2 land rovers—Not reported.

United Kingdom Save the Children Fund—medicines—$1,596.

UNDRO to UNICEF—$20,000.

UNICEF emergency allocation for local purchase of 68,120 blankets; 100,000 sets infants' garments; 25,000 saris; and cooking utensils—$225,000.

World Council of Churches to Indian affiliates—$35,000.

World Federation of Trade Unions—$10,000.

Total assistance from the International Community reported to date—$3,291,528.

By Mr. DOMENICI (for himself and Mr. NELSON):

S. 2354. A bill to provide for equal access to courts; to the Committee on the Judiciary.

(The remarks of Mr. DOMENICI when he introduced the bill are printed earlier in today's proceedings.)

By Mr. GLENN (for himself, Mr. HEINZ, Mr. HOLLINGS, Mr. JOHNSTON, Mr. MORGAN, Mr. SCHWEIKER, Mr. MUSKIE, Mr. RANDOLPH, and Mr. SASSER):

S. 2355. A bill to extend the Emergency Natural Gas Act of 1977; considered and passed.

(The remarks of Mr. GLENN when he introduced the above bill appear earlier in today's proceedings.)

By Mr. ROBERT C. BYRD (for Mr. SPARKMAN) (by request):

S. 2357. A bill to repeal sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199); to the Committee on Foreign Relations.

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. SPARKMAN, and by request, I introduce a bill and ask unanimous consent that a statement by Senator SPARKMAN, together with attachments be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY MR. SPARKMAN

By request, I introduce for appropriate reference a bill to repeal sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199).

The bill has been requested by the Department of State and I am introducing it in order that there may be a specific bill to which members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask that the bill be printed in the RECORD at this point, together with the letter from the Assistant Secretary of State for Congressional Relations to the President of the Senate dated April 22, 1977.

S. 2357

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199) are repealed.

APRIL 22, 1977.

HON. WALTER F. MONDALE,
President of the Senate,
U.S. Senate.

DEAR MR. PRESIDENT: Sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199), parts of which go back to the middle of the nineteenth century, authorize suits against United States consular officers for damages as a result of willful neglect or failure to perform in timely fashion any duty imposed by law or by order or instruction pursuant to law. Suit is similarly authorized for any willful misfeasance or abuse of power, or any corrupt conduct in office.

In 1972 Section 1735 was amended as part of a general law to eliminate surety bonds for Federal employees (P. L. 93–210, 86 Stat. 207). The Government now acts as a self-insurer and stands in the place of a commercial surety should a consular officer be sued under this law. Consular officers, but for Sections 1735 and 1736, would be in the same position as other Government employees with respect to personal liability for acts in their official capacity. The Department believes that there is no valid Governmental reason at this time to single out consular officers for special liability, but that general standards for when official immunity applies, and when it does not, should law against consuls for immigration decisions in exercise of the discretion conferred on them by the Congress indicates that it could apply. A number of recent suits under this be used as a means of harassment.

Section 1736 also contains criminal provisions for malversation and corrupt practice in office. The Department believes that these matters are adequately covered by provisions in Title 18 of the United States Code and that it is inappropriate to have a separate criminal statute on these matters applicable solely to consular officers.

For reasons set out in the preceding paragraphs, the Department considers 22 U.S.C. 1199 to be an anachronistic measure which places American consular officers abroad in undue jeopardy. Repeal of 22 U.S.C. 1199 would place consular officers in the same position as other Government employees with respect to personal liability for acts in their official capacity and criminal liability for corrupt practices.

Enclosed for the consideration of the Congress is a draft bill which provides for the repeal of 22 U.S.C. 1199. The Office of Management and Budget has advised that there is no obligation to the presentation of this proposal to the Congress.

Respectfully,
DOUGLAS J. BENNET, Jr.,
Assistant Secretary
for Congressional Relations.

By Mr. DOMENICI:

S. 2358. A bill to declare that the United States holds in trust for the Pueblo of Zia certain public domain lands; to the Select Committee on Indian Affairs.

Mr. DOMENICI. Mr. President, I send to the desk for appropriate reference, a bill to declare that the United States holds in trust for the Pueblo of Zia certain public domain lands.

This is a relative small area of land, 4,848.13 acres and abuts the Pueblo Grant to the South. Since time immemorial this land has been regarded by the Zia people as Zia land. It contains several very significant religious sites, and has been used as a community grazing area for as long as the oldest members of the Tribe can remember. In 1938 the Bureau of Land Management took over the land and fenced it and the Pueblo has used it since that time on the basis of successive yearly permits.

The tribal people did not have any reason to believe that the land was not tribal land and in their minds they were using it as tribal lands when the fence was erected. It should be noted, that the land claimed is not occupied by any other persons and no entities have any business interests which would be affected.

Mr. President, the tribe has had an anthropological study completed on this land which shows that the tribe has used this land for generations.

It is my hope that the appropriate committee will hold hearings on this proposal early next year so the documentation the tribe has gathered can be presented to members of the committee. I believe that this information will show that the title to this land should be transferred to the Pueblo of Zia.

By Mr. MOYNIHAN:

S. 2360. A bill to authorize an appropriation to reimburse certain expenditures for social services provided by the States prior to October 1, 1975, under titles I, IV, VI, X, XIV, and XVI of the Social Security Act; to the Committee on Finance.

Mr. MOYNIHAN. Mr. President, I am today introducing, on behalf of the administration, a bill intended to settle a longstanding dispute between 28 States and the Department of Health, Education, and Welfare arising out of numerous claims for social services rendered under the several titles of the Social Security Act that authorized such services prior to October 1, 1975, when the current title XX took effect.

The claims and disputed payments to be settled by enactment of this legislation came to $2.4 billion. After meticulous negotiations between representatives of the affected States and a team of senior HEW officials, led by Secretary Califano, Under Secretary Champion, and Deputy Under Secretary Eidenberg, all parties concerned have agreed to full and final settlement in the amount of $532 million. This will result in the dropping of disputed claims by the States and by the Federal Government. It is a complete and final agreement, intended to bring to a close a costly and protracted series of claims, counterclaims, and lawsuits.

The present title XX program represents a marked improvement over the previous social service titles under which these disputes arose in a series of misunderstandings, abuses, and apparent manipulations so well chronicled by Dr. Martha Derthick in her brilliant small book "Uncontrollable Spending for Social Service Grants" published by the Brookings Institution.

It is now time to complete the transition from those programs to title XX, and passage of the present legislation, and implementation of the agreement it embodies, will have that salutary effect. It is a step forward for American federalism, and I congratulate all concerned on their success in bringing us to this point. As Senator from one of the affected States, and as chairman of the Subcommittee on Public Assistance, I look forward to early enactment of this bill.

Mr. President, I ask unanimous consent that an HEW background paper and a table outlining the recent settlements be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HEW BACKGROUND PAPER

In the late 1950s the Congress authorized Federal matching under the welfare titles of the Social Security Act (titles I, X, XIV, and XVI) not merely for the traditional money payments by the States to "welfare" recipients but also for the State costs of social services provided to certain classes of the poor. At first these services, to be matchable, had to be provided by the State welfare agency and had to be provided only to current cash payment recipients (1957). Later, the State welfare agencies were authorized to purchase services from other public agencies and simultaneously were authorized to provide those services (with Federal matching) to former and potential cash assistance recipients (1962). Still later, the law was amended to allow the State welfare agency to purchase these services from private agencies (1967).

All these changes took place in the context of the "old" cooperative Federal-State welfare relationships. There were no Federal regulations governing these programs published in the Federal Register before 1969; a Federal Handbook was used for guidance by the States in interpreting the law.

As late as 1969, about 85% of the $354 million claims under the Social Services program was for salaries and expenses of the employees of the Single State Agency who were engaged in the traditional case work services. Only about 15% was for purchased services and most of this was for day care. However, about this time there were a number of things that took place which changed this picture.

HEW became very active in 1969 and 1970 in encouraging States to integrate the delivery of social services through agreements with other agencies, and through the formation of umbrella agencies. Social Services funds were seen by the State agencies as well as by HEW staff as a source, not limited by a ceiling on appropriations, to provide the "glue" money to bring available resources together in an integrated services system, which would greatly expand the availability of services to poor people. The general thrust was to put the Single State Agency in the position of being able to coordinate and expand diverse resources to provide effective services to current, former and potential recipients of Financial Assistance.

This effort toward an integrated services system was greatly encouraged by the provisions of the Act which made former and potential recipients of financial assistance, as well as current recipients, eligible for services.

Against this background, certain State governors and State budget agencies, spurred by fiscal crises, saw an opportunity to utilize Federal funds as a substitute for scarce State resources.

They were encouraged in this by management consultant firms that helped them prepare State Plan Amendments, and purchases of services agreements, and to develop claims in an effort to gain Federal matching for expenditures of other agencies. A variety of techniques was employed, including: estimating expenditures, sampling for eligibility, and determination of eligibility after the fact.

The first State to prepare plan amendments and develop claims did so on the basis of approved plan amendments. The next State to submit claims did so on the expectation that its plan amendments would be approved effective back to nearly a year before. The amendments were subsequently disapproved, and that disapproval is now the subject of a hearing before an Administrative Law Judge. However in the meantime, other States quickly developed amended State plans, and filed claims, and the pressure built to have all such claims expeditiously repaid.

As a result of the heightened expectations by States—even before the claims had been reviewed and approved or disapproved—estimates of the Federal share of FY 1973 social services expenditures ballooned from $1.3 billion submitted by the States in May 1972, to $4.8 billion in August of 1972. That prompted the Congress to set a ceiling of $2.5 billion on social services expenditures for FY 1972.

Meanwhile, HEW requested and received from OMB and the Congress the authority to hire 427 additional personnel to help it improve the management of Public Assistance Programs, and specifically to review the allowability of Public Assistance claims before they were paid. All claims for Social Services received special scrutiny because of the tremendous size of the claims, and because many included unexplained adjustments for prior periods. Payment of retroactive claims began to be deferred until field reviews could be made.

In the course of the review of these claims, questions were raised about the interpretation of Sections of the Act and the Federal Regulations. When a memorandum from SRS attempted to answer some of these questions, a number of States objected to elements of the document, and eventually 13 States filed suit to set aside the interpretations.

Concurrently, the Congress enacted the SSI program in 1972, and consolidated the social services program for adults in a new Title VI of the Social Security Act, and the social services Regulations once again underwent revision. One outcome of the various pressures, both financial and regulatory, was the enactment in 1974 of Title XX of the Social Security Act, as a new, comprehensive social services authority with a $2.5 billion ceiling. Under the new Title, States retained broad authority for determining the kind of social services to be provided, and the relative mix of such services within their borders.

Finally, some of the court action has resulted in District Court decisions, and a request by HEW that the Justice Department file appeals. Virtually all of the issues raised by these changing circumstances remain unsettled at this time.

PROPOSED SETTLEMENTS BY STATE

By Mr. ROBERT C. BYRD (for Mr. Magnuson, for himself, Mr. Pearson, and Mr. Long) (by request):

S. 2361. A bill to revise, codify, and enact without substantive change the Interstate Commerce Act and related laws as subtitle IV of title 39, United States Code, "Transportation"; to the Committee on Commerce, Science, and Transportation.

Mr. ROBERT C. BYRD. I introduce today, at the request of the Interstate Commerce Commission, on behalf of Mr. Magnuson, for himself, Mr. Pearson, and Mr. Long, a bill to revise, codify and enact, without substantive change, the Interstate Commerce Act and related laws as subtitle IV of title 49, United States Code, "Transportation."

I ask unanimous consent that the letter of transmittal and the explanation and justification of the legislation be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

Interstate Commerce Commission,
Washington, D.C., December 2, 1977.
Hon. Warren G. Magnuson,
Chairman, Committee on Commerce, Science and Transportation, Washington, D.C.

Dear Chairman Magnuson: Enclosed with this letter is a copy of H.R. 9777, a bill "To revise, codify, and enact without substantive change the Interstate Commerce Act and related laws as subtitle IV of title 49, United States Code, Transportation," and the accompanying draft report of the House Committee on the Judiciary dated October 27, 1977.

Section 312 of the Railroad Revitalization and Regulatory Reform Act of 1976 requires the Interstate Commerce Commission to submit to the Congress, within two years (by February 5, 1978), a proposed modernization and revision of the Interstate Commerce Act and a proposed codification of all Acts supplementary to the Interstate Commerce Act.

The Law Revision Counsel of the House of Representatives is responsible for the continuing recodification of the entire United States Code. Members of his staff have been working together with Commission staff for the past year to prepare the codification of the Interstate Commerce Act and related statutes. H.R. 9777 is the result of these efforts thus far.

H.R. 9777 restates the Interstate Commerce Act and related laws in comprehensive form. In this bill, simple language has been substituted for awkward and obsolete terms, and superseded, executed, and obsolete statutes have been eliminated. The bill does not bring about any substantive changes in the law.

No compliance bill to H.R. 9777 has yet been introduced in the Senate. I believe that such introduction might facilitate earlier consideration of this important legislation, and for that reason I respectfully request that you introduce H.R. 9777 as a Senate bill.

Sincerely yours,
A. Daniel O'Neal,
Chairman.

By Mr. BENTSEN:

S. 2363. A bill to amend the Internal Revenue Code of 1954 to provide tax incentives to encourage the creation and growth of new and innovative firms; to the Committee on Finance.

VENTURE CAPITAL TAX REFORM ACT

Mr. BENTSEN. Mr. President, I am today introducing the Venture Capital Tax Reform Act to encourage the creation of new and innovative firms that are indispensable to a healthy, competitive economy.

Economic growth in our Nation depends upon the availability of a sufficient supply of capital for the risk-takers and entrepreneurs who have the initiative to start new businesses and to develop imaginative new ideas. That capital—often referred to as venture capital—is in short supply these days. Five years ago there were 418 underwritings of companies with a net worth of less than $5 million, underwritings that generated over $900 million in venture capital. In 1976, the number of such underwritings decreased to 38—about 9 percent of the 1972 figure.

Many products, unheard of a few years ago, which now benefit our daily lives, were developed by small innovative businesses. Minicomputers, semiconductors, hand-held calculators, and sophisticated lifesaving medical devices are but a few examples. The companies that created these products provided new jobs for our growing work force, provided competition to established firms, and increased exports to help with our balance of trade.

There are many causes for the decline of innovative firms, but the Venture Capital Tax Reform Act, which I am introducing today, would do much to alleviate the problem.

My proposal has six major provisions:

Favorable tax treatment would be provided to a new category of stock which would be referred to as "venture capital stock." The favorable treatment would take the form of tax deferral on certain gains and liberalized deductions on certain losses. These incentives will encourage the flow of desperately needed capital to risky new enterprises.

Stock option incentives would also be made available for "venture capital stock" to attract competent management.

The net operating loss carryforward of existing law would be increased to 10 years for new firms.

The existing limitation on investment interest deductions in our tax law would be repealed in order to encourage entrepreneurs to enter new fields to create new jobs and provide greater competition in our economy.

To provide greater cash flow for successful ventures, the corporate surtax exemption would be increased from the present level of $50,000 to $100,000.

To increase the availability of institutional funds for smaller firms, large pension managers would be prevented from holding more than 5 percent of the outstanding stock of most large companies.

Mr. President, it is essential that the problems of venture capital be specifically addressed during consideration of tax reduction and tax reform legislation next year. I have introduced my proposals to provide a starting point for discussion of these issues during the Ways and Means Committee and Finance Committee tax hearings. There is no question that the formulation of fair and effective tax incentives to encourage venture capital is a difficult task. However, with the input of the Treasury Department and outside experts, I am confident that provisions along the lines that I have suggested can be incorporated in the 1978 tax changes.

Mr. President, I would now like to describe these proposals in greater detail.

First, tax incentives would be provided to encourage individuals to invest in venture capital investments which are often very risky but provide a great deal of promise for our economy. These incentives are needed to increase the availability of external investment capital for innovative firms which will become the "new IBM" or the "new Xerox."

Under my proposal, a taxpayer who invests in qualified "venture capital stock" would be eligible to deduct as much as $100,000 of losses from such investment against ordinary income. This compares to the present limitation of only $3,000 on the capital losses that can be offset against ordinary income and the $50,000 limitation on deductible losses for so-called section 1244 stock.

In addition, under my proposal, gain from the sale of qualified "venture capital stock" would qualify as a nontaxable exchange provided the gain was reinvested within 2 years of sale in other qualified "venture capital stock."

Under existing law, the owner of a successful new business who sells out to a major corporation and takes stock in the big business has to pay no taxes until the stock is sold. On the other hand, if he sells his business to his children or to his employees or to another small business, he is taxed on any gains he realizes. In other words, our tax laws encourage venture capitalists to sell their firm to a large corporation.

My proposal would remedy this inequity by allowing a venture capitalist to sell a business without an immediate tax liability if the proceeds of the sale are reinvested in a new venture.

Venture capital stock is narrowly defined to limit the amount of revenue loss to the Treasury. Under my bill, "venture capital stock" would be defined to include stock issued by newly formed, domestic, unaffiliated corporations engaged in manufacturing, research, or extraction. The favorable treatment would be limited to the first $5 million of stock issued by that firm. Furthermore, favorable tax treatment would apply only if the stockholder held such stock for at least 10 years.

Second, this bill would provide favorable stock option treatment for employees of new ventures. Today it is difficult for an entrepreneur with a new idea to attract good management because new firms cannot afford the high salaries paid by larger companies. In addition, risky ventures cannot offer the long-term job security provided by established companies.

My bill would appeal the changes enacted in the 1976 Tax Reform Act with respect to stock options for qualified "venture capital stock."

Prior to the 1976 Tax Reform Act, no income was recognized on the grant to a corporate employee, or on his exercise of, a qualified option to receive employer stock. The stock acquired by the exercise of the option was a capital asset in the hands of the employee and the income realized from the eventual sale of the stock was generally treated as long-term capital gain or loss.

By contrast, the value of a nonqualified stock option constituted ordinary income to the employee if the option itself had a readily ascertainable fair market value at the time it was granted to the employee. If the option did not have a readily ascertainable value it would not constitute ordinary income at the time it was granted; when the option was exercised, however, the spread between the option price and the value of the stock at that time constituted ordinary income to the employee.

Thus, qualified options had this advantage: an executive was not required to pay any ordinary income tax on the value of the option as such when the company granted it to him, or on any "bargain element" which may have existed if and when he decided to exercise the option and purchase stock in the company. The bargain element is the excess of the fair market value of a share of stock over its purchase price. The employee was only required to pay tax when he sold the shares purchased under the option.

Further, if he held the shares for at least 3 years—as required for the option to remain qualified—he was entitled to pay tax at capital gains rates on the full amount of his gain over the price which he originally paid.

Although an employee did not have to pay tax under the qualified stock option rules at the time he exercised the option and received stock worth more than he paid for it, the bargain element was treated as an item of tax preference in the minimum tax.

Under the 1976 Tax Reform Act, if an employee receives an option which has a readily ascertainable fair market value at the time it is granted, this value—less the price paid for the option, if any—constitutes ordinary income to the employee at that time.

On the other hand, if the option does not have a readily ascertainable fair market value at the time it is granted, the value of the option does not constitute income to the employee at that time, but it would be taxable to the employee only when the option is exercised. The ordinary income recognized at that time is the spread between the option price and the value of the stock—unless the stock is nontransferable and subject to a substantial risk of forfeiture.

Current law unduly penalizes key employees of smaller companies who often must sell optioned stock at the time of option exercise in order to pay the required tax, yet are unable to sell the stock obtained from exercising the option due to the limited or illiquid market for the stock. My bill would reinstate the favorable pre-1976 stock option treatment for new risky ventures to enable these firms to attract and motivate key employees. Innovative companies require appropriate incentives to attract capable management away from the high salaries and long-term security provided by mature companies.

Third, this bill would increase the net operating loss carryforward for new businesses. For the first 10 years of operation of a new business the period over which net operating losses may be carried forward and deducted against profits would be increased from the present limit of 7 to 10 years. New enterprises are generally more dependent on internally generated capital for growth and the current limit on the net operating loss carryover can have an adverse effect on growth. Since new businesses are frequently unprofitable for their first few years, operating losses incurred in these early stages often cannot be recovered in the carryforward period now permitted. Thus, although well established companies can usually utilize the net operating loss deductions, newer enterprises often cannot. My proposal would help eliminate this tax inequity.

Fourth, the existing limitation—generally $10,000 plus net investment income—on investment interest deductions would be repealed. Repeal of this very counterproductive limitation would encourage entrepreneurs to enter new fields—with borrowed funds—to bootstrap their way up. This change will facilitate the ability of entrepreneurs to raise capital to start a new business which can provide many new jobs and provide competition to the established firms. Investment interest expenses are real out-of-pocket expenses and should be deductible, particularly since this would encourage competition in our economy.

The present limitation discriminates in favor of persons with established wealth compared to new entrepreneurs. For example, a person who receives interest income of $100,000 per year from a trust is entitled to an investment interest deduction of $110,000. In comparison, a young entrepreneur with no interest income is limited to only $10,000 of investment interest deduction. Furthermore, our tax laws impose no limitations with respect to loans for the purchase of private airplanes or yachts but impose limitations on investment loans even though the establishment of a new business creates many new jobs for our economy.

The original purpose of the investment interest restriction was to prevent the conversion of ordinary income into capital gains. However, now that large capital gains are subjected to a tax of over 49 percent, such a limitation on interest deductions is counterproductive.

Fifth, to provide greater cash flow for successful ventures, the existing corporate surtax exemption of $50,000 would be raised to $100,000.

Under existing law, the first $25,000 of corporate income is taxed at a rate of 20 percent and income from $25,000 to $50,000 is taxed at a 22-percent rate. Corporate income in excess of $50,000 is taxed at a rate of 48 percent. These rates expire at the end of 1978. Under prior law, the first $25,000 of income was taxed at a rate of 22 percent and income in excess of that amount was taxed at 48 percent.

More favorable tax treatment for small business would provide additional capital for reinvestment and expansion of successful ventures.

Sixth, in order to diversify equity investments, large pension managers would be prevented from holding more than 5 percent of the outstanding stock of most large companies. Investments in companies with a capitalization of less than $150 million would not be subject to this limit.

One of the serious problems facing venture capitalists today is the inability of a successful venture to go public once it has grown to a sufficient size. The declining number of individual investors and the tendency of large institutions to ignore smaller firms has contributed to a shortage of funds for public offerings of well-managed firms supplying good products or services. A diversification requirement for pension managers would help spread equity capital and at the same time protect the safety of pension plan benefits.

Such a 5-percent limitation already applies to most insurance companies via New York State law, and many other pension managers have voluntarily adopted it. Several of the Nation's leading bankers have stated that 5 percent is their working rule for good market liquidity.

Today, private pension assets are managed by a relatively small number of financial institutions. Just one New York City bank manages $25 billion of assets, including $15 billion of pension assets. One-fifth of all pension assets—about $63 billion— are managed by just seven banks. There have been instances in which these pension managers tended to concentrate their investments in the stock of the same few companies. This creates a potentially dangerous investment situation for pension plan participants. If one of this very small group of pension managers decides to sell a major investment, on a bit of disturbing news, and other pension managers attempt to follow, they find that the "gate" suddenly gets very narrow. This situation can result in a very substantial reduction in the price of the stock to the detriment of countless American workers and retirees. Greater safety of pension assets can be insured if pension investments are reasonably diversified and decisionmaking is spread over a larger number of advisers.

A 5-percent limit is clearly not restrictive. There are over 2,000 different common stocks on the exchanges—1,150 common stocks on the New York Stock Exchange and 1,118 common stocks on the American Stock Exchange—for pension managers to choose from. In fact, the New York State insurance law specifically prevents insurance companies from holding more than 5 percent of the outstanding stock of a company. Thus, all major insurance companies in the country substantially comply with this rule. Several large banks have a self-imposed 5-percent holding rule, including Continental Bank, Wells Fargo Bank, Northern Trust Co., and Chemical. Furthermore, an executive of Citibank, which has one of the Nation's largest bank trust departments, has stated:

> If we held more than five percent of a company's stock, we'd be concerned that we could become locked in. That five percent limit is our working rule for good market liquidity.

This rule would simply insure that all large pension managers follow the example that some of the best pension managers have adopted voluntarily.

This proposal will not solve all of the problems associated with concentration of pension investments and concentration of pension management. However, the proposal is a constructive step to curb some real abuses and will help diversify pension investments.

Mr. President, I would like to provide some examples which illustrate the importance of venture capital to our entire economy.

Venture capital was essential in the creation of transistors. It is the transistor which made possible the large central computer industry and the military instrumentation industry. The development of the minicomputer industry depended on the availability of venture capital. The minicomputer industry not only provides substantial jobs and tax revenues but has also been a major factor in improving the productivity of industry. Everyone is familiar with pocket calculators. Pocket calculators are solely the product of American technology and venture capital.

A venture capital enterprise funded by risk investments developed the know-how for miniaturized semiconductors called MOS's. With this know-how and technology an entire new industry was created and America still leads the world in this field. The total initial risk capital investment was relatively small, especially when compared to recent total industry sales.

Indeed, venture capital has had an important impact on any number of high-growth industries—semiconductors, minicomputers, all kinds of other computer-related products, hand-held calculators, automatic editing typewriters, CATV, hifis, new medical instruments and a wide variety of others.

Even frozen orange juice was developed through venture capital. A great many jobs have been brought back to the United States from Japan through the development of the small chips that are used in hand-held calculators, and this type of advance is now being applied to electronic watches. These were developments by small companies that were not subject to the restrictions of a large company environment and could attract the bright young scientist, production manager and marketing people to move the product into the marketplace. And it is also the result of venture capitalists who were willing to risk their capital to build new companies to better serve the public.

We cannot maintain a healthy, competitive and growing economy unless there is enough capital available for the risktakers and entrepreneurs who want to develop their ideas into businesses.

In addition, we must avoid encouraging investors to sell new ventures to large firms.

The Federal Trade Commission's 1975 report on mergers and acquisitions states:

> As in the previous years, acquired firms that fell into the smallest asset size class accounted for the highest proportion of recorded acquisitions. Acquisitions of firms in the under $1.0 million and unknown asset size class represented 935, or 76.1 percent of the total number of recorded completed and pending acquisitions. For many of the acquired companies in this category, asset figures were unavailable—most likely because the acquired company was quite small. The $1.0–$9.9 million asset size class had the second highest proportion of acquired companies (11.5 percent).

Limitations on the ability of private investors in successful small businesses to sell their shares to other investors have resulted in large companies being able to take over successful small companies at a discounted price because the businesses and their individual owners have little alternative in meeting their financing and liquidity needs. This is a major force increasing concentration and diminishing competition in the American economy today.

Very often mergers are a legitimate means of developing liquidity. Frequently, a growing business needs the capital and management expertise of a larger partner for continued growth. On the other hand, many mergers in the past 5 years have resulted from an environment that offered the small businessman no alternative methods of acquiring capital and liquidity.

Mr. President, the Venture Capital Tax Reform Act will provide a more favorable economic climate for the creation and growth of innovative firms. It will help remove artificial incentives for new firms to sell out to giant corporations.

The key building blocks for the emerging innovative company are capital and management. Without adequate incentives for both, the ongoing formation of these vitally important businesses will simply not happen.

By Mr. ABOUREZK:

S. 2364. A bill to provide parity to farmers and to prevent interruptions in the supply of food to American consumers; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. ABOUREZK. Mr. President, today I am reintroducing the bill that I introduced last week which would direct the Secretary of Agriculture to increase price supports to producers of most of the major crops and feedgrains to at least 100 percent of parity. This new version adds cattle to the list of "commodities" that are covered by the bill and further stipulates that the Secretary suspend foreign meat imports until such time as domestic cattle prices reach the 100 percent of parity level. It is no secret that our domestic cattle producers are being threatened with economic extinction. It is just another example of producer efficiency that has resulted in an oversupply situation which has depressed market prices received by cattle raisers to a level far below the costs of production. If we allow the alarming trend of cattle ranch failures to continue, the independent cattleman will soon be a thing of the past.

Our food producers have stood by patiently and watched as other threatened industries have been "bailed out" by the Federal Government. The situation is no less desperate today in agriculture than it was in any of those other industries. That is why, Mr. President, that I feel we can do no less than give our full consideration to this bill.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2364

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assesmbled, That this Act may be cited as the "Emergency Farm Act of 1977."

SEC. 2. Notwithstanding any other provision of law, the Secretary of Agriculture is authorized and directed to make available through loans, purchases, payments, or other operations, price support to producers for each of the 1977 through 1981 crops of corn, cotton, peanuts, rice, tobacco, wheat, barley, oats, rye, grain sorghum, soybeans, sugar, wool, mohair, milk, and honey at a level of not less than 100 per centum of the parity price for such commodity, unless a majority of the producers of any such commodity voting in a referendum conducted by the Secretary of Agriculture vote to exempt such commodity from the provisions of this Act. The Secretary is also hereby authorized and directed to make available, through purchase agreements, price support to domestic cattle producers for the years 1977 through 1981 at a level of not less than 100 per centum of the parity price for all cattle produced and sold for use in this country or for export abroad. The Secretary is further directed that, until such time as domestic cattle prices are brought to the 100 per centum level, he shall suspend all foreign meat imports into this country.

By Mr. ROBERT C. BYRD (for Mr. EAGLETON):

S. 2365. A bill to amend the Federal Food, Drug, and Cosmetic Act with respect to cosmetic safety; to the Committee on Human Resources.

COSMETIC SAFETY AMENDMENTS OF 1977

Mr. ROBERT C. BYRD. Mr. President, I introduce a bill for Mr. EAGLETON and I ask unanimous consent that a statement by Mr. EAGLETON, together with the bill and an attachment, be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR THOMAS F. EAGLETON

Today I am introducing the Cosmetic Safety Amendments of 1977. My interest in this legislation began in 1973, when I first introduced a bill to amend the Federal Food, Drug, and Cosmetic Act with respect to cosmetic safety. Again, in 1975, I introduced a cosmetic safety bill, and late in 1976, the Senate passed that bill with minor amendments.

The purpose of these bills, and the one I am introducing today is to prevent unreasonable risk of injury resulting from the use of cosmetic products. The need for this legislation has not lessened, and indeed has been highlighted by recent studies pointing to cancer risks associated with cosmetic use.

Virtually every American family uses cosmetic products of one kind or another, since the term includes everything from lipstick and mascara to toothpaste and shaving cream. Most consumers purchase this wide range of products under the mistaken assumption that they are required to be screened to eliminate potential health hazards. As reported in the April 1973 issue of FDA Consumer, a Food and Drug Administration survey of consumer attitudes revealed that 31.7 percent of those polled are of the view that the law requires manufacturers of cosmetics to test their products prior to marketing them; 50.8 percent think that premarket testing is required some of the time; and only 5.4 percent are aware that the law imposes no testing requirements whatsoever.

The Federal Food, Drug, and Cosmetic Act of 1938 confers extensive regulatory authority on the Food and Drug Administration with respect to safeguarding the public against health hazards in food and drugs, but only very limited powers for FDA respecting cosmetics.

The FDA is currently authorized to act with respect to cosmetics in only two areas: (1) when the cosmetic is "adulterated," that is, the cosmetic or its container is composed of some poisonous or deleterious substance; or it contains any filthy, putrid or decomposed matter, or it is packed in an unsanitary manner and has become contaminated; and (2) when the cosmetic is "misbranded," that is, when its labeling is false or misleading, or fails to contain information required by law, such as the name and location of the manufacturer or the quantity of the contents.

Should a cosmetic be determined to be either adulterated or misbranded, the Food and Drug Administration has the authority to seize the product. This after the fact approach, which allows enforcement to proceed primarily on a case-by-case basis, permits potentially injurious products to be sold, with consumers as the guinea pigs.

Recent safety questions with respect to hair dyes highlight the inadequacy of FDA's current regulatory authority. Several years ago, Dr. Bruce Ames, a biochemist at the University of California at Berkeley, developed a new screening test which indicated that some hair dyes may be responsible for cancer and birth defects. Recently, the National Cancer Institute issued a preliminary report of its findings that rats and mice develop cancer when hair dyes are ingested. Mr. President, I ask that the text of a December 5, "New York Times" editorial on the hair dye question and cosmetic safety in general be printed at this point in the Record.

A 1976 report of an FDA advisory review panel charged with studying and evaluating the safety and effectiveness of certain antimicrobial products which are sold as over the counter drugs, concluded that certain ingredients in these products could not be included in the "generally recognized as safe" category and therefore should not be used in drug products until their safety is definitely established. Significantly, the panel noted that some of the ingredients in question are also commonly used in cosmetics, but that due to the lack of regulatory authority over cosmetics, nothing could be done to require that their safety be shown or that their use be restricted. Thus, the panel came to the anomalous conclusion that the federal government has a legal responsibility to protect consumers against risks posed by drug products of questionable safety, but has no authority to safeguard the public against risks stemming from the incorporation of the same substances in cosmetics.

In the last several years, the FDA has made a commendable beginning effort to reduce cosmetic-related health hazards and to provide consumers with more and better product information when they buy cosmetics. Just last month, FDA regulations requiring that the labels of cosmetic products list the ingredients contained therein, and further, to require that any manufacturer who fails to substantiate the safety of any of his cosmetic products must include the following statement on the label: "Warning: The safety of this product has not been determined," went into effect. In connection with the latter requirement, the former Commissioner of FDA advised manufacturers that substantiation of the safety of a product may be accomplished through "(a) reliance on already available toxicological test data on individual ingredients and on product formulations that are similar in composition to the particular cosmetic, and (b) performance of any additional toxicological and other tests that are appropriate in the light of such existing data and information. Although satisfactory toxicological data may exist for each ingredient of a cosmetic, it will still be necessary to conduct some toxicological testing with the complete formulation to assure adequately the safety of the finished cosmetic." Despite this well-intentioned regulation, FDA has candidly acknowledged that the safety substantiation regulations are essentially unenforceable under present law, since the agency has no authority to inspect, or to require the submission of, the data upon which manufacturers base their claims of safety.

In addition to these regulatory initiatives, the FDA has undertaken a voluntary program in concert with representatives of the cosmetic industry which consists of:

(1) Registration by all cosmetic manufacturers with the FDA, supplying the name and address of the company and the names of the cosmetic product it manufactures.

(2) Submission on the FDA by the manufacturer of the formula for each product, to be kept primarily for use by physicians treating individuals who are injured by a particular cosmetic;

(3) Submission to the FDA by manufacturers, distributors, of cosmetic products of "verified" reports of adverse reactions to each product.

These three voluntary programs have had mixed results. It is true that manufacturers of 95 percent of all cosmetic products have registered, but a great many of the smaller companies have failed to do so. Formula data for about 70 percent of the products on the market have been submitted but only 2 percent of the manufacturers have provided FDA with reports on adverse reactions suffered by consumers.

It is clear that additional legislative authority is needed in this area. The bill which I am proposing represents a long overdue redefinition of the government's responsibility for insuring that cosmetic products offered for sale to the public are safe. The basic thrust of the bill is to assure that cosmetic products undergo adequate safety testing prior to being placed on the market, and to provide the Food and Drug Administration with adequate information and regulatory authority to enforce the provisions of the law in a uniform manner.

A brief summary of the bill follows:

(1) Title I of the bill sets forth procedures for the safety substantiation of cosmetics and cosmetic ingredients, placing the burden on manufacturers for safety substantiation prior to commercial distribution, as well as a continuing burden on manufacturers to substantiate the safety of their products while on the market. The FDA would be authorized to require the submission of this safety test data, or to require specific testing when necessary to assure safe cosmetics. FDA would be given the specific authority to prohibit the inclusion of certain ingredients in cosmetics, require additional labeling, limit amounts of certain ingredients, or ban a cosmetic if necessary to protect the public health. Title I also provides that FDA's good manufacturing practice regulations for cosmetics would have the force of law, (2) for retention of the present exemption for pure soap, and (3) for the deletion of the hair dye exemption from the adulteration provisions of the Act. Title I further provides for citizen civil suits, civil monetary penalties, and modification of the standard of strict criminal liability for a violation of the Act.

(2) Title II requires manufacturers to register with FDA, to submit formulas for cosmetic products to FDA, and to periodically forward consumer complaints about adverse reactions to cosmetic products to the FDA. This title would make mandatory the present voluntary programs, and would broaden FDA's inspection powers to include records bearing on whether a cosmetic may be adulterated or misbranded. It would also authorize FDA to administratively detain suspect products pending seizure. Finally, title II provides an early warning safety provision, requiring registration of new cosmetic products unlike types of cosmetics previously marketed, and of ingredients not previously used in cosmetics.

(3) Title III of the bill provides clear authority for FDA to require ingredient, cautionary, and information labeling of cosmetics under the Federal Food, Drug, and Cosmetic Act.

(4) Title IV provides a procedure for informal notice-and-comment rulemaking, subject to direct review in a United States Court of Appeals. This allows for an expedited regulatory procedure.

Mr. President, I ask that the text of the bill and editorial be printed in the RECORD.

The bill and editorial ordered to be printed in the RECORD are as follows:

S. 2365

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

That this Act may be cited as the "Cosmetic Safety Amendments of 1977".

TITLE I—COSMETIC SAFETY

SEC. 101. Chapter VI of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 361 et seq.) (hereinafter referred to as the Act) is amended to add a new section as follows:

"COSMETIC SAFETY

"Cosmetics Deemed Adulterated

"SEC. 604. (a) A cosmetic shall be deemed to be adulterated under section 601(a), if—

"(1) its safety has not been adequately substantiated prior to and during the commercial distribution of the cosmetic; or

(2) requirements applicable to that cosmetic by or under subsection (c) of this section have not been met; or

"(3) it is a banned cosmetic; or

"(4) it is deemed unsafe under subsection (c)(5).

"Cosmetic Safety Substantiation

"(b)(1) The safety of a cosmetic shall not be considered adequately substantiated unless—

(A) on the basis of all data and information relating to the safety of the cosmetic it can reasonably be concluded that the cosmetic is safe under the conditions of use prescribed in the labeling of the cosmetic, or under such conditions of use as are customary or usual;

"(B) such data and information are contained, or referred to, in records maintained by the manufacturer or the distributor who is designated under section 605 (b)(1)(D) as responsible for maintenance of such records respecting that cosmetic; and

"(C) all data and information maintained in accordance with subparagraph (B) are submitted to the Secretary when he shall, by regulation, so prescribe, or upon his written notice or the written notice of a person designated by the Secretary for such purpose.

"(2) The data and information referred to in paragraph (1)—

"(A) shall include full reports of specific testing conducted by the manufacturer or his designated representatives in animals or humans by such methods as are methodologically adequate and reasonably applicable to determine the potential of the cosmetic for—

"(i) toxicity,

"(ii) sensitization, and

"(iii) irritation,

under such conditions of use as are prescribed in the labeling of such cosmetic, and under such other conditions of use as may be reasonably foreseeable except that, in lieu of conducting such tests, data and results of published scientific tests in animals or humans which are methodologically adequate to determine the potential of the cosmetic for toxicity, sensitization and irritation may be substituted; and

"(B) may include published scientific literature or unpublished data and information in the possession of the manufacturer or distributor relevant to the cosmetic and the cosmetic ingredients.

"Cosmetic Safety Regulations

"(c)(1) Whenever the Secretary finds, on the basis of all available information, that such action is necessary to assure the safety of any cosmetic, or class of cosmetic, he shall by regulation or order require such additional specific testing as he deems necessary to protect the public health, including testing of the cumulative and synergistic effects of such cosmetic, or class of cosmetics.

"(2) In requiring specific testing under paragraph (1), the Secretary shall by regulation provide that such testing be conducted by the manufacturer or manufacturers of such cosmetic or class of cosmetics, or by qualified persons independent of such manufacturer or manufacturers.

"(3) Whenever the Secretary finds that such action is necessary to protect the public health and safety, he shall:

"(A) prohibit the cosmetic from bearing or containing any substance which may render it injurious to users or limit the quantity of such substance in or on the cosmetic; or

"(B) require appropriate labeling pursuant to section 602; or

"(C) ban such cosmetic; or

"(D) require any combination of measures authorized in subparagraphs (A) and (B).

"(4) The Secretary may declare a proposed regulation issued under paragraphs (1) and (2) to be effective upon its publication in the Federal Register and until the effective date of any final action taken respecting such regulation if he determins that making such proposed regulation so effective is necessary to reduce or eliminate a significant hazard to any segment of the public associated with the use of the cosmetic which is the subject of the regulation. If the Secretary makes a proposed regulation so effective, he shall as expeditiously as possible give interested persons notice of his action under this subsection, promptly provide reasonable opportunity for an informal hearing and written expression of views, and thereafter, as expeditiously as possible, either affirm, modify, or revoke such proposed regulation.

"(5) A cosmetic shall be deemed adulterated—

"(A) for any use which will or may result in ingestion of all or part of such cosmetic or cosmetic ingredient if the cosmetic or cosmetic ingredient is found by the Secretary to induce cancer when ingested by man or animal, or if it is found by the Secretary, after tests which are appropriate for the evaluation of chemicals liable to be ingested by man, to induce cancer in man or animal, and

"(B) for any use which will not result in ingestion of any part of such cosmetic or cosmetic ingredient if, after tests which are appropriate for the evaluation of the safety of such cosmetic or cosmetic ingredient, it is found by the Secretary to induce cancer in man or animal.

"Definitions

"(d) As used in this section the term—

"(1) 'toxicity' refers to the short-term or long-term capacity of a cosmetic to produce personal injury or illness to human beings or experimental animals through ingestion, inhalation, or absorption through any body surface;

"(2) 'sensitization' refers to the capacity of a cosmetic to cause, following one or more prior nonreactive exposures, on normal living tissue through an allergic or photodynamic process, an injury to the original site or other sites;

"(3) 'irritation' refers to the capacity of a cosmetic on immediate, prolonged, or repeated contact with normal living tissue, to induce a local inflammatory reaction; and

"(4) 'testing' refers to the process of measuring, in terms of objective standards (as established by the Secretary in consultation with public and private individuals appropriately qualified by training and experience), the capacity of a cosmetic to cause illness or injury.

"Citizen's Civil Actions

"(e) (1) Except as provided in paragraph (2) of this subsection, any person may commence a civil action for mandatory or prohibitory injunctive relief, including interim equitable relief, on his own behalf, whenever such action constitutes a case or controversy—

"(A) against any person who is alleged to be in violation of this section or of any regulation issued under this section; or

"(B) against the Secretary where there is alleged a failure of the Secretary to perform any act or duty under this section which is not discretionary with the Secretary.

The district courts of the United States shall have jurisdiction over actions brought under this section, without regard to the amount in controversy or the citizenship of the parties.

"(2) No civil action may be commenced—

"(A) under paragraph (1) (A) of this subsection—

"(i) prior to sixty days after the plaintiff has given notice of the alleged violation to the Secretary and to any alleged violator in such manner as the Secretary may by regulation require; or

"(ii) if the Attorney General or the Secretary has commenced and is diligently pursuing judicial proceedings or administrative action with respect to such alleged violation,

"(B) under paragraph (1) (B) of this subsection, prior to sixty days after the plaintiff has given notice to the Secretary of such alleged failure to perform an act or duty.

"(3) In any action under this subsection, the Attorney General or the Secretary may intervene as a matter of right. The decision and rulings of the court, in any judicial proceeding commenced under this subsection, shall not be a bar to the institution of any judicial proceeding or administrative action by the Secretary against a party to such judicial proceeding, nor shall any factual finding by such court be determinative as to any fact in any subsequent judicial proceeding or administrative action, unless the Secretary is a party to the proceeding under this subsection.

"(4) The court, in issuing any final order in any action brought pursuant to paragraph (1) of this subsection, may award costs of litigation (including a reasonable attorney's fee, based on the prevailing rates for such services, and expert witness fees) to any party, whenever the court determines that such an award is appropriate.

"(5) Nothing in this subsection shall restrict any right which any person (or class of persons) may have under any statute or at common law to seek enforcement of any regulation or order or to seek any other relief.

"(6) Nothing in this subsection shall require the disclosure of any trade secret information or any other confidential information relating to cosmetics during discovery or at any time or place other than that which may be prescribed by the court.

"Defenses and Representations

"(f) Compliance with this section (1) shall not be an absolute defense in suits for product liability and (2) shall not denote certification by the Secretary that any cosmetic or cosmetic ingredient is safe. Any representation in labeling or advertising that creates an impression of certification shall be deemed misbranding.".

GOOD MANUFACTURING PRACTICES

SEC. 102. Section 601 of the Act (21 U.S.C. 361) is amended by adding at the end thereof of the following new subsection:

"(f) If the methods used in, or facilities and controls used for its processing do not conform to, or are not operated or administered in conformity with, current good manufacturing practices, as determined by regulations issued by the Secretary.".

CONFORMING AMENDMENTS

Definition

SEC. 103. (a) Section 201 of the Act (21 U.S.C. 321) is amended by adding the following new subsection at the end thereof:

"(z) For the purposes of sections 604 and 605, the term 'commercial distribution' means any distribution outside the establishment manufacturing the product for sale, for promoting future sales (including distribution of free samples of the product), or for measuring consumer acceptance through market testing."

Amendment to Section 303

(b) (1) Section 303(c) of the Act (21 U.S.C. 333) is amended by striking the period at the end thereof and inserting at the end thereof the following: "; or (6) for having violated section 301 (a) or (c) with respect to a cosmetic because the cosmetic is deemed adulterated under section 604(a), or misbranded under section 602 (g), (h), or (i), if such person establishes a guarantee, in a form and under such conditions as are established by the Secretary by regulation, to the effect that the person from whom he received in good faith the article complied with the requirements of section 604(a), section 605, or section 602 (g) and (h).".

(2) Section 301(h) of the Act (21 (U.S.C. 331) is amended by inserting "or in section 303(c) (6).", immediately following 303(c) (3),".

Provided Acts

(c) (1) Section 301(e) of the Act (21 U.S.C. 331) is amended by striking the word "or" before "519" and by adding a comma and "or 604" after "(519)".

(2) Section 301 of the Act is further amended by adding a new subsection as follows:

"(s) The maintenance or submission of any required data, information, records, or reports, which contain any false or misleading information or that omit any material information.".

Adulterated and Misbranded Cosmetics

(d) (1) Section 601(a) of the Act is amended to read as follows:

"(a) If it bears or contains any poisonous or deleterious substance which may render it injurious to users, or if it is or may be injurious to users, under the conditions of use prescribed in the labeling thereof, or under such conditions of use as are customary or usual, or if it is deemed adulterated under section 604(a).".

(2) Section 601(e) of the Act is amended to read as follows:

"(e) If it is, or it bears or contains, a color additive which is unsafe within the meaning of section 706(a). This paragraph shall not apply to any hair dye other than any eyelash dye or eyebrow dye.".

(e) Section 602(e) of the Act is amended by striking "as defined in the last sentence of section 601(a))" from the second sentence and inserting "(other than any eyelash dye or eyebrow dye)" in lieu thereof.

CIVIL AND CRIMINAL PENALTIES

SEC. 104. (a) Chapter III of the Act (21 U.S.C. 331, et seq.) is amended by adding at the end thereof the following new section:

CIVIL PENALTIES

"SEC. 308. (a) Any person who is found by the Secretary, after written notice and an opportunity for a hearing, to have committed an act prohibited by section 301 of this chapter with respect to any cosmetic, shall be liable to the United States for a civil penalty of not more than $10 000 for each violation constitutes a separate offense for such purpose. The amount of such civil penalty shall be determined and assessed by the Secretary, or his delegate, by writen notice.

"(b) Any person against whom a violation is found and a civil penalty assessed under paragraph (1) of this subsection may obtain review in the court of appeals of the United States for the circuit in which such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing a notice of appeal in such court within 30 days from the date of such assessment and by simultaneously sending a copy of such notice by certified mail to the Secretary. The Secretary shall promptly file in such court a certified copy of the record upon which such violation was found and such penalty imposed, as provided in section 2112 of title 28, United States Code. The finding of the Secretary shall be set aside if found to be unsupported by substantial evidence, as provided by section 706(2) (e) of title 5, United States Code.

"(c) If any person fails to pay an assessment of a civil penalty after it has become final and unappealable, or after the appropriate court of appeals has entered final judgment in favor of the Secretary, the Secreary shall recover the amount assessed in any appropriate district court of the United States. In such action, the validity and appropriateness of the final order imposing the civil penalty shall not be subject to review.".

(b) Section 303(a) of the Act is amended to read as follows:

"Penalties

"(a) Any person who violates a provision of section 301 shall be imprisoned for not more than one year or fined not more than $10,000, or both; except that such penalties shall apply to any individual who violates a provision of such section 301 with respect to cosmetics or who causes a violation of such section 301 to occur with respect to cosmetics, only if such individual knowingly, willfully, or negligently violates, or causes the violation of, such provision."

EFFECTIVE DATE

SEC. 105. (a) The provisions of this title shall take effect October 1, 1978, except as provided in subsection (b).

(b) The legend required to be placed on the label of a coal-tar hair dye by the proviso of section 601(a), prior to the enactment of this Act, shall continue to be required until the Secretary issues regulations under section 602 prescribing different requirements.

TITLE II—REGISTRATION AND COMPLIANCE

SEC. 201. Chapter VI of the Act (21 U.S.C. 361, et seq.) is amended by adding at the end thereof the following new section:

"REGISTRATION OF COSMETIC PROCESSORS

"SEC. 605. (a) (1) On or before December 31 of each year, every person who owns or operates an establishment engaged in processing a cosmetic shall register with the Secretary his name, principal place of business, and the location of each such establishment, in such manner and form as the Secretary shall prescribe by regulation.

"(2) Every person required to register under this subsection shall, within ten days after commencing operation of any additional establishment, register such additional establishment with the Secretary.

"(3) Every person required to register under this section shall promptly notify the Secretary if he ceases to process cosmetics in any establishment unless such cessation is temporary.

"Registration of Cosmetic Lists

"(b)(1) Every person required to register under this section shall, for each such establishment, include as part of such registration the following information regarding any cosmetic which is in commercial distribution—

"(A) a list of each cosmetic processed in each such establishment by brand name or names;

"(B) the class of cosmetics (as prescribed by the Secretary by regulation) of each such cosmetic;

"(C) a list of each ingredient used in each such cosmetic in descending order of predominance by weight, showing the percentage of each such ingredient: *Provided*, that a flavor or fragrance may be designated as such if the manufacturer or distributor of such flavor or fragrance has separately submitted a registration statement containing a list of ingredients used in such flavor or fragrance which the requirements of this section;

"(D) the name and principal place of business of the person who is to be responsible, with respect to each such cosmetic, for the maintenance of records relating to safety substantiation required to be kept by section 604(b), and the location of such records; and

"(E) summary information on such cosmetic relating to hazards from accidental ingestion or misuse of such cosmetic (which information shall be based upon such investigations as are necessary to identify such hazards) and, where appropriate, information on antidotes or treatment.

"(2) The Secretary may also require the submission by any person required to register under this section of the following information concerning any cosmetic in commercial distribution if he finds that such submission is necessary or appropriate to carry out the purposes of this Act—

"(A) a quantitative list of the ingredients of any cosmetic,

"(B) a list of all cosmetics that include a particular ingredient or fall within a particular cosmetic class or for any particular use;

"(C) representative samples of the labeling or all labeling of any cosmetic or class of cosmetics.

"(3) The Secretary may by regulation require that information required by subsections (2) (A), (B), and (C) be included as part of an annual registration.

"Changes in Registration Information

"(c) If, at any time, material information submitted by any person required to register under this section is no longer accurate, such person shall file with the Secretary, within ninety days after the date on which such information is no longer accurate, such amendment or amendments as may be necessary to make the information accurate.

"Notification of New Cosmetic

"(d) The Secretary shall, by regulation, provide that any person required to register pursuant to this section who proposes to offer for commercial distribution a cosmetic—

"(1) which contains any ingredient which has not previously been used in cosmetics registered pursuant to this setcion, or

"(2) which is proposed to be used in an application for which such cosmetic was not previously offered for commercial distribution shall, within twenty days before the date on which such cosmetic is first offered for commercial distribution, give the Secretary notice of the proposed commercial distribution of such cosmetic, along with a list of the ingredients used in such cosmetic and information as to its intended use as prescribed in the labeling thereof.

"Inspection, Reporting, and Recordkeeping

"(e)(1) Every establishment required to register under this section shall be subject to the inspection and reporting requirements of section 704.

"(2) Every person required to register under this section shall maintain records of all information submitted to the Secretary under this section. Such information, and other records relating to such information, may be inspected or required to be submitted under section 704.

"Availability of Information

"(f)(1) No officer or employee of the United States shall disclose any information revealed to, or otherwise obtained by, the Department or any of its representatives, under subsections (b) and (c), which information is exempt from mandatory disclosure pursuant to section 552 of Title 5 of the United States Code, by reason of its constituting trade secrets or commercial or financial information that is privileged and confidential.

"(2) Information submitted to the Secretary in compliance with requirements of paragraph (d)(2) of this section shall be retained by him as confidential trade secret information until the date on which the cosmetic to which such information applies is offered for commercial distribution.

"Filing of Adverse Reactions

"(g) The Secretary shall require every person required to register under this section to file with him information regarding every report of any adverse reaction received by such person which may have resulted, or is alleged to have resulted, from the use of a cosmetic processed by him, thirty days after the end of the calendar quarter in which such report was received. Each such person shall maintain, for at least five years from date of receipt all such reports, all information regarding such adverse reaction.

"Definitions

"(h)(1) As used in this section the term—

"(1) 'process', 'processed', or 'processing', with respect to cosmetics, includes the manufacturing, preparing, packaging, or labeling of a cosmetic, except that such term shall not include persons whose activities with respect to cosmetics are limited solely to transportation or storage of cosmetics or retail sales of cosmetics to consumers:

"(2) 'name' shall include in the case of a partnership the name of each partner, and in the case of a corporation the name appearing on the corporation's charter or certificate of incorporation and the name of each principal corporate officer and director and the State of incorporation;

"(3) 'owns or operates' means any person who owns, operates, leases, or controls any establishment used in processing a cosmetic:

"(4) 'establishment' means the premises, building, structures, and facilities used in processing cosmetics; and

"(5) 'adverse reaction' means any allergic reaction or other bodily injury associated with or contemporaneous with the use of a cosmetic.".

INSPECTION AND REPORTING

SEC. 202. Section 704(a) of the Act (21 U.S.C. 374) is amended by adding at the end thereof the following new sentence: "In the case of persons manufacturing, processing, preparing, packaging, labeling, or holding a cosmetic (1) inspection shall extend to all things therein (including records, files, papers, processes, controls, and facilities, but excluding those financial, sales, pricing, personnel, and research data not bearing upon whether the product may be adulterated or misbranded) bearing on whether a cosmetic may be adulterated or misbranded or on whether there has been a violation of section 301; and (2) the owner or operator of any establishment which may be inspected under this section shall, upon written notice from the Secretary, submit such information to him. The district courts of the United States shall have jurisdiction to enforce requests under the preceding sentence and to require access to such information upon application of the Secretary or the Attorney General, in an action brought in any district wherein the person or establishment involved is found or transacts business.".

ADMINISTRATIVE RESTRAINT AND SEIZURE

SEC. 203. (a) Section 304 of the Act (21 U.S.C. 334) is amended by adding at the end of the following new subsection:

"Administrative Restraint

"(h)(1) If during an inspection conducted under section 704 of an establishment or a vehicle, a cosmetic which the officer or employee making the inspection has reason to believe is adulterated or misbranded is found in such establishment or vehicle, such officer or employee may order the cosmetic detained for a reasonable period which may not exceed twenty days unless the Secretary determines that a period of detention greater than twenty days is required to institute an action under subsection (a) to seize the cosmetic, in which case he may authorize a detention period of not to exceed thirty days. A detention order under this paragraph may require the labeling or marking of a cosmetic during the period of its detention for the purpose of identifying the cosmetic as detained. Any person who would be entitled to claim a cosmetic if it were seized under subsection (a) may appeal to the Secretary a detention of such cosmetic under this paragraph. Within five days of the date an appeal of a detention is filed with the Secretary, the Secretary shall, after affording opportunity for an informal hearing, by order confirm the detention or revoke it.

"(2)(A) Except as authorized by subparagraph (B), a cosmetic subject to a detention order issued under paragraph (1) shall not be moved by any person from the place at which it is ordered detained until—

"(i) released by the Secretary, or

"(ii) the expiration of the detention period applicable to such order,

whichever occurs first.

"(B) A cosmetic subject to a detention order under paragraph (1) may be moved—

"(i) in accordance with regulations prescribed by the Secretary, and

"(ii) if not in final form for shipment, at the discretion of the manufacturer of the cosmetic for the purpose of completing the work required to put it in such form.".

Seizure of Any Adulterated or Misbranded Cosmetic

(b) Section 304(a)(2) of the Act is amended (1) by striking out "and" before "(C)", and (2) by striking out the period at the end and inserting in lieu thereof a comma and the following: "and (D) any adulterated or misbranded cosmetic.".

CONFORMING AMENDMENTS

Prohibited Acts

SEC. 204. (a) Section 301(j) of the Act (21 U.S.C. 331) is amended by changing the period at the end thereof to a comma, and by inserting the following immediately after such comma: "or any formula data entitled to protection under section 604(f).".

(b) Section 301 of the Act (21 U.S.C. 331) is further amended by adding the following new paragraphs:

"(s) The movement of a cosmetic in violation of an order under section 304(g) or the removal or alteration of any mark or label required by the order to identify the cosmetic as detained.

"(t) The failure of any person to register, or to submit information, when required to do so under section 605.".

Misbranded Cosmetics

(c) Section 602 of the Act is further amended by adding at the end thereof the following new paragraph:

"(l) If it was processed in an establishment which was not registered as required under section 605, or if information concerning it is not submitted or maintained as required under section 605, or if information concerning it is not submited as required under section 704.".

Imports

(d) Section 801(a) of the Act (21 U.S.C. 381(a)) is amended by inserting "(1)" immediately after "(a)" and adding at the end thereof:

"(2) The Secretary shall refuse entry of any cosmetic offered for importation into the United States which has been processed in any establishment other than an establishment registered pursuant to section 605.".

EFFECTIVE DATES

SEC. 205. Every person who owns or operates an establishment engaged in processing a cosmetic shall first register pursuant to section 605 of the Federal Food, Drug, and Cosmetic Act on the first day of the third month after regulations promulgated under section 605 of the Federal Food, Drug, and Cosmetic Act take effect. All other provisions of this title shall take effect upon enactment.

TITLE III—COSMETIC LABELING

SEC. 301. (a) Section 602 of the Act is further amended by adding at the end thereof the following new subsections:

"Cosmetic Ingredient Labeling

"(g) (1) Unless labeling affixed to or within the package in a manner that renders such labeling visible or readily accessible to prospective consumers at the point of retail sale bears—

"(A) the common or usual name of the cosmetic, if any, and

"(B) in case it is fabricated from two or more ingredients, the common or usual name of each such ingredient in the order of decreasing predominance by weight, except that fragrance and flavor may be designated as such without naming each ingredient. The Secretary may, by regulation, require labeling of ingredients which are part of flavor or fragrance if he deems such disclosures to be in the public interest.

"(2) Subject to such conditions as the Secretary may by regulation provide, this subsection shall not apply to incidental additives that are present in a cosmetic in insignificant levels and which do not have any technical or functional effect in such cosmetic.

"(3) Subject to such conditions as the Secretary shall by regulation provide, labeling shall include a statement indicating that additional information shall be made available on request.

"Warning and Other Labeling

"(h) Unless its label or labeling bears adequate warnings against use where it may be hazardous to health, or such warnings or information as the Secretary may by regulation require with respect to use which the Secretary has determined to be necessary for the protection of the public health or appropriate as a guide to use.".

EFFECTIVE DATE

SEC 302. The amendments made by this title shall be effective on the first day of the thirteenth calendar month following the month in which this Act is enacted.

TITLE IV—GENERAL PROVISIONS CONCERNING COSMETICS

SEC. 401. Chapter VI of the Federal Food, Drug, and Cosmetic Act, as amended by this Act, is further amended by inserting at the end thereof the following:

"GENERAL PROVISIONS CONCERNING COSMETICS

"Poison Control Information

"SEC. 606. (a) The Secretary shall establish a system for making publicly available, through poison control centers and other appropriate means, the summary information collected under section 605(b)(1)(E) relevant to hazards from accidental ingestion or misuse of cosmetics and antidotes or treatment. Such system shall assure that such information is available at any time to persons (including physicians, hospitals, clinics, and poison control centers) who request such information to aid in treatment of indivduals who may be injured as a result of the ingestion of, contact with, or exposure to, any cosmetic. The system shall also include a continuing program by the Secretary to inform physicians, hospitals, clinics, and poison control centers, and other persons to whom such information may be useful, of the availability of such information and the methods by which it may be obtained at any time.

"Small Business Assistance

"(b) The Secretary shall cooperate with the Small Business Administration with respect to applications (under section 7(b)(5) of the Small Business Act, as amended (15 U.S.C. 631 et seq.)) for loans to assist affected small business entities to comply with requirements under sections 604 and 601(f). The Small Business Administration shall request the Secretary to review each such application. The Secretary shall evaluate each such application and shall report thereon to the Administrator (or to the bank or lending institution involved) within sixty days after the date of receipt thereof. Each such report shall include the Secretary's conclusion as to whether such proposed additions to or alterations in, the applicant's plant, facilities, or methods of operation are appropriate to enable or to assist the applicant to comply with requirements under sections 604 and 601(f).

"Effect on State Law

"(c)(1) It is declared to be the express intent of Congress to supersede any and all laws of the States or political subdivisions thereof, insofar as they may now or hereafter provide for information on the label or in labeling of a cosmetic which is in addition to or different from information required on the label or in labeling by or under section 602 of this Act, except as provided in this section.

"(2) Upon application of a State or political subdivision thereof, the Secretary may by regulation, after notice and opportunity for oral presentation of views, exempt from the provisions of paragraph (1) (under such conditions as he may impose) a proposed safety requirement described in such application, where the proposed requirement—

"(A) imposes a higher level of performance than the Federal standard,

"(B) is required by compelling local conditions, and

"(C) does not unduly burden interstate Commerce.

"Procedures and Judicial Review

"(d)(1) Proceedings to issue, amend, or repeal a regulation under this chapter shall be conducted in accordance with the procedures prescribed by section 553 of title 5 of the United States Code.

"(2) In the case of any regulation under this chapter any interested person (including a consumer or consumer organization), who may be adversely affected by such regulation may, at any time within sixty days after the regulation is issued by the Secretary, file a petition with the United States Court of Appeals for the District of Columbia, or for the circuit wherein such person resides or has the principal place of business, for judicial review of such regulation. A copy of the petition shall be transmitted by the clerk of the court to the Secretary or other officer designated by him for that purpose. The Secretary shall file in the court the record of the proceedings on which the Secretary based his regulation as provided in section 2112 of title 28 of the United States Code. For purposes of this subsection, the term 'record' means all notices and other matter published in the Federal Register with respect to the regulation reviewed, all information submitted to the Secretary with respect to such regulation, proceedings of any advisory committee with respect to such regulation, any hearing held with respect to such regulation, and any other information identified by the Secretary, in the administrative proceeding held with respect to such regulation, as being relevant to such regulation.

"(3) If the petitioner applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there was no opportunity to adduce such evidence in the proceeding before the Secretary, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Secretary in a hearing or in such other manner, and upon such terms and conditions, as the court may deem proper. The Secretary may modify his findings, or make new findings, by reason of the additional evidence so taken, and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original regulation, with the return of such additional evidence.

"(4) Upon the filing of the petition under subsection (3) of this section, the court shall have jurisdiction to review the regulation of the Secretary in accordance with subparagraphs (A), (B), (C), and (D) of paragraph (2) of section 706 of title 5 of the United States Code. If the court orders additional evidence to be taken under subsection (4) of this section, the court shall also review the Secretary's regulation to determine if, on the basis of the entire record before the court pursuant to subsection (3) and (4) of this section, it is supported by substantial evidence. If the court finds the regulation is not so supported, the court may set it aside.

"(5) With respect to any regulation reviewed under this section, other than a regulation made effective upon publication in the Federal Register pursuant to section 604(e)(2), the court may grant appropriate relief pending conclusion of the review proceedings, as provided in section 705 of such title 5.

"(6) The judgment of the court affirming or setting aside, in whole or in part, any such regulation of the Secretary shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification, as provided in section 1254 of title 28 of the United States Code.

"Advisory Committees

"(e) The Secretary may appoint advisory committees to assist in the administration of this chapter. Any such committee shall consist of members who are individuals appropriately qualified by training and experience. Not less than one-third of the members of any committee shall be representatives of consumer interests. The Secretary shall prescribe by regulation the procedures to be followed by such committees and shall assure that each committee provides, to the maximum extent practicable, an opportunity for any interested person to submit data and views on all matters considered by the committee. All meetings of the committee shall be open in accordance with the requirements of the Federal Advisory Committee Act.".

SEC. 402. The provisions of this title shall take effect on the date of enactment of this Act.

[From the New York Times, Dec. 5, 1977]

CLEANSING THE COSMETIC LAWS

It's enough to make the hair turn gray. A debate over the possibility that some hair dyes may contain a dangerous ingredient has revealed a dangerous loophole in Federal law. Even if every expert in the country agreed that the dyes present a major hazard, the Government would be powerless to remove them from the market.

The hair dyes under suspicion are the "permanent" variety, not color rinses or semi-permanent dyes that last through only a few shampoos. Most of the permanent dyes contain a chemical—known as 2,4-diaminoanisole (2,4 DAA) or 4-methoxy-m-phenylenediamine—that helps impart a bluish hue to hair colors ranging from black to ash blond. About 20 million Americans use dyes containing this ingredient. The industry contends there is no good substitute; other substances are unstable and gradually turn the hair brassy red. Thus, a $250-million-a-year business feels dependent on 2,4 DAA.

The National Cancer Institute, in a preliminary report, has found that rats and mice develop cancer when large doses of the substance are fed to them. Other tests have shown that the chemical penetrates when it is applied to the skin of laboratory animals. Hence the possibility arises that hair dyes may penetrate the scalp and cause cancer in humans. The industry, however, disputes the significance of these findings, arguing that the substance does not cause cancer when it is merely applied to the skin of animals, only when it is fed to them. Further, surveys of cancer victims and of beauticians who work with the hair dyes have found no connection between the dyes and cancer. The tests of both sides have been challenged on technical grounds and Government investigations continue.

But the controversy has revealed a bizarre twist of law that needs attention, as does the entire position of the Government toward cosmetics. When Congress passed the Food, Drug and Cosmetic Act of 1938 it knew that hair dyes sometimes cause skin irritations. To prevent their prohibition on this count, it specifically sanctioned their sale provided they carried a warning about possible irritation. A Federal court read this to mean that a hair dye bearing that warning could not be banned for *any* reason of safety. Today, even if the Food and Drug Administration recognized a major health hazard it could do no more than order a rewrite of the warning label.

In re-examining this issue, Congress would do well to consider the law's approach to all cosmetics. Whereas food additives and drugs must now be proved safe in extensive tests before they can be sold, the burden of proof concerning a cosmetic is entirely the Government's. This presumption may have been sound when cosmetics were perceived as merely something applied to the skin, but the effects of some ingredients on or under the skin, as well as near the mouth, eyes and other sensitive areas, have come periodically under suspicion.

Yet as the law stands, the F.D.A. often does not know what safety tests have been conducted by manufacturers and it lacks authority to find out. The agency's small cosmetics unit cannot review all of the tens of thousands of products offered. In recent years, the F.D.A. banned or restricted the sale of several cosmetic ingredients on the market, including hexachlorophene, an antibacterial agent used in soaps, skin creams and deodorants, which was found to cause brain damage; vinyl chloride, an aerosol propellant identified as a carcinogen, and mercury compounds used as skin bleaching agents or preservatives. With the help of independent physicians, the F.D.A. has found some evidence that hair dyes may cause many more allergic reactions than had been realized.

Probably, cosmetics should not be marketed until their ingredients have been demonstrated as safe in animal tests. The industry is currently sponsoring a review of thousands of ingredients and will make the findings public. That is a welcome step. However, because even "safe" ingredients have been known to interact in harmful ways and because manufacturing processes can introduce dangerous impurities, consideration should also be given to some procedure for requiring the testing of finished products. Individual companies already test their own products—although how extensively is not known. Clearly, the F.D.A. should have the authority to obtain the industry's data to assess suspect products or selectively to assure itself that testing is adequate. The present system, as the hair dye controversy suggests, poses not only greater risks but greater political difficulties as it disrupts industries, jobs and consumer habits. The item to clear up the blemishes is before the makeup goes on.

By Mr. NELSON:

S. 2367. A bill to declare a national policy on small business and free enterprise, and for other purposes; to the Committee on Governmental Affairs.

A VOICE FOR SMALL BUSINESS IS NEEDED IN THE WHITE HOUSE

Mr. NELSON. Mr. President, even though there are more than 13 million small businesses in our country today—who employ more than half of all American workers and produce more than half our gross national product—there is no voice for small business in the White House to advise the President on how economic policy affects small business.

Every major new direction in economic policy developed in the White House, and every major piece of legislation enacted by Congress, affects small businesses in special ways that differ from the effects on big business. But seldom are the small business effects taken into account. In the administrative and legislative process, the voice of big business is heard through their Washington representatives. In congressional hearings, in procedures before regulatory bodies, and in administration policymaking, large businesses have an effective input. In all processes—ERISA, OSHA regulations, environmental regulations, tax decisions, energy—big business is heard from through their lobbyists, their legal counsel, and their trade organizations.

But the voice of small business is rarely, if ever, effectively heard. Since economic and social policies developed in the White House have a significant impact on small businesses, this is a serious omission that weakens the quality of our policymaking mechanism.

To correct this, I am introducing a bill today that will give small business a permanent and effective representation in the White House.

This bill will establish in the Executive Office of the President an Advisory Council on Small Business and Free Enterprise, which will have an impact on Presidential economy policy equivalent to that already exercised by the Council of Economic Advisers. It will require the President to submit to Congress an annual Report on Small Business and Free Enterprise and to create a Cabinet-level coordinating group to coordinate the Government's programs which affect small business and our free enterprise system.

This will have a tremendous impact for the better on small business and our economy.

When the President and his economic advisers get together today to develop economic policy, they often overlook the effect of their decisions on the small business community and the millions of Americans who depend on small business for their jobs and their livelihood.

The President has good economic advisers, but none of them has any statutory responsibility or any incentive to examine the needs of the small business sector when considering policy alternatives, and none represents the small business community when the President and his advisers weigh the costs and benefits of different actions.

The Council of Economic Advisers, for example, consists of three academics who are topnotch when it comes to recommending budget and monetary policies to fight unemployment and inflation. But who is standing at the President's right hand to point out the impact of their recommendations on small business? And if a decision taken on economic policy threatens to put thousands of small businesses on the auction block, who can yell before it is too late?

The Secreary of the Treasury, who comes from the business community himself, advises the President on tax policy. But there is not one single individual in the Treasury Department who is charged with examining the effect of our tax system on competition and small business. We can get good estimates of the revenue effects of tax policy from Treasury, but we can't get one iota of information on how many small businesses might be hurt critically by a proposed tax or on how taxes affect economic concentration. If no one is advising the Treasury Secretary on this, how can he advise the President?

Even the Small Business Administration, as hard as it may try, has only limited access to the White House and can't effectively contribute to the economic policy decisions made in the Oval Office by the President and his closest advisers.

So, when economic policy is made, too often it is made without an examination of its potential impact on small business.

When taxes are proposed, too often they are proposed without any information about how they will help or harm small business.

When regulations are written, too often they are written without any examination of their cost for small business.

The "National Small Business Policy Act of 1977" which I am introducing today will correct these deficiencies in economy policy development. The bill has three major provisions.

First, it will create an Advisory Council on Small Business and Free Enterprise in the Executive Office of the President. This Small Business Council will have three members, just as the CEA does, who will be responsible for recommending overall policy toward small business and economic competition to the President. The three members will be appointed by the President with the advice and consent of the Senate, and will be entirely independent of the Small Business Administration or any other agency so that they can make recommendations on every aspect of policy that affects small business without having to protect any particular programs or defend any special turf.

The Small Business Council will be charged with "formulating and recommending national economic policy to promote small business and free enterprise, to increase competition and reduce the concentration of economic resources, to eliminate monopoly and other anticompetitive market structures, to improve the performance of markets, to increase the efficiency and equity of the economy, and to increase the availability of capital and other resources for small businesses."

The Council will have the responsibility with the SBA for gathering and publishing information on small business. It will evaluate the effect of Government programs on small business, determine the availability of resources to small business, and recommend national economic policies to foster small business and free enterprise.

The Council will have wide-ranging responsibility over almost every aspect of our policy toward small business and free enterprise, just as the Council of Economic Advisers now has wide-ranging responsibility over the macroeconomic performance of the economy.

Second, every January the President would submit to Congress a "Small Business and Free Enterprise Report," paralleling his current "Economic Report" but focusing on the economic issues that affect our free enterprise system, the efficiency of our Nation's markets, and the strength of our small business sector. The report will make recommendations and will be reviewed by the Senate Select Committee on Small Business and the Small Business Committee of the House, each of whom will report recommendations to the Senate and House and to the committees having jurisdiction over policies and programs that affect small business.

The submission of a report on small business and free enterprise will give Congress and the President an opportunity to review all of the Government policies and programs that have an impact on small business in one fell swoop, rather than going at it piecemeal and without any coordination.

Finally, the act will establish an Executive Coordinating Group on Small Business Policy and Programs. This coordinating group will bring together the Small Business Council, the Administrator of the Small Business Administration, and other top members of the Government, including a number of Department Secretaries, to coordinate the Government's policies and programs that affect small business.

The coordinating group members will have to develop and submit data on how their programs affect small business, prepare an inventory of all the resources available in their department or agency, and coordinate their activities.

This is a very important provision, because we do not now have a mechanism for coordinating small business programs across agencies or even for collecting data on how programs affect small business.

Altogether, Mr. President, this bill will be a major step forward for our Nation's small businesses. It will, for the first time, put a voice for small business and the free enterprise system right in the White House, where much of our economic policy is made and where the small business impact should first be considered.

Since the Small Business Committee took over responsibility for Small Business Administration legislation this year, we have passed a number of bills that establish new and innovative programs. We have taken a creative role in helping develop programs to preserve and strengthen small business.

The White House, too, can be a source of creative ideas to preserve and strengthen our small business sector and our free enterprise system. We have a President who comes from a small business background, but even he needs good analysis and good advice on how government policies and programs affect this vital sector of our economy.

The creation of a Presidential Advisory Council on Small Business and Free Enterprise would give the President this source of analysis and advice. It is urgently needed.

This legislation has been endorsed by the National Small Business Association and by the President of the Independent Business Association of Wisconsin, Mr. Bruno Mauer. Mr. Mauer has told me that the creation of a Small Business Council would be an "effective way of getting direct small business input into the White House."

I ask unanimous consent that a letter to me from the National Small Business Association be printed in the RECORD at this point, along with the bill.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2367

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Small Business Policy Act of 1977."

DECLARATION OF POLICY

SEC. 2. The Congress hereby declares that it is the continuing policy and responsibility of the Federal Government to use all practical means consistent with its needs and obligations and other essential considerations of national policy, and to take such actions as are necessary, to implement and coordinate all Federal department, agency and instrumentality policies, programs and activities in order to protect the economic interests of small business concerns; to provide an economic climate conducive to the development, growth and expansion of small business and free enterprise; to establish incentives to assure that adequate capital and other resources at reasonable costs are available to small business concerns; to reduce the concentration of economic resources and expand competition; and to provide an opportunity for entrepreneurship, inventiveness, and the creation and growth of small business concerns.

REPORT OF THE PRESIDENT ON SMALL BUSINESS AND FREE ENTERPRISE

SEC. 3. (a) The President shall transmit to the Congress not later than January 10 of each year a Report on Small Business and Free Enterprise which shall (1) examine the current role of small business in the economy, (2) present current and historical data on production, employment, investment, and other economic variables for small business in the economy and each sector of the economy, (3) identify economic trends which will or may affect the small business sector and the health of the free enterprise system, (4) examine the effects on small business and free enterprise of policies, programs and activities of the Federal departments, agencies and instrumentalities, identify problems generated by such policies, programs and activities, and recommend legislative and administrative solutions to such problems, and (5) recommend a program for carrying out the policy declared in section 2 of this Act, together with such recommendations for legislation as he may deem necessary or desirable.

(b) The President may transmit from time to time to the Congress reports supplementary to the Report on Small Business and Free Enterprise, each of which shall include such supplementary or revised recommendations as he may deem necessary or desirable to achieve the policy declared in section 2 of this Act.

(c) (1) The Report on Small Business and Free Enterprise, and all supplementary reports transmitted under subsection (b) of this section shall, when transmitted to Congress, be referred to the Senate Select Committee on Small Business and the Committee on Small Business of the House of Representatives.

(2) Each Committee, in addition to its other duties and responsibilities, shall—

(A) make a continuing study of matters relating to the Report on Small Business and Free Enterprise;

(B) study and evaluate policies, programs and activities of the Government in order to further the policy of this Act; and

(C) as a guide to the several Committees of the Congress dealing with legislation relating to the Report on Small Business and Free Enterprise, not later than April 1 of each year file a report with the Senate or the House of Representatives, as the case may be, containing its findings and recommendations with respect to the recommendations made by the President in the Report on Small Business and Free Enterprise, together with such other recommendations as it deems advisable.

PRESIDENT'S ADVISORY COUNCIL ON SMALL BUSINESS AND FREE ENTERPRISE

SEC. 4. (a) There is hereby created in the Executive Office of the President an Advisory Council on Small Business and Free Enterprise (hereinafter called the "Council"). The Council shall be composed of three members who shall be appointed by the President, by and with the advice and consent of the Senate, and each of whom shall be a person who, as a result of his or her training, experience, and attainments, is exceptionally qualified to analyze and interpret the effects of economic developments on small businesses, to appraise programs and activities of the Federal Government in the light of the policy declared in section 2, and to formulate and recommend national economic policy to promote small business and free enterprise, to increase competition and reduce the concentration of economic resources, to eliminate monopoly and other anticompetitive market structures, to improve the performance of markets, to increase the efficiency and equity of the economy, and to increase the availability of capital and other resources for small businesses.

The President shall designate one of the members of the Council as Chairman.

(b) The Council is authorized to employ, and fix the compensation of, such specialists and other experts as may be necessary for the carrying out of its functions under this Act, without regard to the civil service laws and the classification Act of 1949, as amended, and is authorized, subject to the civil service laws, to employ such other officers and employees as may be necessary for carrying out its functions under this Act, and fix their compensation in accordance with the Classification Act of 1949, as amended.

(c) It shall be the duty and function of the Council—

(1) to assist and advise the President in the preparation of the Annual Report on Small Business and Free Enterprise;

(2) to gather and publish timely and authoritative information, in cooperation and coordination with the Administrator of the Small Business Administration, concerning the position of small business in the economy and economic developments and economic trends, both current and prospective, which do or may affect small business and free enterprise; to analyze and interpret such information in the light of the policy declared in section 2 for the purpose of determining whether such developments or trends are interfering or are likely to interfere with the achievement of such policy objectives; and to compile and submit to the President and Congress studies relating to such developments and trends;

(3) to appraise the various programs and activities of the Federal Government, as they affect small business and free enterprise in the light of the policy declared in section 2, for the purpose of determining the extent to which such programs and activities are contributing, and the extent to which they are not contributing, to the achievement of such policy, and to make recommendations to the President with respect thereto;

(4) to determine and evaluate the availability of capital, labor, management, and technological resources to small businesses; to determine and evaluate emerging trends in the availability of such resources to small businesses; to assess Federal Government policies and programs and other economic circumstances which affect small businesses in order to determine their impact on the availability and cost of capital and other resources for small businesses; and to make recommendations to the President with respect thereto;

(5) to develop and recommend to the President national economic policies to foster and promote small businesses and free enterprise and to maintain and increase the strength of small business in each economic sector;

(6) to make and furnish such studies, reports, and recommendations with respect to matters of Federal Government economic policy and legislation which affect small business and free enterprise as the President or Congress may request.

(d) In November of each year, the Council shall make an annual report of its activities and the activities of the Coordinating Group, established under section 5 of this Act, during the previous fiscal year.

(e) In exercising its powers, functions, and duties under this Act—

(1) the Council may constitute such advisory committees and may consult with such representatives of business, agriculture, labor, State and local governments, and other groups as it deems advisable;

(2) the Council shall cooperate and coordinate its activities with the Chief Counsel for Advocacy of the Small Business Administration, when appropriate; and

(3) the Council shall, to the fullest extent possible, utilize the services, facilities, and information (including statistical information) of other Federal Government departments, agencies, and instrumentalities as well as of private research firms, in order that duplication of effort and expense may be avoided.

EXECUTIVE COORDINATING GROUP ON SMALL BUSINESS POLICY AND PROGRAMS

SEC. 5. (a) Within 30 days after enactment of this Act, the President shall constitute an Executive Coordinating Group on Small Business Policy and Programs (hereinafter called the "Coordinating Group"). The Coordinating Group shall consist of the Administrator of the Small Business Administration; the members of the Advisory Council on Small Business and Free Enterprise; the Secretary of Treasury, Secretary of Commerce, Secretary of Labor, and Secretary of Agriculture, or their designees who serve at a level no lower than that of an Assistant Secretary; the Chairman of the Board of Governors of the Federal Reserve, or his designee who serves as a Governor; the Chairman of the Securities and Exchange Commission and Chairman of the Federal Trade Commission, or their designees who serve as a Commissioner; the Assistant Attorney General for Antitrust; and the Chairman of the Council of Economic Advisors, or his designee who serves as a Member.

(b) The Chairman of the Coordinating Group shall be the Administrator of the Small Business Administration.

(c) The Coordinating Group shall meet at least quarterly and at the call of the Chairman.

(d) It shall be the duty and function of the Coordinating Group—

(1) to advise and assist the Council in the performance of its duties and functions;

(2) to coordinate and improve the effectiveness of all policies, programs and activities of the Federal Government which have an impact on small business or free enterprise;

(3) to prepare an inventory of the resources available to small business throughout the Federal Government and to update such inventory annually;

(4) to facilitate the making available of such data and information as is requested by the Council or the Administrator of the Small Business Administration from Federal departments, agencies, and instrumentalities, and such data and information collected by the departments, agencies and instrumentalities from State and local governments and private sources as is requested by the Council or the Administrator;

(5) to review and coordinate the data and information collecting activities of the Government from small business so as to minimize the burdens of such activities on small business concerns; and

(6) to make recommendations for improvements in the relationship between the Federal Government and the private sector that will or may strengthen small business and free enterprise.

(e) The Council shall make available to the Coordinating Group such specialists, experts and other employees as may be needed to assist the Coordinating Group in the performance of its duties.

AUTHORIZATION OF APPROPRIATIONS

SEC. 6. To enable the Council to exercise its powers, functions, and duties under this Act, there are authorized to be appropriated such sums as may be necessary.

EXECUTIVE LEVEL OF COUNCIL CHAIRMAN

SEC. 7. Section 5313 of title 5, United States Code, is amended by adding the following new paragraph:

"(24) Chairman, Council on Small Busines and Free Enterprise.".

EXECUTIVE LEVEL OF COUNCIL MEMBERS

SEC. 8. Section 5315 of title 5, United States Code, is amended by adding the following new paragraph:

"(114) Members, Council on Small Business and Free Enterprise.".

NATIONAL SMALL
BUSINESS ASSOCIATION,
Washington, D.C., December 6, 1977.

Hon. GAYLORD NELSON,
Chairman, Senate Small Business Committee,
Washington, D.C.

DEAR SENATOR NELSON: the National Small Business Association enthusiastically applauds your efforts to ensure the establishment of a small business voice in the White House. Through enactment of your proposed legislation, small business would have, for the first time, effective and continuing representation in the White House and at the Cabinet level, when major economic policy is initially developed.

NSB has noted on several occasions that a major stumbling block in the formulation of sound and equitable small business programs has been the chronic lack of an adequate statistical barometer of the economic status of small business in the economy. We strongly feel that a Small Business Advisory Council, serving in the capacity of a statistical collection center, could develop the types of data needed for the small business indicators so essential in the development of any economic program.

President Carter has previously endorsed the types of proposals currently embodied in your legislation, namely, the importance of more effective small business representation, and the need for accurate and up-to-date information about the small business community. In response to an NSB poll in the fall of 1976, President Carter stated:

"As President, I will see that small business has a strong voice in the White House and personally work to stimulate a new wave of scientific and technological creativity which will create new businesses, new jobs, new markets and get America back on the move. My administration would develop statistical yardstick formulas to measure the relative growth of small business in relationship to other sectors of the economy . . ."

In light of the vast importance of the small business community to the economic wellbeing of this country, we fully support this initiative that would put the small business voice where it will be most effectively heard.

We once again commend you for your innovative and long-overdue proposals.

Sincerely,

HERBERT LIEBENSON,
Staff Vice President, Government Affairs.

By Mr. INOUYE:

S. 2368. A bill to amend the Public Health Service Act to provide for a national program of medical injury compensation insurance; to the Committee on Human Resources.

NATIONAL MEDICAL INJURY COMPENSATION INSURANCE ACT OF 1977

Mr. INOUYE. Mr. President, today I am introducing the National Medical Injury Compensation Insurance Act of 1977. This bill would establish a system for compensating medically induced injuries on a no-fault basis. The objective would be to create an alternative to our ailing and failing system of tort law for handling medical injuries. The Department of Health, Education, and Welfare would administer the system, providing professional liability insurance to health care providers who chose to participate. Any patient who suffered an adverse outcome as the result of medical or diagnostic intervention by a participating health care provider would have the option of filing a claim for health care and income support benefits.

When this bill was first introduced in 1975, it was against a backdrop of incipient calamity for the health professions. The price of medical malpractice insurance was beginning to soar, and major liability insurers were beginning a pullout that threatened to leave thousands of physicians uncovered. In the ensuing months, policy cancellations, doctor strikes, and hospital shutdowns plagued several of the more acutely affected States.

Much has happened between then and now to make the present backdrop one of relative calm. State governments, professional associations, and other organizations have sought actively to assess and resolve the malpractice insurance crisis. As of August 1976, all 50 States had enacted legislation in this area. Twenty-seven States had authorized the creation of joint underwriting associations on an emergency standby basis. Thirty-four States had modified evidentiary and/or procedural rules of tort law to stem the litigative tide. In the meantime, the National Association of Insurance Commissioners initiated a 12-month study of closed claim files in order to garner data sorely needed by health policy analysts. State and county medical societies, as well as independent practitioner groups, have formed physician-owned insurance companies to ease the coverage crunch, and an AMA-supported reinsurance company has provided these ventures with backup resources. Finally, a growing number of hospitals have converted to self-insurance schemes as an alternative to fiscally burdensome commercial plans. Here in Washington, for instance, the Children's Hospital National Medical Center decided last spring to self-insure rather than face a 900-percent premium increase that would have boosted its insurance bill to $2.3 million.

This combination of public and private initiatives has probably helped encourage private insurers and reinsurers to continue part of their underwriting activities. Although the price of coverage is high in many areas of the country (hovering, for instance, around the $40,000 level for group V physicians in southern California), the problem of unavailability appears to have been forestalled. For the time being, then, the pressing exigencies of a year ago seem to have abated.

But in spite of this abatement and in spite of the plethora of remedies being applied in the various States, the Federal Government should not settle overhastily into a passive role. For two important reasons, the continuing attention of the U.S. Congress to the malpractice problem and its impact on our national health care system may still be in order.

First, there is no telling yet whether the solutions being tried by the States will prove effective. The viability of a self-insurance or reinsurance scheme, for example, cannot be judged after only 1 year. Only about 8 percent of the ultimate claims cost arising under a malpractice liability insurance policy are known at the end of the actual period of coverage. In fact, it takes 6 years before 90 percent of the loss occurrences have surfaced. In addition, the demands placed upon liability insurance pools have been growing startlingly over the last few years. According to testimony received by Senator KENNEDY's Health Subcommittee during its malpractice hearings in 1975, the average severity of malpractice claims is increasing at a rate of 14.5 percent per year, and the frequency of losses per doctor is growing at an annual rate of 12 percent. Unless the claim deterrents enacted by various States prove dramatically effective, this trend is likely to continue, if not accelerate. Still another test of the yet untested solutions to the insurance crisis may be in the offing this spring when many existing liability policies expire. Whether an insurance shortage will again materialize, and whether a new crop of uninsured physicians can be absorbed into the new coverage arrangements remain unknown. In short, the malpractice insurance situation may be as volatile now as it was 2 years ago. If this is so, it would be premature of the Congress to remove itself from the area at this first sign of abatement. There should be an ongoing effort to frame backup solutions to the malpractice problem in the event that State efforts prove inadequate. I am hopeful that the Senate will review the present bill as part of that ongoing effort, using it as a vehicle for further exploration of the issue.

My second reason for reintroducing this bill is that it highlights an aspect of the malpractice problem that many State solutions have tended to slight—the needs and rights of the injured patient. By establishing a no-fault system of compensation, the proposal gets away from the destructive focus of the tort system. Instead of pitting the patient By establishing a no-fault system of compensation, the proposal gets away from the destructive focus of the tort system. Instead of pitting the patient against his doctor in a resource-wasting legal battle, the proposed system would concentrate on timely medical treatment and efficient long-term maintenance. The present tort-with-liability-insurance system cannot achieve these objectives; or is it meant to. And what the system is meant to do—that is, decide who is to blame for an untoward medical event—is often as impossible as it is irrelevant.

Consider, for example, the patient who enters the hospital for a minor operation and who awakens after surgery to find that his arms are paralyzed. The surgical team, genuinely perplexed, disavows any negligence. The patient cannot attest to any negligence; all he knows is that he no longer has the use of his arms. In court, he produces undisputed statistical testimony of experts that when limb paralysis occurs in the type of operation he underwent it is attributable to negligence 70 percent of the time. Is there any way for the tort system to deal fairly with this sort of case? It would not be fair to impute negligence to the surgical team when their performance may well have been part of the non-negligent 30 percent. But neither would it be fair to leave the patient uncompensated for an injury that may have been negligently induced. Perhaps because the patient's loss seems so egregious, or perhaps because the hospital is better situated than the patient to spread the cost of his losses, many courts and juries have been willing to decide in the patient's favor on the basis of numerical odds alone. Using the doctrine of res ipsa loquitor, they have held that the statistics "speak for themselves."

From the standpoint of equity, though, there is not a satisfactory resolution of the issue, and its common recurrence should prompt us to rethink our approach to compensating medical injuries. We should be asking whether a fault standard makes sense in a world where certain injuries are unavoidable, their causes are often unknown and unknowable, and their immediate treatment is imperative.

It, therefore, disturbs me to see so many solutions to the malpractice problem being adopted in disregard of this need for fundamental change. Many States have made not only the passive choice to adhere unquestioningly to the tort system, but also the regressive choice to take away features of the system which favor the patient. Legislators have recognized, for example, that the res ipsa loquitor doctrine disserves the conscientious members of the medical community. But they have not recognized that its absence would disserve patients like our paralysis victim.

Thus, instead of rejecting the fault system as a system which cannot fairly decide whether the doctor or the patient should win, they have rejected res ipsa loquitor as a doctrine which produces the "wrong" winner. Several States have now prohibited the use of res ipsa where the only evidence of negligence is statistical. This may help solve the malpractice insurance problem by reducing the number of cases being lost by doctors, but it merely trades one unfair outcome for another, denying our hypothetical patient the compensation to which he may be entitled.

The same regressive effect is observable in other solutions with which the States are now experimenting. Thirty-three States had by August 1976 revised their statutes of limitation for malpractice claims in order to shorten the notorious "long tail" of claims arising under an insurance policy. But in some instances, these changes could unfairly deny malpractice victims their day in court. If a physician fails to diagnose cancer in a patient and the condition is not discovered for another 2 years, a statute of limitations that has been running since the date of misdiagnosis rather than from the date of discovery may foreclose the patient's right to recover. The insurance actuary may feel relief at this outcome, but his relief is purchased at dire cost to the health care consumer.

A similar measure that disserves the patient's interest is the statutory ceiling on malpractice awards. Several States have established an upper limit—ranging anywhere from $100,000 to $500,000—on indemnification for medical injuries. The patients who will be affected by this are relatively few—3 or 4 percent of all compensated claimants, to judge from preliminary data in the NAIC report—but they will also tend to be those who are most severely injured and most in need of extended medical care. Courts in Illinois and Idaho have declared that limits on malpractice liability are unconstitutional, but in at least one State, Ohio, a $200,000 ceiling has survived judicial challenge.

This may bail out the various insurers that are still reeling from million-dollar verdicts, but who is going to bail out the injured patient whose medical needs persist long after his medical bills have depleted his $200,000 award? A more constructive approach—and one which might generate the same or greater cost savings—would be to provide for periodic payments of injury compensation. Rather than imposing arbitrary limits which bear no relation to the patient's needs, and rather than allowing juries to bestow windfalls on malpractice plaintiffs, we should consider a system which would pay benefits for as long as justified by actual persisting needs, and no longer. I would like to see the States seeking this sort of solution in fact, instead of settling for the solution in appearance that we are now seeing.

This calls to mind yet another trend in the search for solutions which bears reexamination if our real concern is with the needs of the health care consumer. Faced with unaffordably high premiums, a growing number of physicians—exactly how many is not known—have chosen to take the drastic step of dropping all of their insurance coverage. It has been estimated that as many as 19 of every 100 active physicians in California have taken this course. By "going naked," they hope to become less attractive targets for trigger-happy, indemnity-seeking lawyers. Physicians can hardly be blamed for coming to this private solution to their troubles, but their action as much deprives the valid plaintiff as it does the bogus plaintiff of a source of compensation.

Perhaps a more hopeful deterrent to spurious or fraudulent claims will be the increased resort by physicians to countersuits for malicious prosecution. To the glee of the medical profession, this has begun to occur with greater frequency in recent months, serving notice to lawyers that ambulance-chasing is no longer a cost-free activity. I would only caution here how important it is that this development be kept in the proper perspective. Unscrupulous attorneys, like incompetent physicians, no doubt exist, but they are only a small part of the problem. According to the 1973 report of the HEW Secretary's Commission on Malpractice, by far the greater number of malpractice suits are brought in good faith. We must now allow valid interest of injured patients to be obscured by the sound and fury of the clash between the professions. And we should take care not to deal with the faults of the professions in a manner which may in reality penalize only the patient.

For all of these reasons, I would like to see a revived dialog at the Federal and State levels on more comprehensive approaches to the malpractice problem. I am reintroducing the no-fault bill in the hope that it will provide a focus for part of that dialog, directing legislative attention to the fundamental question of what should be the societal objectives of a compensation system.

I am convinced that a good system should serve three objectives. First, it should actually aim to compensate injuries. The present system seems more geared, whether by accident or intent, to prevent compensation whenever possible. Ignorance, intimidation, and impecuniousness prevent many—perhaps most—injuries from entering the claim stream. After studying two community hospitals, the HEW Secretary's Commission estimated that 7.5 percent of all hospital admittees sustain medical injuries in the course of their treatment. Of this population, only one-fifth were patients who were probably injured as the result of negligence and who could therefore hope to recover anything under tort law. And this fraction would be reduced considerably further before one would arrive at the tiny proportion of medically injured persons who actually muster the resolve and wherewithal to seek and receive compensation. Some people see this screening effect as a desirable way to hold down the aggregate cost of medical injuries. But the screen merely hides the real cost to society. The injuries impose social costs regardless of who pays for them. And when they fall upon an individual who cannot afford the price of timely treatment and rehabilitation, society eventually incurs the double cost of paying for his welfare support and losing his output as a potentially productive individual. The failure of the tort system to make fast and adequate compensation available is therefore an inefficient means of dealing with medical injuries.

Moreover, the system is inefficient even where it does make compensation. Looking only at premiums and not at investment income, malpractice insurers took in about $1.5 billion last year, but only about 20 percent of this vast sum will ever reach the pockets of malpractice victims. The remainder will be expanded on the industry's overhead, marketing, sales commissions, legal fees, associated litigative costs, and profits. This strikes me as a gross mistargeting of resources, particularly when we recall where much of the $1.5 billion has come from. A large part of it has been paid by patients, to whom physicians pass on their insurance expenditure. (In California, this passthrough among anesthesiologists amounted in 1975 to about $11.50 per patient contract.) And part of it is in effect subsidized by Government, since premium costs are deductible business expenses for income tax purposes. In brief, then, compensatory functions are poorly served by the tort system, reaching too few at too great a cost.

A second objective of any medical injury compensation system should be to grant relief and assistance to injured claimants as quickly as possible. Where physical impairment has occurred, the emphasis should be on immediate medical intervention to prevent further deterioration and to provide therapeutic services. And where death befalls the patient—as happens in about 16 percent of all reported malpractice incidents—a delay in compensation may have truly catastrophic consequences for his or her survivors. It, therefore, seems a particularly indefensible shortcoming of the present system that delays of several years are commonplace. The NAIC's August report indicated that nearly 40 percent of all paid malpractice claims take more than 2 years to reach disposition once they are reported. The average time required for cases that are settled during trial is about 38 months. And 2 years ago, claims which proceeded all the way to verdict in a jury trial took twice that time.

The third objective of a system for handling medical injuries should be to insure a high standard of quality for health care. It should effectuate standard procedures for monitoring health care providers and for detecting, disciplining, or retraining deficient practitioners. It is generally estimated that about 5 percent of the Nation's 380,000 physicians can be classified as professionally incompetent, yet only about 0.1 percent of them have been disciplined in any fashion over the past decade.

As I see it, then, our existing approach to the problem of medical injury fails on all three of the systematic criteria I have put forth. A system like that contained in the Medical Injury Compensation Insurance Act would come far closer to achieving the desired social objectives. Compensation would be forthcoming automatically to persons who suffer adverse consequences from medical treatment. Delay would be reduced since the establishment of fault would be unnecessary and since claims would be determined and processed administratively. Substandard practitioners would be identified through review of loss records, and quality health care would be enhanced through requirements that participating providers meet prescribed national licensing standards, enroll in professional standards review organizations, submit to periodic relicensing examinations, and confirm surgical decisions with consulting physicians.

There are only a few differences between this bill and the version introduced as S. 215 in the 94th Congress. The major change relates to the mode of financing the no-fault plan. The earlier version would have created a medical injury compensation insurance fund financed entirely through premiums paid by subscribing health care providers. Although the Health Subcommittee has not received a reliable projection of the total cost of a no-fault system, it is possible that provider premiums would afford too small a pool for compensating all of the medical injuries that would be eligible under no-fault. Nor would it be fair to call upon the health professions to serve as the insurer of all recipients of health care. For these reasons, the bill now limits the premiums charged under no-fault, and section 1702 provides that the difference between total premium receipts and total disbursements from the fund be financed from general revenues. An alternate financing mechanism worth evaluating would be to shift to a general social security type of tax paid by all taxpayers. Although this option has not been written into the bill, I believe it too should be considered by the Senate in the deliberations which lie ahead.

Aside from this and some lesser changes the bill essentially matches its predecessor. I do not doubt that some of its provisions may yet call for refinement and informed revision. Designing a no-fault scheme inevitably raises complex and problematic questions—what is a compensable injury? What tort options should remain? How can benefits be kept fiscally manageable? Deliberate study and resolution of these and other issues by the Senate should be placed on the agenda of this bill's consideration, so I do not wish to represent my proposal as a flawless construction capable of instant implementation. I do, however, wish to represent it as the sort of approach that has tremendous promise as an equitable, comprehensive, and long-term response to the malpractice problem. Its consideration by the Congress will inject into the public malpractice debate some significant concerns that are now being callously ignored, and its adoption will constitute an enlightened reform of our approach to medical misadventures, benefiting patients, health care providers, and others whose interests have been so long mishandled.

Mr. President, I ask unanimous consent that the text of my bill and a bill summary be printed in the RECORD.

There being no objection, the bill and summary were ordered to be printed in the RECORD, as follows:

S. 2368

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; TABLE OF CONTENTS

SECTION 1. This Act may be cited as the "National Medical Injury Compensation Insurance Act of 1977."

Sec. 1. Short title; table of contents.

AMENDMENT OF PUBLIC HEALTH SERVICE ACT

SEC. 2. The Public Health Service Act is amended by adding at the end thereof the following new title:

"TITLE XVII—NATIONAL MEDICAL INJURY

"PART A—NATIONAL MEDICAL INJURY COMPENSATION INSURANCE PROGRAM

"PARTICIPATION; INSURANCE COVERAGE

"SEC. 1801. (a) The Secretary shall establish and implement a program of national medical injury compensation insurance.

"(b) In carrying out such program, the Secretary shall, in accordance with the provisions of this title, enter into contracts with physicians and other health professionals and with health care institutions which choose to participate in such program to provide insurance coverage under this title.

"(c) Insurance coverage provided by any contract entered into pursuant to this title shall include—

"(1) insurance benefits for the insured against loss resulting from tort liability as provided in section 1808, and

"(2) no-fault benefits for any beneficiary of such contracts as provided in section 111,

respecting injury suffered as a result of the provision of health care services by the insured.

"MEDICAL INJURY COMPENSATION INSURANCE FUND

"SEC. 1802. (a) To carry out the medical injury compensation insurance program authorized by this title, there is established in the Treasury of the United States a Medical Injury Compensation Insurance Fund (hereinafter referred to as the 'fund') which shall be available, without fiscal year limitation—

"(1) for making such payments as may, from time to time, be required under this title, and

"(2) to pay the necessary administrative expenses of carrying out the insurance program under this title.

"(b) The fund shall be credited with:

"(1) premiums which may be paid or collected pursuant to section 1803, and

"(2) such amounts which are hereby authorized to be appropriated as may be necessary to maintain the fund in a condition adequate to meet its liabilities and defray expenses associated with the administration of the insurance program under this title.

"SEC. 1803. (a) The Secretary shall, after consultation with the Advisory Council on Medical Injury Compensation, established under section 1824, prescribe by regulation—

"(1) chargeable premium rates for insurance coverage under this title,

"(2) appropriate loss-deductibles for tort liability,

"(3) appropriate limitations of coverage, and

"(4) other general terms of insurability,

which he shall incorporate in contracts entered into under this tiitle.

"(b) Premium rates shall be established at a level deemed reasonable by the Secretary and shall in no event exceed for any class of health professional established by the Secretary under subsection (c) the average level of premium rates paid by such class from 1973 to 1975, inclusive, except that such level may be adjusted from time † time to take account of real dollar fluctuation.

"(c) Premium rates shall be uniform among insureds, except that the Secretary may classify physicians and other health professionals by type of practice and percentage of time devoted to such practice in a manner which reflects risk exposure and may vary the rates among such classes of professionals.

"ELIGIBILITY FOR PARTICIPATION

"SEC. 1804. (a) The Secretary shall make insurance available under this title in only those States which he finds have established programs—

"(1) for the licensure of health professionals, in accordance with part D, and

"(2) for the licensure of health care institutions, in accordance with regulations of the Secretary,

and in only those areas for which Professional Standards Review Organizations have been designated pursuant to section 1152 of the Social Security Act.

"(b) No health professional or health care institution shall be eligible for insurance under this title unless such professional or institution has submitted satisfactory evidence of initial licensure and, where appropriate, renewal of such licensure in accordance with a program described in paragraph (1) or (2) of subsection (a) in the State or States where such professional practices his profession or the State in which such institution is located.

"(c) No physician shall be eligible for insurance under this title unless he agrees—

"(1) to have the health care services which he provides reviewed by the Professional Standards Review Organization (designated pursuant to section 1152 of the Social Security Act) for the area in which he provides such services, without regard to whether such services are provided in institutions,

"(2) with respect to health care services provided individuals who are entitled to insurance benefits under title XVIII of the Social Security Act, to accept payment for the provision of such services on the basis of an assignment in accordance with the provisions of section 1842(b)(3)(B)(ii) of such Act, and

"(3) with respect to the performance of any surgical procedure specified in regulations of the Secretary, to consult with, and obtain the recommendation of surgery by, such appropriately qualified specialists as may be required by such regulations, prior to the performance of such procedures.

"CONDITIONS OF PARTICIPATION

"SEC. 1805. (a) Participation in the insurance program established under this title shall be conditioned upon continued compliance with the requirements for eligibility described in section 1804.

"(b) Each insured under this title shall furnish to the Secretary such information as may be necessary to determine whether payment is due on any claim made under this title and the amount of any payment which may be due with respect to such claim.

"(c) (1) Each insured under this title shall inform any patient of such insured of the existence of any injury which is compensable under section 1811 and of the fact of its compensability through the insurance program established under this title.

"(2) In the event that any insured fails to inform such patient within thirty days after he knew or reasonably should have known of such injury and such patient does not file a claim for no-fault benefits within the period required by section 1816, because he has not been so informed, such insured shall be liable to compensate such patient in an amount equal to the amount such patient would have been entitled to recover if he had filed a timely claim.

"(3) (A) A suit may be instituted under paragraph (2) at any time.

"(B) Nothing in this subsection shall be construed to affect the tort liability of any insured.

"TERMINATION OF PARTICIPATION

"Sec. 1806. (a) A contract of insurance under this title may be terminated—

"(1) by the insured at such time and upon such notice to the Secretary and the patients of such insured as may be provided in regulations, except that notice of more than three months shall not be required, or

"(2) by the Secretary at such time and upon such reasonable notice to the insured and the public as may be provided in regulations, and in accordance with subsection (b).

"(b) The Secretary shall not terminate any contract for insurance under this title, except upon a finding—

"(1) that the insured is not complying substantially with the conditions of participation described in section 1805,

"(2) that the insured has failed to pay the applicable premium within a reasonable period of time after it becomes due or is not compying substantially with any other term of such contract,

"(3) that the insured has knowingly made, or caused to be made, any false statement or misrepresentation of a material fact for use in applying for insurance or in determining whether payment of no-fault benefits or tort damages is due under this title, or

"(4) that the insured has provided services which are unnecessarily harmful to the patients of such insured or are of grossly inferior quality.

"(c) Any termination shall be applicable with respect to health care services provided after the effective date of such termination, except that insuranec coverage may continue for up to thirty days after such termination with respect to services to patients which are a continuation of a treatment begun prior to the effective date of such termination.

"(d) Where a contract under this title with an insured has been terminated by the Secretary, the Secretary may not enter into another contract with such insured unless the Secretary finds that the reason for the termination has been removed and that there is reasonable assurance that it will not recur.

"(e) Any individual aggrieved by any action of the Secretary pursuant to this section shall be entitled to a hearing and to review in accordance with the provisions of section 1815.

"REPORTING OF CLAIMS

"Sec. 1807. (a) (1) The Secretary shall report all claims for no-fault benefits filed under this title and all tort actions instituted respecting health care services provided by a physician or other health professional to the State agency in the State in which such professional practices his profession.

"(2) The Secretary shall report such claims and actions respecting health care services by a health professional to the Professional Standards Review Organization designated under section 1152 of the Social Security Act for the area in which such professional practices his profession.

"(b) Where there are an unusually high number of claims and actions respecting the health care services provided by an insured, the Secretary shall investigate the nature and cause of the injuries for which such claims are made and actions are instituted and the findings of such investigation shall be reported as provided in subsection (a). The Secretary shall also take in consideration such findings in determining whether it is appropriate to terminate the insurance contract with such insured.

"INSURANCE BENEFITS

"Sec. 1808. (a) The insurance program established under this title shall provide insurance benefits to insureds which benefits shall consist of compensation for loss incurred as a result of tort liability.

"(b) Loss incurred as a result of tort liability shall consist of all damages recoverable under the tort law of the State in which a tort action is brought applicable to injury resulting from the provision of health care services.

"(c) Insurance benefits under this title shall not include compensation for loss incurred as a result of a failure to comply with the provisions of section 1805(c).

"PART B—PAYMENT OF CLAIMS FOR NO-FAULT BENEFITS

"NO-FAULT BENEFITS

"Sec. 1811. (a) The insurance program established under this title shall provide no-fault benefits to beneficiaries of contracts entered into in accordance with such title which benefits shall consist of compensation for loss from any injury suffered as a result of health care services provided by an insured to such beneficiary, to the extent provided in section 1813.

"(b) No-fault benefits shall be paid to beneficiaries without regard to fault on the part of the insured.

"BENEFICIARIES OF NO-FAULT BENEFITS

"Sec. 1812. (a) Beneficiaries of no-fault benefits provided for in any contract entered into with an insured under this title shall be—

"(1) any patient of such insured, and

"(2) any survivor of a patient of such insured who has died as a result of health care services provided by such insured.

"(b) Claims for no-fault benefits may be filed by (1) beneficiaries, or (2) legal representatives of such beneficiaries.

"LIMITATION ON NO-FAULT BENEFITS

"Sec. 1813. (a) The no-fault benefits provided to a beneficiary by the insurance program established under this title shall consist of compensation for loss from injury determined in accordance with regulations of the Secretary, but limited to—

"(1) in the case of a patient, economic loss, including—

"(A) all reasonable expenses necessarily incurred for medical and other health treatment,

"(B) all reasonable expenses necessarily incurred for medical and vocational rehabilitation services,

"(C) all reasonable expenses necessarily incurred in obtaining services in lieu of those the patient would have performed for the benefit of himself or his family if he had not been injured, up to $800 per month, and

"(D) loss of earnings, including—

"(i) loss of gross income as calculated in accordance with subsection (b), and

"(ii) all reasonable expenses of a patient for hiring a substitute to perform self-employment services, thereby mitigating loss of income, or for hiring special help, thereby enabling a patient to work and mitigate loss of income,

up to an amount which, when added to such patient's other sources of continuing income equals $2,000 per month, and

noneconomic loss, including pain, suffering, inconvenience, physical impairment, and other nonpecuniary damage recoverable under tort law applicable to injury resulting from the provision of health care services (but not including punitive or exemplary damages) up to a limit of $2,000 per month, or

"(2) in the case of a survivor,

"(A) loss of income of a deceased patient which would probably have been contributed to a survivor, if such patient had not sustained the fatal injury, and

"(B) all appropriate and reasonable expenses necessarily incurred by a survivor, after a patient's death resulting from injury, in obtaining services in lieu of those which the patient would have performed for the benefit of such survivor if he had not sustained the fatal injury,

reduced by expenses which the survivor would probably have incurred but avoided by reason of that patient's death resulting from injury: *Provided*, That in no case shall (i) the amount of compensation for loss described in subparagraph (A) exceed an amount which, when added to such survivor's other sources of continuing income equals $2,000 per month, or (ii) the amount of compensation for loss described in subparagraph (B) exceed $800 per month, and

"(C) loss (as defined in paragraph (1)) suffered by the patient prior to his death for which such patient did not otherwise receive compensation.

"(b) Loss of earnings of an individual shall be calculated by determining the probable income of such individual for the period for which he incurs such loss and reducing the amount of such income by an amount equal to—

"(1) any income which such individual earns from substitute work,

"(2) any income which such individual would have earned in available substitute work he was capable of performing but unreasonably failed to undertake, and

"(3) any income which such individual would have earned by hiring an available substitute to perform self-empolyment services but unreasonably failed to do.

"(c) In determining economic loss under this section all benefits and advantages (less reasonably incurred collection costs) that an individual receives or is entitled to receive from Social Security (except those benefits provided under title XIX of the Social Security Act), workers' compensation, any disability or health insurance, and all other benefits (except the proceeds of life insurance) received by or available to an individual because of the injury shall be subtracted from the gross amount of loss.

"PAYMENT OF NO-FAULT BENEFITS

"Sec. 1814. (a) There shall be paid from the Medical Injury Compensation Insurance Fund to each beneficiary of no-fault benefits under this title such benefits as such beneficiary is entitled to receive under this title.

"(b) No-fault benefits are payable monthly as loss accrues. Loss accrues not when injury occurs, but as loss is sustained.

"(c) A claim for no-fault benefits shall be paid without deduction for the benefits or advantages which are to be subtracted from the gross amount of loss in calculating economic loss in accordance with section 1813, if such benefits or advantages have not been paid or provided to such claimant prior to the date the no-fault benefits claim is paid. The Secretary is thereupon entitled to recover reimbursement from the person obligated to pay or provide such benefits or advantages or from the claimant who actually receives them.

"(d) The right of any individual to any future payment under this part shall not be transferable or assignable, at law or in equity, and none of the moneys paid or payable or rights existing under this part shall be subject to execution, levy, attachment, garnishment, or other legal process, or to the operation of any bankruptcy or insolvency law.

"PROCEDURES FOR DETERMINATION OF NO-FAULT BENEFITS; APPEALS

"SEC. 1815. (a) (1) The Secretary is directed to make findings of fact, and decisions as to the rights of any individual filing a claim under this part within sixty days of the date on which such claim is filed. Upon request by any such individual who makes a showing in writing that his rights may be prejudiced by any decision the Secretary has rendered, he shall give such individual reasonable notice and opportunity for a hearing with respect to such decision, and, if a hearing is held, shall, on the basis of evidence adduced at the hearing, affirm, modify, or reverse his findings of fact and such decision. Any such request with respect to such decision must be filed within such period after such decision as may be prescribed in regulations of the Secretary, except that the period so prescribed may not be less than six months after notice of such decision is mailed to the individual making such request. The Secretary is further authorized, on his own motion, to hold such hearings and to conduct such investigations and other proceedings as he may deem necessary or proper for the administration of this title. In the course of any hearing, investigation, or other proceeding, he may administer oaths and affirmations, examine witnesses, and receive evidence. Evidence may be received at any hearing before the Secretary even though inadmissible under rules of evidence applicable to court procedure.

"(2) Decisions of the Secretary under this subsection shall be reviewable by commencing a civil action in the United States district court as provided in subsection (d).

"(b) For the purpose of any hearing, investigation, or other proceeding authorized or directed under this title, or relative to any other matter within his jurisdiction hereunder, the Secretary shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence that relates to any matter under investigation or in question before the Secretary. Such attendance of witnesses and production of evidence at the designated place of such hearing, investigation, or other proceeding may be required from any place in the United States or in any territory or possession thereof. Subpenas of the Secretary shall be served by anyone authorized by him (1) by delivering a copy thereof to the individual named therein, or (2) by registered mail or by certified mail addressed to such individual at his last dwelling place or principal place of business. A verified return by the individual so serving the subpenas setting forth the manner of service, or, in the case of service by registered mail or by certified mail, the return post office receipt therefor signed by the individual so served, shall be proof of service. Witnesses so subpenaed shall be paid the same fees and mileage as are paid witnesses in the district courts of the United States.

"(c) In case of contumacy by or refusal to obey a subpena duly served upon, any person, any district court of the United States for the judicial district in which said person charged with contumacy or refusal to obey is found or resides or transacts business, upon application by the Secretary, shall have jurisdiction to issue an order requiring such person to appear and give testimony, or to appear and produce evidence, or both; any failure to obey such order of the court may be punished by said court as contempt thereof.

"(d) Any individual, after any fiscal decision of the Secretary made after a hearing to which he was a party, irrespective of the amount in controversy, may obtain a review of such decision by a civil action commenced within sixty days after the mailing to him of notice of such decision or within such further time as the Secretary may allow. Such action shall be brought in the district court of the United States for the judicial district in which the plaintiff resides, or has his principal place of business, or, if he does not reside or have his principal place of business within any such judicial district, in the District Court of the United States for the District of Columbia. As part of his answer the Secretary shall file a certified copy of the transcript of the record including the evidence upon which the findings and decision complained of are based. The court shall have power to enter, upon the pleadings and transcript of the record, a judgment affirming, modifying, or reversing the decision of the Secretary, with or without remanding the case for a rehearing. The findings of the Secretary as to any fact, if supported by substantial evidence, shall be conclusive, and where a claim has been denied by the Secretary or a decision is rendered under subsection (a) hereof which is adverse to an individual who was a party to the hearing before the Secretary, because of failure of such individual to submit proof in conformity with any regulation prescribed under this title, the court shall review only the question of conformity with such regulations and the validity of such regulations. The court shall, on motion of the Secretary made before he files his answer, remand the case to the Secretary for further action by the Secretary, and may, at any time, on good cause shown, order additional evidence to be taken before the Secretary and the Secretary shall, after the case is remanded, and after hearing such additional evidence if so ordered, modify or affirm his findings of fact or his decision, or both, and shall file with the court any such additional and modified findings of fact and decision shall be reviewable the additional record and testimony upon which his action in modifying or affirming was based. Such additional or modified findings of fact and decision shall be reviewable only to the extent provided for review of the original findings of fact and decision. The judgment of the court shall be final except that it shall be subject to review in the same manner as a judgment in other civil actions. Any action instituted in accordance with this subsection shall survive notwithstanding any change in the person occupying the office of Secretary or any vacancy in such office.

"(e) The findings and decision of the Secretary after a hearing shall be binding upon all individuals who were parties to such hearing. No findings of fact or decision of the Secretary shall be reviewed by any person, tribunal, or governmental agency except as herein provided. No action against the United States, the Secretary, or any officer or employee thereof shall be brought under section 24 of the Judicial Code of the United States to recover on any claim arising under this title.

"TIME LIMITATIONS ON FILING OF CLAIMS FOR NO-FAULT BENEFITS

"SEC. 1816. (a) An initial claim for no-fault benefits for loss from injury may be filed by a patient not later than 18 months after such patient knew or reasonably should have known of such injury and that such injury was a result of the provision of health care services. If no-fault benefits have been paid for such loss, a claim for further benefits may be filed not later than one year after the last payment of benefits.

"(b) An initial claim for no-fault benefits for loss from injury may be filed by the survivor of a patient not later than the longer of one year after the death of such patient or 18 months after such survivor knew or reasonably should have known that the injury resulting in death was a result of the provision of health care services. If no-fault benefits have been paid for such loss, a claim for further benefits may be filed not later than one year after the last payment of benefits.

"(c) If a beneficiary is under a legal disability when the right to file a claim first accrues, the period of his disability is not a part of the time limited for filing of a claim.

"EFFECT OF FILING FOR NO-FAULT BENEFITS ON TORT RECOVERY

"SEC. 1817. (a) No claim for no-fault benefits of any beneficiary under this title shall be accepted for filing by the Secretary unless such beneficiary or his legal representative agrees, in writing, that no tort action will be instituted or prosecuted against the insured with respect to the injury for which no-fault benefits are claimed.

"(b) In the event such beneficiary or his legal representative does institute or prosecute such action he shall be considered to have breached such agreement. The Secretary is authorized to sue for damages for such breach. The amount of liquidated damages for breach of such agreement shall be the amount of any damages recovered by such beneficiary or representative in such tort action.

"PART C—GENERAL PROVISIONS

"DEFINITIONS

"SEC. 1821. As used in this title—

"(1) The term 'insured' means an individual identified by name as an insured in a contract entered into under section 1081.

"(2) The term 'patient' means an individual to whom an insured provides health care services.

"(3) The term 'survivor' means an individual identified in the wrongful death statute of the State of domicile of a deceased patient as one entitled to receive benefits by reason of the death of another individual.

"(4) The term 'legal representative' means an individual who would be entitled to institute a tort action on behalf of another individual, according to the law of the State of domicile of such other individual.

"(5) The term 'health professionals' means physicians, dentists, clinical psychologists, pharmacists, optometrists, podiatrists, nurses, nurse mid-wives, physicians assistants, dental auxiliaries, and any other classes of professionals prescribed by the Secretary in regulations.

"(6) The term 'health care institutions' means health care facilities and health maintenance organizations within the meaning of regulations promulgated under section 1122 of the Social Security Act.

"(7) The term 'injury' means physical harm, bodily impairment, disfigurement, or delay in recovery.

"(8) An injury 'results' from the provision of health care services when it is more probably associated in whole or in part with the provision of such services than with the condition for which such services were provided.

"(9) The term 'condition' means the state of health of the patient prior to the provision of health care services.

"(10) The term 'without regard to fault' means irrrespective of fault as a cause of injury.

"(11) The term 'health care services' means the rendering, as well as the omission, of any care, treatment, or services provided within the course of treatment.

"(12) The term 'State' means a State of the United States, the District of Columbia and the Commonwealth of Puerto Rico.

"(13) The term 'State agency' means the department, commission, board, or other agency of a State which is charged by the law of that State with the administration of laws and regulations regarding licensure of health professionals.

"MEDICAL INJURY COMPENSATION INSURANCE ADMINISTRATION

"SEC. 1822. (a) There is hereby established within the Department of Health, Education, and Welfare an office to be known as the Medical Injury Compensation Insurance Administration.

"(b) The Secretary shall perform the functions authorized by this title through the Medical Injury Compensation Insurance Administration.

"REGULATIONS

"SEC. 1823. The Secretary shall have authority to make rules and regulations and to establish procedures, not inconsistent with the provisions of this title, which are appropriate to carry out such provisions, and shall adopt reasonable and proper rules and regulations to regulate and provide for the nature and extent of the proofs and evidence and the method of taking and furnishing the same in order to establish the right to benefits hereunder.

"ADVISORY COUNCIL ON MEDICAL INJURY COMPENSATION

"SEC. 1824. (a) The Secretary shall establish and appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive services, an advisory council to be known as the Advisory Council on Medical Injury Compensation (hereinafter referred to as the 'Council'). The Council shall advise, consult with, and make recommendations to, the Secretary with respect to (1) the preparation of any regulations prescribed in accordance with this title, and (2) the implementation and administration of this title.

"(b)(1) The Council shall be composed of fifteen members. The members shall be appointed by the Secretary and shall be persons who, as a result of their training, experience, or attainments, are exceptionally well qualified to assist in carrying out the functions of the Council. Not less than seven members shall be persons who are not health professionals.

"(2) The term of office of voting members of the Council shall be six years, except that—

"(A) of the members first appointed to the Council, five shall be appointed for terms of two years and five shall be appointed for terms of four years, as designated by the Secretary at the time of appointment; and

"(B) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term.

A member may serve after the expiration of his term until his successor has taken office.

"(3) The Chairman of the Council shall be selected by the members from among their number. The term of office of the Chairman of the Council shall be the lesser of three years or the period remaining in his term of office as a member of the Council.

"(c)(1) Except as provided in paragraph (2), the members of the Council shall each be entitled to receive the daily equivalent of the annual rate of basic pay in effect for grade GS–18 of the General Schedule for each day (including traveltime) during which they are engaged in the actual performance of duties vested in the Council.

"(2) Members of the Council who are full-time officers or employees of the United States shall receive no additional pay on account of their service on the Council.

"(3) While away from their homes or regular places of business in the performance of services for the Council, members of the Council shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703(b) of title 5, United States Code.

"(d) The provisions of section 14(a) of the Federal Advisory Committee Act shall not apply with respect to the Council.

"PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1825. (a) Any agreement entered into by the Secretary with a qualified organization designating it a Professional Standards Review Organization under section 1152 of the Social Security Act shall provide that such organization perform the applicable review and other functions described in title IX of such Act with respect to the health care services provided by physicians who agree, pursuant to section 1804, to have such services reviewed by such organization.

"(b) The provisions of part B of title XI of the Social Security Act shall apply to the health care services provided by any physician who agrees, pursuant to section 1804, to have such services reviewed as provided by such section.

"(c) The Secretary shall make payments to Professional Standards Review Organizations equal to the amount of expenses reasonably and necessarily incurred, as determined by the Secretary, by such organizations in carrying out or preparing to carry out the duties and functions required to be performed under this section.

"(d) There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this section.

"PAYMENT OF ATTORNEYS' FEES

"SEC. 1826. (a) In addition to no-fault benefits or tort damages paid by the Secretary out of the Medical Injury Compensation Insurance Fund established by section 1802 to or for the benefit of any claimant or plaintiff to whom such payment is due the Secretary shall, if the claimant or plaintiff was represented by an attorney, pay out of such Fund, a reasonable fee (based upon actual time expended), established on the basis of regulations of the Secretary, to compensate such attorney for the services performed by him in connection with such claim or action to recover such damages.

"(b) No part of such no-fault benefits or tort damages may be applied in any manner as attorney's fees in connection with such claim or action to recover such damages.

"(c) Any attorney who charges, demands, receives or collects for services performed by him in connection with such claim or action to recover such damages any amount in excess of that paid by the Secretary under subsection (a) shall be guilty of a misdemeanor and upon conviction thereof shall be subject to a fine of not more than $10,000, or imprisonment for not more than one year, or both.

"(d)(1) Except as provided in paragraph (2), with respect to a claim for no-fault benefits filed by a claimant for which payment is not due under this title, the Secretary shall, if such claimant was represented by an attorney, pay out of such Fund, a reasonable fee (based upon actual time expended), established on the basis of regulations of the Secretary, to compensate such attorney for the services performed by him in connection with such claim.

"(2) No payment shall be made under paragraph (1) with respect to any claim found by the Secretary to be fraudulent or frivolous.

"PENALTIES

"SEC. 1827. Whoever—

"(1) knowingly and willfully makes or causes to be made any false statement or representation of a material fact in any claim for any benefit or payment under this title,

"(2) knowingly and willfully makes or causes to be made any false statement or representation of a material fact for use in determining rights to any such benefits or payment,

"(3) knowingly and willfully makes or causes to be made any false statement or representation of a material fact in any application for insurance under this title, or in any proceeding concerning the termination of any contract of insurance under this title, or

"(4) in the case of a health professional or health care institution, knowingly and willfully makes or causes to be made any false statement or representation respecting the participation of such professional or institution in the insurance program established under this title,

shall be guilty of a misdemeanor and upon conviction thereof shall be fined not more than $10,000 or imprisoned for not more than one year, or both.

"PART D—MINIMUM NATIONAL STANDARDS FOR STATE LICENSURE OF HEALTH PROFESSIONALS

"MINIMUM NATIONAL STANDARDS FOR STATE LICENSURE OF HEALTH PROFESSIONALS

"SEC. 1831. (a)(1) Within two years of the date of enactment of this part, the Secretary shall, in consultation with appropriate professional organizations, and in cooperation with any recognized national professional testing organization or organizations, develop and establish national standards for the licensure of health professionals and prepare appropriate examinations for the initial licensure and appropriate procedures for the subsequent renewal of such licensure (which shall be required periodically, but at least once every six years). Such standards shall include satisfactory performance, as defined by the Secretary, on an initial examination, demonstration of written and spoken proficiency in the English language in a manner approved by the Secretary, and compliance with such other requirements as are determined to be appropriate for the evaluation of competence to practice the health professions.

"(2)(A) A health professional licensed to practice his profession in any State shall be deemed to have complied with the appropriate procedures for renewal of his license required by this section if he has complied with the procedures established by any appropriate professional organization and certified by the Secretary in accordance with subparagraph (B).

"(B) The Secretary shall certify the procedures for renewal of licenses under this part, established by any appropriate professional organization, except upon a finding that such procedures are not adequate to assure appropriate continuing competence to practice the health professions. If the Secretary fails to certify any such procedures he shall publish in the Federal Register a statement of the reasons for such action.

"(3)(A) The requirements of this part with respect to licensure shall not apply to any health professional in any State who has been given a license to practice his profession in such State prior to the date upon which the provisions of this part take effect in such State, except that any such professional shall, after the provisions of this part take effect in such State, be subject to the requirements of this part respecting renewal of licenses.

"(B) Procedures for the removal of licensure prescribed under this section shall not, so far as they are applicable to health professionals who are licensed to practice their professions in any State on the date of enactment of this section, require the taking of an examination as a condition of relicensure. Nothing in this paragraph shall be construed to preclude a State or appropriate professional organization from establishing such procedures as it deems necessary for the relicensure of health professionals.

"(b) The Secretary shall periodically, but not less often than once every two years, review the national standards (including the examinations and certifications) established pursuant to subsection (a) and shall, in a manner consistent with such subsection, revise such standards as appropriate to assure that such standards are adequate for evaluation of competence to practice the health professions.

"(c) Prior to the establishment or revision of the national standards, pursuant to this section, the Secretary shall publish a notice in the Federal Register and afford all interested parties a reasonable opportunity to present their views by oral and written submission. The final action of the Secretary in establishing and revising the national standards shall be subject to judicial review in accordance with section 1832(d)(3) in the United States Court of Appeals for the District of Columbia Circuit.

"STATE PROGRAMS FOR LICENSURE IN ACCORDANCE WITH THIS PART

"SEC. 1832. (a)(1) A State may establish a program for licensure of health professionals in accordance with this part.

'(2) A State licensure program is in accordance with this part only if it meets or exceeds all of the national standards and complies with the provisions of section 1833. A State program 'meets' the national standards only if the substance of the State program requirements is the same as, or the equivalent of, the corresponding requirements of the national standards. A State licensure program 'exceeds' the national standards only if it includes requirements which are the same as, or equivalent to, the corresponding requirements of the national standards, and imposes additional requirements which are reasonably necessary to assure competent health professionals, and which are not inconsistent with the national standards.

"(b) Upon the establishment of a program, pursuant to subsection (a), in any State, the State agency may submit to the Secretary a certified copy of such program, together with all relevant information which is requested by the Secretary. Within one hundred and twenty days after the Secretary receives a copy of a State, licensure program established under subsection (a), the Secretary shall make a determination whether such State has established a licensure program in accordance with this part.

"(c) The Secretary shall periodically, but not less often than once every three years, review each State licensure program which has been determined under subsection (b) to be in accordance with this part to determine whether such program is still in accordance with this part. To facilitate such review each State agency shall submit to the Secretary periodically all relevant information which is requested by the Secretary.

"(d)(1) Before making any determination under this section, the Secretary shall publish a notice in the Federal Register and afford the State and all interested parties a reasonable opportunity to present their views by oral and written submission.

"(2) The Secretary shall notify in writing the Governor and the State legislature of the affected State of any determinations made under this section and shall publish these determinations with reasons therefor in the Federal Register.

"(3) Any determinations made by the Secretary under this section shall be subject to judicial review in accordance with chapter 7 of title 5, United States Code, in the United States court of appeals for the circuit in which is located the State whose plan is the subject of such determination or in the United States Court of Appeals for the District of Columbia Circuit. Any such review shall be instituted within sixty days from the date on which the determination made by the Secretary is published in the Federal Register.

"STATE LICENSURE REQUIREMENTS

"SEC. 1833. No State licensure program shall be considered to be in accordance with this part unless such program meets the following requirements—

"(1) each licensing State which has a licensure program which meets the national standards, as determined by the Secretary under section 1831, shall provide that a health professional licensed to practice his profession in any other State which has a licensure program which meets the national standards, as determined by the Secretary under section 1831, shall be deemed to be qualified for licensure in such licensing State; and in the case of any licensing State which has a licensure program which exceeds the national standards, as determined by the Secretary under section 1831, such licensing State shall provide that such a health professional shall be deemed to be qualified for licensure in such licensing State upon compliance with the additional requirements imposed by the licensure program of such licensing State;

"(2) no State shall establish any requirement for licensure of health professionals which requires that the individual applying for licensure reside in such State for a designated period of time prior to such licensure;

"(3) each State shall apply the requirements of its licensure program equally to all individuals who apply to be licensed as health professionals in such State, whether they have received an education in such profession in the United States or in a foreign nation; each State licensure program shall have only one set of licensure requirements and no State shall license (including issuance of temporary, partial, limited, institutional, and conditional licenses) any individual to practice such profession unless such individual has met all of the requirements of its licensure program; and

"(4) the State agency of each State shall notify the Secretary of any denial of licensure or relicensure to any health professional.".

BILL SUMMARY

The National Medical Injury Compensation Insurance Act would establish a no-fault system of compensation—similar to Worker's Compensation—for injuries suffered as the result of health care services. Under the bill, the Secretary of Health, Education, and Welfare would enter contracts with health care providers—professionals and institutions—who chose to participate in the program. The providers would pay an annual premium to a Medical Injury Compensation Insurance Fund and would in turn receive no-fault coverage for their patients as well as federal medical malpractice insurance for themeselves. As conditions of participation, they would be required to comply with standards of licensure and relicensure established by the Secretary. In addition, physicians would agree to accept review of their services by Professional Standards Review Organizations, to accept as full payment in Medicare cases the level of reimbursement assigned by the federal government, and to obtain concurring opinions from specialists prior to the performance of surgical procedures.

For the duration of provider's participation in the program, any of his patients who sustained an injury as a result of the provider's health services would be entitled to file a claim—within a prescribed time limit—with a Medical Injury Compensation Insurance Administration in HEW. If his injury were deemed treatment-induced, he would be compensated within certain limits, for medical expenses, injury-related income loss, and pain or inconvenience. (The program would, however, be a secondary insurance program; that is, any benefits the patient received from the compensation plans like health insurance, sick leave plan of Worker's Compensation would be deducted from the benefits due under this program). Determinations would be made by the Secretary—who would be empowered to subpoena any revelant witness or materials. If appealed by the patient, determinations would be reached through an administrative hearing or, thereafter, by judical review in the federal courts. If he chose to do so, the patient could still seek recovery of damages through a malpractice suit instead of seeking Medical Injury Compensation benefits. However, the initiation of one process—either the no-fault or the malpractice process—would disqualify the claimant from seeking recovery through the other. Participating providers who were sued would be covered by federal malpractice insurance for damages awarded the plaintiff.

In the case of a provider who accumulated unusual recods of losses, whether in the no-fault or the tort systems, the Secretary would investigate the provider's professional performance. If it were found that the services provided in those cases had been seriously deficient or irresponsible or that patients had been unnecessarily harmed, the Secretary would be authorized to terminate the provider's participation in the Medical Injury Compensation program.

Except in these instances or in the cases of providers who failed to pay their premiums or comply with eligibility requirements and other regulations, no one's participation would be terminated.

By Mr. ROBERT C. BYRD (for Mr. ANDERSON, for himself, and Mr. HUMPHREY):

S. 2369. A bill to provide Federal assistance for the control of Dutch elm disease; to the Committee on Agriculture, Nutrition, and Forestry.

DUTCH ELM DISEASE CONTROL ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I introduce a bill for Mr. ANDERSON, for himself and Mr. HUMPHREY. I ask unanmious consent that a statement by Mr. ANDERSON, together with attachments and the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR ANDERSON

I am today introducing legislation aimed at improving and focusing our Federal commitment in combatting the nation's most serious shade tree problem: Dutch Elm disease. Since 1930 when Dutch Elm disease (DED) was first discovered in this country, the federal involvement has been one of half-hearted interest. Money was spent for tree removal from the emergency relief fund during the depression but no comprehension approach has ever been developed to eradicate the disease.

Many communities, already hard pressed in performing local services, are unable to finance the necessary control measures. In a report released earlier this year by the U.S. Forest Service it was shown that local communities that take no action to control Dutch Elm disease may have to spend four times as much on tree removal over a 15 year period as other equivalent-sized cities and towns spend during the same period on programs to combat the spread of the disease.

While many persons may be familiar with the tragic loss of elms in the Twin Cities area of Minnesota, this disease is by no means a Minnesota problem. Only the states of Florida, Louisiana, New Mexico, Arizona, Utah, Nevada, Washington, Hawaii and Alaska have escaped infestation. The incidences of DED is highest in the Northeast where 12 states have lost 75 percent of the elms within their municipalities. The Dutch Elm bettle and the deadly disease which it carries are rapidly moving westward. Of the 16 affected states west of the Mississippi River, 12 have lost less than 25 percent of their elms and 9 states have lost less than 5 percent.

According to a recent USDA study, the percent of trees killed is closely related to the length of time DED has been present in a state. In states where the disease was first reported during the past ten years an average of 95 percent of elms still remain. In states where the disease was first reported from 21 to 30 years ago, an average of only 32 percent of the trees are left.

The loss we are discussing is not only the esthetic value of the trees but the reduction in property values associated with the loss of shade trees. Losses also occur in urban wildlife and in microclimates.

In order to check the interstate spread of this disease, insure proper sanitation and assist in reforestation a comprehensive Federal approach is necessary. S. 2369 authorizes a 3 year $250 million program which emphasizes public education to insure early detection and treatment and is a complement to local and state efforts rather than a replacement for their efforts.

Governors from Dutch Elm disease infected states will be able to apply for matching grants for any dollars spent by state or local governments. After the first year, states' match may not exceed the average state expenditure for the previous three years in order that states who were active before the Federal program came into existence will be rewarded. Matching funds will be available to county and local governments, business organizations and private individuals for tree removal, safe disposal of wood to check the spread of disease and reforestation with healthy disease resistant trees. Individuals who choose to participate must agree to remove all diseased trees unless a qualified forester determines that removal of the tree is unnecessary.

Since earlier detection is dependent upon an aware population, clearinghouses will be authorized in each state so that all may benefit from information among the states. Presently, the most effective combatant for checking the spread of Dutch Elm disease is tree removal and sanitation. Although great care must be taken that the beetle is destroyed, I believe that these field-giants can still be put to active use. My legislation includes a research program to investigate the use of these wood fibers without spreading the disease.

The USDA reports that if a city undertakes a control strategy early on 55 to 85% of a city's elms can be saved. Budget savings in control and disposal costs alone can amount to between $20,000 and $80,000 for a 1,000 tree unit or between 16 and 63% of the no control option.

A federal effort is needed now to assist and encourage local efforts. Our cities' trees, the catalyst of clean air, are too precious a resource to squander away.

I ask that the Dutch Elm Control Act of 1977, a section by section analysis and an informative article from the Minneapolis Tribune be printed in the Record.

The bill and attachments ordered to be printed in the RECORD, are as follows:

S. 2369

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Dutch Elm Disease Control Act of 1977".

Sec. 2. The Congress finds that—

(1) shade trees are essential to a clean, healthy environment and to the esthetic quality of the urban areas of the Nation;

(2) the elm tree is one of the most prized shade trees in the United States;

(3) the plant disease commonly known as Dutch elm disease is responsible for the loss and destruction of thousands of elm trees in this country each year;

(4) Dutch elm disease continues to spread, all but nine States having been infested with such disease, and the resulting losses each year are extensive; and

(5) Federal support and coordination of State programs to control the spread of the disease are essential if the disease is to be effectively controlled.

Sec. 3. As used in this Act—

(1) The term "Secretary" means the Secretarys of Agriculture.

(2) The term "State" means the several States and the District of Columbia.

Sec. 4. (a) The Secretary is authorized to assist the States in combating Dutch elm disease through a program of matching grants for use as provided in this Act.

(b) Grants made available under this Act may be used by a State solely for the purpose of combating Dutch elm disease through a program of financial assistance for State programs, for local governments, business organizations, and private individuals.

(c)(1) Any State which has been infested with Dutch elm disease shall be eligible for grants under this Act upon application therefor by the Governor of the State.

(2) Any grant made to a State under this Act shall be subject to the condition that the State agree to expend an amount equal to the amount of the grant for the same purposes for which the grant is to be used. The matching funds of the State may be made up of funds from any source except funds made available to the State under any Federal-State revenue sharing program.

(3) No State shall be eligible for such a grant in any year after the first year in which grants are made available under this Act unless the amount of funds, exclusive of funds made available under this Act, to be expended for the control of Dutch elm disease by such State in such year is equal to or greater than the average amount expended by such State for such purpose during the three preceding years.

(d) A State may make funds available to any local government, business entity, or individual of such State in such manner as the State may determine, except that—

(1) all such funds must be used for the purpose of removing trees infested with Dutch elm disease, the safe disposition of the wood from such trees after their removal, and the replacement of the infested trees with healthy, disease resistent trees;

(2) where funds are made available to any business entity, organization, or individual, not more than an amount equal to 50 percent of the cost of the removal of the infested trees, the disposition of the wood from such trees, and the replacement of the infested trees with healthy, disease resistant trees on the property of such entity, organization, or individual, may be paid with funds made available under this Act;

(3) where funds are made available to any business entity, organization, or individual for the removal of trees infested with Dutch elm disease located on the property of such entity, organization, or individual, such entity, organization, or individual must agree to the removal of all trees on such property so infested unless it is determined by the appropriate State forester that the removal of all such trees is unnecessary to prevent the spread of the disease or is impracticable under the circumstances; and

(4) all funds made available must be strictly accounted for in such manner as the Secretary shall prescribe.

Sec. 5. Funds under this Act shall be allocated among the States by the Secretary on the basis of the severity of the Dutch elm disease in such State, on the basis of the effort of each State in combating such disease and on the basis of such other relevant factors as the Secretary deems appropriate for determining the fair and equitable distribution of the funds; except that in no year shall more than one-third of the total funds available for allocation be allotted to any single State.

Sec. 6. None of the funds made available under this Act may be used to compensate any person for any damage suffered to any property as the result of or in connection with the removal of any tree or the planting of any tree as a replacement for any tree removed.

Sec. 7. The Secretary shall conduct a program of research designed to develop ways in which wood from diseased trees can be used without the threat of spreading the disease to other trees. The Secretary may carry out such a program through the States, colleges and universities, and by such other means as he deems most effective.

Sec. 8. (a) The Secretary shall carry out a program of information and education throughout the United States regarding the identification of Dutch elm disease and the various and most effective means of combating the spread of such disease. As a part of such program, the Secretary shall furnish such technical advice in connection with combating Dutch elm disease as may be requested by local governments, business entities, organizations, and individuals.

(b) The Secretary shall also provide financial assistance to aid the States in establishing a clearinghouse through which information will be provided regarding programs being carried out in the United States for the control of Dutch elm disease and the effectiveness of such programs.

Sec. 9. The Secretary shall submit to the Congress, within sixty days after the end of the first year of operation of the program provided for in this Act and annually thereafter a written report reviewing the effectiveness of such program together with such comments and recommendations for improvement of the program as he deems advisable.

Sec. 10. (a) There is authorized to be appropriated for the purpose of carrying out sections 2 through 6 and section 9 of this Act during the fiscal year beginning October 1, 1978, the sum of $70,000,000, for the fiscal year beginning October 1, 1979, the sum of $80,000,000, and for the fiscal year beginning October 1, 1980, the sum of $90,000,000.

(b) There is authorized to be appropriated for the purpose of carrying out sections 7 and 8 of this Act during the fiscal year beginning October 1, 1978, and for each of the two succeeding fiscal years the sum of $10,000,000.

(c) Funds appropriated to carry out the provisions of this Act for any fiscal year shall remain available until expended.

SECTION-BY-SECTION ANALYSIS: DUTCH ELM DISEASE CONTROL ACT OF 1977

Section 2. Findings: Shade trees are essential. The elm tree is one of the most important shade trees in the U.S. Dutch Elm disease is destroying thousands of elm trees each year throughout the U.S., Federal support and co-ordination of relevant State programs is essential to effective control of Dutch Elm disease.

Section 3. Definitions. "Secretary" means Secretary of Agriculture. "State" means the several states and the District of Columbia.

Section 4. (a) Authorizes the Secretary to establish a matching grant program to assist states in combating Dutch Elm disease.

(b) Requires program of financial assistance to county and local governments, business organizations, and private individuals.

(c) (1) The Governor of a Dutch Elm disease infested state is to make application for grant funds.

(2) Grants are conditioned on the State's providing dollar for dollar matching grants. The matching funds of the State may be made up of funds from any source except funds made available to the State under a Federal-State revenue sharing program.

(3) After the first year of grant availability, States must spend at least as much money as the average of the three preceding years to be eligible for Federal funds during any given year.

(d) States must determine the manner of distribution to local governments, business entities, or individuals in the state, except that—

(1) all funds made available must be used to remove Dutch Elm disease infested trees, safely dispose of the wood after removal of the tree, and replace the infested trees with healthy, disease resistant trees;

(2) no more than 50 percent of the costs for removing, disposing, and replacing infested trees incurred by business entities, organizations or individuals with respect to trees on their property can be paid under the Act (no limit for local governments);

(3) where funds are potentially available to a business entity, organization, or individual for removal of infested trees on their property, the potential recipient of funds must agree to the removal of all infested trees from the property unless it is determined by the appropriate forester that removal of all the trees is unnecessary to prevent the spread of the disease or impracticable under the circumstances; and

(4) all funds made available must be strictly accounted for in such manner as the Secretary shall prescribe.

Section 5. The Secretary is to allocate funds among the states according to the severity of the disease in each state, the effort of each state in combating Dutch Elm disease, and on the basis of other relevant factors leading to fair and equitable distribution as determined by the Secretary; except that no one state shall receive more than 1/3 of the total funds available for allocation in any one year.

Section 6. Funds available under the Act may not be used to compensate persons for damage to their property as the result of, or in connection with, the removal of any tree or replacement of any tree removed from the property.

Section 7. The Secretary is to conduct a research program designed to develop ways to use wood from diseased trees without spreading the disease to other trees. The Secretary may carry out this program through the States, educational institutions, and other means he deems effective.

Section 8. (a) Directs the Secretary to carry out an information and education program throughout the U.S. regarding the identification of the disease and the most effective ways of combating its spread. The Secretary is to furnish technical advice in connection with combating the disease as requested by local governments, business entities, organizations, and individuals.

(b) The Secretary is to provide financial assistance to the States to establish clearinghouses for educational information provided through Dutch Elm disease program.

Section 9. The Secretary must submit annually to Congress, a written report reviewing the effectiveness of the program along with comments and recommendations for the program's improvement.

Section 10. (a) Authorizes appropriations for carrying out sections 2 through 6 and section 9 of the Act during the fiscal year beginning October 1, 1978 of $70, for the fiscal year beginning October 1, 1979 of $80, and for the fiscal year beginning October 1, 1980 of $90.

(b) Authorizes $10 to be appropriated to carry out section 7 and 8 for the fiscal year beginning October 1, 1978, and for each of the two succeeding fiscal years.

(c) Funds appropriated to carry out the provisions of this Act for any fiscal year shall remain available until expended.

[From the Minneapolis Tribune, Aug. 14, 1977]

ST. PAUL LOST ELM TREES THROUGH APATHY

(By Joe Rigert)

(EDITORS NOTE.—This is the first of several articles the Tribune will publish in the next few days on the extent and problems of Dutch elm disease in Minnesota.)

The battle to save the elms is lost in St. Paul.

Within a couple of years or so, most of the trees probably will be gone, premature victims of public apathy and political inaction.

The disaster comes just 16 years after the state's first case of Dutch elm disease was spotted in St. Paul, the capital and second largest city. The disease hit 39,000 trees this year, forcing the city to shift partly from a control program to a logging operation, while depriving the city of much of its charm, comfort and character.

As the trees come down, streets like prestigious Summit Av. stand half naked and people fire the recriminations that accompany defeat in war. With tree losses this year almost double the predictions, the city will be left with less than half of its 70-year-old green canopy.

"The city should have been better prepared," said Stephanie Rynne of the Summit area's Ramsey Hill Association. "We've known about the disease for over a decade."

University of Minnesota experts say now that 80 to 90 percent of the city's elms probably will be gone in two or three years. The experience in other cities, after more than half of the elms were lost, supports that prediction.

The outlook for Minneapolis, which will lose 26,000 trees this year, is more uncertain, although not very reassuring. The same university experts say that this city may be just a year or so behind St. Paul, faced in 1978 with the devastating loss suffered across the river.

But 80 percent of the elms will remain in Minneapolis at the end of this year, and city tree experts insist that they still have a fighting chance to control the disease spread by tiny bark beetles.

In St. Paul, however, even the city's "tree" official concedes that 70 percent of the elms may be gone in two years. The disease won't spread as fast from now on, says head arborist Tom Karl, because the trees no longer are lined up like soldiers for the attacking beetles. Heavy losses have thinned their ranks.

Even as the trees have withered and died, city government has delayed—and delayed again—over the removal of the dry hulks that act as a breeding ground for millions of elm-bark beetles.

Last year, in an effort to save money, the city called three times for new bids from private tree-removal contractors. This year, the city pushed up the price of tree removal by tying the wages of such companies to union scales. When the bids came in too high, the city created a lower-paid new job and invited new proposals.

The result of all this has been to delay the work of private contractors each year until late summer or early fall—long past the needed early start for an effective disease-control program.

What the delays have done is provide time for possibly two generations of bark beetles to breed in the diseased trees and fly on to healthy elms, carrying the fungus that clogs the "veins" of the good trees.

The city, mostly with the use of its own crews, has removed only 5,200 (13 percent) of the diseased elms so far this year. Last December, the city had 10,000 elms still to be removed for that year.

Ward Stienstra and Mark Ascerno described the problem last week in a search for bark beetles on Summit Av. The scientists pointed to trees that had just been hit with the disease, dead trees where the beetles had bred and gone, a pile of elm branches where they found beetles beneath the bark.

At one home, they talked to a woman who was reluctant to see the removal of the seven diseased trees from her yard, even though there was no hope for them. "I can see the beauty in them," she said, comparing their leafless features with winter trees.

Stienstra and Ascerno were asked if St. Paul could slow the spread of the disease. Stienstra, a plant pathologist, and Ascerno, an expert on insects, said no. It was too late.

David French, another plant pathologist and the state's leading authority on Dutch elm disease, took essentially the same view later, although he said the city might save the elms longer in some neighborhoods. If those predictions were not gloomy enough, epidemiologist Robert Shrum calculated that 90 percent of the trees will be lost in two years. Shrum is an expert on disease trends.

Why did St. Paul get hit so hard? The experts blame it on failure of the city in recent years to identify and remove all of its diseased elms, failure of the politicians to provide necessary money and failure of the public to support an adequate control program until it was too late.

French emphasizes the need for public cooperation; foresters can't combat the disease alone. The people, he said, must see to it that their private trees are removed promptly when they become diseased. They also must get rid of elm firewood, which makes ideal breeding territory for the bark beetles.

Such efforts can slow down spread of the disease, allowing time to plant other trees, but they will not eliminate the malady, because there are no known cures.

Once the disease catches on, experts say, it doubles and triples its toll each year, until the explosion hits the city. After almost a decade of minor impact, that's what happened in St. Paul—the incidence rose from 6,000 trees to 20,000 to 39,000 in three years. That's also when the public became alarmed, but that's when it was too late.

According to the experts, a successful control program calls for prompt removal of 95 to 98 percent of the diseased elm trees, including debris or firewood. Chemical treatment, if applied annually, may help to ward off the disease, they say, but it generally fails to penetrate the entire tree, leaving some limbs vulnerable to infection. Under ideal conditions, a city would remove all diseased elms by April 1 and July 15, to prevent the emergence of two generations of bark beetles after those dates.

Then other diseased trees would be removed during the rest of the summer, as they were spotted, to head off the escape of still a third generation of beetles.

At the same time, root systems would be separated or chemically treated to keep the disease from traveling underground from diseased to healthy trees.

Tom Karl maintains that St. Paul was effectively spotting and removing bad trees, but couldn't stop beetles coming from inaccessible bluffs or river bottoms and couldn't keep people from hoarding elmwood. This made ultimate disaster inevitable, regardless of the city's efforts.

When the disease reaches a certain level, Karl said, it is impossible to stop. And when the number of dying trees reaches a certain number, he added, it becomes physically impossible to remove them in a timely manner.

As it is now, Karl said, some people look upon the city as their enemy, taking away their trees under a quota system. The people paint over the signs that mark trees for removal, argue that the trees will recover, challenge the right of the city to intrude on their property.

Karl remains hopeful that the city will be able to save a third of its elms, maintaining them the way others were preserved until the onslaught came. The university experts say this is no longer possible, that even a reduction in the beetle population won't make much difference because of the "overkill" capacity of the present numbers.

Ascerno flipped one of the beetles—a mere one-eighth of an inch long—from under the bark of a branch big enough to support 1,800 of them. The tiny insect was gone in an instant, possibly headed for one of the healthy trees still left on Summit Av.

St. Paul officials hope that private contractors will be ready this week to begin removing 225 diseased trees a day, at which rate they would finish the job by next April, when a new beetle breeding season begins.

Karl is philosophical about the unpleasant prospects: "The trees were going to die sooner or later anyway."

By Mr. JACKSON (for himself and Mr. MAGNUSON):

S. 2370. A bill to remove the limitation on the amount authorized to be appropriated under the Volunteers in the National Forests Act of 1972; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. JACKSON. Mr. President, I am today introducing a bill to amend section 4 of the Volunteers in the National Forest Act of 1972 (16 U.S.C. 558d). The Volunteers Act authorizes the Forest Service to expend $100,000 of its regular appropriations to reimburse volunteers for incidental expenses which they incur. The present limitation of $100,000 restricts the use of additional citizens who wish to participate in this popular program. This bill will remove this limitation and, it should be added, will not necessitate any additional appropriations.

The volunteers in the national forest program has been a notable success. Even with its limitations, the Volunteers Act has enabled the Forest Service to utilize the valuable resources of American volunteer workers to enhance the environment, and to develop the rich resources of the national forests.

The Forest Service has found there are thousands of conservation-minded citizens who, through individual initiative or organizations, stand ready to assist the Forest Service in its work. Furthermore, Forest Service experience with the program shows a return of over $10 in terms of work value received for every dollar expended. In fiscal year 1974, a total of 7,255 volunteers gave 148 years of work toward the Forest Service mission. The appraised value of the work accomplished by these volunteers was $698,503. The fiscal year 1975 report shows that some 6,473 individuals donated 250 years of work at an appraised value of $1,154,814. For fiscal year 1976, plus transition quarter, 11,676 persons volunteered 341 years of work valued at $2,338,606.

One of the many successful activities is the volunteer host program which provides visitor services in national forest recreation areas. In my own State of Washington this impressive campground host program is a joint venture between the Forest Service and the Washington State Chapter of the Good Samaritan Club. Initiated in 1975, volunteer assistance in 1976 involved seven campgrounds on four national forests in Washington. The volunteers help maintain facilities, man entry stations, answer questions and train campers by explaining rules and good camping techniques. Their presence has substantially reduced vandalism, theft, joy riding by locals and similar problems.

Unfortunately, there are far more opportunities to use volunteers in Forest Service programs than can currently be utilized. Given the current necessity to control Federal spending, the vast amount of conservation work to be accomplished on the national forests, and the availability of volunteers who only need reimbursement for out-of-pocket expenses, it is believed that volunteers offer the Forest Service a most useful and cost-efficient method of accomplishing some of its work. The proposed amendment would enable the Forest Service to utilize significant additional opportunities afforded by citizens who desire to volunteer their services. It should be emphasized, however, that these volunteers will not replace regular Forest Service employees who are responsible for conducting the work of this agency. In fact, the Forest Service is already operating under severe personnel ceiling constraints which, I feel, must be raised if they are to fulfill their responsibilities to Congress and the American people.

Mr. President, I ask unanimous consent that the text of this bill, together with a letter I requested from the U.S. Forest Service Chief, John McGuire, regarding the Volunteers Act, be inserted at this point in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2370

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Volunteers in the National Forests Act of 1972 (16 U.S.C. 558d) is amended by striking out ", but not more than $100,000 shall be appropriated in any one year".

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., November 23, 1977.

Hon. HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: This is in response to a request by Mr. Denny Miller of your staff for information concerning the Volunteers in the National Forests Program.

The Volunteers in the National Forest Act authorizes the Forest Service to recruit interested individuals for volunteer service in Forest Service activities and to expend $100,000 of regular appropriations for reimbursement to volunteers for incidental expenses they incur.

The Volunteers in the National Forest Program have been tremendously successful. Thousands of conservation-minded citizens, through individual initiative or organizations, have indicated willingness to assist the Forest Service in its work. In FY 1974, a total of 7,255 volunteers contributed 148 man-years of work valued at $698,503 toward the Forest Service mission. In FY 1975, 6,473 individuals donated 250 man-years of work at an appraised value of $1,154,814 and in FY 1976, plus the transition quarter, 11,676 persons volunteered 341 man-years of work valued at $2,338,606. Forest Service experience with the program shows a return of more than $10 work value received for every dollar expended.

Typical of the many successful activities is the "Volunteer Host" program which provides visitor services in National Forest recreation areas. Such services include distributing information to visitors, assisting in maintaining campgrounds free of litter, and orienting visitors to the attractions of the forest. This has been well received by the public. For example, in campgrounds where Volunteer Hosts have been assigned, Forest Service officials report significant reduction in vandalism, litter, and unruly behavior and greater compliance with camping rules and regulations.

There are more opportunities to use volunteers in Forest Service programs than can currently be utilized. The $100,000 limitation restricts the size of the volunteer program. For FY 1976 and 1977, our field offices requested more than twice the amount of authorization that was available. This indicates that we are losing opportunities to utilize volunteer services. For example, in FY 1976, 60 people from the Izaak Walton League volunteered to help with clean-up and trail work in the Hell's Canyon area of the Wallowa-Whitman National Forest in Oregon providing they were reimbursed for expenses. Unfortunately, the authorization limitation prevented our acceptance of this offer. We also would like to expand the Volunteer Host Program into more campgrounds but cannot because of the authorization limitation. We are pleased with the outstanding accomplishments of the program and we are hopeful that we will have the opportunity to use additional volunteers in the future.

Reimbursement of volunteer expenses is charged to the Forest Service function or activity which benefits from the volunteer help. The net result of the volunteer program is a savings rather than an additional cost to the Federal Government.

We appreciate your interest in the Volunteers in the National Forest Program and hope that expansion of the Program will prove to be feasible.

Sincerely,

JOHN R. MCGUIRE,
Chief.

By Mr. ROBERT C. BYRD (for Mr. ANDERSON):

S. 2371. A bill to amend title 39 of the United States Code to provide that pledge reminders of charitable organizations may be mailed at third class rates; to the Committee on Governmental Affairs.

Mr. ROBERT C. BYRD. Mr. President, I introduce a bill for Mr. ANDERSON, and I ask unanimous consent that a statement by Mr. ANDERSON, together with the bill, be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR ANDERSON

I am pleased to introduce S. 2371, a bill which will assist legitimate charitable groups in reducing the administrative costs of fundraising and thereby permit a greater percentage of donor dollars to be used for charitable purposes.

It is a common practice among charities to solicit donation pledges in connection with a fundraising event and, subsequently, mail pledge reminders to persons who earlier agreed to contribute. However, under current U.S. Postal Service regulations, these pledge reminders from charities come within the definition of "bills" and must be sent at first-class mail rates instead of the non-profit bulk rate that these groups use for all other mailings. As a result, thousands of dollars collected for worthy causes is used up on extra postage.

S. 2371 allows qualified, non-profit organizations to mail presorted, zip-coded pledge reminders at the bulk rate. In addition, since delayed delivery of pledge reminders reduces the rate of return, S. 2371 requires first-class handling for this type of mail, assuring quick receipt by the pledgor.

This legislation is not intended as an alternative to the sound financial management that must be required of all charities to reduce administrative costs. Nor will the bill lower the postal rates for non-profit organizations' mailings generally. Rather, S. 2371 will increase the amounts of funds available to charities for their worthwhile purposes by reducing a fixed expense—postage costs—incurred in this type of fundraising project.

Of course, an effect of S. 2371 will be to reduce Postal Service revenues. However, I am sure my colleagues will agree that the lost revenue is insignificant compared to the benefits to the recipients of the funds raised by these charitable organizations from the decreased fundraising costs that will result from this bill.

A look at representative, well-run, and well-known charities demonstrates the beneficial effect of S. 2371. For example, each Labor Day weekend, Jerry Lewis puts on a 24-hour telethon to raise funds for the Muscular Dystrophy Association (MDA). Pledge reminders are sent out to persons all across the country who call in during the 24-hour period. In 1976, $359,000 was spent on first-class postage to mail the pledge reminders. In 1977, $398,000 was spent for the same purposes by MDA. Had S. 2371 been in force during the past two years, MDA would have saved more than $638,000 in postage costs. In my judgement, this money would have been better spent on the much needed research funded by this fine organization than the 0.0027% loss in revenue it would represent for the Postal Service's annual budget.

Other causes would benefit as well. The National Campaign Director of The Arthritis Foundation estimates that passage of S. 2371 could result in immediated savings of $10,000 and in even more substantial savings in the future.

S. 2371 is prompted in part by the impact of present postal regulations on Project Concern, Inc., a San Diego based, international non-profit medical and dental assistance program that since 1961 has provided medical services to millions of very deserving people in our own country and around the world. Project Concern annually sponsors 175 Walks for Mankind around the country, including Minnesota, where next May the 9th Annual Twin Cities Walk is scheduled. Since adopting the walk fundraising technique in 1969, Project Concern has sponsored nationally more than 2,500 walks and over the years 1½ million Americans, mostly high school age young people, have walked an average of 20 miles to raise funds for the good works of Project Concern.

Project Concern has consistently and successfully held down its fundraising costs so as to use the maximum percentage of their donor dollars for medical services. Last spring, however, $110,000, 4% of Project Concern's pledged contributions from the spring, 1977, Walks for Mankind, was spent on first class mailing of pledge reminders. S. 2371 would have reduced this group's mailing costs by $91,700. Last year $91,700 would have supported Project Concern's entire medical service program in Appalachia and the operating costs of the Project's program with the Navajo Indians in Arizona and New Mexico.

This legislation should be analyzed with regard, first, to the benefits it conveys to the recipients of hardearned funds by charitable organizations and, second, to the minimal loss of revenue to the Postal Service. I ask my colleagues to support S. 2371 as a gift to the donating public to assure that a greater percentage of funds they generously give to charitable organizations goes for its intended purpose.

I include the text of S. 2371 in the RECORD.

The bill was ordered to be printed in the RECORD as follows:

S. 2371

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3626 of title 39, United States Code, is amended by adding at the end thereof the following new subsection:

"(e) (1) Except as provided in paragraph (2), in the administration of this title, any qualified pledge reminders (as defined in paragraph (3)) of a qualified nonprofit organization (as defined in former section 4452(d) of this title) which are mailed in bulk (within the meaning of former section 4452(e) of this title) shall qualify to be entered and mailed as third class mail in accordance with the provisions of former sections 4451 through 4453 of this title at the rates provided under subsection (a) for matter mailed under former sections 4452(b) and (c) of this title.

"(2) Qualified pledge reminders mailed in bulk shall be handled as first class mail (within the meaning of former section 4251 of this title), but at the rate provided in paragraph (1), if the organization—

"(A) sorts the quaified pledge reminders by zip code before mailing, and

"(B) pays a fee (in an amount equal to the fee paid by a qualified nonprofit organization for a permit to mail matter under former sections 4452(b) and (c) of this title) for a permit to have such reminders so handled.

"(3) For purposes of this subsection, the term 'qualified pledge reminder' means any notice sent in the form of a bill or statement of account which serves as a reminder to any person of the pledge of a contribution (which, if paid, constitutes a charitable contribution (within the meaning of section 170(c) of the Internal Revenue Code of 1954)) to an organization but only if such pledge was made in connection with an identifiable fund-raising event of that organization.".

(b) The amendment made by subsection (a) shall apply to any mail matter mailed on or after the date of the enactment of this Act.

By Mr. ABOUREZK:

S. 2372. A bill to amend the Indian Self-Determination and Education Assistance Act; to the Select Committee on Indian Affairs.

Mr. ABOUREZK. Mr. President, I am today introducing an amendment to the Indian Self-Determination and Education Assistance Act, Public Law 93–638, I consider this measure as singularly important to the future course of Indian affairs. The amendment is necessary to insure that Congress original intent in passing the Indian Self-Determination Act is successfully implemented.

The act states that it would "permit an orderly transition from Federal domination of programs for and services to Indians to effective and meaningful participation by the Indian people in the planning, conduct, and administration of those programs and services. (Sec. 3 (b).)" Since the act was passed in 1975, and the regulations published over 1½ years ago, Indian people throughout the Nation have encountered problems and barriers to the assumption of control over Bureau of Indian Affairs and Indian Health Service programs. The Senate Committee on Indian Affairs conducted oversight hearings to investigate these problems with the implementation of Public Law 93–638. One of our hearings, held in Albuquerque, N. Mex., generated testimony from over 30 Indian tribes and tribal organizations. On the basis of Indian testimony and information gathered directly from IHS and BIA, it became clear that the intent of Congress has been frustrated because there has been no transfer of control in the actual implementation of the act. Rather, control has been retained by the agencies through a combination of factors. The agencies have incorporated into the contracts their identification of priorities and policies rather than allowing tribes to make the determination. Further, tribes are severely restricted by having to formulate their policy determinations within the narrow parameters of the current programs and budget allocations of the agencies. Duplications of effort, excessive paperwork, and inhibitions against long-term planning in the contracting process have seriously undercut the intended tribal control.

Tribes seeking contracts have undergone excessively long delays in receiving approval or their applications were disapproved because of a cited lack of fund a step which has left the tribes without redress, since it is not grounds for a formal declination appeal. Even after contract approval, the tribal services and programs have been fiscally disrupted by the agencies reimbursement voucher system of payment. Taken together these and other factors have frustrated the clear intent of Congress.

As a response to these significant problems, I am proposing an amendment designed to address the range of problems brought out in our hearings and to bring about the transfer of control over these services which Congress originally intended. The amendment leaves the present structure of Public Law 93–638 intact. It adds as a new option, however, the opportunity for tribes to elect to develop a comprehensive tribal plan for the administration and delivery of the total range of government services for which they are eligible under presently existing law. The Secretary of the Interior is authorized and directed to provide a consolidated single grant to implement these tribal plans. The intent is to greatly simplify the excessive paperwork generated by the contracting process and to allow for the necessary flexibility in local policy determinations by the tribes. Application of this comprehensive tribal plan, single grant process, would also greatly enhance the local management capabilities of the tribes and enable them to engage in long-term planning. Finally, the bill would solve many of the detailed procedural problems which the tribes have encountered.

Mr. President, the Federal policy of Indian self-determination has been adhered to by the past three Presidents of the United States, enacted into law by the U.S. Congress with the passage of Public Law 93-638, and unequivocally supported by the American Indian Policy Review Commission. Yet, even today the Indian has little true self-determination. We must insure that our policies are not idle rhetoric. With the passage of this bill, we have the opportunity to see the fruition of our intent and our promises honored. Gentlemen of the Senate, I urge your support for this bill so that we may together truly put an end to the Federal paternalism of the past.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2372

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Indian Self-Determination and Education Assistance Act is amended by adding at the end thereof the following:

"TITLE III—ELECTION TO RECEIVE BLOCK GRANTS

"BLOCK GRANTS

"SEC. 301. Any Indian tribe or tribal organization entitled, under this Act, to enter into contracts with the Secretary of the Interior or the Secretary of Health, Education, and Welfare, or to receive grants from any such Secretary, for the purpose of enabling such tribe or organization to plan, conduct, and administer programs and projects for, and provide services to, Indians, or to carry out certain functions, authorities, and responsibilities previously carried out by the Secretary of the Interior or the Secretary of Health, Education, and Welfare, may elect to receive a single grant in each fiscal year in lieu of such grants or contracts authorized in the foregoing titles of this Act.

"(b) The Secretary of the Interior, in consultation with the Secretary of Health, Education, and Welfare, is authorized to make such grants provided for in subsection (a) of this section to each Indian tribe or tribal organization having an approved plan submitted in accordance with this title.

"PLANS; APPROVAL

"SEC. 302. (a) The Secretary of the Interior shall not provide financial assistance under this title for any fiscal year, in the way of a single grant for such year, to any Indian tribe or tribal organization unless such tribe or organization submits to the Secretary a plan for providing or carrying out, during such fiscal year, any one or all of such programs, projects, functions, activities, or services referred to in section 303 of this title. Such plan shall be in such detail as the Secretary deems necessary and shall set forth a comprehensive program which meets the objectives of this title, including a description of the programs, projects, functions, activities, and services to be carried out or provided by such tribe or organization from the proceeds of such grant. No program, project, function, activity, or service not otherwise authorized by section 303 of this title shall be approved for inclusion within any such plan.

"(b) The Secretary of the Interior shall not provide financial assistance under this title unless the Indian tribe or tribal organization seeking such assistance certifies that it will comply with the provisions of any such plan so submitted.

"(c) (1) The Secretary of the Interior shall provide financial assistance to any Indian tribe or tribal organization to carry out the plan submitted by such tribe or organization upon determining that—

"(A) the plan is consistent with the provisions of this title;

"(B) the Indian tribe or tribal organization submitting such plan has demonstrated maximum effort to implement the provisions in such tribe or organization's prior year's plan, if any.

"(2) The Secretary of the Interior shall not disapprove any plan because of the percentage of funds devoted to a particular program, project, function, activity, or service authorized by section 303 of this title.

"PROGRAMS

"SEC. 303. No program, project, function, activity, or service shall be included in any plan submitted pursuant to this title unless such program, project, function, activity, or service is a program, project, function, activity, or service which is within the purview of the foregoing titles of this Act, or is a program, project, function, activity, or service which is substantially similar to such program, project, function, activity, or service so within such purview.

"SANCTIONS

"SEC. 304. (a) The Secretary of the Interior shall not disapprove any plan or amendment without first affording the Indian tribe or tribal organization submitting the plan reasonable notice and opportunity for a hearing.

"(b) If the Secretary of the Interior receives a formal allegation from an affected member of a tribe or tribal organization that the tribe or organization operating under a plan pursuant to this title is administering such plan in a manner so as to constitute a failure to comply substantially with any provision of such plan, and such allegation is supported by substantial evidence, the Secretary shall, after due notice and an opportunity for a hearing to such tribe or organization, determine whether the allegation is true. If the Secretary determines such an allegation to be true, the Secretary shall notify such tribe or organization that no further payments will be made to such tribe or organization under the plan (or, in his discretion, that further payments will be limited to programs under or portions of the plan not affected by such failure), until he is satisfied that there will no longer be any failure to comply. Until he is so satisfied, the Secretary shall make no further payments to such tribe or organization under the plan (or shall limit payments to programs under the plan not affected by the failure).

"(c) Whenever the Secretary determines, after notice and opportunity for a hearing, that any such tribe or tribal organization is materially failing to carry out the purposes and intent of this Act, the Secretary is authorized to revoke such tribe or organization's plan, in whole or in part, and to the extent necessary and appropriate not make any further payments to such tribe or organization under this title pursuant to such plan, and he is authorized to notify such tribe or organization to return to him all or any part of the unexpended sums paid under this title during that fiscal year pursuant to such plan or part thereof so revoked.

"CONTINUATION OF SERVICES

"SEC. 305. (a) In any case in which the Secretary of the Interior has taken an action under section 304 of this title which results in vital services not being provided to individuals who were the beneficiaries of such services under such plan, the Secretary of the Interior shall take such action as may be necessary to provide for the continuation of such services for the fiscal year covered by such plan.

"(b) The provisions of section 5(d) shall not be applicable to any financial assistance provided pursuant to this title.

"PAYMENTS

"SEC. 306. Payments made pursuant to this title may be made in installments, and shall be made in advance, with necessary adjustments on account of overpayments or underpayments as the Secretary may determine.

"AUTHORIZATIONS

"SEC. 307. (a) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this title.

"(b) In any fiscal year in which the amounts appropriated pursuant to subsection (a) of this section available for this title plus amounts appropriated pursuant to any other provision of Federal law available for this title are insufficient to pay in full the total amounts required to carry out plans approved by the Secretary of the Interior under this title, the Secretary of the Interior shall prepare and submit a statement of the amounts necessary to carry out such plans. The statement shall be included in a report to be submitted to the Select Committee on Indian Affairs of the Senate and the Committee on Interior and Insular Affairs of the House of Representatives which shall constitute a budget estimate within the meaning of section 201(a) (5) of the Act of June 10, 1921 (31 U.S.C. 11(a) (5)).".

By Mr. INOUYE (for himself and Mr. MATSUNAGA):

S. 2373. A bill to provide for the establishment of a Division of Minority Mental Health Programs; to the Committee on Human Resources.

MINORITY MENTAL HEALTH PROGRAM ACT OF 1977

Mr. INOUYE. Mr. President, today Senator MATSUNAGA and I are jointly introducing legislation which would amend the Community Mental Health Centers Act of 1963 in order to establish within the Alcohol, Drug Abuse and Mental Health Administration an identifiable Division of Minority Mental Health Programs.

The primary legislative mandate of this division will be the development of knowledge about the Nation's minorities' ability to cope with and adapt to society's stresses and . . . the application of this acquired information to ongoing efforts to provide services to our minority consumers. The Division will also actively explore the effects of racism upon our various institutions. Consistent with one of the recent specific recommendations of the President's Commission on Mental Health Preliminary Report to the President (September 1, 1977), the Division will similarly be expected to aggressively emphasize the "training of (a) minority mental health workers, (b) researchers from minority groups, and (c) persons serving bicultural and bilingual groups." In our judgment, the accomplishment of these mandates will require both long-term institutional support programs, as well as innovative demonstration project grants.

Presently there is established within the National Institute of Mental Health a center for minority mental health programs administered under the division of special mental health programs. This Center has been in operation for the past 6 years and, in our judgment, with minimal staff and financial resources has made remarkable strides in focusing upon the oftentimes truly unique mental health needs and resources of our Nation's minority populations. To date, the center has funded at least 77 research projects and 25 training projects, including rather major grants to each of the four traditional mental health professional disciplines. In fact, this summer I had the special opportunity of having Ms. Sally Ruybal, one of the American Nurses' Association's minority fellow interns, serve in my office. The center now funds six prototype research and development centers which are presently addressing a broad range of research issues in various parts of our Nation directly relatting to our Black, Asian and Pacific American, Hispanic, and Native American populations.

Our minorities presently represent approximately 17 percent of our Nation's total population, but, unfortunately, all indications are that these individuals still continue to suffer from the stresses of prejudice and racism. Their income levels, housing conditions, educational attainments, and health predicators are substantially below that of our Nation as a whole. Many experts also have continually emphasized that although there is a disproportionately high level of schizophrenia, alcoholism, and drug abuse in these populations, the actual number of minority mental health professionals and behavioral scientists remain distressingly low, with a resulting reliance on excessive institutionalization in mental health facilities.

From the preliminary evidence that the center for minority mental health programs already has developed, there seems no question that the development of a comprehensive minority mental health strategy, especially with the resulting emphasis on developing an adequate number of minority mental health professionals, would be a highly effective means of addressing many of our Nation's social problems. However, the real question is whether we as a nation are willing to commit the resources that such an effort would require. In our judgment, the time has come to do this.

Mr. President, I ask unanimous consent that the text of this bill be printed in the Record.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 2373

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Minority Mental Health Program Act of 1977".

Sec. 2. Title II of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963 is amended by redesignating part E as part F and inserting after section 231 the following:

"PART E—MINORITY MENTAL HEALTH PROGRAMS

ESTABLISHMENT OF DIVISION

"Sec. 232. (a) The Secretary shall establish within the Alcohol, Drug Abuse and Mental Health Administration an identifiable administrative unit to be known as the Division for Minority Mental Health Programs (hereinafter referred to as the 'Division').

"(b) The Secretary, acting through the Division shall—

"(1) support programs with regard to the delivery of mental health services to minority populations, including demonstration projects;

"(2) develop a plan to increase the minority population's mental health manpower;

"(3) study the effects of racism upon minority and majority institutions and individuals;

"(4) develop systems to assist minority populations in adapting and coping with the effects of racism;

"(5) develop special and innovative training programs aimed at the elimination of institutional racism;

"(c) The Secretary, acting through the Division, may carry out the provisions of subsection (b) by making grants to, or entering into contracts with professional associations, nonprofit entities, or State or local agencies.

"(d) There are authorized to be appropriated to carry out the provisions of this part $40,000,000 for the fiscal year ending September 30, 1978, $45,000,000 for the fiscal year ending September 30, 1979, and $50,000,000 for the fiscal year ending September 30, 1980."

By Mr. ROBERT C. BYRD (for Mr. Magnuson, for himself, Mr. Long, and Mr. Pearson) (by request):

S. 2374. A bill to amend the Interstate Commerce Act to establish epeditious Interstate Commerce Commission procedures, and for other purposes; to the Committee on Commerce, Science, and Transportation.

Mr. ROBERT C. BYRD. Mr. President, I introduce today for Mr. Magnuson, at the request of the Interstate Commerce Commission, and on behalf of Mr. Magnuson, for himself, Mr. Long, and Mr. Pearson, a bill to amend the Interstate Commerce Act to establish expeditious Interstate Commerce Commission procedures, and for other purposes.

I ask unanimous consent that the text of the bill, the letter of transmittal and the explanation and justification of the legislation be printed in the Record.

There being no objection, the bill and letter were ordered to be printed in the Record, as follows:

S. 2374

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 17 of the Interstate Commerce Act (49 U.S.C. 17) is amended as follows:

Sec. 1. Subsections (5), (6), (7), (8), and (10) of section 17 are deleted and the following subsections are substituted therefor:

"(5) (a) This subsection applies to a matter before the Interstate Commerce Commission involving a carrier other than a rail carrier providing transportation subject to the jurisdiction of the Commission under this part. Where a matter involves both a nonrail carrier and a rail carrier providing transportation subject to the jurisdiction of the Commission under this part, the provisions of subsection 17(10) shall apply.

"(b) In a proceeding under this subsection, after the parties have had at least an opportunity to submit evidence in written form, they may be given an opportunity for briefs, written statements, or conferences of the parties. A conference shall be chaired by a division, an individual Commissioner, an employee appointed under section 3105 of title 5, a board, or a designated employee.

"(c) A division, individual Commissioner, employee appointed under section 3105 of title 5, employee board, or employee designated to make an initial decision in a matter related to carriers which this section applies shall submit the initial decision to the Commission in writing after all evidentiary proceedings related to the matter have been completed. The initial decision shall include:

(1) specific findings of fact;

(2) specific and separate conclusions of law;

(3) an appropriate order; and

(4) justification of the findings of fact, conclusions of law and order.

A determination by the entire Commission in the first instance is not an initial decision within the meaning of this subsection.

"(d) The Commission or a division may void the requirement of an initial decision under this subsection and may require the matter to be considered by the Commission or the division on finding that the matter involves a question of Commission policy, a new or novel issue of law, or an issue of general transportation importance, or that it is required for the timely execution of its functions. When the requirement of an initial decision is voided, the first determination by the Commission or division shall include the elements required by paragraph (c) of this subsection and may be appealed pursuant to subsection 17(6)(e).

"(e) Before an initial decision becomes an action of the Commission, the Commission, a division, or a board acting pursuant to subsection 17(6)(b), may review the initial decision on its own initiative on the record on which it is based or on further hearing, and shall review an initial decision if an appeal is filed under subsection 17(6).

"(6)(a) Copies of an initial decision shall be served on the interested parties, including persons referred to in subsection 205(e) of this act if the proceeding involves a motor carrier subject to the jurisdiction of the Commission under part II of this act. An initial decision becomes an action of the Commission on the 20th day after it is served on the interested parties, unless:

(1) an appeal of the initial decision is filed by an interested person during that 20 day period, or by the end of an extended period (not to exceed 20 days unless extraordinary hardship would result) in authorized by the Commission or an individual Commissioner, division, or employee or appeal board; or

(2) the Commission or an individual Commissioner, division, or employee or appeal board stays the initial decision.

"(b) An employee board may not decide an appeal from an initial decision unless its determination of the appeal is not subject to any further appeal under the Commission's rules. However, the Commission may establish rules to permit designated appeal boards, composed of either Commission members, or employees other than those who have participated in the taking of evidence or determination of the decision under appeal, or both, to review appeals of an initial decision (or the first decision in a proceeding under subsection 15(7), 15(8), 216(g), 218(c), 307(g), 307(1), or 406(e) of this Act) of an employee board, employee appointed under section 3105 of title 5, or other designated Commission employee. Commission rules may also provide that certain decisions or categories of decisions, including appeal board decisions, shall become administratively final, unless a discretionary application for administrative review is granted pursuant to subsection 17(7).

"(c) An initial decision may be reviewed on the record on which it is based or on further hearing. If an initial decision is reviewed pursuant to subsection 17(5)(e), it shall be stayed pending final determination of the appeal, and it is an action of the Commission only after the final determination is made.

"(d) Other than as provided by this section, review of, or appeal from, an initial decision shall be conducted under section 557 of title 5. The Commission may prescribe rules limiting and defining the issues and pleadings on review under section 557(b) of that title.

"(e) Where the Commission has rendered the first determination of any matter, or when a division has rendered a first determination after the requirement of an initial decision has been voided, appeals shall be governed by this paragraph. An appeal may be filed by an interested party within 20 days after it has been served or by the end of an extended period (not to exceed 20 days unless extraordinary hardship would result) if authorized by the Commission, division, or an individual Commissioner. The Commission, division, or an individual Commissioner may stay the decision pending a final determination under this paragraph and rules may be established to limit the grounds for appeal. A determination on appeal under this paragraph may not be further appealed under this paragraph or subsection 17(7).

"(7) Except as provided in subsection 17(6)(e), when the division, individual Commissioner, or employee or appeals board determines an appeal under subsection 17(6), its determination may be reviewed by the Commission, upon the filing of a petition for administrative review. This petition may only be granted upon a showing that:

(1) the action involves a matter of general transportation importance; or

(2) the action would be affected materially because of new evidence or changed circumstances.

If the petition is granted, further hearing or reargument may be ordered. Under this paragraph, an interested person may petition for review, including rehearing or reargument, within 20 days of service of the decision on appeal, subject to such regulations as the Commission may establish. The Commission may stay an action pending a final determination under this paragraph.

"(8) The Commission, division, or appeal board may at any time on its own initiative because of material error, new evidence, or substantially changed circumstances:

(1) reopen a proceeding which is administratively final under subsection 17(9)(c),

(2) grant rehearing or reargument, and

(3) change a prior action.

A reopened proceeding may be assigned to an employee board, appeal board, division, or an employee appointed under section 3105 of Title 5, if further hearing is necessary, under such regulations as the Commission may establish. Regulations may also be established for interested parties to petition for reopening of an administratively final action.

"(9)(a) An action of the Commission, division, or employee or appeal board under subsections 17(5)-(8) is effective on the 30th day after service unless the Commission provides otherwise.

"(b Once an action becomes effective under paragraph (a), it remains in effect under its own terms or until suspended. The Commission or a division may change, suspend or set aside any such action on notice. Notice may be given in a manner determined by the Commission. A court of competent jurisdiction may enjoin or set aside any such action.

"(c) A court action to enforce, enjoin, or set aside an administratively final decision, order, or requirement of the Commission may be filed on or after the date on which the action is served, pursuant to the provisions of law which are applicable to such suits.

"(d) Notwithstanding any other provision of law, a decision, order, or requirement of the Commission shall be administratively final for purposes of judicial review when interested parties have exhausted their right to appeal under section 17(6). However, when the entire Commission has rendered a determination in the first instance, when a division has rendered a first determination after the requirement of an initial decision has been voided, or when a review of an initial decision has been rendered, the action of the Commission shall not be deemed administratively final if an appeal under subsection 17(6)(e) or a petition for administrative review under section 17(7) is filed. In such instance, a court of competent jurisdiction shall not commence a review of the Commission action while the appeal or the petition for administrative review is pending."

SEC. 2. Subsecton (9) of section 17 is renumbered subsection (10).

SEC. 3. The amendments provided in this act shall become effective 180 days after enactment. During this 180-day period, the Commission shall establish final rules to implement the provisions of this act.

WASHINGTON, D.C.,
December 12, 1977.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, Science, and Transportation, U.S. Senate, Washington, D.C.

Hon. HAROLD T. JOHNSON,
Chairman, Committee on Public Works and Transportation, U.S. House of Representatives, Washington, D.C.

DEAR CHAIRMEN MAGNUSON AND JOHNSON: As you know, the Railroad Revitalization and Regulatory Reform Act of 1974 (the 4–R Act) made a number of changes in the procedures of the Interstate Commerce Commission. Most of those changes were limited to the Commission's regulation of railroads, since the House Interstate and Foreign Commerce Committee, which reported out the underlying House bill, has jurisdiction over only one mode of surface transportation—railroads. Jurisdiction over the Commission's regulation of the other modes of surface transportation rests with the House Public Works and Transportation Committee. This has meant that many of the procedural reforms brought about by the 4–R Act have not been extended to cover proceedings involving motor carriers, domestic water carriers and freight forwarders.

One of the reforms enacted by the Congress in the 4–R Act was the adoption of new Commission hearing and appellate procedures, which are now contained in section 17(9) of the Interstate Commerce Act. As is explained more fully in the Explanation and Justification accompanying the legislation proposed here, the Commission is of the view that section 17(9), while beneficial in some respects, is not entirely satisfactory. Accordingly, rather than recommend that section 17(9) be made applicable to non-rail areas of regulation—as we did to the 94th Congress—we are of the opinion that the present proposal should be enacted instead to cover non-rail areas of regulation.

Several observations are pertinent to this requested legislation, which I will briefly note here.

First, the proposal is designed to eliminate the interpretive and administrative problems which we have encountered with section 17(9), without compromising the benefical reforms brought about by that section; particularly the elimination of multi-layered administrative appeals which were required under pre-existing law—and still are required in non-rail areas of regulation.

Second, the proposed legislation, in contrast to section 17(9), does not include statutory time limits on administrative actions. This does not reflect any desire by the Commission to avoid time limits, and we remain committed to them. However, we believe that they are best achieved by the agency itself, and, as is discussed in the Explanation and Justification accompanying the bill, we have already taken important steps in this direction.

Third, the proposed bill covers only non-rail areas of regulation, despite our belief that it is preferable to section 17(9) and could as well cover railroads. We have approached the matter this way only in the hope of avoiding a joint Committee referral in the House of Representatives, and because the matter is much more urgent in the non-rail area since *no* reforms have been enacted in that area. We believe that it may be appropriate on a future occasion to recommend that the present proposal be extended to cover rail regulation.

Fourth, I would note that the Commission's Staff Task Force on Improving Motor Carrier Entry Regulation—whose report and recommendations to me are now actively under consideration by the Commission—stated that the Commission should give a high priority to seeking appropriate amendments to section 17 in the non-rail area. We agree with the Staff Task Force on this point, and believe that enactment of this proposed legislation would be a highly important part of our overall effort to streamline motor carrier regulation.

At a time when the regulatory mandate of the Commission is under scrutiny both within and outside the agency, we believe that the measure proposed herein, if enacted, would be a significant step toward regulatory reform. Accordingly, we request your early introduction and consideration of this measure.*

Sincerely yours,

A. DANIEL O'NEAL,
Chairman.

EXPLANATION AND JUSTIFICATION

GENERAL PURPOSES OF THE LEGISLATION

The reduction of regulatory lag is an essential goal of regulatory reform. One of the most promising methods of accomplishing this task is the reform of Interstate Commerce Commission procedures, including the elimination of unnecessary multi-layered levels of administrative review. To a limited extent, this has been accomplished for rail carriers by section 17(9) of the Interstate Commerce Act, as amended by the Railroad Revitalization and Regulatory Reform Act of 1976. However, that section affected only rail carriers, and no legislative streamlining of procedures applying to motor carrier, water carrier, pipeline, and freight forwarder cases has yet been adopted.

---

*Commissioner Christian is of the opinion that it would be preferable to extend the 4–R Act procedural reforms, which are now contained in Section 17(9) of the Interstate Commerce Act, to non-rail areas of regulation. She does not believe that Section 17(9) has presented any major administrative problems, and believes that the few problems which have arisen should be addressed by proposed technical amendments to be applicable to all modes. Moreover, she is of the view that many of the beneficial reforms of Section 17(9)—particularly in the area of time limits on administrative action—are not fully incorporated in the proposal advocated by the majority.

In the previous Congress we recommended that this problem be solved merely by extending the provisions of section 17(9) to all modes of transportation. Upon re-examination, we are of the view that a better approach is to recommend that new and different procedures be adopted for non-rail carriers.

While section 17(9) achieved the desirable goal of effecting various procedural reforms, it has caused problems both in interpretation and administration. These have resulted from lack of clarity in the section as now written. Two examples are as follows:

Under section 17(9)(b) of the Interstate Commerce Act as amended, exceptions to an initial decision may be filed within 20 days "or within such further period (not to exceed 20 days)" as authorized. In view of the fact that section 17(9)(e) allows 90-day extensions of *any* time limit, there is a question as to the meaning of the parenthetical phrase just mentioned.

Section 17(9)(h) of the Interstate Commerce Act as amended by section 303 provides that an order of the Commission shall be final on the date it is served. Taken literally, this language would mean that the order is final even if an administrative appeal is still available. Since the only evident purpose of this subsection was to make an otherwise administratively final decision final on the date served, rather than on the date entered, the language appears to be inadequate to achieve that purpose. In our view the amendments proposed here for non-rail carriers would cure the interpretive and administrative problems which we have encountered in section 17(9).

Before proceeding with a section-by-section analysis of our proposal, two further observations of a general nature appear warranted. First, the amendments do not include statutory time limits for administrative actions. This by no means indicates a desire by the Commission to depart from the time-limit concept. We continue to believe that internal agency time limits are appropriate, and that it is our responsibility. However, we believe this is best achieved by the Commission itself. This is particularly true in the area of motor carrier regulation, where the volume of proceedings is so great that it is necessary to have a degree of flexibility which is difficult to achieve under statutorily-imposed deadlines.

We have already taken some important steps in the direction of establishing time limits in non-rail areas of regulation. As explained more fully in the attached press release, a program of time limits was implemented by the Commission on October 1st of this year. This program will be continually evaluated, expanded, and updated as circumstances warrant. Also, it is possible, although we have not yet considered the matter fully, that our rules implementing this legislation if enacted should include time limits on administrative actions.

A second matter to which we would invite your attention is that the proposed legislation would cover only non-rail areas of regulation and would not repeal existing section 17(9). We have approached the matter this way for tactical reasons only, having to do with the split of jurisdiction over our functions between the House Committee on Public Works and Transportation and the House Committee on Interstate and Foreign Commerce. Any bill dealing with both rail and non-rail matters would have to be jointly referred to both Committees. Since we are most interested in having this bill considered and acted upon as soon as possible, our view was that a proposal which required referral only to the Public Works Committee could be handled more expeditiously. Of course, the urgency of this matter is greater in the non-rail area because section 17(9)—although not entirely satisfactory from our viewpoint—is nevertheless in place in the rail area and achieves some of the objectives of the proposed legislation. However, we do believe that this proposal is preferable to section 17(9), and we anticipate that it may be appropriate on a separate occasion to recommend either a bill or an amendment to this bill for consideration by the Interstate and Foreign Commerce Committee which would repeal section 17(9) and bring railroads under the present proposal.

SECTION-BY-SECTION ANALYSIS

Section 1 of this proposed legislation would repeal subsections (5) through (8) and subsection (10) of present section 17, and replace them with an entirely new set of sections. Section 17(5) sets out what constitutes an initial decision. It makes clear that a first determination by the entire Commission is not an initial decision for purposes of appeal. Like the rail provisions of current section 17(9), it permits the Commission or a division to void the requirement of an initial decision where a question of Commission policy, a new or novel issue of law, or a matter of general transportation importance is involved, or where the proceeding requires expedited treatment. In such proceedings the "first determination" is made by either the full Commission or an appropriate division, and appeals are subject to section 17(6)(e). Section 17(6)(e) provides for a discretionary appeal of any Commission decision in the first instance or division decision when the requirement of an initial decision has been voided. In either instance the Commission or division retains the discretion to stay the first determination. Once this first appeal is decided, there is no further right to appeal or petition for administrative review. Any decision on appeal under this subsection becomes administratively final when served, whether or not it reverses the previous Commission or division decision.

In contrast, section 17(5)(e) provides for the automatic review of an initial decision when an appeal is filed. Under section 17(6)(e), the filing of an appeal to an initial decision automatically stays the effect of the decision until the appeal is decided. In the absence of an appeal, the Commission may review the initial decision on its own initiative, and a stay is discretionary.

Section 17(6)(b) gives the Commission authority to establish regulations to permit appeal boards, composed of Commissioners and/or employees, to review certain types of initial decisions and issue administratively final determinations in certain situations. This provision is modeled after current Senate Bill No. 1720. By permitting a reduction in the appeals backlog on more routine decisions, the Commissioners would have more time to concentrate on entire Commission and division cases involving basic policy considerations or new questions of law. This would also increase the Commission's flexibility to handle its work load expeditiously.

Section 17(7) provides a discretionary level of review after the appeal of an initial decision has been determined. Such an appeal, designated a petition for administrative review, is directed to the entire Commission, and it may only be granted on a clear showing of material new evidence, changed circumstances, or general transportation importance. The discretion to file such a petition rests with the parties. A stay of the effectiveness of the prior decision is left to the Commission's discretion. A petition for administrative review of initial decisions of a division may not be filed since a mandatory appeal under section 17(6) to the Commission is provided. This parallels the treatment of division decisions where the requirement of an initial decision is voided, except that the appeal of an initial decision of the division results in an automatic stay. In either case, one level of review by the entire Commission after the decision of a division should be sufficient. Moreover, any administratively final decision may be reopened under section 17(8).

Based upon the 4–R Act, section 17(8) provides a safety valve for the Commission to change an administratively final decision where change is warranted because of material error, new evidence, or substantially changed circumstances. It permits the Commission to act promptly to obviate the need for unnecessary litigation and expense to the parties. The section permits the Commission to assign a reopened proceeding and grants the Commission discretion to establish rules permitting parties to petition for reopening.

Proposed section 17(9)(a) permits Commission orders to become effective after 30 days unless otherwise provided. Sections 221(b), 315(d), and 416(c) of the act generally provide for a minimum 30-day period before Commission orders become effective. The 4–R Act permits orders to become effective within 30 days or less, necessitating the use of compliance dates where more than 30 days are necessary. Although this section could track the language of present section 17(9) the proposed language provides the Commission with maximum flexibility.

Section 17(9)(c) provides the parties with a definite date for calculating time with regard to petitions seeking judicial review of administratively final actions of the Commission, while section 17(9)(d) defines administratively finality for purposes of judicial review. It acts to delay court consideration of proceeding where the filing of a discretionary appeal or petition for administrative review continues Commission jurisdiction over what would otherwise be an administratively final action. This approach is consistent with current Commission and court practice and the concepts of discretionary petitions for administrative review and reopening of administratively final decisions. Practically, it will permit the Commission a last review, if the narrow grounds are shown, without the need to request leave of the reviewing court. This could reduce the number of Commission proceedings ultimately appealed to the courts, and provide a definitive time for court appeal, thereby eliminating the present need and extra cost of duplicative Commission and court appeals.

Section 2 of the proposal would redesignate present section 17(9) as section 17(10). The purpose of this is merely to gather all non-rail-related sections in one place.

Section 3 of the proposed legislation would set an effective date of 180 days after enactment, and require the Commission to adopt rules within that time. We believe that this would be a reasonable time for the Commission, the industry, and the bar to adjust to the changes brought about by the legislation.

By Mr. ABOUREZK:

S. 2375. A bill to establish an administrative procedure and guidelines to be followed by the Department of the Interior in its decision to acknowledge the existence of certain Indian tribes; to the Select Committee on Indian Affairs.

Mr. ABOUREZK. Mr. President, one of the greatest needs in the field of Indian law today is for a clearcut and uniform method to be used in determining which Indian tribal groups are to be included within the Federal-Indian relationship. Failure on the part of the United States to acknowledge the existence of certain Indian tribes has not been premised on grounds of law, justice, or equity, but rather has been due to a lack of clarity and consistency in those Federal laws and regulations relating to the standards and criteria upon which this relationship should be based. This uncertainty has left many tribal groups otherwise eligible for services without adequate governmental assistance.

The bill which I introduce today establishes an administrative procedure and sets forth guidelines to be followed by the Department of Interior in response to petitioning Indian tribes seeking an acknowledgement of a Federal relationship. This bill is not the complete solution to the confusing issues of law and fact involved here nor is it an attempt to totally resolve significant underlying policy questions which need to be worked out over a longer period of time. Rather, the intent of this bill is to indicate a process for determining tribal existence and thereby fulfill a longstanding Federal responsibility, the neglect of which is documented in the American Indian Policy Review Commission's report. The criteria specified in this bill which will be applied by the Interior Department in evaluating all petitions from tribal groups have been carefully developed in the context of the history of the Federal relationship.

It is important to note that this bill is primarily concerned with three things: First, it directs the Secretary of the Interior to establish a separate office within that department for the purpose of resolving the questions of the legal existence of certain Indian tribes. Second, the bill gives congressional guidance to the Executive Department on what the Federal policy should be in addressing the issue. And third, the bill expands the Secretary of the Interior's authority to reestablish relationships with certain Indian tribal groups. The Interior Department has been making a serious attempt to do so through the process of administrative regulation and I commend the administration's policy of starting with a clean slate and refusing to be bound by confusing and conflicting statements of the past. However, it will be several months before those regulations are adopted and implemented and even then it is unlikely that the regulations will encompass within the Federal-Indian relationship the majority of those Indian tribal groups who need assistance the most.

This bill continues to base acknowledgement of tribal existence upon the establishment of a government-to-government relationship. It does not initiate a process for identifying all Indians in the United States, but does establish a mechanism for determining which Indian tribal groups are to be included within the Federal-Indian relationship. Questions involving such areas as the status of a tribe relative to surrounding States, the range of services to be delivered, the definition of tribal membership, and the issue of a land base will be the subject of negotiations which can take as long as necessary.

This bill, as circulated for comment in draft form, has been criticized, because it does not direct the Secretary of the Interior to establish a reservation for all newly acknowledged tribes, including placing lands in trust. However, in terms of the policy issue at stake here, that issue is not a necessary provision and the reservation status of tribes shall be the subject of a case-by-case determination.

Further, I would like to respond to certain alarmist fears regarding the number of tribal groups who will fall within the scope of this act. It is my opinion that rather than doubling or even greatly increasing the Federal Government's tribal service population, only a relatively small number of tribes will eventually meet the specified criteria. Based on our intensive study of the matter, we have concluded that most of the tribes with petitions on file are very small groups composed of only several families. Although there are larger groups who may qualify, the proof of direct Indian descent as official membership criteria will necessarily and, correctly, restrict actual Federal service eligibility.

There have also been fears that this bill will encourage many tribes whose existence has not been previously acknowledged by the Federal Government to assert land claims under the Indian Non-Intercourse Act. However, the Senate Select Committee on Indian Affairs, which I chair, has researched this question and feels confident that nearly all such claims have already been identified and this bill will not result in identification of additional tribes who will then file land claims. Further, a determination that a petitioning group is a tribe within the scope of this act does not at all affect such a group's right to assert a claim under the Non-Intercourse Act, nor is it intended to. Federal court decisions have shown that if a tribe has a claim under the Non-Intercourse Act, the status of the tribe will be determined in the judicial processing of the claim.

Finally, I would like to emphasize that a bill of this nature is long overdue. The Federal Government has seriously neglected its responsibility on this matter literally for generations, and it is time to afford an opportunity to Indian tribal groups to resolve once and for all the issue of whether they are a distinct tribe and should be so treated by the United States.

Mr. President, I ask unanimous consent that the bill be printed in the Record.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 2375

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

The Congress, after careful study of the history of American Indian policy, finds that:

(1) There are numerous Indian tribes who have not been accorded a Federal relationship, including the services and protections provided pursuant to the Federal-Indian trust responsibility. This failure to acknowledge a Federal relationship with these tribes has not been premised on grounds of law, justice, of equity, but rather has been due to a lack of charity and consistency in those Federal laws and regulations relating to the standards and criteria upon which this relationship should be based.

(2) Failure on the part of the United States to acknowledge a Federal relationship with certain Indian tribes has created confusion regarding eligibility for governmental services, such uncertainty leaving many tribes otherwise eligible for services without adequate governmental assistance.

(3) In order to equitably determine which Indian tribal groups are to be included within the Federal-Indian relationship, an administrative procedure and policy guidelines to be followed by the Department of the Interior in its decision to acknowledge the existence of certain Indian tribes must be established. This acknowledgement must continue to be premised upon the establishment of a government-to-government relationship with Indian tribes.

(4) Any mechanism established by Congress must be based upon carefully developed criteria which will afford petitioning tribal groups an opportunity to resolve once and for all the issue of whether they are a tribe and should be so treated by the United States. Such Congressional action shall not entail a diminishment of services and assistance to those tribes whose existence is already acknowledged.

Sec. 3. As used in this Act, the term—

(1) "Indian" means a member of or a descendant of any North American Indian tribal group or Alaska Native village.

(2) "Secretary" means the Secretary of the Interior.

Sec. 4. (a) There is hereby established within the Department of Interior a special investigative office (hereinafter referred to in this Act as the "Office"), the duties of which are set forth below in section 4(b). The Office shall be headed by a Director who shall be appointed by the Secretary, and who shall be compensated at the rate provided for Level III of the Executive Schedule Pay Rates (5 U.S.C. § 5314). The Director is authorized to appoint and fix the compensation of such employees as may be necessary to carry out the functions of the Office.

(b) It shall be the function of the Office, among others, to—

(1) contact, within the 12-month period following the date of enactment of this Act, all known Indian tribal groups in the United States whose existence has not been previously acknowledged by the Department of Interior, including those listed in chapter 11 of the American Indian Policy Review Commission Report. The Office shall inform all such tribal groups of their right to petition for an acknowledgement of tribal existence by the Federal Government, and shall report the results of its efforts in connection therewith to the appropriate committees of the Congress, the Secretary, and the Assistant Secretary for Indian Affairs; and

(2) solicit statements from unacknowledged tribal groups, provide necessary technical assistance for the preparation of those statements, investigate the petitioning tribal group's historical background and Indian identity for verification purposes, report findings of such investigation to the Secretary, assist tribes in the organization and enrollment of their members, and refer tribal concerns to the appropriate departments or agencies of the Federal Government.

(3) review all petitions for acknowledgement of tribal existence presently pending before the Bureau of Indian Affairs and to allow the petitioning group to revise the petition if necessary to satisfy the guidelines specified in this Act. The priority date of the amended petition shall be that of the original filing date.

(c) After receiving any petition for acknowledgement of tribal existence, without regard to the form thereof, the Office shall offer technical assistance to the group to investigate its status. Such investigation shall at least include attention to the definitional factors set forth in section 5 of this Act. All correspondence received by the Bureau of Indian Affairs from unacknowledged tribal groups shall be directed to, and routed through, the Office.

(d) Within two years of receipt of an Indian tribal group's petition, the Office shall submit a written preliminary report to the petitioning Indian group. Upon receipt of this report, the group shall have sixty (60) days to respond, including an opportunity to present oral argument to rebut the evidence relied upon. The Office shall have thirty (30) days after petitioner's response to prepare a final report to be submitted to the petitioner and the Secretary, such report to be published in the Federal Register. The Secretary shall endorse or reject the findings of the Office contained in such report within six (6) months following the receipt by him of such report.

(e) If the Secretary determines, on the basis of such report, that any such group is an Indian tribal entity within the purview of this Act, the Secretary shall designate such group as a federally acknowledged Indian tribe. Upon the publication by the Secretary of that fact in the Federal Register, such tribe shall be entitled to all the rights, privileges, immunities, benefits, and other services to which other federally acknowledged Indian tribes are eligible to receive by reason of their status.

(f) Any determination by either the Office or the Secretary that a group is not an Indian tribe shall be made in writing to the petitioning group and shall specify why the group does not conform to the definitional factors in section 5 of this Act. Any decision by the Secretary shall be reviewable in the United States District Court with the burden of proof on the United States to establish that the petitioners do not meet the criteria specified in this Act. Legal fees shall be paid by the United States to any petitioning group whose tribal existence is affirmatively determined as a matter of law and fact by the court.

(g) A denial of any petition shall not preclude an Indian group from resubmitting a petition at any time in the future.

(h) Upon certification by the Secretary that a group is an Indian tribe, the tribe shall develop a membership roll. The process of determining the roll shall entail public notices, the formation of tribal committees to hear individuals' claims of direct tribal descent of a specified degree, and written statements of enrollment certification which must be recorded by the Bureau of Indian Affairs as well as by the tribe. At the request of the tribe, the Office shall provide technical assistance for the development of a membership roll.

(i) Annual budget requests for appropriations for any fiscal year from the Department of Interior shall state the funds which have been directed to servicing those tribes whose existence was acknowledged in the preceding fiscal year.

SEC. 5. (a) The following definitional factors shall be relied upon by the Office and the Secretary in determining whether a group is an Indian tribe for the purposes of this Act. The group shall conform to factors one and two and at least one additional factor—

(1) the group has been identified as "Indian, Native American, or Aboriginal" consistently and for a protracted period of time, but in any event for a period of no less than 44 years. Such continuing Indian identity may include identification as a division of, combination of, or confederation with, other specific Indian tribes. Evidence to be relied upon in determining the group's continuing Indian identity shall include but not be limited to any of the following:

(A) repeated identification as Indian by Federal authorities;

(B) longstanding relationships with State governments based on identification of the group as Indian;

(C) repeated dealings with a county, parish, or other local governments in a unique relationship based on the group's Indian identity;

(D) identification as Indian by records in court houses, churches, or schools;

(E) identification as Indian by anthropologists, historians, or other scholars;

(F) identification as Indian in newspapers and books;

(G) any other evidence deemed relevant by the Office or the Secretary.

(2) the group exhibits evidence of a longstanding tribal governmental influence or authority over the members of the group. This evidence shall show that the group has exercised political influence or authority over its members through a tribal council or other structure which the group has used as its own form of government or as a means to determine its membership. Such evidence shall include traditional social of political structures or organizations unique to American Indians.

(3) the group utilizes an identified American Indian language or shows other clear indications of Indian cultural retention.

(4) the group has held collective rights in tribal lands or funds, whether or not it was expressly designated a tribe.

(5) the group has been treated as an Indian tribe by other Indian tribes or groups. This factor shall be evidenced by written statements from presently acknowledged tribes stating that they have related to the unacknowledged tribal group for purposes connected with any inter-tribal activity.

(6) the group has had treaty relations with the United States, particular States, or pre-existing colonial or territorial governments. "Treaty relations" shall include any formal relationship based on a government's acknowledgement of the Indian group's separate or distinct political status. Satisfaction of this criterion shall be prima facie evidence of tribal existence.

(7) the group has been identified or referred to as an Indian tribe or designated Indian by an Act of Congress or Executive Order which provided for, or otherwise affected or identified the governmental structure, jurisdiction, or property of the tribal group in a special or unique relationship to the Federal Government. Designation of a group as Indian by such Act of Congress or Executive Order shall be prima facie evidence of tribal existence.

(b) The Secretary shall have the authority to acknowledge any group which he determines is Indian.

SEC. 6.—Upon enactment of this Act, the Secretary shall publish in the Federal Register a list of all Federally acknowledged Indian tribes, such list to be updated and published annually.

SEC. 7.—There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

By Mr. BAKER (for Mr. MATHIAS, for himself and Mr. SARBANES):

S. 2376. A bill to authorize withholding from salaries disbursed by the Secretary of the Senate and the Architect of the Capitol for contributions to certain charitable organizations; to the Committee on Governmental Affairs.

Mr. BAKER. Mr. President, I introduce a bill for Mr. MATHIAS (for himself and SARBANES) and I ask unanimous consent that a statement by Mr. MATHIAS be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MATHIAS

I was chairman of the 1976 Combined Federal Campaign for the U.S. Senate. My most vivid recollection of that appeal for support is the degree to which the appeal went unheeded. I was concerned that the poor Senate showing resulted from my chairmanship but was comforted when I reviewed the long Senate tradition of dismal participation. One of the strongest reasons for that poor record is that the Senate does not allow payroll deductions for contributions. Experience with the Campaign has shown that the good intentions of contributors are not matched by the money they have available when we approach them on a one-time basis. The payroll deduction allows the Campaign to capitalize on those good intentions by spreading a contribution out over the whole year.

Today I am introducing with my distinguished colleague from the State of Maryland (Mr. Sarbanes) a bill to allow contributions to the Combined Federal Campaign to be made by payroll deduction for employees of the Senate and the Architect's office. The House has already done this.

One of the most hackneyed dodges in the American language is, "I gave at the office." I hope that with passage of this bill more of us on Capitol Hill will be able to so state with clear conscience. After all, the CFC benefits more than 130 local, national and international social agencies. In your hometowns industry contributes faithfully to the Community Chest. In Washington, we are the industry and we must do our share. We can provide this opportunity for generosity the same way those industries provide it, with continuing and relatively easy contributions from each paycheck.

By Mr. INOUYE (for himself and Mr. MATSUNAGA):

S. 2378. A bill to increase the amount of funds available for Native American employment and training programs; to the Committee on Human Resources.

Mr. INOUYE. Mr. President, I am introducing today a bill that will provide an increase in funds for the Native American employment and training programs authorized under title III, section 302 of the Comprehensive Employment and Training Act of 1973. Under the present legislation, section 302 receives 4 percent of the total funding for title I, general population programs. It is the intent of the measure I am now submitting to increase that figure to 5 percent.

On May 27, 1977 the Senate passed an amended version of H.R. 6138, the Youth Demonstration Projects Act of 1977. Included in that act was a proposal offered by Senator MATSUNAGA and myself that would make Native Hawaiians eligible for benefits awarded to Native Americans pursuant to title III, section 302 of CETA; this amendment was accepted in House conference on June 16, 1977.

I was greatly pleased by the passage of this measure both because it represents further recognition of Native Hawaiians as aboriginal inhabitants of our Nation and is an attempt to address many of the problems and needs of the Hawaiian people which until now have been all but ignored. Historical and social circumstances have worked to an end that Native Hawaiians today find themselves, similar to the Indian and Native Alaskan populations, confronted by a severe crisis of identity and survival.

Foreign encroachment on their land has caused a staggering reduction in their numbers and a progressive dilution of their culture. A growing alienation from their noble past as well as an inability to completely reconcile native culture and tradition with modern age values and practices has left the Native

Hawaiian a stranger in his own land and helped to relegate him to the lowest rung of our social hierarchy. Native Hawaiians are disproportionately represented in the population among those who are recipients of public assistance, and who are incarcerated in correctional institutions. According to the 1970 Hawaii State Census count, 14 percent of Native Hawaiian families had family incomes of under $5,000 and 30 percent had incomes between $5,000 and $9,999.

With their inclusion in CETA legislation, Native Hawaiians, with the Federal Government's help, can begin themselves to change these statistics for the better. Section 302 of title III requires that special comprehensive employment and training programs be established for Native Americans including such programs as on the job training, work experience, skill and classroom training, and public service employment. Steps have already been taken by the Hawaiians to plan and implement a CETA strategy which will emphasize the importance of education and will focus on training and placing Native Hawaiians in technical, managerial, and paraprofessional areas within the labor force. Through this new labor resource Native Hawaiians will be assisted who would otherwise have no alternative to their present depressed situation.

The Department of Labor's Division of Indian and Native American Programs that administers section 302 funds has informed me that some $2 million will be necessary if the Hawaiian's new jobs program is to be as effective as it should. In fiscal year 1975 there were some 133 prime sponsor organizations funded under title III, S. 302, serving large populations of Indians and Native Americans.

As that figure of 2 years ago has substantially increased the Department of Labor has estimated that without an increase in the funding level of section 302 the inclusion of Native Hawaiians in this legislation—there are approximately 150,000 Native Hawaiians in the State of Hawaii—would result in a 10-percent increase in the funding levels for other S. 302 prime sponsors. A concern for this prompted a resolution to be submitted at the recent convention of the National Congress of American Indians recently held in Dallas, Tex., which stated:

> Whereas, The National Congress of American Indians understands the intent of the Congress in making Native Hawaiians eligible for benefits under Title III, Section 302 of the Comprehensive Employment and Training Act (CETA);
>
> Whereas, The National Congress of American Indians, does not dispute the right of Native Hawaiian people to receive these employment and training funds, however, these funds should not come at the expense of Indian and Alaskan Native people;
>
> Now, therefore be it resolved that, The National Congress of American Indians recommends the funding be increased for all Native Americans under Section 302 from 4 percent to 5 percent, thereby allowing sufficient increase to provide $2.6 million for Native Hawaiians.

Mr. President, it has not now nor ever will be the Hawaiian people's intention that their benefits should come at the expense of other needy peoples especially those who culturally, spiritually, and in terms of historical and social circumstances, share a common bond with the Native Hawaiian population. An increase of section 302 funds from 4 percent to 5 percent of CETA title I funding will insure that this does not happen. It is with the intention that both the Native Hawaiians and the Indian and Alaskan Natives be fairly and justly treated that I submit this measure which has been endorsed by the Executive Committee of the National Congress of American Indians.

I am hopeful that this bill will meet the fast approval of the appropriate Senate committee, the full House of Representatives, and United States Senate and the President.

Mr. President, I seek unanimous consent to have printed in the Record the text of the bill I have introduced today.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 2378

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 302 (g) of the Comprehensive Employment and Training Act of 1973 is amended by striking out "4 percent" and inserting in lieu thereof "5 percent".

By Mr. ROBERT C. BYRD (for Mr. Magnuson, for himself and Mr. Pearson) (by request):

S. 2380. A bill to amend the Intervention on the High Seas Act to implement the Protocol Relating to Intervention on the High Seas in Cases of Marine Pollution by Substances Other Than Oil, 1973; to the Committee on Commerce, Science, and Transportation.

Mr. ROBERT C. BYRD. Mr. President, I introduced for Mr. Magnuson, for himself and Mr. Pearson, by request of the Department of Transportation, a bill to implement the Protocol Relating to Intervention on the High Seas in Cases of Marine Pollution by Substances Other Than Oil, 1973.

Mr. President, I also ask unanimous consent that the text of the bill and the letter of transmittal be printed in the Record.

There being no objection, the bill and letter were ordered to be printed in the Record, as follows:

S. 2380

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Intervention on the High Seas Act (88 Stat. 8, P.L. 93–248) is amended as follows:

(1) Section 2 is amended to read as follows:

"Sec. 2. As used in this Act

"(1) 'a substance other than convention oil' means those oils, noxious substances, liquified gases, and radioactive substances—

"(A) enumerated in the protocol, or

"(B) otherwise determined to be hazardous under section 4(a).

"(2) 'convention' means the International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties, 1969, including annexes thereto;

"(3) 'convention oil' means crude oil, fuel oil, diesel oil, and lubricating oil;

"(4) 'Secretary' means the Secretary of the department in which the Coast Guard is operating;

"(5) 'ship' means—

"(A) a seagoing vessel of any type whatsoever, and

"(B) any floating craft, except an installation or device engaged in the exploration and exploitation of the resources of the seabed and the ocean floor and the subsoil thereof;

"(6) 'protocol' means the Protocol Relating to Intervention on the High Seas in Cases of Marine Pollution by Substances Other Than Oil, 1973, including annexes thereto; and

"(7) 'United States' means the States, the District of Columbia, the Commonwealth of Puerto Rico, the Canal Zone, Guam, American Samoa, the Virgin Islands, the Trust Territory of the Pacific Islands, and any other commonwealth, territory, or possession of the United States."

(2) Section 3 is amended by—

(A) striking the word "oil" and inserting in lieu thereof the phrase "convention oil or of the sea or atmosphere by a substance other than convention oil"; and

(B) striking the word "Convention" and inserting in lieu thereof the phrase "convention, the protocol".

(3) Section 4 is amended by—

(A) inserting the words "human health," between the words "limited to," and "fish" and designating the existing section as subsection (b);

(B) adding a new subsection (a) as follows:

"(a) The Secretary, after consultation with the Administrator of the Environmental Protection Agency, shall determine when a substance other than those enumerated in the protocol is liable to create a hazard to human health, to harm living resources, to damage amenities, or to interfere with other legitimate uses of the sea."

(4) Section 10 is amended by adding a new subsection (c) as follows:

"(c) With respect to intervention for a substance identified pursuant to section 4 (a), the United States has the burden of establishing that, under the circumstances present at the time of the intervention, the substance identified pursuant to section 4 imminent danger analogous to that posed by a substance enumerated in the Protocol."

(5) Section 13 is amended—

(A) in subsection (a) by striking the period at the end of the subsection and inserting in lieu thereof the phrase "and article II of the protocol and may propose amendments to the list of substances other than convention oil in accordance with article III of the protocol."; and

(B) in subsection (b) by striking the words "annexes thereto" and inserting in lieu thereof the word "protocol".

(C) by adding a new subsection (c) as follows:

"(c) The President may accept amendments to the list of substances other than convention oil in accordance with article III of the protocol."

(6) Section 15 is amended by inserting the words ", the protocol," between the words "convention" and "and".

Sec. 2. This Act shall be effective upon the date of enactment, or upon the date the protocol becomes effective as to the United States, whichever is later.

The Secretary of Transportation,
Washington, D.C., September 13, 1977.

Hon. Walter F. Mondale,
President of the Senate,
Washington, D.C.

Dear Mr. President: There is transmitted herewith a proposed bill,

"To amend the Intervention on the High Seas Act to implement the Protocol Relating to Intervention on the High Seas in Cases of

Marine Pollution by Substances Other Than Oil, 1973."

As stated in the title, the proposed bill amends the Intervention on the High Seas Act (88 Stat. 8, P.L. 93–248), which implemented the International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties, 1969.

The Intervention on the High Seas Act permits the United States to take necessary action involving foreign vessels on the high seas, to prevent danger to its coastline or related interests from pollution or the threat of pollution of the sea by crude oil, fuel oil, diesel oil, or lubricating oil. In this proposal, these oils are defined as "convention oil" to distinguish them from other oils covered by the protocol.

The Intervention on the High Seas Act enabled the Coast Guard to take rapid action in the Argo Merchant grounding off Nantucket in December 1976. The protocol and the proposed legislation would enable the United States to take similar prompt action with regard to vessels that contain a hazardous substance other than "convention oil."

The protocol extends the right of intervention to incidents involving the threat of pollution by certain additional substances, and includes pollution to the atmosphere as well as to the sea. Annexed to the protocol is a list containing the substances for which intervention is authorized if the requisite danger to the coastline or related interests is present. The protocol does not preclude intervention with respect to an unlisted substance. However, for an unlisted substance the intervening nation is required to establish that, under the circumstances present at the time of intervention, the unlisted substance could reasonably pose a danger equivalent to that of a substance listed in the protocol.

The proposed legislation gives the President the authority to accept changes to the list of substances in accordance with procedures outlined in the protocol.

The protocol will become effective 90 days after 15 nations have ratified it. Our proposed amendments to the Intervention on the High Seas Act will become effective on that same date or upon the date of enactment, whichever is later. Currently only 2 nations have ratified or acceded to the protocol, due in part to the fact that the list of substances contained in the annex was not established until November 21, 1974 at the 2nd Session of the Marine Environmental Protection Committee of the Inter-Governmental Maritime Consultative Organization and publication of the list in foreign languages has been delayed. The protocol will be transmitted to the Senate for advice and consent in the very near future.

The existing Act provides that the revolving fund established under section 311 (k) of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1321(k)), is available for actions taken by the Secretary thereunder. Since the Intervention on the High Seas Act became effective, intervention action has been taken only in the Argo Merchant incident and it is difficult to predict the effect of this amendment on government expenditures. However, because intervention actions will be infrequent, such additional costs as may be incurred will not have a significant inflationary impact.

It is recommended that the proposed legislation be enacted by Congress.

The Office of Management and Budget has advised that enactment of this proposal would be consistent with the Administration's objectives.

Sincerely,

Brock Adams.

By Mr. TOWER:

S. 2382. A bill to amend the Internal Revenue Code of 1954 to provide tax reform for small businesses; to the Committee on Finance.

SMALL BUSINESS INVESTMENT INCENTIVE ACT OF 1977

Mr. TOWER. Mr. President, I am today introducing the Small Business Investment Incentive Act of 1977 to encourage investment in small business and to reduce small business tax rates.

The very survival of the small entrepreneur is severely challenged today.

One of the most serious obstacles to the health of small business is Federal tax policy which discourages savings and capital formation.

Although it has been more than 2 years since the economy emerged from the recession, there is a low rate of investment in the United States in new plant and equipment. The distressing fact is that the level of capital investment in the United States is still lower than it was in 1974.

The decline of investor confidence in stocks has made it increasingly more difficult for small firms to raise equity capital. This forces small business to bank financing. But in the best of times interest rates that banks charge small firms are normally several points higher than the prime rate given the large customers. When money becomes tight the first to be cut off are the smaller customers.

The plight of small business may be seen in the estimate that the small firms will need up to $500 billion in new capital investment in the 10-year period ending in 1985 but will fall short of that mark by about $100 billion. If this short fall is to be avoided, the tax burden must be eased on small firms.

The Small Business Investment Incentive Act attacks this problem by encouraging capital formation through tax reform. This program will also create new jobs and reduce unemployment.

The objectives of this bill will be achieved through investment incentives and tax reduction. The need for tax relief for small business was recognized in the study of small business prepared by the Small Business Administration pursuant to title II, Public Law 94–305 which was an outgrowth of my proposal in 1975 for a National Commission on Small Business. That report noted that:

Earnings that would otherwise be retained for use in the business are eroded by taxation.

There is a bias against small business created by the complexities of the tax system.

Small business has a special need for long-term, venture, and equity capital which can be met through tax reform.

The bill I am introducing today follows a number of the recommendations of this study.

Title I contains investor tax incentives to increase the availability of capital to small business. For example, investors would be permitted to postpone recognition of gain on their small business investment if "rolled over" into a similar investment within 2 years. The limit on the deductibility of losses in small business stock would be increased from $25,000 to $50,000. In addition, title I allows guarantors of small business obligations to deduct their losses and permits small business once again to offer stock option plans to attract high-quality management.

Title II, the most important tax reduction provision, would increase the corporate surtax exemption from $50,000 to $100,000. The Tax Reduction Act of 1975 temporarily increased the surtax exemption from $25,000 to $50,000 and reduced the tax on the first $25,000 of income from 22 percent to 20 percent. These changes were continued through 1977 by the Tax Reform Act of 1976. The surtax exemption increase in my bill would encourage capital formation for smaller enterprise through the retention of earnings.

Other tax reduction provisions include liberalization of the additional first-year depreciation allowance from $10,000 to $20,000 to encourage capital expenditures by small concerns, an increase in the minimum accumulated earnings credit, and a special 10-year loss carryover provision applicable only to small business.

In the 93d Congress, I introduced a similar measure, the Small Business Tax Reform Act of 1974. Some of its provisions have been enacted. Others are included in this bill. I have pursued this course to promote the health and continued success of the bedrock of our economic system—the small businesses which comprise 97 percent of all business concerns, 43 percent of the gross national product, and 58 percent of the private work force. It is my firm intention to continue in this regard, and I would urge my colleagues to lend their support.

Mr. President, I ask unanimous consent that the bill and the section-by-section analysis be printed in the Record at this point.

There being no objection, the bill and analysis were ordered to be printed in the Record, as follows:

S. 2382

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Section 1. Short Title.

This Act may be cited as the "Small Business Investment Incentive Act of 1977".

TITLE I—INVESTMENT INCENTIVES

Sec. 101. Sales of Interests in Small Concerns.

(a) In General.—Part III of subchapter O of chapter 1 of the Internal Revenue Code of 1954 (relating to nontaxable exchanges) is amended by adding at the end thereof the following new section:

"Sec. 1041. Sales of Interests in Small Concerns.

"(a) Nonrecognition of Gain.—If an equity or proprietary interest in a small concern is sold, gain (if any) from such sale shall, at the election of the taxpayer, be recognized only to the extent that the taxpayer's sale price exceeds the cost of replacement property purchased by the taxpayer within 2 years from the date of such sale.

"(e) Statute of Limitations.—If during a taxable year a taxpayer sells an interest in a small concern at a gain, then—

"(1) the statutory period for the assessment of any deficiency attributable to any part of such gain shall not expire before the expiration of 3 years from the date the

Secretary is notified by the taxpayer (in such manner as the Secretary may by regulations prescribe) of—

"(A) the taxpayer's cost of purchasing replacement property which the taxpayer claims results in nonrecognition of any part of such gain,

"(B) the taxpayer's intention not to purchase property within the period specified in subsection (2), or

"(C) a failure to make such purchase within such period; and

"(2) such deficiency may be assessed before the expiration of such 3-year period notwithstanding the provisions of any other law or rule of law which would otherwise prevent such assessment."

(b) Holding Period.—Section 1223 of such Code (relating to holding period of property) is amended by redesignating paragraph (12) as paragraph (13) and by inserting after paragraph (11) the following new paragraph:

"(12) In determining the period for which the taxpayer has held replacement property, the acquisition of which resulted under section 1041 in the nonrecognition of any part of the gain realized on the sale or exchange of an interest in a small concern, there shall be included the period for which such interest had been held as the date of such sale or exchange."

"(b) Definition.—For purposes of this section—

"(1) Small concern.—The term 'small concern' means a small business as defined in the Small Business Act and in the regulations promulgated thereunder by the Small Business Administration.

"(2) Replacement property.—The term 'replacement property' means an equity or proprietary interest in a small concern.

"(c) Limitations.—

"(1) Acquisition status; holding period.—Subsection (a) shall apply only to the gain attributable to the sale of an interest which was, at the time it was acquired, an interest in a small concern and which has been held by the taxpayer for at least 60 months.

"(2) Stock redemption.—Where the interest sold is evidenced by stock of a small concern, subsection (a) shall apply only to a sale of stock which, if such stock had been purchased by the issuing corporation, would have been treated as a redemption within the meaning of paragraphs (1), (2), and (3) of section 302(b).

"(d) Basis of Replacement Property.—The basis of replacement property shall be reduced by the amount of gain not recognized solely by reason of the application of subsection (a). If more than one item of replacement property is purchased, such reduction in the basis of the replacement property shall be applied to each such property in chronological order of purchase. The amount of the reduction applicable to each item of property shall be determined by multiplying the maximum gain not to be recognized pursuant to subsection (a) by a fraction the numerator of which is the cost of each replacement property and the denominator of which is the total cost of all replacement properties.

(c) Clerical Amendment. The table of sections for such part is amended by adding at the end thereof the following new item:

"Sec. 1041. Sales of interests in small concerns.".

Sec. 102. Losses on Small Business Stock.

(a) Increase in Maximum Amount of Losses.—Section 1244 (b) of the Internal Revenue Code of 1954 (relating to limitation on application of section 1244) is amended by striking out paragraphs (1) and (2) and inserting in lieu thereof the following:

"(1) $50,000 (not more than $25,000 of which is attributable to stock acquired before the date of the enactment of the Small Business Investment and Tax Reduction Act of 1977), or

"(2) in the case of a husband and wife filing a joint return for such year under section 6013, $100,000 not more than $50,000 of which is attributable to stock acquired before such date.".

(b) Definition of Section 1244 Stock.—Section 1244 of such Code (relating to losses on small business stock) is amended by redesignating subsection (e) as (g) and by inserting after subsection (d) the following new subsections:

"(e) Plans Adopted After Enactment of Business Investment and Tax Reduction Act of 1977.—In the case of a plan adopted after the date of the enactment of the Small Business Investment and Tax Reduction Act of 1977—

"(1) paragraph (2) of subsection (c) shall be applied by substituting—

"(A) $750,000 for $500,000 in subparagraph (A), and

"(B) $1,500,000 for $1,000,000 in subparagraph (B),

"(2) paragraph (1)(A) of subsection (c) shall be applied by substituting 'five years' for 'two years';

"(3) paragraph (1)(C) of subsection (c) shall not apply with respect to a prior offering of section 1244 stock under a plan adopted on or before such date, but in applying paragraphs (2)(A)(i) and (2)(B)(i) of subsection (c) there shall be taken into account the amount of such prior offering which is outstanding on the date of the adoption of the plan; and

"(4) for purposes of paragraph (1)(C) of subsection (c), options to acquire stock held by employees of the corporation (and unissued stock necessary in case of the exercise of such options) shall not be considered to be a part of a prior offering which is outstanding.

"(f) Notice of Offering and Adoption of Plans.—A corporation which during the taxable year makes an offering of its stock which it believes to fulfill the requirements of subparagraphs (A), (B), and (C) of subsection (c)(1) shall—

"(1) include, on its return for such year, a statement that such offering has been made and the date on which the plan for such offering was adopted, and

"(2) include a copy of such plan with such return.".

Sec. 103. Bad Debt Deduction for Guarantors of Obligations of, and Lenders to, Small Business Corporation.

(a) Guarantors of Obligations of Small Business Corporations.—Section 166 of the Internal Revenue Code of 1954 (relating to bad debts) is amended by redesignating subsection (g) as (h) and by inserting after subsection (f) the following new subsection:

"(g) Guarantor of Certain Noncorporate Obligations and Obligations of Small Corporations.—

"(1) In general.—A payment during the taxable year by the taxpayer (other than a corporation) in discharge of part or all of his obligation as a guarantor, endorser, or indemnitor of—

"(A) a noncorporate obligation; or

"(B) an obligation of a corporation which (at the time such obligation was incurred) was a small business corporation,

the proceeds of which were used in the trade or business of the borrower shall be treated as a debt becoming worthless within such taxable year for purposes of this section (except that subsection (d) shall not apply), but only if the obligation of the borrower to the person to whom such payment was made was worthless (without regard to such guaranty, endorsement, or indemnity) at the time of such payment.

"(2) Small business corporation.—For purposes of paragraph (1), the term 'small business corporation' means a corporation the equity capital of which does not exceed $1,500,000. For purposes of the preceding sentence, the equity capital of a corporation is the sum of its money and other property (in an amount equal to the adjusted basis of such property for determining gain), less the amount of its indebtedness (other than indebtedness to shareholders).".

(b) Definition of Nonbusiness Debts.—Section 166(d)(2) of such Code (relating to definition of nonbusiness debt) is amended—

(1) by striking out "or" at the end of subparagraph (A);

(2) by striking out the period at the end of subparagraph (B) and inserting in lieu thereof "; or"; and

(3) by adding at the end thereof the following new subparagraph:

"(C) a debt arising from a loan to—

"(i) one or more individuals, or

"(ii) a corporation which at the time such loan is made is a small business corporation (as defined in subsection (g)(2)),

the proceeds of which are used in the trade or business of the borrower or borrowers.".

Sec. 104. Special Reserve for Equity Losses of Small Business Investment Companies.

(a) In General.—Part VIII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to special deductions for corporations) is amended by adding at the end thereof the following new section:

"Sec. 251. Reserves for Losses on Equity Investments of Small Business Investment Companies.

"(a) General Rule.—In the case of a taxpayer which is a small business investment company operating under the Small Business Investment Act of 1958, in lieu of any deduction for capital losses under section 165 with respect to losses arising out of the sale or exchange of stock in a small business (within the meaning of section 2 of the Small Business Act (15 U.S.C. 632)), there shall be allowed (at the discretion of the Secretary) for any taxable year a deduction—

"(1) for a reasonable addition to a reserve for losses which may arise out of equity investments in a small business concern, and

"(2) for the amount of any reduction in the suspense account required by subsection (c)(2)(A).

"(b) Opening Balance.—The opening balance of a reserve described in subsection (a)(1) for the first taxable year for which the taxpayer maintains such a reserve shall, under regulations prescribed by the Secretary, be determined as if the taxpayer had maintained such reserve for the preceding taxable years.

"(c) Suspense Account.—

"(1) In general.—Each taxpayer who maintains a reserve described in subsection (a)(1) shall, for purposes of this section, establish and maintain a suspense account. The initial balance of such account shall be equal to the opening balance described in subsection (b).

"(2) Adjustments.—At the close of each taxable year the suspense account shall be—

"(A) reduced by the excess of the suspense account at the beginning of the year over the reserve described in subsection (a)(1) (after making the addition for such year provided in such subsection), or

"(B) increased (but not to an amount greater than the initial balance of the suspense account) by the excess of the reserve described in subsection (a)(1) (after making the addition for such year provided in such paragraph) over the suspense account at the beginning of such year.".

(b) Clerical Amendment.—The table of sections for such part is amended by adding at the end thereof the following new item:

"Sec. 251. Reserves for losses on equity investments of small business investment companies.".

Sec. 105. Qualified Stock Options for Small Concerns.

Subsection (b) of section 422 of the Internal Revenue Code of 1954 (relating to qualified stock options) is amended by inserting after "subsection (c) (7)" the following: "or is granted by a small business concern (within the meaning of section 2 of the Small Business Act, as determined by the Administrator of the Small Business Administration)".

Sec. 106. Effective Date.

The amendments made by this title shall apply with respect to taxable years beginning after December 31, 1977.

TITLE II—TAX REDUCTION

Sec. 201. Increase of Surtax exemption.

(a) In General.—Section 11(d) (1) of the Internal Revenue Code of 1954 (relating to surtax exemption) is amended by striking out "$25,000" and inserting in lieu thereof "$100,000".

(b) Conforming Amendment.—Section 12 (7) of such Code (relating to cross-references relating to tax on corporations) is amended by striking out "$50,000" and inserting "$100,000" in lieu thereof.

Sec. 202. Increase in Additional First-Year Depreciation Allowance.

Section 179(b) of the Internal Revenue Code of 1954 (relating to dollar limitation on property eligible for additional first-year allowance) is amended—

(1) by striking out "$10,000" each place it appears and inserting in lieu thereof "$20,000"; and

(2) by striking out "$20,000" and inserting in lieu thereof "$40,000".

Sec. 203. 10-Year Carryover of Small Business Net Operating Losses.

(a) 10-Year Carryover Period.—Section 172(b) (1) of the Internal Revenue Code of 1954 (relating to years to which loss may be carried) is amended—

(1) by striking out "(C), (D), (E), and (F)" in subparagraph (B) and inserting in lieu thereof "(C), (D), (E), (F) and (H)"; and

(2) by adding at the end thereof the following new subparagraph:

"(A) In the case of a taxpayer carrying on a trade or business as a small business concern (within the meanings of section 2 of the Small Business Act) determined as of the close of the taxable year, the portion of a net operating loss sustained in such trade or business shall be a net operating loss carryover to each of the 10 taxable years following the taxable year of such loss.".

(b) Effective Date.—The amendments made by subsection (a) shall apply with respect to losses sustained in taxable years beginning after the date of the enactment of this Act.

Sec. 204. Increase in Minimum Accumulated Earnings Credit.

Section 535 (c) (relating to accumulated taxable income) is amended by striking out "$150,000" each time it appears and inserting in lieu thereof "$200,000".

Sec. 205. Effective Date.

The amendments made by this title shall apply with respect to taxable years beginning after December 31, 1977.

Section-by-Section Analysis of Small Business Investment Incentive Act of 1977

INVESTMENT INCENTIVES

Sec. 101—Establishes new Section 104 to allow the sale of a small business interest without recognition of gain if "rolled-over" into a similar investment within two years. Basis is carried over. Extended statute of limitations is provided requiring notice to the IRS before the statute begins to run. Provides for tacking of holding periods. The mechanics of this deferral would be similar to the existing deferral of gains from the sale of a personal residence or an involuntary conversion. The gain would be subject to tax when the qualifying equity interests were sold with no reinvestment of the proceeds. The availability of this tax deferral would encourage investors to commit their funds to small business on a long-term basis.

Sec. 102—To encourage equity investment, this section eases the limitations on deductibility of losses in small business stock (§ 1244 Tax Code), and broadens application of § 1244. This would permit individuals owning a small business stock to deduct losses up to $50 000.

Sec. 103—Restores § 166(f) which was deleted by the Tax Reform Act of 1976, and broadens it to include small business corporate obligations. The section allows non-corporate guarantors of small business obligations to deduct against ordinary income payments made in discharge of their guaranty.

Under current law, a non-corporate guarantor may only deduct payments made when the principal obligor defaults as a short term capital loss. This section restores the ability of these guarantors to deduct such payments against ordinary income. Additionally, application of the section is broadened to include obligations of small business corporations as well as non-corporate obligations.

Small businesses are very often required by lending institutions to have a guarantor on loans to the business. This would make it more attractive for individuals to guarantee such loans and increase the ability of small businesses to obtain financing.

Sec. 104—Allows Small Business Investment Companies to establish a reserve for losses in their equity investments.

Current law allows small business investment companies to reduce income by set aside in a reserve for losses from debt investments. SBIC's cannot however, similarly reduce income by establishing a reserve for losses on equity investments. This provision would provide further incentive for equity investments by small business investment companies which were created by Congress in 1958 as a new investment vehicle to serve as a source of private financing for small business. Recent studies have shown that small business investment companies have not been as effective a source of long-run financing for small businesses as was originally hoped.

Sec. 105—Restores pre-1976 Tax Reform Act rules for qualified stock option plans, but only for small businesses.

This permits a small business to attract experienced management employees by offering attractive stock option plans under which the employee does not incur any tax liability until the security is actually sold or otherwise disposed of. Gain would then be taxed as a capital gain.

TAX REDUCTION

Sec. 201. Increases corporate surtax exemption from $50,000 to $100,000.

Under present law all corporate profits above $50,000 are subject to the corporate income tax. The surtax exemption increase would encourage capital formation for smaller enterprise through the retention of earnings.

Sec. 202. Allows small businesses to claim additional first year depreciation by raising the limit from $10,000 to $20,000.

By raising this depreciation bonus, the cash flow of small businesses would be increased. Firms would be able to generate more internal capital for modernization and expansion.

Sec. 203. Allows small businesses to carry over losses for a 10 year period instead of the present seven years. It is now possible to carry a net business operating loss forward to be offset against income for the 7 following years. The SBA study indicates that many small businesses sustained operating losses on a recurring basis. This is particularly true of new businesses. Losses in several consecutive years often cause the carry forward period for early years to expire before the losses can be offset in full against income. This would correct the deficiency in the present law.

Sec. 204. Increases minimum accumulated earnings credit from $150,000 to $200,000.

Under current law the retention of earnings by corporations beyond a reasonable amount for anticipated business expenses is taxed as a dividend. It is presumed that accumulation of up to $150,000 is reasonable. This would increase by $50,000 the amount that a firm could accumulate without exposing itself to the tax penalty.

Small businesses are particularly affected by the accumulated earnings tax. The tax is generally applied to small closely-held corporations and makes it difficult for such businesses to raise capital or to accumulate capital out of earnings. The accumulated earnings tax also prevents small corporations from accumulating a cushion of liquid assets to protect against business failure in times of economic fluctuation.

By Mr. DURKIN:

S. 2383. A bill to amend the Tax Reform Act of 1976 to delay for 1 year the effective date of changes in the exclusion for sick pay; to the Committee on Finance.

Mr. DURKIN. Mr. President, today I am introducing a bill to postpone for another year the elimination of the sick pay exclusion. Action by Congress eliminating this income exclusion has caused hardships for many people. I believe that this 1-year extension will give Congress an opportunity to fully review its decision and take action which is consistent with fairness to those who are already burdened by an inability to work due to illness.

In the Tax Reform Act of 1976, Congress repealed the sick pay exclusion and made the repeal retroactive. It quickly became apparent that the Congress had made an unwise decision in applying the change retroactively and this mistake was corrected so that the provision takes effect in the tax year 1977.

But that necessary correction does not change the basic problem: Did the Congress act fairly in deciding to eliminate the sick pay exclusion?

The sick pay exclusion serves a very special group of taxpayers—those who are collecting benefits because they are forced to be absent from work due to illness or injury. This is a particularly trying time for a family—a time of severe financial worries as well as worries about the medical condition.

The law as amended has seriously limited the ability of people who are receiving sick pay from claiming the tax exclusion. Only those who are under 65, have retired on disability, and are totally and permanently disabled are eligible.

These are not the only people who need the sick pay exclusion. The effect of illness and injury on an individual and his family is profound, regardless of whether the condition is permanent. And the resulting loss of income may be equally devastating for those who are not totally and permanently disabled.

I feel strongly that elimination of the sick pay exclusion was an ill-advised and unwarranted decision. In urging the Senate to adopt this 1-year extension, I feel that we should take the opportunity to review our previous action. This issue should be referred to the Finance Committee and given full consideration. I believe that on the balance, a recommendation will come out of the committee to restore this exclusion.

I ask unanimous consent that the text of the bill be included in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2383

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (f) of section 505 of the Tax Reform Act of 1976 (relating to effective date for changes in exclusions for sick pay) is amended by striking out "December 31, 1976." and inserting in lieu thereof "December 31, 1977.".

By Mr. CRANSTON (for himself, Mr. STAFFORD, Mr. TALMADGE, Mr. RANDOLPH, Mr. STONE, Mr. DURKIN, Mr. MATSUNAGA, Mr. THURMOND, Mr. HANSEN, and Mr. WILLIAMS):

S. 2384. A bill to amend title 38 of the United States Code in order to provide a security pension program for non-service-connected disabled veterans of a period of war who are in need, for surviving spouses of veterans of a period of war who are in need, and for surviving children of veterans of a period of war who are in need; to provide for annual automatic cost-of-living adjustments in the security pension program; to prevent reductions in security pension benefits solely attributable to cost-of-living increases in social security benefits; and for other purposes; to the Committee on Veterans' Affairs.

VETERANS' AND SURVIVORS' INCOME SECURITY ACT, S. 2384

Mr. CRANSTON. Mr. President, as chairman of the Veterans' Affairs Committee I am privileged to introduce the Veterans' and Survivors' Income Security Act, a bill which is cosponsored by Mr. TALMADGE, Mr. RANDOLPH, Mr. STONE, Mr. DURKIN, Mr. MATSUNAGA, Mr. STAFFORD, Mr. THURMOND, and Mr. HANSEN, that is, by all the members of the Senate Committee on Veterans' Affairs, and by my good friend and colleague Mr. WILLIAMS. I am particularly pleased with this unanimous, bipartisan support for this vitally important measure, and wish particularly to thank the distinguished chairman of our Subcommittee on Compensation and Pension, the Senator from Georgia (Mr. TALMADGE), for his extremely valuable support, counsel, and assistance in this effort.

This bill would provide for the first comprehensive restructuring of the pension program for needy wartime veterans who are disabled by reason of non-service-connected disability, and needy surviving spouses and children of wartime veterans, in almost two decades.

MAJOR PROVISIONS OF THE BILL

Mr. President, the major provisions of the Veterans' and Survivors' Income Security Act would:

First, establish a new program of security pension benefits payable monthly to wartime veterans who are permanently and totally disabled by reason of non-service-connected disability, or who are 65 or over, with the following annual rates, reduced by the amount of the veteran's annual income, or by the income of a dependent spouse or child which is reasonably available to the veteran:

Veteran without dependent spouse or child	$3,200
Veteran with one dependent (spouse or child)	4,128
Veteran in need of regular aid and attendance without dependents	5,299
Veteran in need of regular aid and attendance with one dependent	6,227
Veteran permanently housebound without dependents	3,976
Veteran permanently housebound with one dependent	4,904
Increase for each additional dependent child	660

Second, establish a new program of "security pension" benefits payable monthly to surviving spouses of wartime veterans, with annual rates for permanently and totally disabled surviving spouses and those who are 65 or over, equal to those applicable to veterans, with rates for surviving spouses in need of regular aid and attendance equal to those for veterans, and with an increase for each additional dependent child equal to that payable to a veteran for a dependent child. The applicable annual rates, reduced by the amount of the surviving spouse's annual income, are as follows:

Permanently and totally disabled surviving spouse, or one who is age 65 or over	$3,200
Permanently and totally disabled (or age 65 or over) surviving spouse with one dependent child	4,128
Surviving spouse with one child age 6 or under, or a helpless child	4,128
Permanently and totally disabled (or age 65 or over) surviving spouse in need of regular aid and attendance	5,299
Permanently and totally disabled (or age 65 or over) surviving spouse in need of regular aid and attendance with one dependent child	6,227
Increase for each additional dependent child afer the first	660
Other surviving spouse without dependent child	2,144
Other surviving spouse with one dependent child	2,766

Third, require that all income from whatever source derived be counted, for purposes of determining basic income eligibility and the amount of the security pension payable, subject to the following exclusions:

Payments under chapters 11, 13, and 15, compensation for service-connected disability or death, dependency and indemnity compensation for service-connected deaths, and pension for non-service-connected disability or death, respectively;

Gifts;

Amounts equal to amounts paid for last illness and burial expenses for a veteran;

Amounts equal to amounts paid for last illness and burial expenses for a spouse;

Fire insurance proceeds;

Profit from the sale of real or personal property other than in the course of a business;

Amounts in joint accounts acquired by reason of the death of the other co-owner;

$780 of earned income plus one-half of all earned income in excess of $780; and

Amounts equal to amounts exceeding $100 paid out for unreimbursed medical expenditures for the preceding year.

Fourth, require net worth determinations of a veteran, surviving spouse, or surviving child, including the net worth of any dependent for whom the veteran or surviving spouse is receiving increased security pension, but excluding from the net worth of any child amounts reasonably set aside for educational and other vocational goals, with security pension payments to be denied or discontinued if the net worth is such that some portion thereof could reasonably be expected to be used for the support of the veteran, surviving spouse, or surviving child.

Fifth, require the VA to increase security pension rates annually by the same percentage and at the same time as social security cost-of-living increases.

Sixth, require the VA to redetermine the amount of security pension to which a person is entitled at the same time that social security benefit rates are increased in such a way that no person in the security pension program will suffer a reduction in security pension attributable to a cost-of-living increase in social security benefits, or other Federal program which provides for automatic annual cost-of-living increases in accord with the social security automatic "indexed" increase.

Seventh, allow persons in the current pension program to remain under the terms and conditions of that program, or to elect to receive security pension if they are eligible.

Eighth, allow persons in the "old law" pension program, or who receive pensions based on service during the Spanish-American War or earlier periods of war, to continue in those programs or to elect to receive security pensions if they are eligible.

BACKGROUND

Mr. President, the original impetus for a thorough reworking of the pension program was provided by the testimony of the VA in June 1973, that the current pension program contained "inconsistencies, inequities, and anomalies, which cannot be corrected unless the entire framework of the program is restructured."

During the 93d and 94th Congresses, the Committee on Veterans' Affairs—under the chairmanship of my predecessor, Senator Hartke—conducted extensive investigations, held hearings, and reviewed studies by the VA on the pension program. On December 9, 1975, the committee favorably reported S. 2635, a comprehensive reform measure. That bill was passed unanimously by the Senate on December 15, 1975, but the House did not act on it in the 94th Congress.

Since December 15, 1975, the Congress has passed three laws providing cost-of-living increases in pension rates: Public Law 94–169, enacted December 23, 1975; Public Law 94–432, enacted September 30, 1976; and Public Law 95–204, enacted December 2, 1977.

None of these measures addressed the question of pension restructuring. However, section 404(a) of Public Law 94–432, the Veterans and Survivors Pension Adjustment Act of 1976, declared it to be the sense of the Congress that the existing pension program—

> (1) does not provide sufficient assistance to meet the needs of some eligible veterans and survivors;
>
> (2) has developed some inconsistencies, inequities, and anomalies which prevent it from operating in the most efficient and equitable manner; and
>
> (3) subjects many pensioners annually to reductions in their pensions.

The Congress also declared, at that time, that it lacked sufficient long-range information as to actual and anticipated financial characteristics of potential pensioners and their families upon which to estimate the costs of existing and alternative pension programs; and, in section 404(b) of Public Law 94–432, it directed the VA to conduct a thorough and comprehensive study of existing and alternative non-service-connected pension programs and to submit its report and recommendations to the Congress on October 1, 1977. This report has not yet been submitted, although we have repeatedly stressed our great need for it.

Mr. President, I ask unanimous consent that the text of correspondence on this subject with the Administrator of Veterans' Affairs and the Director of OMB be printed in the RECORD at the conclusion of my remarks prior to the text of the bill.

The PRESIDING OFFICER. It is so ordered.

Mr. CRANSTON. Mr. President, throughout this session, the staff of the committee has worked assiduously to prepare this legislation for introduction, though hampered by the lack of the pension study report. It was our plan to introduce pension reform legislation with an effective date in fiscal year 1978; and the committee laid substantial groundwork for this in our March 15, 1977, recommendations to the Budget Committee for function 700 (Veterans' Benefits and Services) and in the concurrent resolutions on the budget for fiscal year 1978.

At a meeting of the committee on July 15, 1977, members of the committee again expressed their interest in the pension study underway at the VA and their commitment to thoroughgoing restructuring of the pension program, emphasizing that the cost-of-living increase in pension rates then approved—now enacted as Public Law 95–204—was intended as a stopgap measure only. At that time, we fully expected to introduce and proceed in this session of Congress with a measure to provide for a new pension program under which automatic annual benefit increases would be keyed to the rise in the Consumer Price Index to protect needy veterans and survivors against inflation and against pension reductions attributable solely to cost-of-living increases in their social security benefits. We also envisioned a pension restructuring measure that would equalize benefits between equally needy veterans and survivors and provide a basic amount sufficient to remove veterans and their families who are dependent on pension income from poverty levels of subsistence.

The VA has advised the committee that the report mandated by Public Law 94–432 and due on October 1, 1977, was submitted to the Office of Management and Budget more than 2 months ago, but has not been able to provide assurances to the committee as to the date of its eventual submission to the Congress. The administration's failure to provide the findings of the VA's year-long study and its recommendations based thereon has seriously handicapped the committee during this session. Moreover, as I pointed out in debate on the floor on October 19, 1977, on the GI Bill Improvement Act of 1977, the committee found it necessary to request the Congressional Budget Office (CBO) to reestimate the anticipated 5-year cost of the draft version, after receiving a memorandum from CBO stating that earlier estimates, on which we had placed reliance in preparing the legislation, were in error.

Reluctantly, we determined that the bill should not be introduced with an effective date in fiscal year 1978 in the absence of acceptable cost estimates, and we determined to postpone introduction pending the receipt of such cost estimates from CBO, with confirmation by the VA.

COST ESTIMATES

The following estimates of the incremental costs of the bill over current policy using CBO economic assumptions and projections were received from CBO in early December:

[In millions]

Fiscal year 1979	$385.9
Fiscal year 1980	374.8
Fiscal year 1981	408.5
Fiscal year 1982	506.5
Fiscal year 1983	624.1

The committee also requested CBO and the VA to prepare estimates of the incremental costs of the bill using OMB economic assumptions and projections. These estimates are as follows:

[In millions]

	CBO	*VA*
Fiscal year 1979	$385.4	$390.6
Fiscal year 1980	386.6	391.7
Fiscal year 1981	445.2	446.8
Fiscal year 1982	545.8	553.1
Fiscal year 1983	654.7	685.3

I am very pleased that, because these estimates are so close, we now have reasonable assurance of the reliability of the CBO estimates.

In view of the substantive provisions of our bill, which would improve benefits to the majority of veterans and surviving spouses receiving pension, these estimates are, we believe, within acceptable limits.

In addition to requesting confirmation from the VA as to the CBO cost estimates, the staff of the committee has carefully followed the development by OMB's Special Studies Division of a long-range computer model simulating the anticipated characteristics of the pension population over the next 25 years. At our request, this model was used to prepare comparisons between the expected total costs of the current program at 5-year intervals between 1980 and 1995 and the expected total costs over the same period, of the bill which we are introducing today.

OMB, using its own economic assumptions, has estimated the total costs in current dollars of the years indicated. "Current dollars of the years indicated" are calculated to reflect the estimated increase in the Consumer Price Index which is assumed to continue throughout the period 1980–95.

Mr. President, I ask unanimous consent that a table reflecting the OMB estimates be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

OMB ESTIMATES OF TOTAL COSTS IN CURRENT DOLLARS OF THE YEARS INDICATED

[In millions]

	1980	1985	1990	1995
Current program (maximum)[1]	$3,112	$4,248	$5,517	$7,432
Current program (intermediate)[2]	2,971	3,691	4,395	5,492
S. 2384	3,091	3,616	4,303	5,484

[1] This estimate assumes that the current program would be adjusted in the future so that all pension payments would be increased in accordance with the rise in the Consumer Price Index.

[2] This estimate assumes that the current congressional practice of adjusting the maximum benefit and the annual income limitations to accord with the rise in the CPI would continue, without changing the formula used to calculate actual benefit payments.

Mr. CRANSTON. Mr. President, it should be noted that OMB's estimate of "total costs" do not include the cost of the pension program for surviving children, because there are insufficient data upon which to estimate these costs. However, it is reasonable to assume that the costs shown for "current program" would be many hundreds of millions higher, if surviving children were included, but the costs shown for S. 2384 would be only slightly increased.

Mr. President, an examination of this table indicates that the difference between the expected long-range maximum total costs of the current program and the Veterans' and Survivors' Income Security Act would be sizable. The two sets of figures shown for "current program," are very different. The "maximum" costs assume that the present pension program would continue more or less in its present form except that all the benefit amounts payable under that program would be "indexed"—increased annually in accordance with the Consumer Price Index—instead of the current practice of increasing only the maximum benefits payable and the annual income limitations, and providing "adjustments" for the intermediate rates through the application of the formula.

In my view, Mr. President, this would be a highly likely change in the present program—but not a desirable one. The probability of this occurring, if pension reform is not enacted, is underscored by the success of the recent amendment—No. 1580—to the Social Security Financing Act, H.R. 9346, offered by the Senator from New Hampshire (Mr. McIntyre). That amendment would have undermined the need-based principles of the present program by permitting pension dollars in the future to be paid to persons whose aggregate incomes are far above the minimum standard of need, with concomitant increased costs totaling billions of dollars within a decade. Yet it would have done little or nothing to restructure the pension program along equitable lines. This amendment was dropped in the conference report on H.R. 9346 adopted today by both Houses, but its favorable reception on the Senate floor, and the many pending House bills which are similar indicate that the pressure for such passthrough measures could well become irresistible in the next few years.

That is why, Mr. President, I am confident that the "maximum" total costs shown in the OMB table provide a far more reliable indication of what the expected long-range costs of the current program will be if reform is not achieved than do the "intermediate" costs, which were estimated by assuming continuation of the present system of increasing—through congressional enactments—the maximum rates and the annual income limitations, with adjustments in the "rate-decrement-income limitation" formula.

Another development in the Congress not unrelated to the pressures which brought about the amendment of the Senators from New Hampshire is the pressure for an unrestricted, non-need-based World War I pension. In the other body, a majority of the Members voted to increase both the first and second concurrent resolutions on the budget for fiscal year 1978—House Concurrent Resolution 214 and House Concurrent Resolution 341—by $500 million and $700 million, respectively, in an effort to show their support for the concept of unrestricted non-need-based World War I pension.

Mr. President, the estimated costs of unrestricted pensions—even if limited to World War I veterans and survivors—would increase the budget allocations under Function 700 (Veterans' Benefits and Services) far beyond what is reasonable or equitable for wartime veterans and survivors. The estimated 5-year costs for certain of these measures are in the billions, and for a service pension for all veterans in the tens of billions annually.

In view of these pressures and the inordinate costs which they would, if successfully exerted, generate, it is imperative to achieve a restructuring of the pension program which will provide substantial increases in benefits for those in greatest need and eliminate the other inequitable features of the current program which have created these quite understandable pressures.

The long-range estimates prepared by OMB indicate that the enactment of our bill would result in cost savings beginning in the mid-1980's, which would be substantial in later years—rising to almost $2 billion by 1990. However, all estimates are based upon assumptions, and they are accurate only to the extent that the assumptions are valid. The data base used by each of these agencies—CBO, VA, and OMB—is known to be inadequate with respect to a most important aspect, that is, the data used to estimate the probable number of veterans and surviving spouses becoming eligible for pension, together with estimates of their probable income, in each future year. Therefore, all of the estimates are possibly higher than they would be if better information about the expected income of potential future pensioners could be compiled by the VA and the Bureau of the Census.

Also, these estimates do not include any offset to net governmental costs resulting from cost decreases in Federal welfare programs such as Supplementary Security Income or food stamps. Given the large number of pensioners receiving such assistance, there is no doubt that the net Federal cost savings resulting from enactment of the new pension program would be sizable.

RECENT DEVELOPMENTS

Mr. President, recently there have been two legislative developments which have substantial implications for our efforts to enact meaningful pension-reform legislation. The first of these, which I have already discussed, was the overwhelming adoption on November 3, 1977, by the Senate of amendment No. 1580 by the Senator from New Hampshire (Mr. McIntyre) to H.R. 9346, the Social Security Financing Act. Although I opposed that particular amendment because of the inappropriateness of amending a social security bill for this purpose and the inequities involved in the "passthrough" concept, and am pleased that it was dropped in the conference report we are adopting today, I wholeheartedly agree with the Senator from New Hampshire (Mr. McIntyre) that the present pension system—which results in many hundreds of thousands of pensioners receiving a reduction in pension due to social security cost-of-living increases, even though Congress enacts a cost-of-living adjustment in the pension rates—is not equitable. The bill we are introducing today solves the problem addressed by the Senator's amendment by ensuring that no person receiving benefits under the new security pension program would ever suffer a reduction in pension attributable to a social security cost-of-living increase.

Second, on November 30, 1977, Mr. Montgomery, the chairman of the Subcommittee on Compensation, Pension, and Insurance of the House Veterans' Affairs Committee, introduced H.R. 10173, the Pension Improvement Act of 1978. In many ways, this bill is similar in concept to the previous pension-reform measure of the 94th Congress, S. 2635, which was not acted on by the House, and to the bill we are introducing today. Mr. Montgomery's staff and our staff have had rather extensive discussions and exchanges of materials on this legislation over the past several months. I believe that none of the differences between H.R. 10173 and my bill are irreconcilable, and I congratulate Mr. Montgomery for his initiative.

DISCUSSION OF NEW SECURITY PENSION PROGRAM

NEW INCOME STANDARD APPROACH

Mr. President, under the current pension program, a maximum payment rate is set for veterans and surviving spouses who have no other income, and for persons who do have other income, that rate is reduced according to a rate-decrement-income limitation formula—one of great complexity and considerable inequity when applied to certain situations—to determine the amount of pension payable, based on their countable income.

The maximum payment under the current pension program, as increased by the 6.5-percent increase just enacted in Public Law 95-204, to be effective January 1, 1978, is $2,364, payable monthly, for a veteran who has no dependents and no other income—$1,596 for a surviving spouse. A veteran with one dependent and no other income cannot receive more than $2,544 annually, with $60 added annually for each of up to two additional dependents. Therefore, a veteran who has a spouse and two children, and does not have any other income receives the sum total of $222 per month for the support of himself and his family—$2,664 per year, far below the national minimum standard of need which was $3,930 for a two-person household in the most recent data published by the Department of Labor; and the pension amount is not increased regardless of how many more than two children the veteran has.

Mr. President, the existing law provides even less adequately for a surviving spouse. If she has no other income and has two children to support, she receives a maximum pension payment from the VA of $185 per month, or $2,220 per year.

Is it any wonder that many disabled or elderly wartime veterans, and their surviving spouses, are forced to turn to income-assistance and in-kind programs such as Supplementary Security Income and food stamps merely to survive?

The benefits payable to pensioners who do have other income are determined by the rate-decrement-income limitation formula that is literally so complicated that only a very few people understand how it works. When Congress enacts a cost-of-living increase applicable to the current pension program, the complexities of this formula are such that the actual percentage increase in the interim rates may be more or less than the percentage increase in the maximum rates and the annual income limitations. Moreover, use of this formula approach has meant that, especially in recent years, the aggregate incomes of pensioners who have outside income have not increased commensurately with increases in the Consumer Price Index, thus frustrating the obvious intent of the Congress in providing cost-of-living increases for them, especially in those situations when the pensioner's total income is composed of VA pension plus social security, both of which Congress intends to be increased according to the rise in the Consumer Price Index.

On the other hand, features such as the exclusion from income of 10 percent of all retirement income, the exclusion of all of a veteran's spouse's earned income, and the minimum pension provision have tended, singly or in combination, to permit the payment of pension dollars to persons whose outside income is well above the national minimum standard of need.

The new income standard approach changes this complicated and inequitable system to provide a simplified method of determining the amount of security pension payable, and to insure that no wartime veteran who is permanently and totally disabled from non-service-connected causes, or who is 65 or over, will be forced to live at poverty subsistence levels. The income standard is set above the poverty guidelines developed and published by the Department of Labor, and will assure that all eligible veterans and survivors receive a pension commensurate with their need.

Under the new income standard approach, persons who have no outside income would be entitled to receive the maximum amounts. For persons who do have other income, the pension income standard would be reduced dollar for dollar—except for certain exclusions—so that such persons would receive security pension as a supplement to their other income. In this way, the aggregate income for a veteran who has no outside income would be identical to that of a similarly-circumstanced veteran who does have some outside income.

The income standard for a veteran or surviving spouse who has one dependent would be substantially increased in our bill to be 1.29 times the basic standard, a ratio derived from the "poverty level guidelines" developed and published by the Department of Labor. This ratio in current pension law is 1.07 for veterans and 1.20 for surviving spouses. These ratios are far too low to account for the increased cost of supporting a two-person household.

Moreover, the income standard for each category would be increased by $660 for each additional dependent child. This amount is far more clearly related to the actual cost of supporting a dependent child than are the present levels, as increased by Public Law 95-204, effective January 1, 1978. Under the current pension program, a veteran who has no spouse is entitled to $168 per year, maximum, for the first child, $60 per year, maximum, for the second and third child, and nothing for any additional children. A surviving spouse is somewhat better off; one with no outside income receives $312, maximum, per year for each child, with no limitation on the number of children for whom additional pension is paid.

Mr. President, the Veterans' and Survivors' Income Security Act would substantially increase the income standards applicable to either a veteran or a surviving spouse who has one dependent, and who also has additional dependent children, by increasing the annual income standard by $660—$55 per month—for each additional dependent child, and the income standards for veterans who are in need of regular aid and attendance or housebound, so that the following would be the income standards applicable to persons in different categories:

Veteran with a spouse (counted as one dependent	$4,128
Veteran with a spouse and one child (counted as two dependents)	4,788
Veteran with no spouse and one child (counted as one dependent)	4,128
Veteran in need of aid and attendance with a spouse (counted as one dependent)	6,227
Veteran in need of aid and attendance with a spouse and one child (counted as two dependents)	6,887
Veteran in need of aid and attendance with no spouse and one child (counted as one dependent)	6,227
Veteran who is permanently housebound and who has a spouse (counted as one dependent)	4,904
Veteran permanently housebound who has a spouse and one child (counted as two dependents)	5,564
Veteran permanently housebound with no spouse and one child (counted as one dependent)	4,904
Add (for a veteran in any of the above categories) for each additional dependent child	660

The concept of an increased dependent's allowance is carried forward in the provisions applicable to surviving spouses.

TREATMENT OF OUTSIDE INCOME

Mr. President, a need-based income maintenance program, if carefully constructed, must take into account the other income available to the potential recipient. Although all veterans eligible for pension have, in my view, earned their right to a basic income standard through their wartime service, many veterans also have income available to them from savings, retirement plans, social security, or, in the case of some veterans, income of their dependents. Thus, in our Veterans' and Survivors' Income Security Act, all income available to the veteran or survivor is considered in determining the appropriate amount of security pension required to bring his or her aggregate income up to the income standard allowing only those exclusions which are consistent with a need-based system.

The security pension program, unlike the present program, contains few exclusions from annual income. The allowable exclusions generally represent extraordinary, non-recurring income, such as fire insurance policy proceeds, and one-time expenses, such as expenses for a last illness and burial.

Two of the exclusions, however, are different. The first of these allows for the exclusion of $780 of earned income plus one-half of any earned income over $780. This exclusion, in the case of a veteran or surviving spouse with one or more dependents, would apply to all of the earned income of the dependent members of the family group. This exclusion, by allowing a veteran or survivor, or their family, to have the benefit of the higher aggregate income resulting from the employment of one or more dependent members of the family, without being terminated from the security pension program, is intended primarily to benefit persons in two quite different situations.

The first situation is that of a catastrophically disabled veteran who has a spouse who works, and perhaps two or three children to support. The earned income exclusion will benefit this family by allowing the veteran to continue to receive security pension until the spouse's earnings reach the cutoff point, or break-even point. If the veteran with two children in this situation were in need of aid and attendance, the cutoff point would be reached when the spouse's earned income exceeded $15,873. For a fairly typical situation, assume that the spouse earns $9,000 per year. This family would be entitled to receive security pension at the annual rate of $3,437, so that their aggregate annual income would be $12,437. Thus, the earned income exclusion would provide a work incentive in such a situation since the family would be substantially better off than if the spouse did not work.

A second situation which comes readily to mind is that of the person 65 or over who has retired from full-time employment, but who has a part-time job or, perhaps, works for a few months each year. Assuming that such a veteran earns $1,500 a year, has a dependent spouse with no income, and receives retirement income of $3,000 per year, he would be entitled to receive security pension at the annual rate of $768, thus making the aggregate income of the couple $5,268. In this case, the veteran would have the satisfaction as well as the additional income that gainful employment provides.

A second exclusion has an entirely different premise, and is derived from the provision in the current pension program that permits the exclusion from annual income of amounts equal to such amounts paid out by a pensioner for unreimbursed medical expenditures as are deemed unusual. The VA has interpreted "unusual" unreimbursed medical expenditures as those in excess of 5 percent of the person's annual income.

This exclusion, designed to ameliorate the severe pressures which unusual unreimbursed medical expenses would impose upon veterans and survivors receiving pension, has been carried forward in our bill in another form, with the intention that it operate equitably for all veterans and survivors receiving security pension. Our new program would provide for the exclusion of an amount equal to the amount exceeding $100 of the veteran, surviving spouse, or surviving child's unreimbursed medical expenditures. For example, assume that an elderly veteran pensioner must spend—and is not reimbursed for—$500 in 1 year for medical care for himself and his family. The following year he would be entitled to an exclusion of $400 of his outside income, which would mean an increase in pension benefits.

Mr. President, the provision of a $100 "deductible" means that pensioners with different amounts of annual outside income will be treated more equitably. For example, with the present 5-percent exclusion, a veteran with $1,000 of annual outside income need only expend $50 for unreimbursed medical bills before benefiting from the exclusion in current law, whereas a veteran with $2,500 annual outside income must expend $125. With the $100 deductible, each begins to benefit from the exclusion at the same point.

However, in order to avoid subsidizing expenditures for treatment from non-VA sources when VA-operated facilities are reasonably available, my bill encourages veterans to use VA-operated facilities. Thus, if the veteran lives in an area where VA facilities are reasonably available, the VA would be directed to notify such a veteran, in any year following a year in which the exclusion has been allowed, that adequate services of the same kind are readily available to him or her at a VA facility. If the services continued to be available to the veteran, no exclusion would be permitted thereafter for expenditures incurred for such treatment more than 30 days after the VA had notified the veteran.

The provision for the exclusion of an amount equal to the amount of unreimbursed medical expenditures in excess of $100 is in accord with the principles of a need-based income maintenance system, and it is intended to be administered with a view toward assisting veterans, their survivors, and their families, to obtain adequate health care.

Mr. President, the exclusions to which I have referred would apply to veterans, surviving spouses, and surviving children, who would become entitled to security pension if there is no surviving spouse, or if the surviving spouse is ineligible by reason of income.

The treatment of income in my bill also differs from the current pension program in that the income of a veteran's dependents, for whom he or she is receiving increased security pension, which is reasonably available to the veteran, would be treated as the veteran's income for purposes of determining the amount of security pension. This differs from current law, which allows for the exclusion of all of a spouse's earned income, or $1,200, whichever is the greater, and does not treat as income to the veteran income received by a dependent child which is reasonably available to the veteran.

Similarly, in my bill, the income of a surviving spouse's dependents for whom the surviving spouse is receiving increased security pension, and which is reasonably available to the surviving spouse, would be treated as the income of the surviving spouse.

ANNUAL INCREASES IN INCOME STANDARDS

Mr. President, the Veterans' and Survivors' Income Security Act would provide for annual automatic increases in the income standards. The percentage increase would be the same as that adopted for social security benefits, supplementary security income benefits, and other Federal programs, which is based on the applicable rise in the Consumer Price Index, and would insure that the pension entitlement of persons covered under the new security pension program would not decline in value because of inflation.

NO REDUCTION DUE TO SOCIAL SECURITY INCREASES

Mr. President, I wish to turn now to a feature of the Income Security Act which I regard as absolutely crucial. Under the current pension program, it is possible for a person who is entitled to social security benefits and who is also entitled to receive pension payments to suffer a reduction in his or her pension benefits which is solely attributable to a cost-of-living increase in social security benefits. Since 1974, social security benefits have been automatically increased annually by a percentage derived from the applicable rise in the Consumer Price Index. This increase takes place annually in July. Because of a special rule found in section 3012(4) of title 38, the law relating to veterans' benefits, the increase in social security benefits is not "counted" as increased income to the pensioner until the end of the year. Therefore, such a person receives the full benefit of the July social security cost-of-living increase for 6 months, but in the following January, when his or her annual pension entitlement is redetermined, the person may well suffer an actual reduction in pension benefits, leaving the person less well off with respect to the actual value of his or her aggregate income. Congress has somewhat ameliorated the adverse impact of this system for most pensioners by enacting, in recent years, annual cost-of-living increases in pension rates. But because of the complex rate-decrement-income limitation formula used to determine a person's pension entitlement, the cruel effect of the Government's "giving with one hand and taking away with the other" cannot be fully eradicated, and many pensioners annually suffer actual reductions in their pension benefits as well as a decrease in the purchasing power of their incomes.

This problem would be resolved, for persons electing security pension, first, by automatically increasing the security pension income standards annually at the same time, and by the same percentage, as social security is increased, and, second, by requiring the VA to "count" the social security increase at that time. Thus no person could suffer a reduction in security pension attributable to a social security cost-of-living increase, and such a person's aggregate income—social security benefits plus security pension benefits—would rise annually in accordance with the percentage reflecting the increase in the Consumer Price Index.

Mr. President, the first annual automatic increase in security pension benefits would take place in July 1979; and our bill requires the new income standards to be published in the Federal Register at the same time as the new social security rates are published.

An example of how a person electing security pension would be benefited by these provisions is as follows. If the veteran pensioner is receiving monthly social security benefits of $225 per month in June 1979, and his security pension benefit is $42 per month, his aggregate monthly income is $267. Assuming that in July his social security benefit payment rises to $238, reflecting a 5.9-percent increase, at the same time, the annual security pension income standard would rise from $3,200 to $3,389 (by the same percentage). His security pension entitlement would be determined by subtracting $2,856—his new social security annual rate—from $3,389, and dividing the result by 12. His monthly security pension amount would now be $44, so that his monthly aggregate income would be $238 plus $44, or $282, an increase of the full 5.9 percent over his previous aggregate income—exactly the result which makes sound economic and public policy, and common sense, and which I believe the Congress wishes to occur.

NET WORTH DETERMINATIONS

Again, consistent with the principles of a need-based system, the Veterans' and Survivors' Income Security Act, as does current law, provides for the denial or discontinuance of security pension if it is determined that the veteran's net worth is such that it is reasonable for some portion thereof be used for the veteran's support. Under our bill, the net worth of a spouse or dependent child is also subject to such a determination, except that the Administrator is expressly directed to exclude from a child's net worth amounts reasonably set aside for the child's education or other vocational objectives. Similar net worth determinations—with a similar exclusion from a child's net worth—would be required for a surviving spouse or surviving child. Under current VA regulations, net worth determinations do not include the value of a recipient's home or reasonable personal effects. Nothing in our bill is intended to change this regulation.

SURVIVING SPOUSES

Mr. President, the provisions in the Veterans' and Survivors' Income Security Act relating to surviving spouses are substantially different from those in the current pension program. Although the basis requirements of eligibility relating to marriage are the same, the security pension program substantially increases to $2,144 the annual income pension payable to a surviving spouse who has no other income; and if such a surviving spouse has one dependent, the applicable standard would be $2,766, with $660—the same amount applicable to a veteran—for each additional dependent child.

If the surviving spouse, however, is permanently and totally disabled—using the same standard of disability that applies to a veteran—or is 65 or over, the annual income standard would be the same as that for a veteran, $3,200, and $4,128 if such a surviving spouse has one dependent child. In addition, the benefit rates for surviving spouses in need of regular aid and attendance are equalized. And if the surviving spouse has a child age 6 or under, or a helpless child of any age who became helpless before reaching the age of 18, the applicable annual income standard is the same as that for a veteran with one dependent, $4,128. In each situation, the annual income standard applicable to a surviving spouse who has more than one dependent child would be increased by $660 for each such child, the same dependent's allowance applicable to veterans. The annual income standards applicable to surviving spouses in various categories are thus as follows:

Permanently and totally disabled or age 65 or over surviving spouse, $3,200;

Permanently and totally disabled or age 65 or over surviving spouse with one dependent, or surviving spouse with child age 6 or under or helpless child, $4,128;

Permanently and totally disabled surviving spouse in need of regular aid and attendance, $5,299;

Permanently and totally disabled surviving spouse in need of regular aid and attendance, with one dependent, $6,227;

Other surviving spouse, $2,144;

Other surviving spouse with one dependent child, $2,766; and

Increase for each additional dependent child, $660.

As in the case of a veteran, the annual security pension rate would be reduced dollar for dollar by annual income, with such income subject to the same exclusions as are applicable to veterans; and pension eligibility would be subject to net worth determinations similar to those applicable to veterans.

By equalizing benefit rates for surviving spouses who are permanently and totally disabled or who are 65 or over, we address one of the harshest inequities of the current pension program; and by allowing a surviving spouse who has a helpless child, or a child 6 or under, to receive security pension at the same rates applicable to a veteran, we are recognizing the clear and powerful need of persons in these situations for income maintenance. It is consistent with the principles of a need-based system to treat similarly circumstanced persons similarly, as these provisions for equalizing benefit rates would do; and it honors the memory of the deceased veteran, on the basis of whose service the survivor is entitled, to provide an income standard for the needy survivor sufficiently above the national minimum standard of need to prevent the survivor from having to turn to social welfare programs merely to survive.

SURVIVING CHILDREN

Mr. President, the current pension program also provides separate pension entitlement for the surviving children of deceased wartime veterans in cases where there is no surviving spouse or the children are not in the custody of a surviving spouse. These are the so-called children alone—somewhat of a misnomer since these children are not "alone" in terms of adult supervision.

Under current law as amended by Public Law 95-204, effective January 1, 1978, the amount for each child will be $61 per month, or $732 per year, subject only to an annual income limitation of $3,080, which is determined by excluding all earned income of the child. If there is more than one such child, the applicable monthly amount is increased by only $26—$312 per year—for each child, and the total amount is divided in equal shares for each child. If, for example, there are three children, each would be entitled to receive $37.67 per month ($452 per year).

Mr. President, it is not consistent with the principles of a need-based system to penalize needy children because there happen to be more than one; nor is it consistent to allow the payment of pension dollars to persons not truly needy.

The bill which I am introducing today sets an annual income standard of $660 for each surviving child, reduced by the amount of the child's annual income and subject to the same exclusions as the income of veterans and surviving spouses, including the earned income exclusion—$780 plus one-half of all earned income over $780. This is both equitable and reasonable; and, although the income standard for one child is less than the benefit level for one child in the current pension program, the income standard is not reduced merely because there is more than one child. Moreover, the earned income exclusion would allow a surviving child to retain all of his or her earned income up to $780 per year. By increasing the amount which a second or third child could receive, we have established an income standard which bears a relationship to the cost of a child's support. In situations where there are two or more children, the amount payable for each "child alone" would be generally higher under the new program.

OPPORTUNITY TO ELECT SECURITY PENSION

Mr. President, the effective date of the Veterans' and Survivors' Income Security Act would be October 1, 1978. From that date forward, all persons applying for pension benefits would be covered under the new security pension program. Persons with applications pending on that date, and those receiving pension under current law or "old law", would be entitled to elect security pension if they so desire, but such an election would be irrevocable. No person currently receiving pension, however, would be forced into the new system if it were more advantageous to him or to her to remain under the current program. There is no question, Mr. President, that there are persons receiving pension under current law—or "old law" whose nonpension income would exceed the income standard, and for whom the new program would provide no advantage. These pensioners may continue to receive benefits under the current pension programs as long as they meet the eligibility requirements of those programs. The bill also provides the same options for any veteran, surviving spouse, or surviving child receiving pension based on service during the Spanish-American War—or an earlier period of war, in the case of certain survivors—that is, to elect, irrevocably, security pension if he or she finds it advantageous to do so, or to continue under the present programs.

Mr. President, except for the provisions I have just discussed, relating to the closing of the current pension program to new applicants and the opportunity of participants in the current program to elect to receive security pension, no provision of the bill we are introducing will in any way modify provisions of existing law with respect to pensioners under the current program.

INCOME AND NET WORTH REPORTING

Mr. President, consistent with the principles of a need-based income maintenance system, our bill would include a requirement that veterans and surviving spouses receiving security pension report to the VA annually on the income they received during the previous year, their estimated income for the following year, and their net worth, including a report on the income and net worth of any dependents for whom the person is receiving security pension. The bill also provides for such reports by surviving children.

However, our bill exempts from this annual reporting requirement pensioners without dependents whose entire nonpension income is derived from a Federal retirement program, such as social security or railroad retirement, and who have filed at least one such annual report.

In addition to the annual reporting requirements, prompt reports as to any changes in income or net worth are required, as in current law, as well as prompt reports on changes in the status of any dependents.

The rule found in section 3012(4), of title 38, relating to reductions and discontinuances in pension entitlement because of changes in income and net worth, would be amended by the bill, but only with respect to participants in the new security pension program. Under current law, such changes do not affect pension entitlement until the end of the calendar year in which the changes occur. Under the Veterans' and Survivors' Income Security Act, the effective date of a reduction or discontinuance of security pension by reason of a change in income would be the end of the month in which the change occurs.

ADMINISTRATIVE PROVISIONS

Mr. President, the administrative costs of the present pension program are considerable. Under current law, the minimum amount of pension payable is $5 per month; and, because of the rate-decrement-income limitation formula, more and more pensioners each year receive a monthly $5 pension payment. This provision costs more to administer than its value to the recipient. Our bill provides that persons participating in the security pension program whose annual benefit payment would be less than 4 percent of the annual income standard applicable to a veteran who has no dependents may be paid less frequently than monthly. In 1979, for example, this provision would affect any pensioner under the new program entitled to receive less than $128 per annum. It is not anticipated that this change will adversely affect any person who relies substantially on the pension program for income maintenance; but it is anticipated that it will reduce the overall cost of administration.

In addition, the definition of "pension" in section 101(15) would be slightly changed by our bill. Under current law, "pension" means, among other things, a monthly payment; our bill alters this so that "pension" would mean a periodic payment.

COMMENTS INVITED

Mr. President, I believe, and I think that the members of the committee agree, that this bill will provide the basis for much thoughtful interchange on the veterans' and survivors' pension program in the weeks ahead. I will welcome your comments and suggestions, and I hope you will share them with me, as we work together in this Congress to accomplish one of the Veterans' Affairs Committee's major goals.

HISTORY OF VETERANS' PENSION PROGRAM

Mr. President, Congress has compiled a most admirable record in providing for veterans' benefits and services. The historical development of veterans' pension programs illustrates that Congress has become increasingly sensitive to the plight of needy wartime veterans and their needy survivors.

Throughout America's 220-year history, wars have claimed the lives of many. Millions have rallied to the aid of their country during times of turmoil. Since the War of Independence, America has remembered these brave citizens who have risked their lives in defense of their country. Pensions to veterans and their survivors have been one expression of this Nation's gratitude and its sense of obligation.

Veterans whose bravery characterized the fight for independence were the objects of the Nation's first pension bill. In 1818, President Monroe, himself a veteran of the Revolutionary War, signed into law a measure providing benefits to needy veterans who had served 9 months or more during the Revolutionary War period.

The administrations of Presidents Jackson and Van Buren witnessed extended efforts on behalf of the Revolutionary War patriots. Widow pensions were authorized.

The War of 1812 did not spark the nationalist fervor produced by the Revolution. Mired in sectional conflict which inhibited the development of national pride, the Nation did not grant pensions to veterans of that conflict until the 1870's when, again, need plus wartime service determined entitlement.

The veterans of the Mexican War also waited for pensions. The sectional ills which plagued this country in the decades following the Mexican War prevented the passage of a comprehensive pension program. But upon a return to "normalcy" the Nation remembered; the 1870's evidenced a pension program instituted designed to help the destitute. And in 1890, Benjamin Harrison signed into law a measure which extended pension benefits to the needy veterans of the Civil War.

Mr. President, within 20 years following the Spanish-American War, veterans and surviving spouses were extended pension benefits. Though immersed in World War I, the Nation sought to express gratitude for their service to our country.

World War I resulted in pension measures within a decade. President Hoover recognized the Nation's obligation to the warriors of the trenches and signed into law a bill which provided pensions to veterans of the Great War. Again the determinative factor, after a showing of qualifying service, was need.

In the midst of the depression President Roosevelt requested and received measures which repealed pension legislation for Spanish American and World War I veterans. To replace these programs F.D.R. issued 41 Executive orders in the area of veterans' affairs. The New Deal established the mechanisms to relieve those needy veterans whose valiant services had protected this country in time of war.

World War II vets, their widows, and dependents were extended benefits as well. Later, Congress extended pension benefits to Korean war veterans and to needy non-service-connected disabled veterans of the Vietnam era. Thus, after each war, the Nation has remembered its obligation to veterans and dependents in need who have faithfuly served their country.

Mr. President, until 1959, the veterans' pension program employed an all-or-nothing determination of eligibility. Needless to say, this particular feature of the system resulted in drastic consequences to those whose allowable income increased above the determined eligibility limits. In 1959, the Congress extensively researched the pension system. This study revealed the continued need for a pension program. It was also apparent that the structure of that program had created inequities. As a result a revision was undertaken which produced the pension structure as we know it today.

In 1959, Mr. President, the Congress decided that the variations in the amounts of pension entitlement required graduation in amounts of pension entitlement. Believing that the pension should be responsive to the needs of those served, the Congress sought to take steps to correct the inequitable deficiencies inherent in the all-or-nothing pension structure. For example, the old system failed to correlate the number of dependents for whom a veteran was responsible with the amount of pension for which he was eligible.

To rectify the anomalies, Congress attempted to adjust the pension entitlement to correspond with the individual pension recipient's income. A three-tier structure replaced the one-level benefit. In this manner, it was hoped, cognizance could be given to the varying degrees of need characterizing individual recipients.

To protect those pensioners whose pension entitlement might be reduced by the new program, a grandfather clause permitted those on the rolls to continue their eligibility under old law subject, of course, to the requirements of that law.

Thus, enactment of Public Law 86–211 in 1959 gave credence to the philosophy that a pension ought to be reflective of the needs of individual recipients. The graduated levels of pension eligibility represented clear expressions of Congress' desire that need would be determinative of pension entitlement. As such, Public Law 86–211 was a major step toward the creation of a benefit program truly based upon need.

Mr. President, in 1964, faced with a prospective increase in social security benefits, Congress amended the revised pension law by authorizing an exclusion of 10 percent of all payments to an individual under public or private retirement, annuity, endowment, or similar plans or programs in determining the "annual income" of the pensioner. Thus, in addition to a general rate increase, the 10-percent exclusion provided for in Public Law 88–664 generally assured that no individual pensioner would be adversely affected because of the contemplated social security increase. At the same time Congress also created another exclusion, and provided that a spouse's earned income would not be counted in determining a veteran's outside income and that a spouse's unearned income would only be counted in excess of $1,200.

In 1967, Congress provided an average overall cost-of-living pension increase of 5.4 percent in Public Law 90–77. The following year in 1968, in Public Law 90–275, Congress again increased pension rates and also provided for a $200 increase in the maximum annual income limitations to mitigate against prospective pension loss which would result because of the 13-percent increase in social security benefits that year. The same act also replaced the three-level system of pension rates with a multilevel increment system. Under the previous three-level system, a slight increase in outside income often could result in a disproportionate decrease in a veteran's pension. The enactment of a 20-plus increment system of $100 graduations was designed to permit a more orderly and gradual reduction in monthly benefits whenever there was an increase in outside income.

In 1970, in enacting Public Law 91–588, Congress again agreed to reduce projected adverse effects on pensioners because of that year's 15-percent increase in social security benefits. It raised the current maximum annual income limitations by $300 and increased most current law pensions through an increase in the rates.

Mr. President, under earlier pension laws, despite increasing refinements, the structure of the pension system was such that small increases in outside annual income could result in a sharp drop in pension or a person's being dropped from the pension rolls completely. The problem became particularly acute whenever there were increases in social security, other retirement benefits, or other countable income under the current pension program. Veterans complained that whatever social security increase Congress gave with one hand it took back in reduced pension with the other. More important, the reduction in a veteran's pension was often greater than the increase in social security benefits producing a loss of aggregate income for the veteran or his survivor. As the foregoing indicates, congressional response to the problems over the years has generally been to adjust pensions and increase the maximum annual income limitations which in effect has accomplished somewhat of a "pass along" of social security increases or other increases of like amount.

In 1971, in response to social security increases that year, Congress enacted Public Law 92–198 which not only increased the pension rates and the maximum annual income limitations but also adopted a new formula approach to the payment of pensions. Intended to prevent the net loss of aggregate income for any pensioner who continued to qualify for a pension and who received an increase in outside income, the formula specified a maximum monthly rate for each group within designated income categories. Under the formula, each individual's monthly benefit is computed by reducing the maximum rate by a specified number of cents for each dollar by which the maximum income level for that group is exceeded.

Because of 1972 social security increases, approximately 20,000 pensioners—consisting of 14,200 veterans and 5,800 survivors—were scheduled to be dropped from the pension rolls on January 1, 1973, the effective date of annual revision of entitlement to pension income. Concerned about the effect of social security amendments on pensioners the Committee on Veterans' Affairs held hearings on September 12, 1972, to consider legislation to ameliorate the adverse impact of social security increases on pensioners and to adjust for continuing inflation. Subsequently, the committee unanimously ordered reported S. 4006 which would have increased maximum annual income limitations by $400—the approximate amount of the average social security increase—and would have increased the base pension rates by about 8 percent.

The measure unanimously passed the Senate in the closing days of the sesssion on October 11, 1972, but the House was unable to consider pension legislation prior to sine die adjournment.

Mr. President, during the 93d Congress, the committee examined a number of approaches for adjusting the pension system. In testimony before the Subcommittee on Compensation and Pensions on June 18, 1973, representatives of the Veterans' Administration asserted that there were a number of "inconsistencies, inequities, and anomalies" in the present pension system. They advocated that there be a thorough examination and complete revision of the system which they asserted they believed could be developed quickly, but did not offer any formal draft of legislation to accomplish this.

Subsequent to the hearings on June 18, 1973, the Senate and House Committee staff members met with representatives of the administration in an attempt to reduce the suggestions of the testimony to a more concrete form. At the meeting, it was obvious that there was a serious lack of the pertinent data which Congress would need to make any rational determination of the shape of any proposed new pension system. In general, this information was not forthcoming during 1973, nor did the committee receive a formal draft proposal. Accordingly, while agreeing to investigate further the entire pension system, the committee concluded that action was needed on an immediate cost-of-living measure and introduced legislation (S. 275) to accomplish it.

S. 275 was ultimately enacted as Public Law 93-177 and provided for a 10-percent increase in the rates effective January 1, 1974.

In signing Public Law 93-177, on December 6, 1973, the President stated:

> While this bill is a step in the right direction, more can be done—and should be done. As I mentioned in my message to the Congress on national legislative goals on September 10, 1973, full reform of the Veterans' Administration pension program is necessary. The program is currently fraught with inconsistencies, inequities, and anomalies which cannot be corrected unless the entire framework of the program is restructured.
>
> This administration regards the following principles as vital to a realistic and equitable VA pension program:
>
> VA pensioners should have some regularized way of receiving cost-of-living adjustments in VA pension payments tied to automatic increases now available to social security recipients.
>
> The VA pension program should be restructured to assure that additional income flows to the neediest pensioners. This objective would involve raising VA payments to those pensioners who receive less total income than adult welfare recipients under recent amendments to the Social Security Act. In addition, a family's total income should be considered in determining the amount of pension needed.
>
> Veterans and widows should be treated equally with regard to income and pension payments.

In his message on veterans of January 28, 1974, the President repeated the foregoing and stated that he would propose legislation.

On March 15, 1974, the administration submitted a formal draft legislative proposal. The transmittal letter stated:

> The enclosed draft measure would (1) fill the gap between the resources available to a veteran and his dependents and a national minimum standard of need; (2) treat veterans and widows equally with regard to income and benefit amount; (3) eliminate the inequities arising from exclusions of income—consideration of family income as a whole; (4) contain an automatic cost-of-living adjustment working simultaneously with that applicable to social security and eliminate the lag in adjusting pension for increase in income; (5) provide benefits which guarantee a minimum income of $166 per month for a single person and $249 per month for a person with one dependent; and (6) provide a hold-harmless provision to permit present recipients of pension to continue receiving benefits under the present provisions of law with a 4-percent rate increase and thereafter, automatic cost-of-living increases.

Mr. President, on receipt of the administration's formal reauest, the committee intensified its efforts to obtain relevant information from the VA with which to assess the full impact of this proposal.

It soon became apparent that the VA lacked basic timely information in detail. Further, the Veterans' Adminstration lacked sufficient analytical staffing and did not have an advanced computer model necessary to make an adequate analysis of its own proposal, let alone the possible variations being considered by the committee. These inadequacies continued throughout 1973 and 1974. A series of six memoranda were exchanged with the VA. Each memorandum occasioned delays by the VA; some information was submitted months beyond the committee's requested deadlines. From information then currently available to the committee, it was apparent that the actual proposals made by the VA would be unduly restrictive and unacceptable in operation. Few of the veterans or surviving spouses in need of pension could qualify under the new system submitted by the Veterans' Administration.

For example, if the pension system proposed by the Nixon administration had been applied to the population of veterans and surviving spouses then receiving VA pensions, almost two-thirds would have been ineligible for receipt of pension under the new system. Parenthetically, Mr. President, it should be noted that under the proposal we submit today, exactly the opposite would very probably be true; approximately two-thirds would be eligible for security pension benefits. Accordingly, it was obvious then that variations had to be considered and additional information was necessary before the committee could proceed with any pension restructuring.

Meanwhile, given the uncertainties and the unanswered questions, the committee believed that it was necessary to proceed with an interim cost-of-living measure in order to protect VA pensioners from the continued toll of inflation.

Thus, Congress enacted S. 4040, the Veterans and Survivors Pension Adjustment Act of 1974 as Public Law 93-527. In addition to providing an average 12-percent increase in the rates of pension and a $400 increase in the maximum annual income limitations, Public Law 93-527 also directed the Administrator of Veterans' Affairs to carry out an original study of the needs and problems of veterans and their widows 72 years of age and older. The statute directed the study to include a profile of the current income characteristics of such veterans and their widows describing the proportion and amount of such income from all sources, and the average cost for all necessities such as rent, food, medical care, and other items. The study was also to evaluate the adequacy of the present expected mortality rates of such pensioners.

Mr. President, with each succeeding pension adjustment enacted into law and each study of the pension program, it was becoming increasingly clear that the entire pension system needs to be overhauled if it is to be fully responsive to the needs of our veterans and their survivors. The stopgap approach of responding to social security increases and tinkering with the pension rate decrement system actually just distorts the formula and further prevents it from working properly. Thus, our neediest pensioners are not receiving adequate benefits while at the same time in some cases, other pensioners are receiving pensions under questionable circumstances. Further, thousands of veterans and surviving spouses each year complain bitterly about pension reductions even following congressional action which increases rates and annual limitations.

Accordingly, staff activity was intensified at the beginning of the 94th Congress to obtain adequate relevant information from the Veterans' Administration in order to restructure the entire program.

Previously, on November 11, 1974, then Chairman Hartke sent a detailed letter to then Administrator Roudebush noting the many problems the committee had encountered in obtaining adequate accurate information, and relaying particular concern that an adequate computer simulation model be developed which could predict with greater assurance the operation and effect of various alternative pension reform proposals.

That letter noted problems in obtaining information on a timely basis and cited a study by the Congressional Research Service conducted at committee request concluding that the chief problems of the Veterans' Administration in responding to committee inquiries concerning pension restructuring were:

> Inadequate analytical staff in the Veterans' Administration devoted to VA pension reform effort (a potentially solvable problem).
>
> Inadequate data (only partly amenable to solution).
>
> Competing computer models, which are by themselves only partially capable of answering committee concerns.
>
> A tangled administrative structure which now seems incapable of resolving these problems and making timely responses to Committee inquiry.

In response, Mr. President, Administrator Roudebush indicated that he had directed that the Veterans' Administration proceed rapidly with the development of a more sophisticated computer simulation model capable of producing information long desired by the committee. In the interim, additional information for which an advanced computer simulation model was not necessary, was requested during the early part of this year. On April 1, 1975, the Administrator informed the committee that the long awaited new computer simulation model was operational. The committee then requested considerable information to be processed by the computer simulation model in a series of memos dated April 11, May 19, June 3, and June 25. Generally the bulk of the information requested was promptly supplied by the Veterans' Administration with the material requested in the last memo received by July 15, 1975.

On July 22, 1975, the Veterans' Administration transmitted its "Study of the Needs of Older Veterans and Widows," as required by section 8 of Public Law 93-527, which provided:

> The Administrator of Veterans' Affairs shall carry out an original study of the needs and problems of veterans and their widows seventy-two years of age or older. The study shall include (1) a profile of the current income characteristics of such veterans and their widows, describing the proportion and amount of such income from all sources and the average necessary for all necessities such as rent, food, medical care, and other items; (2) an evaluation of the adequacy of the present veterans pension system to meet the needs of such veterans and their widows; and (3) actuarial information concerning the present expected mortality rates of such veterans and their widows.

The law further directed that a report of the results be furnished the President and the Congress together with any recommendations for legislative or administrative action to improve the present program of pension benefits for such veterans and widows.

The required study was transmitted to the committee on July 22, 1975 and printed as Senate Committee Print No. 16, 94th Congress, 1st session.

Mr. President, graphic evidence that the current pension system is not fulfilling its objectives can be found in that study of the needs of older veterans and widows. The raw data produced by the study has been of great value to the committee. This data revealed, for example, that large numbers of veterans and widows had incomes below the poverty level; 30 percent of the veterans and nearly 37 percent of the widows interviewed reported they could not afford all the food they need; 25.1 percent of the veterans and 20.9 percent of the widows could not afford to pay for all the medical attention they need; and nearly 36 percent reported problems concerning adequate housing.

This study and the continued exposure of anomalies and inequities inherent in the present pension program combined to argue forcefully and persuasively for fundamental restructuring.

The committee then formulated S. 2635, introduced by then Chairman Hartke and cosponsored by most members of the committee. The Veterans' Administration, however, did not support S. 2635. It testified that the bill incorporated many of the concepts present in its draft proposal submitted the previous year, but it opposed the bill for the reason that the 8 percent cost-of-living increase in titles II and IV of the bill as reported exceeded the Ford administration's hold-the-line-at-5-percent policy. On December 15, 1975, S. 2635 passed the Senate unanimously; however, it was not acted upon by the House and died with the adjournment of the 94th Congress.

Since that time Congress has passed three rate adjustment measures: Public Law 94-169, providing for an 8-percent increase; Public Law 94-432, providing for a 7-percent increase; and Public Law 95-204, providing for a 6.5-percent increase. These rate increases were necessary to offset the decline in purchasing power attributable to inflation, but they did nothing in themselves to promote pension reform and they did not address the problem inherent in the rate-decrement-income limitation formula which results in hundreds of thousands of pensioners suffering reductions in pension each year.

Nevertheless, Mr. President, it should be acknowledged that the present pension program has not served us badly over the years. The difficulties experienced today are often the result of circumstances outside the initial basic design of the program itself. In large part, the present pension program has been a progressive one which has in the main aided those needy veterans and survivors for which it was designed. Increasing legislative refinements in recent years, as previously discussed, have mitigated many problems which developed or became apparent during the operation of the program. But when the current pension program was first enacted into law in 1959, it was impossible to gauge the very rapid increases in the Consumer Price Index and increases in social security payments which would occur in the succeeding years. These changes have distorted the basic formula system and together with various statutory income exclusions have produced today's very evident inequities.

The result is that today similarly circumstanced pensioners with identical outside incomes but from different sources can receive radically different pension benefits. And, although the number of cases is not excessive, the fact that veterans may receive pensions, even where their spouses have incomes in excess of $20,000 a year, strikes heavily at the principle of a need-based pension program and, at best, is an unwise allocation of available tax dollars under the pension program.

Continued tinkering with the current formula system with periodic enactment of pension adjustment laws has not resulted in proportional increases which accurately reflect the varying needs of veterans and surviving spouses. That is, larger increases have gone to less needy pensioners while the neediest have received smaller increases which continue to leave them substantially below acknowledged poverty levels.

These problems inherent in the current program intensify with continuing changes in the Consumer Price Index and resulting periodic rate adjustments. This in turn makes it increasingly difficult, if not impossible, to meet fully the objectives of an equitable need-based pension program by simply adjusting the current formula system.

CONCLUSION

Mr. President, there seems now to be a broad bipartisan consensus in the Congress that a major reform of the veterans' pension program is necessary. But we have not yet heard from the Carter administration. Their views will be forthcoming in the next 4 to 6 weeks with the submission of the President's budget for fiscal year 1979 and the convening of our February 3 hearing. I am very hopeful that we will receive an enlightened, equitable response from the administration and that Max Cleland, our fine Administrator of Veterans' Affairs, will be permitted to assume a critically needed role of leadership in our efforts to achieve the kind of fundamental, equitable pension reform in the 95th Congress which is represented by the bill we offer today.

I urge my colleagues and the administration to give this bill careful study with a view toward making any further improvements and passing this legislation early next year.

I want to assure my colleagues and all veterans that the committee and I are firmly committed to this course and will move forward prudently but with great determination. I am confident we will be successful.

In closing, I would like to express my gratitude to my fellow members of the Committee on Veterans' Affairs for their enormous patience and great cooperation during this session, and to the hardworking members of their staffs, especially Bobby Avary of the staff of the chairman of the Subcommittee on Compensation and Pension, the Senator from Georgia (Mr. Talmadge). The preparation of this legislation has required intensive work by committee staff over many months. I am deeply grateful to Mary Sears, who worked so tirelessly in preparing this legislation, Jon Steinberg, Ed Scott, Michael Burns, and Jack Wickes. I am also deeply grateful to Garner Shriver and Gary Crawford of the minority staff, who worked so very closely with us throughout this developmental process, Hugh Evans of the Office of Legislative Counsel, Nina Shepherd of CBO, Judith Selvidge of OMB, and John Mears, Charlie Peckarsky, John McCloskey of the VA, as well as the veterans' service organizations who provided very valuable assistance and counsel.

Committee on Veterans' Affairs,
Washington, D.C., August 25, 1977.
Hon. Max Cleland,
Administrator of Veterans' Affairs,
Veterans' Administration,
Washington, D.C.

Dear Max: On August 3, 1977, the Senate passed H.R. 7345, the Veterans and Survivors Pension Adjustment Act of 1977, to provide for an increase of approximately 6.5 percent in pension rates for needy non-service-connected disabled veterans and their survivors, and in the rates for surviving parents receiving dependency and indemnity compensation. Although the House has not yet had time to act on the Senate amendment to this bill, we expect prompt action after the recess.

The members of the Committee, at a meeting on July 15, 1977, expressed great interest in the pension study mandated by Public Law 94–432 now underway at the Veterans' Administration particularly in view of the Committee's continued concern with comprehensive structural reform of the pension program. I believe that the VA study will receive widespread attention and thorough analysis by the veterans' organizations and by the press, and I know it will be most helpful to the Congress (and to this Committee) as it considers the first comprehensive reform of the veterans' and survivors' pension program since 1959.

It would therefore be most helpful if you would provide the Committee with an appraisal of the VA's progress in making this study and whether it will be submited on or before October 1, 1977, the date specified in section 404(b) of Public Law 94–432.

With warm regards,
Cordially,
Alan Cranston, *Chairman.*

Veterans' Administration,
Washington, D.C., September 1, 1977.
Hon. Alan Cranston,
Chairman, Committee on Veterans' Affairs, U.S. Senate, Washington, D.C.

Dear Mr. Chairman: This will acknowledge your letter of inquiry concerning the pension study mandated by Public Law 94–432.

Your inquiry is receiving attention by my staff and a response will be furnished as soon as possible.

Sincerely,
Max Cleland, *Administrator.*

Committee on Veterans' Affairs,
Washington, D.C., October 18, 1977.
Hon. Max Cleland,
Administrator of Veterans' Affairs,
Washington, D.C.

Dear Max: On August 25, 1977, I wrote to you expressing the interest of the Veterans' Affairs Committee in the pension study mandated by Public Law 94–432, which was to have been submitted to the Congress on or before October 1, 1977. At that time, I requested an appraisal of the VA's progress in completing the study and asked whether it would be submitted by October 1.

I have not as yet received any response to this letter other than an interim acknowledgement dated September 1, 1977.

As you know, the equitable restructuring of the pension program is a major priority of this Committee in the 95th Congress. In order to fulfill our commitment to this end, I regard it as essential to have the benefit of your findings and recommendations. In addition, the analysis and evaluation of existing and alternative pension programs, together with the data you have compiled during the year-long investigation, will be invaluable to the Committee as it pursues its objective of an equitable program.

In the light of our desire to work with the VA to achieve what I believe to be a common purpose, I hope you can understand my concern, and the concern of the other members of the Committee, that the study has not yet been submitted to the Congress. Therefore, I would be most appreciative if you would promptly advise me of the current status of the report and provide a firm date for its submission to the Congress. We have been advised informally that a month's delay would be necessary. I very much hope you will be able to provide assurance of our receipt of the report not later than November 1.

Please also advise the Committee of the firm date for submission of the equally overdue DIC study report, mandated by Public Law 94–433.

With warm regards,
Cordially.
Alan Cranston, *Chairman.*

Veterans' Administration,
Washington, D.C., November 2, 1977.
Hon. Alan Cranston,
Chairman, Committee on Veterans' Affairs, U.S. Senate, Washington, D.C.

Dear Mr. Chairman: This is in response to your letter of October 18, 1977, concerning the current status of the pension study mandated by Public Law 94–432. I fully appreciate your concern in this matter, as well as that of the other members of the Committee.

As you know, we have been working diligently to complete the pension study, and the Executive branch coordination process. As soon as that is completed, we will, of course, transmit it immediately to the Congress. We anticipate that this will be accomplished within the next few weeks.

With respect to the dependency and indemnity compensation study mandated by Public Law 94–433, we are in the final stages of the coordination process and expect to transmit it to Congress shortly.

Sincerely,
Max Cleland, *Administrator.*

Committee on Veterans' Affairs,
Washington, D.C., December 7, 1977.
Mr. James T. McIntyre, Jr.,
Acting Director, Office of Management and Budget, Executive Office Building, Washington, D.C.

Dear Jim: I regret having to bring to your attention the fact that the Office of Management and Budget is presently delaying submission to the Congressional Committees on Veterans' Affairs of three statutorily mandated reports beyond their due dates. These reports have been prepared by the Veterans' Administration and were submitted to OMB for clearance.

The delays being encountered in the OMB-clearance process are now seriously impairing the work of this Committee, including its budget planning responsibilities under the Congressional Budget Reform Act of 1974. It is essential that these reports be cleared and submitted to the Congress as rapidly as possible. The reports required by law are as follows:

1. Section 117(a) of Public Law 94–581, the "Veterans Omnibus Health Care Act of 1976", requires the Chief Medical Director of the VA's Department of Medicine and Surgery to accomplish and submit to the Congressional Committees on Veterans' Affairs, a report of a study "to determine the short-range and long-range direction of the [VA's] hospital and medical program . . . with reference to the increasing age of the eligible veteran population." This report was, by statute, due on October 21, 1977, and is of direct and important relevance to a hearing which the Committee will hold on January 11, 1978, on long-term care in the VA. We need to have that report and provide it to the witnesses well in advance of the hearing in order to get their comments on it.

2. Section 204 of Public Law 94–433, the "Veterans Disability Compensation and Survivors Benefits Act of 1976", directs the VA to carry out a thorough study of the dependency and indemnity compensation (DIC) program to measure and evaluate the adequacy of benefits and to determine whether such benefits should be based on the former military pay grade of the deceased veteran. The report on this study was due on October 1, 1977, and is now more than two months overdue. The Committee needs to review this report and make important policy judgments regarding the DIC program before making its fiscal year 1979 recommendations to the Budget Committee on March 15, 1978.

3. Section 404 of Public Law 94–432, the "Veterans and Survivors Pension Adjustment Act of 1976", requires a comprehensive study by the VA of the needs-based pension program, with a report thereof due on October 1, 1977. This report, also now more than two months overdue, is to include recommendations regarding alternatives to the present program. The recommendations as well as the underlying data supporting them are absolutely essential to the Committee as it works on one of its major priorities for the second session of this Congress—thorough going restructuring of the pension program. Hearings are planned on this important issue for February 3, 1978. The significance of this report to the work of the Committee cannot be overemphasized. The Committee has already encountered serious difficulties in receiving reasonable cost estimates from the Congressional Budget Office in part because data compiled by the VA in making this study are unavailable.

In addition, by letter dated June 20, 1977, I requested the official agency views of the VA on S. 1693, the "Veterans Health Care Amendments Act of 1977", and have yet to receive the agency's report on section 4 of that bill. That section would authorize the expansion and improvement of the VA's treatment and rehabilitation programs for alcohol and drug dependence of this Committee's Subcommittee on Health and Readjustment on that legislation, the VA's witness declined to comment on that section of the bill because it would provide new authority for the VA to enter into contractual relationships with non-VA facilities and programs in the community. Before taking a position on any matter relating to VA-community relationships, the VA wanted to review and respond to the National Academy of Sciences' study of the VA health-care system which had raised important issues regarding the relationship of VA facilities to community health-care programs. The VA submitted its response to the Academy's study on September 22, 1977. There should, therefore, be no reason for the Administration further to withhold or delay its report on this legislation. Although this provision passed the Senate as section 303 of H.R. 5027 on September 9, 1977, it is still very important that the VA's report be submitted.

Since January of this year, I feel that the Office of Management and Budget has generally played a constructive role—a role of assistance not only to the President but to the various agencies of the executive branch and the Congress as well. However, the current delays which OMB is causing with regard to the submission of the reports discussed above hark back to the practices of previous Administrations which reflected poorly on OMB and were extremely detrimental to cooperation between the executive and legislative branches and to the overall efficiency and effectiveness of the Federal government. I feel certain that you will not want this situation to be replicated by your Administration.

Therefore, I urge you to take immediate action to ensure that the Committee will receive these reports no later than December 16, 1977.

Sincerely,

ALAN CRANSTON, *Chairman*.

S. 2384

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Veterans' and Survivors' Income Security Act".

TITLE I—SECURITY PENSION FOR VETERANS AND SURVIVORS

SEC. 101. (a) Chapter 15 of title 38, United States Code, is amended by—

(1) redesignating subchapter IV as subchapter V and by renumbering sections 560, 561, and 562 as sections 571, 572, and 573, respectively; and

(2) inserting after subchapter III the following new subchapter IV:

"Subchapter IV—Security Pension for Non-Service-Connected Disability or Death

"§ 561. Security pension for veterans of a period of war

"(a) The Administrator shall pay to each veteran of a period of war who meets the service requirements of this section, and who is permanently and totally disabled from non-service-connected disability not the result of the veteran's willful misconduct, security pension at the rate prescribed by this section.

"(b) If the veteran is unmarried (or married but not living with or not reasonably contributing to the support of such veteran's spouse) and has no child to whose support the veteran is reasonably contributing, security pension shall be paid to the veteran monthly at the annual rate of $3,200, unless the veteran is entitled to security pension at the rate provided by paragraph (1) of subsection (d) or by subsection (e) of this section, reduced by the amount of the veteran's annual income.

"(c) If the veteran is married and living with or reasonably contributing to the support of such veteran's spouse, or has a child to whose support the veteran is reasonably contributing, security pension shall be paid to the veteran monthly at the annual rate of $4,128, unless the veteran is entitled to security pension at the rate provided by paragraph (2) of subsection (d) or by subsection (e) of this section. If such a veteran has two or more such dependents, the rate shall be increased by $660 for each dependent in excess of one. The rate payable shall be reduced by the amount of the veteran's annual income and, subject to section 564(b)(1) of this title, the annual income of the veteran's spouse and dependent children to whose support the veteran is reasonably contributing.

"(d)(1) If the veteran is in need of regular aid and attendance, the security pension payable to the veteran under subsection (b) of this section shall be $5,299, reduced by the amount of the veteran's annual income.

"(2) If the veteran is in need of regular aid and attendance, the security pension payable to the veteran under subsection (c) of this section shall be $6,227. If the veteran has two or more dependents the annual security pension rate shall be increased by $660 for each such dependent in excess of one. The rate payable shall be reduced, subject to section 564(b)(1) of this title, by the amount of the annual income of the veteran's spouse, if the veteran is living with or reasonably contributing to the support of such spouse, and the annual income of any dependent child or children to whose support the veteran is reasonably contributing.

"(e) If the veteran has a disability rated as permanent and total, and (1) has additional disability or disabilities independently ratable at 60 per centum or more, or (2) by reason of a disability or disabilities, is permanently housebound but does not qualify for the aid and attendance rate under subsection (d) of this section, the security pension payable to the veteran under subsection (b) of this section shall be $3,976, reduced by the amount of the veteran's annual income, and the security pension payable to the veteran under subsection (c) of this section shall be $4,904, plus allowances for additional dependents, reduced by the amount of the veteran's annual income and, subject to section 564(b)(1) of this title, the annual income of such dependents.

"(f) A veteran meets the service requirements of this section if such veteran served in the active military, naval, or air service—

"(1) for ninety days or more during a period of war;

"(2) during a period of war, and was discharged or released from such service for a service-connected disability;

"(3) for a period of ninety consecutive days or more and such period began or ended during a period of war; or

"(4) for an aggregate of ninety days or more in two or more separate periods of service during more than one period of war.

"(g)(1) The Administrator shall provide that, for the purpose of determining whether or not a veteran is permanently and totally disabled, ratings for service-connected disabilities may be combined with ratings for non-service-connected disabilities.

"(2) Where a veteran, by virtue of this section, is found to be entitled to a security pension, and is entitled to compensation for a service-connected disability, the Administrator shall pay such veteran the greater benefit.

"(h) Notwithstanding subsections (b), (c), (d), and (e) of this section, benefits under this section may be paid less frequently than monthly where the amount of the annual benefit would be less than four percent of the maximum annual rate payable to a veteran under subsection (b) of this section.

"§ 562. Security pension for surviving spouses of veterans of a period of war

"(a) The Administrator shall pay to the surviving spouse of each veteran of a period of war who met the service requirements of section 561 of this title, or who at the time of death was receiving (or entitled to receive) compensation or retirement pay for a service-connected disability, security pension monthly at the annual rate prescribed by this section.

"(b)(1) If there is no child, or if no child is in the custody of the surviving spouse, security pension shall be paid to the surviving spouse monthly at the annual rate of $2,144, reduced by the amount of the surviving spouse's annual income.

"(2) If there is a surviving spouse and a child in the custody of the surviving spouse, security pension shall be paid to the surviving spouse monthly at the annual rate of $2,766. If the surviving spouse has two or more children in the surviving spouse's custody, the annual security pension rate shall be increased by $660 for each such child in excess of one. The rate payable shall be reduced by the amount of the surviving spouse's annual income and, subject to section 564(b)(2) of this title, the annual income of any child or children in the custody of the surviving spouse.

"(c)(1)(A) If there is no child, or if no child is in the custody of the surviving spouse, and the surviving spouse is permanently and totally disabled, security pension shall be paid to the surviving spouse monthly at the annual rate of $3,200, reduced by the amount of the surviving spouse's annual income.

"(B) If such surviving spouse has one or more children in the custody of the surviving spouse, security pension shall be paid to the surviving spouse monthly at the annual rate of $4,128, plus $660 for each child in excess of one, and reduced by the amount of the annual income of the surviving spouse and, subject to section 564(b)(2) of this title, the annual income of such child or children.

"(2) If there is a surviving spouse and the surviving spouse (A) has one or more children six years of age or under, in such surviving spouse's custody, or (B) has one or more children who, before attaining the age of eighteen years, became permanently incapable of self support and depends upon the surviving spouse for over one-half of such child's support, security pension shall be paid to the surviving spouse monthly at the annual rate of $4,128. If such surviving spouse has two or more children in such surviving spouse's custody, the annual security pension rate shall be increased by $660 for each such child in excess of one. The rate payable shall be reduced by the amount of the surviving spouse's annual income and, subject to section 564(b)(2) of this title, the annual income of any child or children in the custody of the surviving spouse.

"(d)(1) If a surviving spouse who is entitled to security pension under subsection (c)(1)(A) of this section is in need of regular aid and attendance, the annual rate of security pension payable monthly to the surviving spouse under such subsection shall be $5,299, reduced by the amount of the surviving spouse's annual income.

"(2) If a surviving spouse who is entitled to security pension under subsection (c)(1)(B) of this section is in need of regular aid and attendance, the annual rate of security pension payable monthly to the surviving spouse shall be $6,227. If such surviving spouse has two or more children in the custody of the surviving spouse, the annual security pension rate shall be increased by $660 for each such child in excess of one. The rate payable shall be reduced by the amount of the surviving spouse's annual income and, subject to section 564(b)(2) of this title, the annual income of any child or children in the custody of the surviving spouse.

"(e) No security pension shall be paid to a surviving spouse of a veteran under this section unless the spouse was married to the veteran—

"(1) before (A) March 4, 1917, in the case of a surviving spouse of an Indian War veteran, (B) January 1, 1938, in the case of a surviving spouse of a Spanish-American War veteran, (C) December 14, 1944, in the case of a surviving spouse of a Mexican border period or World War I veteran, (D) January 1, 1957, in the case of a surviving spouse of a World War II veteran, (E) February 1, 1965, in the case of a surviving spouse of a Korean conflict veteran, or (F) May 8, 1985, in the case of a surviving spouse of a Vietnam era veteran;

"(2) for one year or more; or

"(3) for any period of time if a child was born of the marriage, or was born to them before the marriage.

"(f) Notwithstanding subsections (b), (c), and (d) of this section, benefits under this section may be paid less frequently than monthly where the amount of the annual benefit would be less than the amount specified in section 561(h) of this title.

"(g) As used in this section and section 563 of this title, the term 'veteran' includes a person who has completed at least two years of honorable active military, naval, or air service, as certified by the Secretary concerned, but whose death in such service was not in line of duty.

"§ 563. Security pension for surviving children of veterans of a period of war

"(a) The Administrator shall pay to each surviving child, not in the custody of a surviving spouse eligible for security pension under section 562 of this title, of each veteran of a period of war, who met the service requirements of section 561 of this title, or who at the time of death was receiving (or entitled to receive) compensation or retirement pay for a service-connected disability, monthly security pension at the annual rate of $660, reduced by the amount of each child's annual income.

"(b) Notwithstanding subsection (a) of this section, benefits under this section may be paid less frequently than monthly where the amount of the annual benefit would be less than the amount specified in section 561(h) of this title.

"§ 564. Determinations with respect to annual income; income exclusions

"(a) In determining annual income under this subchapter, all payments of any kind or from any source (including salary, retirement or annuity payments, or similar income, which has been waived, irrespective or whether the waiver was made pursuant to statute, contract, or otherwise) shall be included except—

"(1) payments under this chapter and chapters 11 and 13 (except section 412(a)) of this title;

"(2) donations from public or private relief or welfare organizations;

"(3) amounts equal to amounts paid by a spouse for the expenses of a veteran's last illness, and by a surviving spouse or child of a deceased veteran for—

"(A) the veteran's just debts,

"(B) the expenses of the veteran's last illness, and

"(C) the expenses of the veteran's burial to the extent that such expenses are not reimbursed under chapter 23 of this title;

"(4) amounts equal to amounts paid—

"(A) by a veteran for the last illness and burial of the veteran's deceased spouse or child, or

"(B) by a spouse of a living veteran or the surviving spouse of a deceased veteran for the last illness and burial of a child of such a veteran;

"(5) proceeds of fire insurance policies;

"(6) profit realized from the disposition of real or personal property other than in the course of a business;

"(7) amounts in joint accounts in banks and similar institutions acquired by reason of death of the other joint owner;

"(8) $780 of all earned income not otherwise excluded by this section plus one-half of the amount of income which exceeds $780 of (A) the earned income of the veteran, the veteran's spouse and children, if any, for whom the veteran is receiving increased security pension under section 561 (c), (d), or (e) of this title, (B) the earned income of the surviving spouse and the surviving spouse's children, if any, for whom the surviving spouse is receiving increased security pension under such section 562 (b), (c), or (d) of this title, or (C) the earned income of a surviving child receiving security pension under section 563 of this title; and

"(9) amounts equal to amounts paid in the previous calendar year by the veteran, the veteran's spouse, the surviving spouse, or by or on behalf of the surviving child for unreimbursed medical expenditures which exceed $100, to the extent that the Administrator determines, under regulations which the Administrator shall prescribe, that such expenditures were reasonably necessary for the health needs of—

"(A) the veteran,

"(B) the veteran's spouse or children for whom the veteran receives increased security pension,

"(C) the surviving spouse,

"(D) the surviving spouse's children for whom the surviving spouse receives increased security pension, or

"(E) the surviving child or children;

but if the Administrator has determined that adequate services of the same kind as those for which an exclusion had been granted in a previous year were readily available at a facility operated by the Veterans' Administration, expenditures for such health-care services incurred more than 30 days after the Administrator has notified the veteran, surviving spouse, or surviving child, as appropriate, of the Administrator's determination shall not be taken into consideration in determining the amount excludable under this clause, if the Administrator further determines that such services continued to be available during the period in which such expenditures were incurred.

"(b) In determining annual income under this subchapter, (1) where a veteran is living with or reasonably contributing to the support of such veteran's spouse or children, the income of such spouse and children which is reasonably available to or for the veteran shall be considered as the income of the veteran, and (2) where a surviving spouse has custody of a child or children, the income of such child or children which is reasonably available to or for the surviving spouse shall be considered income of the spouse.

"(c) A veteran shall be considered as living with a spouse, even though they reside apart, unless they are estranged.

"(d) Where a fraction of a dollar is involved, annual income shall be fixed at the next lower dollar amount.

"§ 565. Net worth limitation

"(a) The Administrator shall deny or discontinue payment of security pension under section 561 of this title when the corpus of the estate or estates of the veteran, the veteran's spouse, if any, and the veteran's child or children, if any, for whom the veteran is receiving increased security pension under subsection (c), (d), or (e) of section 561 of this title, is such that under all the circumstances, including the consideration of the veteran's income, it is reasonable that some part of the corpus of such estate or estates be consumed for the veteran's maintenance, excluding from the corpus of the estate of such child or children reasonable amounts set aside for educational or other similarly worthwhile vocational purposes.

"(b) The Administrator shall deny or discontinue payment of security pension under section 562 of this title to a surviving spouse when the corpus of the estate or estates of the surviving spouse and the surviving spouse's child or children, for whom the surviving spouse is receiving increased security pension under subsection (b), (c), or (d) of section 562 of this title, is such that under all the circumstances, including the consideration of the surviving spouse's income, it is reasonable that some part of the corpus of such estate or estates, excluding from the corpus of the estate of such child or children reasonable amounts set aside for educational or other similarly worthwhile vocational purposes, be consumed for the maintenance of the surviving spouse.

"(c) The Administrator shall deny or discontinue payment of security pension under section 563 of this title when the corpus of the estate of the surviving child is such that under all the circumstances, including the consideration of the child's income, it is reasonable that some part of the corpus, excluding reasonable amounts set aside for educational or other similarly worthwhile vocational purposes, be consumed for the maintenance of the surviving child.

"§ 566. Election of security pension benefits

"Any veteran eligible for pension under section 521 of this title, any surviving spouse eligible for pension under section 541 of this title, any child eligible for pension under section 542 of this title, and any veteran, surviving spouse, or child eligible for pension under section 9(b) of the Veterans' Pension Act of 1959 may elect at any time to receive security pension under this subchapter in lieu of pension payable to such veteran, surviving spouse, or child under such section. An election to receive security pension under this subchapter shall be irrevocable."

(b) The table of sections at the beginning of chapter 15 of such title is amended by striking out.

"Subchapter IV—Army, Navy, Air Force, and Coast Guard Medal of Honor Roll

"560. Medal of honor roll; persons eligible.
"561. Certificate.
"562. Special provisions relating to pension."

and inserting in lieu thereof

"Subchapter IV—Security Pension for Non-Service-Connected Disability or Death

"561. Security pension for veterans of a period of war.
"562. Security pension for surviving spouses of veterans of a period of war.
"563. Security pension for surviving children of veterans of a period of war.
"564. Determinations with respect to annual income; income exclusions.
"565. Net worth limitation.
"566. Election of security pension benefits.

"Subchapter V—Army, Navy, Air Force, and Coast Guard Medal of Honor Roll

"571. Medal of honor roll; persons eligible.
"572. Certificate.
"573. Special provisions relating to pension."

(c) Subsection (a) of section 503 is amended by striking out "In determining annual income under this chapter," and inserting in lieu thereof "In determining annual income under subchapters II and III of this chapter,".

(d) Section 504 is amended by striking out "and III" and inserting in lieu thereof a comma and "III, and IV".

(e) Section 506 is amended by—

(1) inserting after subsection (a) the following new subsection (b):

"(b) As a condition of granting or continuing a pension under section 561, 562, or 563 of this title, the Administrator—

"(1) may require from any person applying for, or in receipt of, a pension thereunder such information, proofs, or evidence as the Administrator desires in order to determine the annual income and the corpus of the estate of such person and of each spouse and child for whom the person is receiving or is to receive additional pension;

"(2) shall require that any such person, other than a person who has no such spouse or child and whose entire income is derived from a Federal retirement program, if such person has been paid pension under section 561 or 562 for a period of one year or more, file each year with the Veterans' Administration (on the form prescribed by the Administrator) a report showing the total income which such person (and any such spouse or child) received during the preceding year, the corpus of the estate of such person (and of any such spouse or child) at the end of that year, and such person's estimate for the then current year of the total income such person (and any such spouse or child) expects to receive and of any expected increase in the corpus of the estate of such person (and of any such spouse or child), "(3) shall require that any such person promptly file a revised report whenever there is a material change in the estimated annual income of such person (or of any such spouse or child) or a material change in such person's estimate of the corpus of the estate of such person (or of any such spouse or child); and

"(4) shall require that any such person promptly notify the Administrator of any change in the dependency status of any spouse or child on whose account such person is receiving additional pension."; and

(2) amending subsection (b) by striking out "or 542" and inserting "542, 561, 562, or 563" in lieu thereof and by redesignating such subsection (b) as subsection (c).

(f) Section 507 is amended by inserting "or IV" after "subchapter II".

(g)(1) Paragraph (1) of section 511(c) is amended by striking out "section 521" and inserting in lieu thereof "section 561" and by striking out "World War I." and inserting in lieu thereof "a period of war.".

(2) Subsection (c) of section 511 is further amended by inserting at the end thereof the following new paragraph:

"(3) Any veteran who was entitled, prior to the effective date of the security pension program provided for under section 561 of this title, and who elected, prior to such effective date and pursuant to paragraph (1) of this subsection, to receive pension under section 521 of this title may elect to receive security pension under section 561 of this title in lieu of pension under such section 521. Such an election shall be irrevocable.".

(h)(1) Subparagraph (A) of section 512(a)(3) is amended by striking out "521" and inserting in lieu thereof "561" and by striking out "World War I." and inserting in lieu thereof "a period of war.".

(2) Paragrapn (3) of section 512(a) is further amended by redesignating "(B)" as "(C)", and by inserting after subparagraph (A) the following new subparagraph:

"(B) Any veteran who was entitled, prior to the effective date of the security pension program provided for under section 561 of this title, and who elected, prior to such effective date and pursuant to paragraph (1) of this subsection, to receive pension under section 521 of this title may elect to receive security pension under section 561 of this title in lieu of pension under such section 521. Such an election shall be irrevocable.".

(i) Section 521 is amended by inserting at the end thereof the following new subsection:

"(i)(1) No veteran who makes application for and becomes entitled to pension on or after the effective date of the security pension program provided for under section 561 of this title may be paid pension under this section.

"(2) Any veteran who made application for pension under this section prior to such date may be paid pension under this section if (A) the Administrator determines, after such date, that such veteran is entitled on the basis of such application to a non-service-connected disability pension, and (B) such veteran elects to receive pension under this section in lieu of security pension under section 561 of this title.".

(j) Section 532 is amended by inserting at the end thereof the following new subsection:

"(e) Any surviving spouse eligible for pension under this section, shall, if such surviving spouse so elects, be paid pension at the rates prescribed by section 562 of this title, and under the conditions (other than the service requirements) applicable under that section to surviving spouses of veterans of a period of war. If pension is paid pursuant to such an election, the election shall be irrevocable.".

(k) Section 533 is amended by inserting "(a)" before "Whenever" and inserting at the end thereof the following new subsection:

"(b) Any child eligible for pension under this section shall, if such child so elects, be paid pension at the rate prescribed by section 563 of this title, and under the conditions (other than the service requirements) applicable to pension paid under that section to children of veterans of a period of war. If pension is paid pursuant to such an election, the election shall be irrevocable.".

(l) Section 534 is amended by inserting at the end thereof the following new subsection:

"(d) Any surviving spouse eligible for pension under this section, shall, if such surviving spouse so elects, be paid pension at the rates prescribed by section 562 of this title, and under the conditions (other than the service requirements) applicable under that section to surviving spouses of veterans of a period of war. If pension is paid pursuant to such an election, the election shall be irrevocable.".

(m) Section 535 is amended by inserting "(a)" before "Whenever" and inserting at the end thereof the following:

"(b) Any child eligible for pension under this section shall, if such child so elects, be paid pension at the rate prescribed by section 563 of this title, and under the conditions (other than the service requirements) applicable to pension paid under that section to children of veterans of a period of war. If pension is paid pursuant to such an election, the election shall be irrevocable.".

(n)(1) Paragraph (1) of subsection (d) of section 536 is amended by striking out "541" and inserting in lieu thereof "562" and by striking out "World War I." and inserting in lieu thereof "a period of war.".

(o) Section 537 is amended by inserting "(a)" before "Whenever" and inserting at the end thereof the following new subsection:

"(b) Any child eligible for pension under this section shall, if such child so elects, be paid pension at the rate prescribed by section 563 of this title, and under the conditions (other than the service requirements) applicable to pension paid under that section to children of veterans of a period of war. If pension is paid pursuant to such an election, the election shall be irrevocable.".

(p) Section 541 is amended by inserting at the end thereof the following new subsection:

"(g)(1) No surviving spouse who makes application for and becomes entitled to pension on or after the effective date of the security pension program provided for under section 562 of this title may be paid pension under this section.

"(2) Any surviving spouse who made application for pension under this section prior to such date may be paid pension under this section if (A) the Administrator determines, after such date, that such surviving spouse is entitled on the basis of such application to a pension, and (B) such surviving spouse elects to receive pension under this section in lieu of security pension under section 562 of this title.".

(q) Section 542 is amended by inserting at the end thereof the following new subsection:

"(d)(1) No surviving child not in the custody of a surviving spouse who makes application for and becomes entitled to pension on or after the effective date of the security pension program provided for under section 563 of this title may be paid pension under this section.

"(2) Any surviving child, not in the custody of a surviving spouse eligible for security pension under section 562 of this title, who made application for pension under this section prior to such date may be paid pension under this section if (A) the Administrator determines, after such date, that such surviving child is entitled on the basis of such application to a pension, and (B) such child elects to receive pension under this section in lieu of security pension under section 563 of this title.".

(r)(1) The first sentence of subsection (c) of section 571 (as redesignated by subsection (a)(1) of this section) is amended by striking out "562" and inserting in lieu thereof "573".

(2) The second sentence of subsection (a) of section 572 (as redesignated by subsection (a)(1) of this section) is amended by striking out "560" and inserting in lieu thereof "571".

(3) Subsection (b) of section 572 (as redesignated by subsection (a)(1) of this section) is amended by striking out "562" and inserting in lieu thereof "573".

(4) The first sentence of subsection (c) of section 572 (as redesignated by subsection (a)(1) of this section) is amended by striking out "562" and inserting in lieu thereof "573".

(5) Subsection (a) of section 573 (as redesignated by subsection (a)(1) of this section) is amended by striking out "561" and inserting in lieu thereof "572".

TITLE II—MISCELLANEOUS PROVISIONS

Sec. 201. Paragraph (15) of section 101 of title 38, United States Code, is amended by striking out "monthly" and inserting in lieu thereof "periodic".

Sec. 202. Clause (4) of subsection (b) of section 3012 of title 38, United States Code, is amended to read as follows:

"(4) by reason of change in income or corpus of estate shall be the last day of the calendar year in which the change occurred, except that such effective date shall be the last day of the month in which the change occurred for persons receiving payments under section 561, 562, or 563 of this title;".

Sec. 203. (a) Chapter 53 of title 38, United States Code, is amended by inserting at the end thereof the following new section:

"§ 3112. Annual adjustment of certain benefit rates and income exclusions

"(a) Whenever in any calendar year after 1978 benefit amounts under title II of the Social Security Act are increased by a percentage effective with any month as a result of a determination made under section 215(i) of such Act, each of the dollar amounts in effect for such month for security pension benefits payable under sections 561, 562, and 563 of this title, and the dollar amount shown in subsection (a)(8) of section 564 of this title, as specified in such sections or subsections, or as previously increased under this section, shall be increased by the same percentage (and rounded in such manner as the Administrator deems appropriate), effective with respect to security pension benefits payable for months after such month; and such dollar amounts so increased shall be published in the Federal Register at the same time as the material required by section 215(i)(2)(D) of the Social Security Act to be published therein by reason of such determination.

"(b) Notwithstanding the provisions of section 3012(b)(4) or any other provision of this title, whenever the rates of security pension payable under sections 561, 562, and 563 of this title are adjusted in accordance with subsection (a) of this section, the Administrator shall recompute the amount of annual security pension payable to each veteran, surviving spouse, and surviving child, who is also entitled to receive payments under any other Federal program, the rates of which are adjusted as a result of a determination made under section 215(i) of the Social Security Act. Any such recomputation shall be made on the basis of the annual rate of payments payable to a veteran, surviving spouse, or surviving child under such other Federal program, as increased by the determination made under section 215(i) of the Social Security Act; and the recomputed rates of security pension shall become effective beginning with the first month in which the increase in security pension and the increase in payments under such other Federal program are both effective.".

(b) The table of sections at the beginning of chapter 53 of such title is amended by inserting

"3112. Annual adjustment of certain benefit rates and income exclusions."

below

"3111. Prohibition of certain benefit payments.".

(c) Notwithstanding the provisions of section 3012(b)(4) of title 38, United States Code, or any other provision of such title, the Administrator shall compute the amount of annual security pension payable to each veteran, surviving spouse, and surviving child who is receiving pension on the effective date of this Act, and who elects to receive security pension under the amendments made by this Act, in any case in which such person is also entitled to receive payments under any other Federal program, the rates of which are adjusted as a result of a determination made under section 215(i) of the Social Security Act, by determining the annual rate of payments to such veteran, surviving spouse, or surviving child under such other Federal program as increased by the most recent determination made under section 215(i) of the Social Security Act, if such person elects security pension within six months of the effective date of this Act.

TITLE III—EFFECTIVE DATE

SEC. 301. The amendments made by this Act to title 38, United States Code, shall become effective on October 1, 1978.

By Mr. ROBERT C. BYRD (for Mr. HUMPHREY, for himself, Mr. LEAHY, Mr. CLARK, Mr. McGOVERN, Mr. PEARSON, Mr. MELCHER, Mr. YOUNG, Mr. CURTIS, Mr. BELLMON, Mr. DOMENICI, Mr. CHURCH, Mr. EASTLAND, Mr. MORGAN, Mr. HOLLINGS, Mr. MATSUNAGA, Mr. BURDICK, and Mr. CULVER):

S. 2385. A bill to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities and to authorize nonmarket economy countries to participate in certain programs of the Commodity Credit Corporation; to the Committee on Agriculture, Nutrition, and Forestry, and the Committee on Finance, jointly, by unanimous consent.

THE AGRICULTURAL TRADE EXPANSION ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I introduce a bill for the Senator from Minnesota (Mr. HUMPHREY), for himself and others, entitled "The Agricultural Trade Expansion Act of 1977." I ask unanimous consent that a statement by Mr. HUMPHREY, together with the bill, be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR HUMPHREY

We are at a crossroads in our policymaking regarding the export of agricultural commodities.

We have the choice of being satisfied with our current levels of agricultural exports or deciding to push ahead to expand into new markets.

The bill I am introducing today, The Agricultural Trade Expansion Act of 1977, is designed to make this nation fully competitive in international markets with the principal grain exporting nations of the world: Canada, Australia, and Argentina.

Our trade deficit and its pressure on the dollar make it imperative that we move more aggressively into international marketing of our farm commodities instead of sitting back and remaining the residual supplier of the rest of the world.

We must press vigorously to eliminate every obstacle to expanded food trade.

The Agricultural Trade Expansion Act of 1977 would achieve two important objectives. The first would be to establish an intermediate credit program under the Commodity Credit Corporation. The second objective would be to lift existing restrictions on the ability of the CCC to extend participation of its programs to nonmarket economy countries.

This bill does not create a concessional or giveaway program. It is designed solely to maximize our farm exports on a commercial basis. As such, it should not cost the American taxpayer one cent.

The purpose of this first portion of the bill, the intermediate credit program, is to give our CCC the ability to offer credit terms of up to ten years. At the present time, the CCC is able to provide credit only for up to three years.

All available evidence indicates that Canada, Australia, and Argentina are able to provide credit in excess of three years. Because of this lack of capacity to offer more favorable terms, I believe that we are losing sales to our competitors.

We should recognize the fact that financing facilities have become an established and recognized part of international trade in farm commodities. Financing is important simply from the standpoint that it is desirable not to utilize all of one's capital investment at the outset. Countries want and expect financing terms as a part of a transaction. Our competitors are making inroads into our markets because we are not matching them.

By writing the intermediate credit provision into law, we will be bridging the gap that currently exists between the present CCC program and Title I of Public Law 480 ("Food for Peace"). The PL 480 program authorizes concessional credit over a period of 20 to 40 years as opposed to the CCC program of up to three years at commercial rates of interest

The second portion of this legislation would establish the eligibility of nonmarket economy countries to participate in CCC credit programs. I am taking this approach because I believe that these countries are where our significant market advances can be made in coming years. We must begin to export to these countries or we will lose these important markets to competing nations, thereby continuing our historic position as a residual supplier.

None of these nonmarket economies will be getting a free ride. And all of them will be required to meet stringent CCC tests for credit worthiness. If these rigid standards cannot be met, then credit simply would not be offered.

Let me make my position very clear. Trade in commodities is a world of its own that cannot be turned on and off because of changes in the political climate. In agricultural production, it is impossible to suddenly shut down the assembly line. And agricultural production in the United States is the envy of the world, accounting for the predominant dollar-value of our exports, while at the same time assuring adequate supplies for our own people. The exporting of farm commodities can and should be looked upon, not only as very good business, but also as a unique sector of trade that only benefits other people, thereby having a definite potential to improve our international relations. The United States only suffers a worsening of its trade balance when we put restrictions on sales of farm commodities to other nations which then turn around and buy elsewhere in the world.

The bottom line of this legislation is our desire to put our CCC at the same competitive level with our principal competition in the world food marketplace—Canada, Australia, and Argentina. While this bill will not immediately reverse the discouraging conditions facing our farmers, it will be a promising and significant step in the right direction.

I believe that there is wide support for this bill. I am pleased that Senators Leahy, Clark, McGovern, Melcher, Pearson, Hollings, Young, Curtis, Bellmon, Domenici, Morgan, Matsunaga. Church, Culver, Eastland, Burdick, have joined me in offering this legislation.

I ask that the text of the bill be printed in the RECORD.

The bill was ordered to be printed in the RECORD as follows:

S. 2385

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Agricultural Trade Expansion Act of 1977."

SEC. 2. Section 4 of the Food for Peace Act of 1966 (80 Stat. 1538; 7 U.S.C. 1707a) is amended to read as follows:

"SEC. 4. (a) Commercial sales of agricultural commodities out of private stocks on credit terms of not to exceed three years may be financed by the Commodity Credit Corporation under its Export Credit Sales Program.

"(b) Export sales of agricultural commodities out of Commodity Credit Corporation and private stocks on credit terms in excess of three years, but not more than ten years, may be financed by the Commodity Credit Corporation. The provisions of Public Law 664, 83d Congress, as amended (68 Stat. 832, 46 U.S.C. 1241(b)), shall not apply to sales financed pursuant to this subsection.

"(c) There are hereby authorized to be appropriated such sums as may be necessary to reimburse the Commodity Credit Corporation annually for its actual costs incurred or to be incurred under programs undertaken under this section."

SEC. 3. Notwithstanding any other provision of law denying nonmarket economy countries eligibility to participate in programs of the Government of the United States, such countries shall be eligible to participate in any program carried out by the Commodity Credit Corporation (other than under the Agricultural Trade Development and Assistance Act of 1954) under which credit or credit guarantees or investment guarantees are extended, directly or indirectly.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill I introduced for Senator HUMPHREY relating to expanding agricultural trade be referred jointly to the Committee on Agriculture, Nutrition, and Forestry, and the Committee on Finance.

The PRESIDING OFFICER. Without objection, it is so ordered.

By Mr. LONG:

S. 2386. A bill to amend the Shipping Act, 1916, as amended, to provide for the prompt and effective implementation of certain equal access, pooling, rationalization, apportionment, and related reciprocal ocean transportation agreements entered into between carriers of the flags of the United States and of the nations with which we trade and to provide immunity for such agreements from the application of the antitrust laws; to the Committee on Commerce, Science, and Transportation.

Mr. LONG. Mr. President, U.S. foreign ocean commerce presently faces, in the form of malpractices committed by certain carriers, a problem which is of a magnitude sufficient to see the demise of the participation of U.S.-flag vessels in our ocean foreign trades; this is an immediate and real threat which must be recognized and dealt with in a prompt and effective manner. This memorandum will attempt to outline, in brief terms, the nature of the problem and the solution offered by this bill.

I. MALPRACTICES

Malpractices, such as rebating, are matters which are peculiar to the foreign trades of the United States. This results from the fact that carriers in our trades, through regulation under the Shipping Act, 1916, are required by law to publish their tariffs and to adhere to the rates so published. In most non-U.S. trades, such regulation does not exist and carriers effectively are free to charge what the traffic will bear paying such commissions, rebates, or other allowances as may be appropriate or necessary to obtain the business. Under such a nonregulated system, carriers may negotiate individually and secretly with shippers in a manner entirely foreign to our concepts of common carriage.

The issue of malpractices, generally, is one which was recognized by the Alexander committee report which was a prelude to the enactment of the Shipping Act, 1916. The latter statute made unlawful certain defined types of deferred rebates and also required that all shippers or receivers, equally situated, be thereby precluding, in theory, the private deals which exist in some non-U.S. or foreign-to-foreign trades.

Competitive forces coupled with difficulty—actually, impossibility—in enforcing the concepts of our legislation have allowed rebating to remain a severe and destructive practice in some U.S. ocean trades. This was recognized by the report of the Celler committee in 1962 which outlined the variety of rebating practices which had been engaged in by many foreign-flag carriers in our export and import trade. The fact remains that despite all such disclosures, there has been no effective means devised to enforce—through regulation—the prohibitions against malpractices contained in our laws. However, in recent years, pooling and related agreements—most notable those in the United States/Latin American trades—have demonstrated their effectiveness in eliminating malpractices.

With the growth of containerization, our trades have seen extreme over-tonnaging with attendant growth of malpractices adopted to fill the surplus tonnage. The seriousness of the problem was pointed up by the September 10, 1976, press release issued by R. J. Reynolds Industries, Inc., in which Reynolds announced that—

> Its investigation had concluded that more than 19-million dollars in possibly illegal rebates had been paid by its shipping subsidiary, Sea-Land Service, Inc., to shippers, consignees and forwarding agents during the period 1961 through 1975.

Although Reynolds referred to the rebates as "possibly illegal," the fact of their apparent illegality is best demonstrated by the $4 million settlement of civil penalties effected between Sea-Land and the Federal Maritime Commission.

There have been similar disclosures of malpractices engaged in by other common carriers in our foreign ocean commerce. It is necessary, however, that we recognize the manner in which these incidents have been discovered in order that there will be no confusion as to the obvious futility in attempting to police such practices under the present law.

Disclosures of rebating practices have not resulted, in any significant instances, from policing, public or private, performed under the Shipping Act, 1916. On the contrary, the information apparently has come to light following special audits performed by U.S. corporations to tighten their corporate accounting procedures. These U.S. companies, under our laws, have found it necessary to report those audits to the SEC and other regulatory agencies, causing disclosure of rebates by U.S. shippers and receivers as well as by carriers such as Sea-Land.

Meanwhile, there is and will remain, in the absence of effective legislation, a "dark side of the moon" in which malpractices will continue without check or systematic discovery by our regulatory agencies; that is, non-U.S. companies—carriers, shippers, and receivers—are not subject to our SEC/auditing requirements and will be able to continue, unabated, such malpractices.

In this connection, it must be understood that either the shipper or receiver of the cargo may arrange, under the purchase contract, to retain control over the designation of the ocean carrier. Thus, where a product is sold by a U.S. manufacturer to a foreign consumer, the latter may negotiate, where it is to its advantage, to retain control over the selection of the ocean carrier. A foreign ocean carrier then can arrange to pay an undisclosed and unlawful rebate, abroad, to the foreign receiver to ensure that the cargo will move on the vessel of that carrier. The complete transaction will be such that the U.S. manufacturer will pay the ocean freight to the foreign carrier—whose use has been dictated by the receiver abroad—and that carrier, in turn, will rebate a portion of the freight to the receiver as compensation for having secured this cargo. The transaction need not produce a single piece of paper available in this country which would in any manner disclose the existence of the rebate. It would not be revealed to the U.S. manufacturer, nor to the U.S. agents for the foreign carrier, all elements being consummated abroad, completely safe from discovery by U.S. authorities.

Our present system is one which cannot enforce, effectively, the legal theories under which we attempt to regulate our foreign commerce; the obvious detriment to U.S. carriers and to U.S. shippers and receivers is apparent. It is essential that we undertake steps to remove this self-imposed discrimination against our own interests.

If a trade is over-tonnaged to the extent that 20 or 30 percent of the capacity of the carrier vessels is unoccupied, any individual carrier which is in a position to obtain substantially better utilization through selective malpractices, particularly rebates, will have a better financial result despite the fact that a portion of its cargo is carried at a net rate less than that filed in its tariff. A U.S. flag carrier subjected to FMC/SEC regulation, as Sea-Land Services discovered, will be required to be an "honest" carrier and will be denied an opportunity to compete for cargo moving through the rebating device. The simple fact is that the divergence between the regulation of companies based in the United States and those based abroad precludes our laws from being effectively and evenly enforced; there is no device under which this country is going to be able to obtain a substantially different result as a matter of pure law enforcement.

II. THE PROPOSED LEGISLATION

A. IN GENERAL

The proposed legislation seeks to validate pooling, equal access, and rationalization agreements. None of these are unlawful under the present Shipping Act, 1916, but the regulatory impediments which have been created under that statute have largely frustrated the ability of the carriers to utilize these devices to afford effective competition which will avoid the problems to which we have referred. Carriers which have been engaged in trades with countries whose national policy fosters the implementation of such agreements have been repeatedly faced with inability to obtain prompt approval of such agreements from the Federal Maritime Commission.

This need not be a reflection of a deficiency on the part of the Commission so much as the failure of the laws under which it operates to recognize the political and economic changes which have taken place in the world in the more than 60 years since the enactment of the Shipping Act, 1916, which have given rise to the development of the Communist Bloc nations, the downfall of the colonial empires and the concurrent rise of the Third World or developing countries.

This has been further complicated by the ever more introspective view which the Department of Justice has sought to take of the antitrust laws and their relationship to and impact upon our foreign ocean commerce. We would only point out, parenthetically, that the Department of Justice has never undertaken an effective prosecution of an antitrust violation by a foreign ocean carrier. These companies can merge, agree, and otherwise act with complete impunity while all activities of their U.S.-flag counterparts remain subject to Department of Justice scrutiny.

B. DETAILED ANALYSIS OF THE PROPOSED LEGISLATION

First. The opening and enabling paragraph: The legislation permits, without prior Federal Maritime Commission approval and subject to the conditions imposed, the establishment of cargo pooling, equal access, rationalization and/or apportionment agreements only where U.S.-flag carriers are participants receiving a share of the trade equivalent to that of the reciprocal nation.[1] Such agreements, involving national flag carriers, are entirely normal and commonplace in non-U.S. trades. The agreements would not be discriminatory as the concept would apply equally to all our trading partners, that is, United States-Soviet trade, United States-Brazil trade, and so forth. It is further provided that agreements falling within the categories described will be both lawful and free of any cloud created by our antitrust laws.

Second. Subparts (1) and (2) of the proposed legislation: The bill provides for freedom of entry and participation in the trades by U.S. flag, reciprocal flag and third flag carriers, either as independent carriers or as parties to the agreements.

Third. Concluding paragraphs of the proposed legislation: As has been indicated, the impediment to agreements of this nature has been the inability to obtain their prompt approval by the Federal Maritime Commission. Under the proposed bill, the agreements and any amendments will become effective within 30 days after filing with the Federal Maritime Commission and will remain lawful and effective until there has been a final determination that an agreement in some manner violates the statute.

The section continues by providing for very substantial civil penalties for violation of the statute. These penalties together with the damage and reparation provisions of the Shipping Act, 1916, are to be the exclusive penalties and/or remedies to which the parties are subjected for violation of the statute, to the exclusion of the antitrust laws.

III. THE SOLUTION OFFERED

Malpractices cannot be extinguished solely by any legislative device which this country would be prepared to enact on a unilateral basis. At the same time, if our carriers are given the freedom to deal with their counterparts in the nations with which we trade, the problem can be minimized, if not entirely eliminated. Thus, once carriers reach, by mutual, negotiated agreements, fixed prorations of trades, equal access to cargoes, scheduled participation in profits and/or rationalized limitations on services, the incentive to grant rebates largely disappears. It does not serve the interests of a carrier which, for example, may have a 40 percent right of participation in a trade to increase, through malpractices, such as rebates, its carryings to 50 percent where, in addition to the cost of the rebate, it will—under the pooling agreement—be required to pay a substantial part of the additional revenue—based on the full tariff rate without rebate—to the other participants in the pooling agreement.

This is simply a reflection of the nature of the rebate and the cause of the problem, that is an effort by a carrier to improve its competitive position and carryings through the granting of an unlawful secret discount to certain selected shippers or receivers.

At the same time, such agreements retain for the benefit of our commerce and the shippers and receivers in our trades, a healthy competitive stimulus to the carriers, through the net revenue residuals which are retained even by overcarriers in pooling agreements, to seek, within reasonable competitive limits to maximize their own carryings. Similarly, the service provisions and penalties for noncompliance which are essential parts of the agreements insure maintenance of efficient and regular service.

These desirable goals have been achieved in trades utilizing such agreements without undue increases in transportation costs. As Chairman Dashbach of the FMC recently noted, a communication from the Department of State to the Commission pointed out:

> The evidence does not support the apparent belief by the FMC that Latin American cargo reservation measures have been anti-competitive. The Department of Justice Study of the regulated Ocean Shipping Industry shows that from 1965 to 1975, ocean freight rates increased by 34 percent in the U.S./Brazil and Argentina trades, even though Brazil and Argentina implemented comprehensive cargo preference regimes during this period. This average rate increase of only 3.4 percent per year, during a period of both general inflation, and, particularly, of the price of bunker fuels, compares very favorably with the concurrent 14.9 percent average annual rate increase in the North Atlantic trades, where cargo preference does not exist.

IV. CONCLUSION

The proposed bill does not represent a substantial departure from the basic concepts of our laws, but only recognizes the legitimate interests of this country and of our trading partners in maintaining their merchant fleets, at least to the extent that they do not unduly inhibit the viability of those fleets through unrealistic regulation which prevents them from meeting the conditions which exist in current world trade. The bill, accordingly, serves to promote the goals established for the U.S. flag fleet by the Merchant Marine Act of 1936.

This proposed legislation is intended to provide an effective long term solution which will expressly empower the Federal Maritime Commission, as a matter of national maritime policy, to permit action by ocean carriers that will have the effect of limiting tonnage in a particular liner trade where necessary to insure competitive and economic stability. From the carriers' standpoint, this is becoming increasingly critical as the capital cost of bottoms and shore-side facilities continues to escalate at an exponential rate. Likewise, stability and predictability in the trades themselves will redound to the benefit of importers, exporters, and the consumer.

The Shipping Act, 1916, is a statute which has existed without needed improvements or revisions to meet changing conditions in the real world of international transportation. The present proposed bill is a step toward correcting a major omission which gravely affects our maritime industry.

By Mr. PELL:

S. 2387. A bill to extend for 1 year the authority of the Commissioner of Education to waive provisions of title I of the Elementary and Secondary Education Act for certain local educational agencies; to the Committee on Human Resources.

Mr. PELL. Mr. President, I am introducing today a bill which would give 13 school districts in the country, including that of my home town of Newport, R.I., the opportunity to administer for an additional year compensatory education programs funded under title I of the Elementary and Secondary Education Act in a manner different from that authorized by law.

Congress, in the Education Amendments of 1974, authorized the National Institute of Education to conduct demonstration programs in a limited number of school districts. It was our hope that such demonstrations would show improved ways of operating title I programs. Thirteen districts, including Newport, have participated in these demonstrations for the last 2 years. Their experiences, which were reported to the Subcommittee on Education, Arts, and Humanities by the National Institute of Education, will prove extremely valuable to the subcommittee, as it seeks to reauthorize the title I program.

This reauthorization process will not, however, be complete until some time next year. If the Congress does not act until the summer of 1978, and the Office of Education must then interpret any changes made to title I and issue regulations based on such changes, these 13 districts could be placed in a position of uncertainty and potential administrative and programmatic disruption.

The bill I am introducing today would allow these 13 districts to continue their demonstration projects through fiscal year 1979. This will give the Congress and the Office of Education sufficient time to act in passing and implementing a revised and extended title I. And it will prevent the possibility that these 13 districts might have to revert to the old law for fiscal year 1978, when it is possible that a new law might enable them to continue their innovative practices in 1979.

By introducing this legislation, I do not intend to predict the direction that title I legislation may take. We will have to continue studying the practices adopted by these demonstration districts very carefully, to determine which might be usefully made part of the basic law.

However, as that determination will take some time, I do not believe that these districts should suffer needlessly. The bill I introduce today will assure that this will not happen.

By Mr. ABOUREZK (for himself, Mr. HUMPHREY, Mr. KENNEDY, Mr. INOUYE, Mr. MATSUNAGA, Mr. HATFIELD, Mr. STEVENS, Mr. GRAVEL, and Mr. GOLDWATER):

S.J. Res. 102. A joint resolution relating to American Indian religious freedom; to the Select Committee on Indian Affairs.

---

[1] Where U.S.-flag carriers are not such participants, a proposed agreement would remain subject to the requirement of prior approval by the Federal Maritime Commission.

AMERICAN INDIAN RELIGIOUS FREEDOM

Mr. ABOUREZK. Mr. President, I am today introducing a joint resolution with the cosponsorship of my colleagues Senators Humphrey, Kennedy, Inouye, Matsunaga, and Hatfield. This resolution will set forth a clear policy of religious freedom for traditional American Indians, Native Alaskans, and Native Hawaiians. Indian traditional and religious leaders, some of whom have come a long way to be here today, urgently requested us to present this action. My colleagues and I honor them, and urge you to support their basic right to religious belief and practice.

One of the most fundamental precepts in the founding of our country is the freedom of religion. Indians have an inherent right to the free exercise of their religion. That right is reaffirmed by the U.S. Constitution in the Bill of Rights, as well as by many State and tribal constitutions. The practice of traditional native Indian religions, outside the Judeo-Christian mainstream or in combination with it, is further upheld in the 1968 Indian Civil Rights Act.

LACK OF A POLICY HAS RESULTED IN CONTINUING INFRINGEMENT

However, in recent years, there have been increasing incidents of abrogation of the religious rights of American Indians. New barriers have been raised against the pursuit of their traditional culture, of which religion is an integral part.

It is clear that these incidents did not result from a Government policy to abridge the religious freedom of Indians. Rather, events were allowed to occur, because there was a lack of Government policy

Lack of knowledge, unawareness, insensitivity, and neglect are the keynotes of the Federal Government's interaction with traditional Indians' religions and cultures. This state of affairs is enhanced by the perception of many non-Indian officials that because Indian religious practices are different than their own, they somehow do not have the same status as a "real" religion.

Yet, the effect on the individual whose religious customs are violated or infringed is as intense as if he had been Protestant, Catholic, or Jewish.

HOW DID THIS INFRINGEMENT COME ABOUT?

It came about through the enforcement of policies and regulation based on laws which are basically sound and which the large majority of Indians strongly support. These laws often embody principles such as the preservation of wilderness areas and the preservation of endangered species for which Indians have actively fought, literally generations before the non-Indian became convinced of their importance.

But, because these laws were not intended to relate to religion and because there was a lack of awareness of their effect on religion, Congress inadvertantly neglected to fully consider the impact of such laws on the Indians' religious practices.

It is only within the last decade that it has become apparent that such laws, when combined with more restrictive regulations, insensitive enforcement procedures and administrative policy directives, in fact, have interfered severely with the culture and religion of American Indians. Federal law has interfered with the free exercise of native religions in three general areas.

LACK OF ACCESS TO SACRED SITES

The first is restrictions in space or where Indians are denied access to a physical location. There are certain sites, a hill, a lake, or a forest glade which are sacred to Indian religions. Ceremonies are often required to be performed in these spots. To deny access to them is analogous to preventing a non-Indian from entering his church or temple. Most of these sites not in Indian possession are owned by the Federal Government and a few are on State lands. Federal agencies such as the Forest Service, Park Service, Bureau of Land Management, and others have prevented Indians in certain cases form entering onto these lands. The issue is not ownership or protection of the lands involved. Rather, it is a straightforward question of access in order to worship and perform the necessary rites.

Further, there is the question of cemeteries which were in use at the time of Federal subjugation. In some instances, these lands were put under Federal supervision, because they were Indian cemeteries. Yet, today the same tribes cannot bury their religious and political leaders there. Surely, there is no overriding reason to deny Indians the right to inter their dead in sanctified ground. There is no reason why revised regulations and enforcement procedures could not allow access for religious purposes and still follow the intent of these laws.

RESTRICTION ON USE OF SACRED OBJECTS

The second major area of Federal violations is the restrictions of substances. To the Indians, these natural objects have religious significance, because they are sacred, they have power, they heal, they are necessary to the exercise of rites of the religion, they are necessary to the cultural integrity of the tribe and, therefore, religious survival or a combination of these reasons. To the Federal Government, these substances are restricted, because the non-Indian has made them scarce, as in endangered species, or because they pose a health threat to those who misuse them, as in peyote.

The Federal court system has shown that this apparent conflict can be overcome with the institution of well thought out exceptions. Although, acts of Congress prohibit the use of peyote as a hallucinogen, it is established Federal law that peyote is constitutionally protected when used by a bona fide religion as a sacrament. Yet, a lack of awareness or understanding of the law has led some Federal officials to confiscate sacramental substances. Things which have never been prescribed by law, such as pine leaves or sweet grass, have been confiscated by Federal officials who were suspicious that they were some form of drugs. Even worse, medicine bundles sealed by religious leaders and worn by Indians for health, protection, and purity are never to be opened by them or handled by others. Although containing only legal substances, these medicine bags or bundles have been opened by customs officials searching for drugs, thus making them unclean and valueless.

Another example of overzealous officials is the confiscation of turkey feathers and the feathers of other common birds which are legal for all Americans to possess, but which are taken with fear that they might be from some endangered bird.

Even the most ardent conservationist does not understand the necessity of preserving eagles and hawks as well and as deeply as a traditional Indian. Yet, prohibiting the possession and exchange by Indians of feathers on one's family for generations, or the use of feathers from a bird shot by non-Indian ranchers, or poisoned by non-Indian pesticides does not help preserve endangered species. It does prevent the exercise of American Indian religions. Although the enforcement problems create more difficult administrative issues and require more careful consideration of regulation changes in this area, it is possible, with work, to both uphold the intent of the laws and allow for religious freedom. It is anticipated that where necessary, tribal representatives will be able to institute self-enforcement procedures designed to insure that any exception to general regulatory laws surrounding access to sites, use of sacred objects, et cetera, will be confined to tribal members actually participating in the religious exercise or event.

INTERFERENCE IN RELIGIOUS EVENTS

The third and final area of concern is actual interference in religious events. In some instances, those who interfere have good motives or are merely curious. These instances include being present at ceremonies which require strict isolation. One case even extended to circling the ceremony in small aircrafts. Unlike the other areas, some of these incidents happen, because of Federal omissions, rather than actions. In areas where the Federal Government has a duty to act or is the only law enforcement at the site, they have failed to protect Indian religions from intrusions.

In other instances, it is the Government official who directly interferes. Historically, Indian ceremonies have been misunderstood. The Ghost Dance, a visionary nonactivist rite, was the provocation for massive bloodshed by the Army which believed it to be inciting violence. Even today, certain symbolic portions of the Sun Dance which deal with fertility and the cycle of life are banned. The prejudice involved officials' belief that it was "sinful" in Christian terms. Such misunderstanding is analogous to attributing the taking of communion to cannibalism.

This direct Federal interference in the religious ceremonies imposes upon one religion, by Government action, the values of another. Such action is a direct threat to the foundation of religious freedom in America. It comes far too close to an informal state religion.

HOW CAN WE RESOLVE THE PROBLEM?

America does not need to violate the religions of her native peoples. There is room for and great value in cultural and religious diversity. We would all be poorer if these American Indian religions disappeared from the face of the Earth.

Much can be done to prevent the destruction of Indian religions. For instance, several States have already taken supportive action. During the eagle feather crisis of 1974, many Oklahoma State officials issued statements of support. Montana went beyond rhetoric to pass a State resolution setting forth the policy of free exercise and protection for Indian religions. The State of California has enacted the Native American Historical, Cultural, and Sacred Sites Act of 1976 which takes giant strides in overcoming the problems of access. Unfortunately, to date, with the exception of sporadic efforts by a few individuals, the Federal Government's lack of policy has allowed infringements of religious rights to continue.

Incidents such as the recent bowhead whale controversy, where the State Department without consultation with the tribes made decisions on subsistence bowhead whale hunts upon which Eskimo lives, culture, and religion depend, have made it clear that this is a particularly good time to pursue this important effort to clarify the Federal policy. The Indian traditional and religious leaders rightfully regard a clear Federal policy as a crucial matter which must be resolved if the Indian culture and religion is to survive. The foundation for a coordinated and comprehensive implementation of this policy can be established quickly and the goals achieved with little difficulty once the commitment on the part of the Congress and the Administration has been demonstrated.

It is time for a clear statement from Congress and the President that America stands forthright on the question of religious freedom. It is time to examine laws, regulations, and enforcement procedures to insure that such a statement becomes a reality.

Mr. President, I ask unanimous consent that the joint resolution be printed in the RECORD.

There being no objection, the joint resolution was ordered the be printed in the RECORD, as follows:

S.J. RES. 102

Whereas the freedom of religion for all people is an inherent right, fundamental to the democratic structure of the United States and is guaranteed by the 1st Amendment of the United States Constitution;

Whereas the United States has traditionally rejected the concept of a government denying individuals the right to practice their religion and, as a result, has benefited from a rich variety of religious heritages in this country;

Whereas the religious practices of the American Indian (as well as Native Alaskan and Hawaiian) are an integral part of their culture, tradition and heritage, such practices forming the basis of Indian identity and value systems;

Whereas the traditional American Indian religions, as an integral part of Indian life, are indispensable and irreplaceable;

Whereas the lack of a clear, comprehensive and consistent federal policy has often resulted in the abridgement of religious freedom for traditional American Indians;

Whereas such religious infringements result from the lack of knowledge or the insensitive and inflexible enforcement of federal policies and regulations premised on a variety of laws;

Whereas such laws were designed for such worthwhile purposes as conservation and preservation of natural species and resource but were never intended to relate to Indian religious practices and, therefore, were passed without consideration of their affect on traditional American Indian religions;

Wheras such laws and policies often deny American Indians access to sacred sites required in their religions, including cemeteries;

Whereas such laws at times prohibit the use and possession of sacred objects necessary to the exercise of religious rites and ceremonies;

Whereas traditional American Indian ceremonies have been intruded upon, interfered with and in a few instances banned:

Now, therefore, be it resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That henceforth it shall be the policy of the United States to protect and preserve for American Indians their inherent right of freedom to believe, express and exercise the traditional religions of the American Indian, Eskimo, Aleut and Native Hawaiian, included but not limited to access to sites, use and possession of sacred objects and the freedom to worship through ceremonials and traditional rites.

And be it further resolved, that the various federal Executive Agencies responsible for administering such laws are directed to evaluate their policies and procedures in order to determine appropriate changes which may be necessary to protect and preserve American Indian religious cultural rights and practices.

ADDITIONAL COSPONSORS

S. 123

At the request of Mr. INOUYE, the Senator from Colorado (Mr. HASKELL) and the Senator from Massachusetts (Mr. BROOKE) were added as cosponsors of S. 123, a bill to amend the Social Security Act to provide for the payment of services by psychologists, and for other purposes.

S. 394

At the request of Mr. CULVER, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 394, the Bridge Replacement and Rehabilitation Act of 1977.

S. 1780

At the request of Mr. DOMENICI, the Senator from Oregon (Mr. HATFIELD) was added as a cosponsor of S. 1780, the Elementary and Secondary Optional Consolidation and Reorganization Act.

S. 1860

At the request of Mr. ROTH, the Senator from Tennessee (Mr. BAKER), the Senator from New Mexico (Mr. DOMENICI), the Senator from Utah (Mr. GARN), the Senator from Michigan (Mr. GRIFFIN), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Nevada (Mr. LAXALT), the Senator from Idaho (Mr. MCCLURE), the Senator from Pennsylvania (Mr. SCHWEIKER), the Senator from Alaska (Mr. STEVENS), and the Senator from Texas (Mr. TOWER) were added as cosponsors of S. 1860, the Tax Relief Act of 1977.

S. 1954

At the request of Mr. CURTIS, the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of S. 1954, a bill to repeal the estate tax carryover basis provisions of the Tax Reform Act of 1976.

S. 2009

At the request of Mr. DOMENICI, the Senator from Massachusetts (Mr. BROOKE) was added as a cosponsor of S. 2009, the home care services bill.

S. 2162

At the request of Mr. WALLOP, the Senator from Montana (Mr. METCALF) was added as a cosponsor of S. 2162, the Jackson Hole scenic area bill.

S. 2193

At the request of Mr. ROBERT C. BYRD, for Mr. ANDERSON, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 2193, a bill to amend the Communications Act of 1934.

S. 2300

At the request of Mr. BAYH, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 2300, the Civil Rights Commission Act of 1978.

S. 2309

At the request of Mr. STEVENS, the Senator from Kansas (Mr. DOLE) was added as a cosponsor of S. 2309, a bill to amend title 38, United States Code, to provide that a member of a Reserve component of the Armed Forces shall not be denied certain employment, because of membership in such Reserve component.

SENATE JOINT RESOLUTION 101

At the request of Mr. DOMENICI, the Senator from Texas (Mr. BENTSEN), the Senator from North Carolina (Mr. HELMS), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of Senate Joint Resolution 101, a joint resolution to authorize the President to issue a proclamation designating a Memorial Sunday for firefighters who have been disabled or killed in the line of duty during the preceding year.

SENATE RESOLUTION 323

At the request of Mr. DOLE, the Senator from Indiana (Mr. LUGAR) and the Senator from Georgia (Mr. NUNN) were added as cosponsors of Senate Resolution 323, condemning the human rights violations in Communist Cambodia.

SENATE RESOLUTION 324

At the request of Mr. HOLLINGS, the Senator from Missouri (Mr. EAGLETON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Georgia (Mr. NUNN), the Senator from Rhode Island (Mr. PELL), the Senator from Tennessee (Mr. SASSER), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Wyoming (Mr. WALLOP) were added as cosponsors of Senate Resolution 324, relating to the reduction of customs duties on textile or apparel or fiber products.

SENATE RESOLUTION 326

At the request of Mr. KENNEDY, the Senator from Kentucky (Mr. FORD) was added as a cosponsor of Senate Resolution 326, to amend the Standing Rules of the Senate to require that reported bills and amendments containing or extending tax expenditure provisions be referred to the Committee on Appropriations and the committees having legislative jurisdiction over the subject matters involved.

EXECUTIVE AMENDMENT NO. 9 (EX. 95–1)

At the request of Mr. HOLLINGS, as in executive session, the Senator from Minnesota (Mr. ANDERSON), the Senator from Georgia (Mr. NUNN), and the Senator from Vermont (Mr. STAFFORD) were added as cosponsors of amendment No. 9 intended to be proposed to the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal (Ex. 95–1).

SENATE RESOLUTION 339—ORIGINAL RESOLUTION REPORTED AUTHORIZING ALLOTMENT FOR CONSULTANTS FOR THE COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

(Referred to the Committee on Rules and Administration.)

Mr. RANDOLPH, from the Committee on Environment and Public Works, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES. 339

Resolved, That Section 2 of S. Res. 157, first session, Ninety-fifth Congress, agreed to June 14th, 1977, is amended by striking "$3,900.00" and inserting in lieu thereof "$7,000.00."

SENATE CONCURRENT RESOLUTION 61—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO RURAL HEALTH CARE

(Referred to the Committee on Human Resources.)

Mr. HATHAWAY submitted the following concurrent resolution, which was referred to the Committee on Human Resources:

S. CON. RES. 61

Whereas the Notice of Proposed Rulemaking regarding National Guidelines for Health Planning filed by the Secretary of Health, Education and Welfare on September 23, 1977 (42 F.R. 48502–48505), has generated great public concern that the guidelines may impose unrealistic performance requirements upon small, rural hospitals;

Whereas many small, rural hospitals provide local communities with medical care of a kind and a quality that are not readily available at less accessible metropolitan hospitals; and

Whereas quality health care at a reasonable cost for populations in rural areas is a priority of the Federal Government: Now, therefore, be it

Resolved by the Senate (The House of Representatives concurring), That it is the sense of Congress that the national health planning guidelines should include sufficient flexibility to allow a health systems agency to recognize special characteristics in rural areas and, on the basis of those special characteristics, to establish a health systems plan that varies from the national guidelines, in order to provide necessary health care services to rural residents.

Mr. HATHAWAY. Mr. President, I wish to introduce a concurrent resolution to assure quality health care for populations located in rural areas.

This resolution was generated by the publication on September 23, 1977, of proposed national health planning guidelines by the Department of Health, Education, and Welfare pursuant to the National Health Planning and Resources Development Act. The act requires the Secretary to issue guidelines which include standards respecting the appropriate supply, distribution, and organization of health resources. The guidelines must also include a statement of national health planning goals consistent with statutory priorities. These goals must be expressed in quantitative terms to the maximum extent practicable. Local health plans must take into account and be consistent with the national guidelines.

When the proposed guidelines were issued in September, I was pleased to see that the current administration was committed to implement the national health planning law. The previous administration was sorely delinquent in this regard. Since the law mandated the issuance of final regulations by mid-1976, the publication of proposed guidelines by the current administration is clearly a step in the right direction.

I fully support the goal of the guidelines to reduce unnecessary health expenditures. I am concerned, however, that in its effort to achieve this goal, the Department failed to give adequate and realistic consideration to the needs of residents of rural areas. The proposed guidelines may well be detrimental to these very people whom the National Health Planning Act is intended to serve. In their current form, the guidelines would likely pose a severe hardship on sparsely populated rural areas, and would be potentially contrary to the statute on which they are based.

When Congress passed the Health Planning Act in 1974, we recognized the need for greater access to medical care for residents of underserved areas. Consequently, we gave statutory priority to programs for the provision of primary care services for medically underserved populations, especially those in rural or economically depressed areas. There are still severe shortages of medical services and health personnel in many rural areas. While national totals may indicate sufficient numbers of hospital beds, physicians, and the like, figures for rural areas clearly show a continuing inadequacy of health facilities and services. In Maine, for example, there are 70 communities which lack adequate coverage by physicians, according to Federal standards.

Many health professionals have already expressed grave concern that hospitals in small communities would be forced to close down if the proposed standards were mandated. I share this concern, and agree that the proposed guidelines are unrealistic for many communities. For example, the guidelines propose, among other things, less than 4 short-term hospital beds per 1,000 persons in a community; a bed occupancy rate of at least 80 percent for all short-term hospitals in a community; and at least 500 deliveries annually in any obstetrical unit in a community of less than 100,000 persons. These standards clearly do not reflect the reality of life in rural America.

The guidelines include stated exceptions intended to provide flexibility based on varying conditions in different areas. However, I do not believe that the attempt has been successful. In this regard, it is important to note that Secretary Califano has admitted the need for revision and expansion of the exceptions applicable to rural and community facilities.

Mr. President, the Congress has been attempting to insure access to quality medical care for all Americans. The most recent effort, of course, is the Rural Health Clinics Act, signed by President Carter on Tuesday, which will facilitate medicare and medicaid coverage for rural health clinic services. This legislation, which I cosponsored, represents a significant step forward in improving health care delivery in rural areas.

It would be very unfortunate, especially at this time, to reduce access to hospital care by rural Americans, by imposing guidelines which do not reflect the conditions and needs in rural America. It is essential that any national guidelines take into account the variances of need in different locales, rather than relying solely on national averages.

The concurrent resolution which I am introducing today recognizes these concerns and expresses the sense of Congress that the national health planning guidelines should include sufficient flexibility to accommodate the health care needs of rural Americans. I urge my colleagues to support this measure.

SENATE CONCURRENT RESOLUTION 62—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO A WORLD ALTERNATE ENERGY CONFERENCE

(Referred to the Committee on Foreign Relations.)

Mr. ROBERT C. BYRD, for Mr. HUMPHREY, submitted the following concurrent resolution, which was referred to the Committee on Foreign Relations:

S. CON. RES. 62

Whereas increased dependence on fossil fuels, particularly oil and natural gas, when existing supplies are rapidly being depleted, is costly to developed and developing countries both environmentally and economically;

Whereas the uncontrolled spread of nuclear power carries environmental risks due to waste pollution and the possibilities of accidents, or material diversion;

Whereas both developed and developing countries can benefit from research on and development of alternate sources of energy;

Whereas encouraging the use of alternate, nonconventional or renewable sources of energy, including solar energy, wind, biomass waste materials, and alcohol fuels, can alleviate some of the pressure placed on all countries to satisfy rising energy demands;

Whereas no international agency presently exists which assists countries to exchange information and technical assistance concerning energy-related problems, which disseminates information relating to alternate energy sources, or which promotes the use of alternate energy sources; and

Whereas such an agency could markedly assist developing countries to close their energy gap and increase their standards of living; Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that the United States should encourage the United Nations to hold a World Alternate Energy Conference in 1980 to consider ways to meet the world's energy needs through the development and use of alternate energy sources. The goal of the Conference should be the establishment, under the auspices of the United Nations, of an International Alternate Energy Commission, comparable to the International Atomic Energy Agency, which would encoruage the worldwide use of alternate energy sources by assisting in the dissemination of information and by other appropriate means.

Mr. ROBERT C. BYRD. Mr. President, I submit for Mr. HUMPHREY a concurrent resolution relating to a World Alternate Energy Conference. I ask unanimous consent that Mr. HUMPHREY'*s* statement on the resolution be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR HUMPHREY

I join my good friend, Congressman Jeffords, in offering a Concurrent Resolution calling on the United Nations to focus resources on the use of solar and alternate energy. Congress has spoken clearly and forcefully during the past three years regarding the need for an aggressive program to utilize solar energy domestically. The President's energy program reflects that new priority, I believe, in calling for the demonstration and use of both solar thermal and solar electric systems on numerous Federal structures.

But, the energy crunch we face here is not unique. Rising energy prices and looming shortages are worldwide phenomena. At the same time, we and our neighbors have discovered that there are no easy answers to the coming energy supply shortfall. All conventional fossil energy forms have unattractive features—they are either in short supply, expensive or environmentally disruptive. The exception is solar and other so-called alternate energy systems.

The United States is ahead of much of the world in seeking to explore and exploit these alternate systems. And, we will benefit from that lead in the future. Yet, we have an obligation, as well, to ensure that the fruits of solar and alternate energy systems are made available across the world. This is not the time for smugness or insularity.

For that reason, I've joined Congressman Jeffords in offering this Resolution. It specifically calls upon the United Nations to convene a World Alternate Energy Conference in 1980. The Conference would be designed to explore alternate energy options—to assess how quickly and in what quantities those energy forms could supplement and substitute for conventional energy forms.

In addition, the Conference would be designed to establish an International Alternate Energy Commission—an entity solely committed to the promotion of these energy systems worldwide.

NOTICES OF HEARINGS

SELECT COMMITTEE ON SMALL BUSINESS

Mr. NELSON. Mr. President, I wish to announce that the Select Committee on Small Business has scheduled a hearing for Thursday, January 5, 1978, on the administration of the Interstate Land Sales Registration, and its impact on small intrastate land developers. The hearing will take place at 10 a.m. in room 424, Russell Office Building.

SUBCOMMITTEE ON ANTITRUST AND MONOPOLY

Mr. NELSON. Mr. President, the Subcommittte on Antitrust and Monopoly of the Senate Small Business Committee will hold hearings on December 19, 20, and 21, 1977 on Government patent policy.

The hearings on December 19 and 21 will be in 1318 Dirksen Senate Office Building and on December 20 in 6202 Dirksen Senate Office Building at 10 a.m. each day. A list of witnesses is available from the office of the committee.

CANCELLATION OF HEARING

Mr. NELSON. Mr. President, I wish to announce that the hearing of the Select Committee on Small Business, scheduled for January 9, 1978 in St. Paul, Minn. on the problems of small business of the upper Midwest has been canceled.

S. 242—CLASS I EQUIVALENCY AND S. 1812—FAMILY FARM ACT

Mr. METCALF. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a public hearing before the Public Lands and Resources Subcommittee of the Senate Committee on Energy and Natural Resources.

The hearing is scheduled for January 30, 1978, in room 3110 of the Dirksen Senate Office Building commencing at 10 a.m. Testimony is invited regarding two measures before the subcommittee. The first bill, S. 242, would provide for consideration of the comparative productive potential of irrigable lands in determining nonexcess acreages under Federal reclamation laws. The second measure is S. 1812, a bill to supplement and clarify the Federal reclamation laws, to promote the settlement of family farmers in Federal irrigation projects, to provide for acreage equivalency between class I lands and lands of lesser productive capability, and for other purposes.

For further information regarding the hearings you may wish to communicate with Mr. Russell Brown of the subcommittee staff on extension 224–2366 Those wishing to testify or who wish to submit a written statement for the record, should write to the Public Lands and Resources Subcommittee, room 3106, Dirksen Senate Office Building, Washington. D.C. 20510.

ADDITIONAL STATEMENTS

TRIBUTE TO SENATOR McCLELLAN

Mr. INOUYE. Mr. President, on November 28 the Senate lost a most respected Member. Senator McClellan was a great and distinguished legislator whose integrity, wisdom and dedication will be sorely missed.

His tireless efforts to bring public and private misconduct to light are legendary. As chairman of the Senate's Permanent Subcommittee on Investigations he broke all Senate records in the number of investigations he spearheaded, hearings he held and witnesses he heard.

Before coming to the Senate, I, like millions of my fellow citizens, knew and admired the public side of Senator McClellan through his well-publicized probes into labor union corruption. But I later had the distinct pleasure of serving under his chairmanship on the Senate Appropriations Committee and seeing other aspects of his character.

He was a man of spartan habits, often described as aloof and known to few on an intimate basis. But one could not help but be impressed by his fairness, diligence, and the high standards of personal integrity and conduct he established for himself and expected of others. And on occasion there would be a break in his stern exterior and a surprising ray of light would shine through, giving a glimmer of the depth of his passions. It is said, for example, that he would break into tears at the suggestion that he might use his political position for personal gain. Certainly for a man so dedicated to his work and to public service, such an accusation more than any other must have cut to the heart.

It was a privilege to serve in the U.S. Senate with Senator McClellan and I mourn his passing. But I am confident that his high devotion to public service will live on in these distinguished legislative halls and will continue to provide guidance and inspiration for all of us.

LEGISLATION WITHOUT RECOMMENDATION

Mr. THURMOND. Mr. President, as a member of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary, I would like to register my deep concern about S. 1874, the Illinois Brick legislation recently reported out by the subcommittee.

This legislation would reverse Illinois Brick, decided on June 9, 1977. In this 6 to 3 decision, the U.S. Supreme Court decided that offensive use of passing on a price fixer's overcharge would be limited to direct purchasers. The direct purchaser could sue, but indirect purchasers, with some exceptions, could not sue. Some years ago in 1968, the same Court in Hanover Shoe ruled out defensive pass-on as a defense to the price fixer. In that case the Court did not permit the price fixer to defend on the basis that the plaintiff had passed on the price-fixing overcharge to indirect purchasers in the distribution chain. The proposed legislation would also reverse Hanover Shoe.

On occasion we find the cure to be worse than the illness. The bill now before the full Committee was reported without recommendation. This unusual action concedes that the cure in its present form is at least inadequate. The problems facing the full committee are perhaps not insolvable, but they are deceptively tough. I am well aware that the subject matter of Illinois Brick and Hanover Shoe cases is highly complex and difficult. This conceded level of difficulty serves as a warning to require us to move very carefully. The logic escapes me of moving quickly with quick fix legislation. Such a course may well lead us to create more problems than we solve. Also, such a philosophy would set a bad precedent, for I believe it will ultimately, in this and other cases, lead to drafting the final bill on the floor of the Senate.

The Illinois Brick decision is a highly complex one. The bill before the committee presents even more of a dilemma. Illinois Brick poses two problems. They are easy to identify, but hard to solve. These two problems are the risk of duplicative damages and the impossible complexities of apportioning damages throughout an entire chain of distribution. As I read Illinois Brick, the Supreme Court is saying that introducing these uncertainties and complexities into cases will weaken rather than strengthen antitrust enforcement. It seems to me that anyone who would overturn this decision has the heavy burden of either solving these two problems, or proving that they do not exist. To overturn Hanover Shoe at the same time certainly raises the added question of what further effect will such a move have on enforcement of our antitrust laws.

The committee must address these problems. As Judge Harold Tyler—a distinguished former Federal judge—observed on October 6, 1977, quite bluntly, before the Subcommittee on Monopolies and Commercial Law, House of Representatives:

> It seems important to note that none of the existing drafts [including the current draft of S. 1874] available to me purport to address the problems [of duplication and complexity] which the Supreme Court quite carefully and precisely indicated that it has with the existing law.

Judge Joiner, U.S. district judge, Detroit, Mich., made similar comments before our subcommittee. Professor Areeda of the Harvard Law School in testifying before the subcommittee of the House of Representatives also said much the same thing.

The subcommittee chairman has stated that "substantial improvement" was made in the original bill. This so-called improvement, however, relates to the whole new set of problems that are raised by the bill regarding the law of standing. They are in addition to the problems identified by the Supreme Court. Even this limited "improvement," however, is hardly sufficient to solve new problems of the subcommittee's own creation. As Judge Tyler noted, even the revised draft suggests "a serious problem having to do with the law of standing to sue under section 4."

It would be premature to state that these problems can never be solved. I intend to devote whatever time it takes in trying to find a solution. However, the full committee should be on notice that it has its work cut out for it, and that any solutions will require great study, work, and assistance. We must seek the counsel of the experts who appeared before the subcommittee and others such as Judge Taylor and Professor Areeda who have never appeared before our subcommittee on this legislation.

Mr. President, I ask unanimous consent that the statement of Prof. Phillip Areeda before the House Judiciary Committee on September 16, 1977, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PHILLIP AREEDA

For the record, my name is Phillip Areeda. I am a Professor of Law at Harvard University, where I specialize in antitrust law. I have written *Antitrust Analysis* (2d ed. 1974) and will publish in January, 1978, with a coauthor, the first several volumes of *Antitrust Law*, a treatise on that subject.

I have been invited by your staff to testify about the Supreme Court's decision earlier this year in the case of *Illinois Brick Co.* v. *Illinois* (and the earlier case of *Hanover Shoe Co.* v. *United Shoe Mach. Corp.*, from which it is derived) and about the proposed corrective legislation H.R. 8359. I can summarize my views with four very short points.

I.

First, *Illinois Brick* and *Hanover Shoe* create the unsatisfactory result of (A) denying any recovery to many truly injured persons, while (B) granting the exclusive right to sue the middlemen who, in many cases, will either (i) sue and obtain windfall gains or (ii) not sue and thereby allow some defendants to retain the evil fruits of their antitrust violations. Because I consider these results unfortunate, I believe that corrective legislation should be considered. Whether any particular legislative proposal should be enacted is a different matter.

II.

Second, H.R. 8359 has great capacity for mischief. It would allow recoveries by anyone "injured in fact, either directly or indirectly." That language could do far more than overrule *Illinois Brick*. It also will certainly generate extensive litigation about the standing of shareholders suing those who injure their corporations, landlords or licensors suing those who injure their tenants or licensees, patients suing those who injure their hospitals, franchisors suing those who injure their franchisees, and suppliers suing those who injure their customers. Such plaintiffs are now, in the main, correctly denied standing. The Bill appears to alter those results by allowing standing to those injured indirectly and stressing the existence of injury in fact, no matter how remote and no matter how better situated to sue is a more proximately injured person.

To be sure, anyone thus granted standing must still prove his damages, but the shareholder can, after all, translate any specified injury to the corporation into an injury "per share" and thus readily calculate his harm. There remain, however, good reasons why he should not be allowed to sue the person who injured the corporation.

There are some arguments for allowing some such plaintiffs to sue in some circumstances, but certainly not without careful consideration. H.R. 8359 thoughtlessly upsets the law dealing with such plaintiffs.

(Furthermore, legislation expressed in terms of negating indirectness as a grounds for denying recovery could be unsettling in the same way.)

III.

Third, H.R. 8359, and some other proposals as well, do not necessarily accomplish their objective of overruling *Illinois Brick*. To say that those indirectly injured may sue (or to say that recovery should not be denied for the reason that the plaintiff did not deal directly with the defendant) does not address the rationale of the *Illinois Brick* decision and therefore would not guarantee a different result. The Supreme Court did not deny standing to the *Illinois Brick* plaintiffs *because* they were indirect purchasers. The Court rested not on indirectness but on the difficulties of tracing damages and of avoiding duplicate recoveries. The proposed legislation does not reject those grounds for denying a recovery. Thus, the proposed legislation may be so narrow as not to accomplish its purpose while so broad as to cause mischief.

(I recognize of course, that the courts would try to understand and to implement what they take to be the Congressional will, no matter how badly expressed. But this failure of the various Bills to address the problems troubling the courts is my final point.)

IV.

Fourth, the proposals now being considered do not give the Supreme Court the help that it said that it needed. The Court was by no means happy with its *Hanover* and *Illinois Brick* results, but felt driven there by the difficulties of tracing damages down-the-line in the distribution chain and by the grave dangers of duplicate recoveries (each trebled). To escape those difficulties, it adopted the simple solution of allowing the first purchaser to recover the full amount of a defendant's illegal overcharge. Now that solution may be too simple. But Congress, it seems to me, would not responsibly fulfill its role in the law-making process if it merely replaced the Court's simple solution with an equally simple negative that failed to address the problems the Court felt it could not handle.

A responsible legislative process would focus on the two problems the Court identified and find ways to solve them. The proposed legislation seems either to deny the existence of those problems or to sweep them under the rug by telling the courts to try harder to solve them on their own.

Perhaps, careful thought will persuade you of the wisdom of that approach. But any such conclusion must emerge from deliberate study of the tracing and duplication problems. It ought not to be the initial premise.

Those general observations conclude my prepared statement. I shall be happy to elaborate these points or to address any others that the Committee may wish to raise.

CONTINUING RESOLUTION—DISTRICT OF COLUMBIA

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Maryland (Mr. MATHIAS).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MATHIAS

CONTINUING RESOLUTION—DISTRICT OF COLUMBIA

Mr. President, I can say only one good thing about the present continuing resolution which will provide Fiscal Year 1977 funding levels until September 30, 1978 for the District of Columbia and that is that at least it removes the month-to-month uncertainty under which the City of Washington has functioned since October 1. Let's not be misled, however, by our action on this resolution into believing that the City can actually function for the remainder of FY 78 without further appropriations action by the Congress. There is an absolute necessity for our prompt action in the very beginning of the next session of the Congress to provide funding tailored to the City's needs for Fiscal Year 1978. Let me list a few of the City's activities that must be accommodated beyond the action we have taken:

The mandatory increase in payments for debt service;

The metrobus and rail subsidies;

Costs of city-wide elections; and

Increases in unemployment and disability compensation and Medicaid payments.

And there are many other programs and projects which must be funded by further appropriations action to provide continuity of services in the City. Also, of course, there is the City's building program, most notably the new construction start for the University of the District of Columbia which will not go forward without further action by the Congress.

Therefore, I think it is important that the legislative record show that we do not intend that our passage of this continuing resolution be our final action in supplying the necessary funding needs for the City for the remainder of this fiscal year.

HUMAN RIGHTS IN EL SALVADOR

Mr. KENNEDY. Mr. President, last July I wrote to Secretary of State Vance to express my deep concern about the general human rights problem in El Salvador and specifically the threat of the right-wing "White Warriers Union" to kill immediate and systematically any Jesuit priests found in that country after July 20. Since then, the State Department has been in frequent contact with my staff about the steps taken by the President of El Salvador, Carlos Humberto Romero, not only to assure the safety of the Jesuits, but to improve the distressing human rights situation in that country.

Mr. President, I ask unanimous consent that my letter of July 22 and three letters subsequently received from the State Department be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KENNEDY. Mr. President, it is clear that economic, social, and political rights remain inadequately protected in that country. But it is also clear that the persistent pressure for improvement from the administration is beginning to encourage steps in the right direction.

Last August, I emphasized on this floor the obstacles to basic social and economic rights in this tiny, poor, densely populated country. In fact, at the root of many of the present violations of civil and political rights is the social and economic problems of grossly unequal land distribution in El Salvador. During his administration President Molina had attempted to address this problem by promoting an "Agrarian Transformation," a mild land reform. In November 1976, the Government-dominated legislature substantially modified the law, in effect postponing agrarian reform indefinitely. While serving in former President Molina's cabinet, President Romero was allegedly a staunch opponent of the agrarian reform. This government's 5-year plan is yet to be released.

In the light of the legislated commitment to basic human needs, it is essential for AID to assess seriously and dispassionately the Romero administration's commitment to agrarian reform and to the participation of the poor in development. This will be a crucial issue in El Salvador.

There are some who suggest that President Romero is constrained by reactionary elements within his country from making many more human rights improvements. I am not persuaded that this is the case, although I can understand why human rights opponents would like us to believe that the constraints are substantial. El Salvador is not the first and will not be the last country in which such warnings are sounded with insufficient evidence to bear them out.

Of particular importance recently has been the controlling U.S. vote in the Inter-American Development Bank (IDB) on a proposed $90 million loan for construction of a hydroelectric dam at San Lorenzo. The State Department has indicated that U.S. support for this project has been predicated on further improvements in the human rights situation in El Salvador.

The San Lorenzo project is now approved, on the basis of still tentative improvements in the human rights situation. It would have been wiser policy to reserve this key decision until we could review the findings of the Inter-American Commission on Human Rights, which will visit El Salvador early next year.

The main advantage of deferring this decision would be the continued leverage this would give us to encourage a deepening of the commitment to human rights in El Salvador. Disturbing incidents of abuses have continued. There have been at least 16 disappearances of human rights advocates since President Romero took office last July. Amnesty International reports that on November 3, the National Guard tortured the parish priest of Ocicala, Father Miguel Ventura, as well as the sacristan and two catechists. After President Romero ordered them released, the army detained another catechist of the parish, Sr. Fabio Argueta, whose whereabouts remain unknown and whose life may be in danger. I strongly hope that Sr. Argueta will be located and also released unless legally charged.

I am particularly concerned about the potential effect on civil and political liberties of a new "Law for the Defense and Safeguarding of the Public Order." This law, enacted on November 24, after the San Lorenzo project was approved, threatens to seriously restrict the right to dissent and freedom of the press in El Salvador. Article 15 of the law makes it a crime punishable by 1 to 3 years in jail to disseminate anywhere "biased or false information designed to disrupt the constitutional or legal order, the country's peace and security . . ." In turn, it may now become illegal to publish or send out of the country information on government-related human rights violations.

It is incidents such as these which remind us of the need to carefully review the situation before undertaking further assistance and support to El Salvador. I commend Secretary Vance and his assistants for their conscientious efforts in this regard, and I hope they will encourage President Romero to effect further improvements. An early step should be to pursue President Romero's offer of last September to all those who have left the country to return "whenever they so desire." A Presidential amnesty would be a positive action in this connection, particularly one which includes such important political exiles as former Presidential candidates Ernesto Claramount and Napoleon Duarte, the leader of the Christian Democrats. I look forward to further close consultations with the administration on how we can best further human rights in El Salvador, as well as the rest of the hemisphere. We have made some progress. We can make more.

EXHIBIT 1

U.S. SENATE,
Washington, D.C., July 22, 1977.

Hon. CYRUS R. VANCE,
Secretary of State,
Washington, D.C.

DEAR CY: I am deeply concerned by War Order Number Six of the White Warrior Union, vowing to kill immediately and systematically any Jesuits found in El Salvador after July 20th. As you know, these right-wing terrorists have claimed responsibility for repeated bombings of the Catholic University of San Salvador and for the killing last May of Father Alfonso Navarro Oviedo, in apparent revenge for the assassination of Foreign Minister Borgonovo.

These are unfortunately only examples of persecution of the Church by the Salvadoran National Guard and right-wing military groups, against the backdrop of continued repression of the Salvadoran peasantry. Among the many priests expelled, denied reentry or obliged to flee are two Americans, Father Bernard Survil and Father John Murphy. Of even greater concern are the alleged killing and torturing of priests and other servants of the parishes, and the hundreds of killings in San Salvador and Aguilares since the beginning of this year.

I know and greatly welcome the fact that you have shared this concern, given U.S. Government representations in both San Salvador and Washington and your meeting with American religious leaders earlier this month. Given blatant human rights violations and the assistance the United States has given El Salvador—over $174 million since 1946, and over $11 million in economic aid for the next fiscal year—I believe we should have no apology for pursuing these concerns with the Salvadoran Government.

I therefore urge that you consider a direct high-level appeal to President Romero on behalf of the church community in El Salvador, following up Deputy Assistant Secretary Arellano's special mission to San Salvador on July 11th—with a view to investigating the torture and the killings, and preventing them in the future. I also ask that you urgently ascertain whether American priests remain in El Salvador, where lives might be threatened by right-wing terrorists.

Over time, I would hope that we and other like-minded countries in the hemisphere could use our official ties and economic assistance to bring the Salvadoran Government to contain the White Warrior Union and other terrorist groups, and remedy the underlying social and economic injustices in that country.

My thanks for your attention to this matter.

Sincerely,

EDWARD M. KENNEDY.

DEPARTMENT OF STATE,
Washington, D.C., August 5, 1977.

Hon. EDWARD M. KENNEDY,
U.S. Senate.

DEAR SENATOR KENNEDY: The Secretary has asked me to reply on his behalf to your

July 22 letter concerning the recent threat of a terrorist group, the White Warrior Union, to kill Jesuits remaining in El Salvador beyond July 21.

Your letter states that you are aware of various representations made by the United States Government in both San Salvador and Washington on this matter, as well as Secretary Vance's meeting with American religious leaders in early July. Please be assured that in our conversations with the Government of El Salvador concerning the threat, as when addressing other human rights issues in that country, we have been both quite direct and candid in emphasizing both the depth of our concern and the potential ramifications for our bilateral relations with El Salvador.

As you know by now, the Government of El Salvador took measures to protect the Jesuits and their institutions, against the terrorist threat. The July 21 deadline passed without incident. As of the beginning of August, no harm has come to the clergymen.

President Romero, who assumed office on July 1, has acted to show the new regime's intention to improve relations with the religious community, political opposition, and other elements of Salvadoran society by opening a dialog with them. We understand that a joint Church-State commission has been formed to address the differences existing between the religious community and the Government of El Salvador. We are also aware of steps being taken by President Romero within the Government structure to stem actions by officials which would constitute harassment or intimidation of clergymen in El Salvador. Through his statements to the press and the public, President Romero has emphasized his policy to combat terrorism of any type—rightist or leftist—and has expressed his plans to pursue socioeconomic reform which is really the crux of dealing with El Salvador's myriad of problems.

The United States Government will be watching closely the evolution of the human rights situation under the new President. We have made clear that our policy stances in various fora, including international financial institutions, will depend importantly upon our assessment of human rights conditions in El Salvador, as will be the case in our relations with other countries. Since Deputy Assistant Secretary Richard Arellano's trip, the Department of State's Human Rights Coordinator, Patricia Derian, has also gone to El Salvador. She met with a broad spectrum of individuals and groups, including President Romero, the Archbishop of San Salvador, the Provincial Head of the Jesuits, Christian Democratic Party leaders, and private sector members of both the Salvadoran and American communities.

With respect to whether American priests are in El Salvador and whether their lives are endangered, we are contacting the U.S. Embassy in San Salvador to ascertain this information. Naturally, we will transmit their reply to you forthwith.

If you have further questions, we will be glad to try to answer them. The Country Officer for El Salvador is E. Hicks, on 632-8148.

Sincerely,

DOUGLAS J. BENNET, Jr.,
Assistant Secretary for Congressional Relations.

DEPARTMENT OF STATE,
Washington, D.C., October 13, 1977.
Hon. EDWARD M. KENNEDY,
U.S. Senate.

DEAR SENATOR KENNEDY: As indicated in our August 5 letter regarding El Salvador, we requested our Embassy to obtain information concerning American priests presently in that country. The list given below was provided by the office of the Archbishop of San Salvador:

PRIESTS

Dennis Saint Marie.
William Gibbons.
Paul Schindler.
Kenneth Meyers.
Paul Sommer.
John Spain.
John Halbert.
Ronald Michels.
Flavian Mucci.
Isaac Callichio.
Walter Vanchine.
Jose Rossi.
Guido Villatarie.

NUNS

Rosemary Smith.
Dorothy Kazel.
Martha Owen.
Christine Rody.
Cynthia Drennan.
Lorena Schelte.
Margarita Schete.
Joan Petrick.
Ana Maria Martaman.
Madaline Doresey.
Patricia Maher.
Patricia Haggerty.
Alice Rohn.

None of the American clergy in El Salvador is Jesuit. The U.S. Embassy has no information indicating that the priests and nuns listed have received threats or face danger of physical violence or expulsion.

If you have further questions, we will be glad to try to answer them. The Country Officer for El Salvador is E. Hicks, on 632-8148.

Sincerely,

DOUGLAS J. BENNET, Jr.,
Assistant Secretary for Congressional Relations.

DEPARTMENT OF STATE,
Washington, D.C., October 21, 1977.
Hon. EDWARD M. KENNEDY,
U.S. Senate.

DEAR SENATOR KENNEDY: Members of your staff have recently discussed with representatives of the Department the human rights situation in El Salvador since the advent of the new Government in that country. As was requested, the following is a depiction of some of the recent positive developments cited on that occasion, along with a summary of the context in which they have occured.

During the past year or so, El Salvador has experienced increasing internal socio-political unrest, complicated by strained relations with the United States. The basic source of this situation is the disparate economic structure of El Salvador and the political repression traditionally used to protect that system. More immediately, there have been events exacerbating divisiveness among the varied sectors of Salvadoran society and between the Government of El Salvador and certain groups.

Among others, the following occurrences have contributed to the tensions within El Salvador in recent months:

1. Kidnappings and/or assassinations by extremists on the left and the right. These have included the murder of three priests and the killing of three principal members of the wealthy class, notably the Salvadoran Foreign Minister.

2. A controversial presidential election and evidences of fraud, which resulted in mass arrests, some deaths, and the exile of opposition political leaders. A state of siege, suspending certain constitutional rights such as freedom of speech, assembly and private correspondence, was imposed.

3. The disappointment of campesinos over an abortive land reform program which was to reduce some of the inequities of land tenure and rent arrangements.

4. Increased activism by clergymen advocating various socio-economic reforms for the rural masses especially. A growing estrangement between the Catholic Church and the Government of El Salvador, manifested in the deportation of over a dozen priests.

5. Excessive actions by security forces when conducting operations against suspected subversives, against squatters or against demonstrators.

6. Increased pressures from some of the military and the wealthy class for more rigorous retaliation against leftist terrorists.

7. Strained relations with the United States over human rights in general and treatment of Americans in particular.

With these events as backdrop, the United States has sought to evoke improvements in the human rights situation in El Salvador which deal both with immediate problems and the longer range task of reforming that country's socioeconomic structure along more equitable lines. Various instruments have been used to this end. Emissaries (Assistant Secretary for Human Rights Derian, Deputy Assistant Secretary Arellano, Director of the Central American Affairs Office Matthews) have been sent to discuss the situation. Secretary of State Vance conveyed his concern by letter to the previous President of El Salvador. Congressional hearings have been held to elucidate as much as possible the facts concerning alleged human rights violations. U.S. support for a hydroelectric project important to El Salvador's economic development has been reserved, pending improvements in the human rights situation. Meanwhile, the U.S. Embassy in El Salvador has consistently conveyed the concern of both the U.S. Government and people over alleged human rights violations.

Since President Carlos Humberto Romero's administration was inaugurated on July 1, there have been actions and statements manifesting his attempt to ameliorate the human rights situation in El Salvador.

Some of the recent positive developments under Presdent Romero are the following:

1. The new administration inaugurated on July 1 has not extended or reimposed the suspension of guarantees previously in existence.

2. Protective action was taken in the face of a rightist terrorist threat to the Jesuit community in El Salvador.

3. President Romero is seeking to establish a dialogue with diverse sectors of Salvadoran society and has named a Commission, headed by the Vice President, to open a dialogue with leaders of the Catholic Church.

4. Freedom of assembly has been restored and at least three public demonstrations have occurred without harassment or adverse action by the police;

5. The new Administration has given us assurances with regard to treatment of American citizens who may be arrested, and these were scrupulously honored in the single subsequent case which is known to have occurred.

6. President Romero has stated that political exiles can return to El Salvador, and at least two are known to have done so without harm or harassment;

7. President Romero has sponsored draft legislation to enable the penal system better to deal with terrorism on a criminal basis and thus forestall resort to extra-legal means.

8. One leftist newspaper, closed during the previous administration's suspension of guarantees, has been permitted to reopen and regularly publishes material critical of the Government;

9. On September 12, President Romero ordered that all persons henceforth arrested be remanded to court immediately; and

10. In the face of recent violence by the extreme left, including the assassination of the Rector of the National University, President Romero has stated that only legal means will be used in the investigation and pursuit of those responsible.

11. As he promised President Carter in their September meeting, President Romero has invited the Inter-American Human

Rights Commission of the OAS to visit El Salvador in order to see firsthand the human rights situation in that country.

While these are encouraging steps, the situation remains one in which we see a need for continuing human rights improvement. Your interest in the advancement of human rights is well known and appreciated and we trust that this information will be useful to you.

Sincerely,

DOUGLAS J. BENNET, Jr.,
Asisstant Secretary for Congressional Relations.

WHY LOCKS AND DAMS 26 MUST BE REPLACED

Mr. STEVENSON. Mr. President, in the welter of controversy about the issue of user charges on commercial water carriers as would be imposed by H.R. 8309, the Navigation Development Act, which the Senate will take up in January, there has been an understandable tendency to overlook a second major title of the bill which authorizes the construction of a replacement for locks and dam 26 on the Mississippi River. This locks and dam is one of a series of such structures built on the Upper Mississippi River to stabilize the river for purposes of flood control and navigation. The pools thus created behind the dams provide a superb environment for recreational boating and an improved habitat for fish and game, particularly for the millions of water fowl that use the flyway of the Upper Mississippi Basin annually.

Locks and dam 26 is located at Alton, Ill., at the key intersection on the inland waterway system. All traffic to or from the lower Mississippi and Illinois Rivers originating at, or destined for, the Missouri, the Ohio or the lower Mississippi Rivers must pass through locks and dam 26. It is not an overstatement to say that locks and dam 26 is the gateway into and out of an area that is both America's breadbasket and its industrial heartland.

The present facility, with only a 600-foot main lock and a 360-foot auxiliary lock, is too small to handle the existing traffic, let alone projected increases. Twenty percent more tonnage transits locks and dam 26 annually than goes through the Panama Canal each year. Last year, on the average, a tow had to wait half a day to get through locks and dam 26 and some had to wait as much as 2 days. Traffic which flows with little delay through the rest of the locks on the upper Mississippi and the Illinois Rivers backs up at locks and dam 26. Even under the most conservative projections of future traffic, the theoretical capacity of the present locks will be reached within the 8- to 11-year period it would take to construct a replacement facility. I should add that calculations of theoretical capacity envision a constant stream of traffic through the locks, thus failing to take into account the ebbs and flows of daily traffic, much less seasonal variaations. The actual capacity of locks and dam 26 is undoubedly something less than the theoretical capacity and will, in all likelihood, be reached several years before a replacement could be completed, even if it were authorized today.

Title I of H.R. 8309 authorizes the construction of a replacement for locks and dam 26 at a site recommended by the Corp of Engineers several miles downstream from the existing structure. The new dam would have a 1,200-foot lock to permit tows to pass through with less delay and to increase capacity substantially.

In addition to problems relating to inadequate capacity, locks and dam 26 has suffered extensive deterioration through the years. It was built nearly 40 years ago with a life expectancy of 50 years. The structure was constructed on wood pilings driven in sand and there has been excessive settling and shifting. The river bed immediately downstream from the dam has been scoured out nearly to the depth of the foundation piling. The site selected by the Corps of Engineers for a replacement dam would provide a solid foundation on rock.

Several proposals have been made for rehabilitation of the existing locks and dam 26. The fundamental flaw of all of these proposals is that rehabilitation would cost approximately as much as replacement with a new lock and dam, a situation that was described by Maj. Gen. Ernest Graves, Director of the Civil Works Division of the Corps of Engineers at a Senate hearing last year. General Graves described the severe deterioration of the existing structure and said:

> The only way to arrest this trend is to carry out a complete rehabilitation of the existing structure. This would be just as costly as the Chief's recommended plan for replacement and would not have the safe, rugged foundation of a new dam. If we continue to spend whatever funds are necessary for repairs, we are confident that we could keep the dam from failing. However, it would be a constant, difficult, and costly fight, which would almost certainly result from time to time in major traffic delays.

Moreover, rehabilitation of the existing locks and dam 26 would do nothing to solve the problem of inadequate capacity to meet the demands of increasing traffic. The combination of lack of capacity and deteriorated condition makes a compelling case for authorizing a replacement.

This is the course that was followed by the House in passing H.R. 8309. Indeed, it is consistent with the action taken earlier this year by the Senate on S. 790, which also authorized the construction of a replacement for locks and dam 26, but which contained a user fee provision that proved unacceptable to the House.

Our inland waterways provide a transportation system for bulk commodities that is the envy of much of the world. The replacement of locks and dam 26 is essential if we are to make effective use of this system. The controversy over user fees should be resolved so that work can begin on this vital project.

EXHIBITION OF TREASURES OF EARLY IRISH ART

Mr. KENNEDY. Mr. President, over the past few years, Americans have had the opportunity to see some magnificent art exhibitions of archeological treasures from other lands. I think particularly in this connection of the exhibitions of art treasures from the People's Republic of China and from Egypt. These visiting exhibitions have been enormously successful and have received enthusiastic receptions from the people and rave reviews from the art critics.

Now, for the first time in this country, citizens and visitors to five cities, including New York, San Francisco, Pittsburgh, Boston and Philadelphia, will be able to view a remarkable collection of ancient Irish art.

The exhibit is currently on display at the Metropolitan Museum of Art in New York City, where it is playing to huge crowds and has become one of the most popular exhibitions the museum has ever held.

Americans are well aware of the fine literary, musical and architectural contributions of the Irish. Few of us, however, are as aware of the remarkable artistry of ancient Irish craftsmen, as revealed in the Ardagh Chalice or the Tara Brooch. These are among the brightest highlights of the current exhibition, which includes works dating from the Bronze Age to the 15th century.

Perhaps the most brilliant exhibit in the show is the Book of Kells, the world-famous illuminated manuscript of the Gospels that has been called the supreme achievement of Irish Celtic art. In a recent issue of the Smithsonian magazine, Alfred Friendly states that:

> The Book of Kells stands to Celtic Art as Chartres to Gothic cathedrals, or the Sistine Chapel to Renaissance painting.

Mr. President, I hope that as many Americans as possible will be able to enjoy this extraordinary exhibition as it visits the various regions of the Nation over the next 2 years. To acquaint Members of the House and Senate fully with the exhibition, I ask unanimous consent that the following material may be printed in the RECORD: Articles by Desmond Rushe in the New York Times, by Benjamin Forgey in the Washington Star, by Carl R. Baldwin in the New York Times Magazine, and by Wendy A. Stein in the European Community magazine, and the article by Mr. Friendly in the Smithsonian magazine.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Sept. 7, 1977]

"THERE IS MORE TO IRELAND THAN VIOLENCE"

(By Desmond Rushe)

DUBLIN.

Those Irish who think about it at all are quietly delighted that some 70 treasures of early Irish art are to travel abroad. The collection, scheduled to go on display at New York's Metropolitan Museum of Art on Oct. 15, and later in San Francisco, Pittsburgh, Boston and Philadelphia, is the first of its kind ever to leave the country, and it is of major significance.

Encompassing a 3,000-year period and rich in design, skill and esthetic beauty, it is representative of a highly important civilization. It will trace to their infancy the roots that produced the sap from which the Irish heritage of today has drawn much of its nourishment, and a great deal of the general approval for letting the treasures travel derives from the fact that, it is to be hoped, the current widely held image of Ireland and the Irish will be corrected.

This is the image of violence, conflict, bombs, bullets and bloodshed, and it has been created by a small and almost totally rejected fanatical fringe. The early art exhibition will recall times of exquisite felicity with which, on the more profound levels of heart, soul and mind, the modern Irish might be more validly identified—times when the country had its Golden Age, was described as a land flowing with milk and honey and was known throughout Europe as the Isle of Saints and Scholars.

The items come from the collections of the National Museum of Ireland, the Royal Irish Academy and Trinity College, Dublin, and each, in its own way, is priceless. When the American exhibitions were announced, there was some dissent, but the protests represented little more than a pebble dropped into a sea of acquiescing calm. The ripples were tiny and quickly petered out.

Muriel McCarthy, for instance, considered the whole project "a deplorable idea." As assistant librarian at Marsh's Library, which, incidentally, dates from 1701 and is the oldest public library in Ireland, she commented on the few treasures now left in the country and expressed fears of possible loss or deterioration, particularly relating to fragile illuminated vellum carrying the weight of more than a thousand years.

Another protester acidly described sending the collection abroad as "the prostitution of our national heritage for a little international sociability," and before the noncontroversy disappeared from the letters columns of newspapers, Leonidas Panas, professor of art at the University of Lowell, Mass., became a non-Irish dissenter.

Items such as the Book of Kells and the Ardagh Chalice should not be sent to the United States, he wrote "because they transcend the normal meaning of art and are too precious to the history and culture of Ireland to be away from their home and to chance some unfortunate accident or incident." Professor Panas pointed out that other celebrated national exhibitions—Tutankhamen and Russian icons, for example—never included the most revered and precious works of their cultures, and he concluded, "Imagine Irish concern if these treasures were in New York during the recent blackout."

Irish faith in the efficiency of American public utilities may have been dented by the blackout, but only slightly. Certainly Professor Frank Mitchell of Trinity College and the Royal Irish Academy, coordinator of the exhibition, was not unduly perturbed. He does, he says, appreciate the sincerity of the dissidents and understand their concern, but he is quite happy with the safety and security measures the host museums will take.

The collection Professor Mitchell and his fellow experts have put together starts with Bronze Age objects dating from around 2000 B.C. and progresses through the La Tene, Early Christian and Hiberno-Viking periods to the late medieval times of the 14th century A.D. Care has been taken to illustrate the achievements of early Irish civilization in its evolving phases, and although most attention may focus on the sublime art works of the Golden Age, which was centered on the eighth century and produced such treasures as the Ardagh Chalice and the Book of Kells, the gold ornaments of the Bronze Age abound with loveliness and interest.

Indeed, the Bronze Age collection in the National Museum of Ireland is, possibly, the finest in Europe. In the early period of European metallurgy, the prosperity Ireland enjoyed found expression in the widespread production of gold ornaments; and in sun disks (lanulae, collars, rings and the like, the astonishing skill in design, intricacy, delicacy and craftsmanship are often as remarkable as in much later objects that are now internationally celebrated.

It was, however, in the Golden Age that Irish art work reached the peak of its magnificence. Having earlier remained untouched by the conquering legions of the Roman Empire, Ireland also escaped the fifth-century invasions of Europe by the barbarians, and its monasteries, risen to positions of considerable power and wealth, were able to commission works of sublime beauty in chalices and shrines, crosses and croziers and illuminated vellum gospel books.

While much of Christian Europe fell asunder at the hands of the barbarians, work went on in Ireland uninterrupted, and soon Irish monks were busy in Britain and on the Continent re-Christianizing and bringing enlightenment. Irish monasteries became great schools of learning to which thousands of scholars flocked from abroad, and the age was realistically golden. It ended when the Viking raids began early in the ninth century, and it never returned, although the Hiberno-Viking period from roughly A.D. 800 to A.D. 1200, continued to produce a wide range of extraordinarily beautiful works. The marvelous Cross of Cong belongs to this age.

The exhibition will, then, cover a fascinating spread in the history of Irish civilization and, perhaps, direct the thoughts of viewers away from the tragic image attaching to the Ireland of 1970.

"Apart from being an art occasion of the highest importance," Professor Mitchell says, "we want people to know that there is more to Ireland than violence. The collection represents a civilization at least as high as that anywhere else in the world as far as artistic standards go. We hope to implant in the American mind the idea that Ireland can create more than bombs and bullets."

Aside from its artistic and antiquarian aspects, the collection's history teems with stories of drama, romance, superstition, insensitivity, ignorance and human interest. Scarcely an item is without a background of myth and mystery, like the seventh-century Book of Durrow, which, before it was finally rescued for posterity in the 17th century, held the attribute of having a cure for sick calves. The calves were supposed to speedily regain their health on drinking water that had been poured over it.

And then there is the Brian Boru Harp, which belongs to the exhibition's Late Medieval period. It is credited with being the oldest in existence, and part of its mythology is that it was associated with King Brian Boru, who led the Battle of Clontarf in 1014, which finally overthrew Danish power in Ireland. It is said to have been presented to an unnamed Pope, who presented it to an unnamed English king who, in turn, presented it to an unnamed Irish nobleman. In the last century, the antiquarian expert George Petrie placed the year of its manufacture in 1400, but many preferred to stick to the colorful Brian Boru tradition, and so the harp retains the name of a heroic Irish king.

Some years ago, it was restored by Trinity College in a painstaking scientific process and, for the first time in centuries, it was played once again and its music was sweet and mellow. Then it was stolen from its Trinity display case and after months of tense waiting, was recovered from a County Wicklow quarry. Now it is mute and will remain so.

But in its superb craftsmanship and in the aura of fact, fable and antiquity that surrounds it, it offers a glimpse, admittedly limited and tiny, of a collection of which it is a relative infant—of gold collars worn by pagan kings and gold lock rings worn by their queens, and dazzling artistic elegance of chalices and shrines, the infinitely patient skill of monk illuminators, and traces of Viking influence in still-exquisite objects made when Ireland's Golden Age had ended.

A Worthwhile Wait for 3,000 Years of Irish Art

(By Benjamin Forgey)

New York.—"Treasures of Early Irish Art," which opened last week at the Metropolitan Museum of Art, is a small show of small objects that covers 3,000 years of history and includes three or four unarguable masterpieces of world art.

And don't people know it. The crowds are large on weekdays at the museum. On weekends, be prepared for a long wait.

The combination of small objects and lots of people is an awkward one. To see the objects properly one must see them up very close, ideally, in some instances, much closer than the exhibition cases will allow. And, since the wonder of some of these small pieces is the unbelievably intricate decorative patterns executed in minute detail, it also requires persistence and time to look at them.

When I visited the exhibition on Tuesday, patience was the rule. Small lines would form at some of the more outstanding exhibits such as the "Tara" brooch, a virtual encyclopedia of 8th-century metalwork decoration in a circle less than four inches in diameter. However, everyone seemed willing to wait, and to allow those ahead of them time enough to strain their eyes in appreciation.

The wait is invariably worthwhile. How could it be otherwise? For most of us this really is the one chance in a lifetime to see the thing itself, especially the manuscripts that are the undeniable stars of the show. In the centuries succeeding St. Patrick's conversion of Celtic Ireland to Christianity, the Irish monasteries became the important conservers of the faith. Scribes and illustrators working for these monasteries, and somewhat later, those in Scotland and northern England, created an unprecedented new art. This was the period, too, of the "Tara" brooch and the almost equally astonishing Ardagh chalice.

To create this new art, Irish and Anglo-Saxon artisans drew upon various sources and models from elsewhere in Europe, and molded them into a style of awesome, kinetic, decorative complication whose only rival in the history of art is the Islamic Arabesque at its very best. A 13th-century quotation on the wall at the entrance to the exhibit catches something of their spirit: "Here . . . you will make out intricacies, so delicate and subtle, so exact and vivid, that you might say that all this was the work of an angel, and not of a man."

They are in fact indescribable, but obviously worth waiting in line to see, for no color reproduction (certainly not those in this exhibition's catalogue, which is informative and inexpensive—$7.95, 222 pages—but egregiously off in color reproduction) can come very close to the effect of the original. How one wishes one could look for hours at a volume of the Book of Kells, turning from page to page, allowing the eyes to follow the endless baffling and mischievous connections ribbons and swirls, and letting the mind drift in an effort to imagine just what spirit prompted these amazing artists to do so wonderous a thing. Alas, four pages and a few precious minutes is what we're allowed.

Two of the four volumes the Book of Kells is now packaged in stayed home, in the Library of Trinity College in London, a sensible precaution on the part of the Irish. G. Frank Mitchell, president of the Royal Irish Academy, prefaces the catalogue with this sobering statement: "Only a very few of Ireland's early treasures have survived, and almost all that have are included in the present exhibition."

The first pieces in the exhibition—two thin gold discs, hammered and incised with simple circular motifs and a cross—were made in Ireland during its early Bronze Age, about 1,800 B.C., and it is suggested that these body ornaments were associated with a cult of the sun. The exhibit, in about 70 objects, traces Irish history through the Bronze Age, the Celtic period, the early Christian era, the period of Viking invasions, and the late Middle Ages, by which time the great Irish inspiration in the visual arts had long passed.

The patient, mulling, modern crowd in this small show of ancient and mysterious things is in itself a bemusing scene, and one that becomes increasingly familiar. It confirms again the fact that we are living in a golden age of international museum exhibitions.

In any case, the opportunity this exhibition offers—to see in an hour or so 3,000 years of Irish art and to see first-hand a few pages from a couple of the more magical books ever made on this earth—will not be repeated in most of our lifetimes, if ever. The exhibition will be on view at the Metropolitan through Jan. 15. Then it will travel to San Francisco, Pittsburgh, Boston and Philadelphia.

WONDERS OF IRISH ART

(NOTE.—Miraculous manuscripts and masterworks of metal—from the Bronze Age to the Middle Ages—have been sent from Ireland for a lustrous show, opening this week at the Metropolitan Museum.)

(By Carl R. Baldwin)

It's a long way from Tipperary—not to mention Dublin—but some of Ireland's foremost art treasures have made the trip and this week will go on view at the Metropolitan Museum. Seventy objects, ranging from armlets and shields of the Bronze Age, a trumpet and a boar from the Roman era, shrines, brooches, crucifixes and manuscripts from Early Christian to Gothic times, have been lent by the National Museum of Ireland, Trinity College in Dublin, and the Royal Irish Academy for an exhibition that will tour the U.S. for more than a year after it closes at the Metropolitan on Jan. 15.

For all the luster and refinement of the objects of bronze, silver, enamel and gold, the triumphal arch of the exhibition is undoubtedly the illuminated manuscripts of Early Christian times, including the greatest of all Irish manuscripts, the Gospel Books of Durrow and Kells. Though these wondrous books are monuments of creative art, they are also valuable and vivid evidence of the special importance attached to the writing and decoration of sacred texts in this illustrious period of history.

In the first centuries of the Christian era in Ireland the collecting of books by monasteries, and their multiplication and preservation by handwritten transcription, was a crucial pedagogical function, an essential part of the "curriculum" of each monastery. With reliable copies of the Old and New Testament, of special books needed for the celebration of the mass, and of those inspiring lives of the Irish saints—St. Patrick, St. Brigid and St. Columba—whose miracles could be attested to, say the ancient authors, "not by the two or three witnesses required by law, but by hundreds of witnesses"—the role of the Irish monastery as a teaching institution could be carried out with vigor. And what a teaching institution it was! Although the annals of the period speak of continual wars between kings competing for dominion over the various regions of Ireland, the monasteries, from the sixth through the eighth centuries, maintained themselves as enclaves of relative calm, so that students from Britain and the Continent hastened to leave their own war-torn regions and flocked to Ireland for edification. As Bede, the preeminent historian of the eighth century, and an Englishman, wrote of Irish academic hospitality: "The Irish willingly received them all, and took care to supply them with food, to furnish them with books, and to provide them with their teaching, all free of charge." Having been instructed on these generous terms in Ireland, students then made their way back to England and the Continent, to disseminate and maintain Irish standards of discipline and studiousness, of calligraphy and manuscript decoration.

But beyond the educational importance of the monasteries and their writing workshops, books in Ireland played an unusual role, for they were often closely linked with the lives and deeds of saints and therefore thought to be imbued with extraordinary powers. If we trust the historians of this early period—and those authors assure us that their accounts are based upon "well-established facts"—we must reckon with Gospel books dictated by angels, books that avert plague and insure victory in time of war, and even, in one remarkable case, with an unauthorized copy of a Bible which precipitated a dreadful battle. The story of this last event—whether "established fact" or legend—is so characteristic of the potency of books in medieval Ireland, that it deserves to be retold.

It happened in this way: Columcille, or Columba, a saint of the sixth century A.D. who founded many monasteries in Ireland after the death of St. Patrick, one day prevailed upon a bishop by the name of Finnian to lend him a fine Bible recently arrived from Italy. The understanding was that the book would be read, but not transcribed. Columba, however, enthralled by the beauty of the book, set about copying it secretly in a pitch-dark room, light being provided by pinpoints of illumination from the five swiftly moving fingers of his right hand. Informed by a spy of Columba's deed, Finnian objected strenuously, and, in what must be deemed one of the earliest "copyright infringement" disputes on record, claimed ownership of the copy. Columba, in lawyerlike tones, asserted that "Finnian's book has not decreased in value because of the transcription," and that the bishop had no right "to extinguish the divine things the book contains" by a prohibition against copying. The case was brought before King Diarmaid, who settled the dispute with the apt dictum "To every cow her calf, and to every book its copy," and ordered Columba to return the copy to Finnian at once. Columba, in an eruption of unsaintly and injudicious wrath, denounced the judgment and the judge, and proceeded to declare war upon the king (the ancient authors do not quite explain how it is that this holy man kept a private standing army!). Some scholars believe that Columba carried his unauthorized (and still unreturned) copy into battle, and that this manuscript provided the tactical edge needed for victory: The saint's followers prevailed unscathed, and decimated the king's men. Some saint, and some book! The surreptitiously copied manuscript, nicknamed *cathach* (the battler), is thought by some observers to be that very Cathach of St. Columba which now holds pride of place in the library of the Royal Irish Academy in Dublin (it did not make the trip to America), and which a modern scholar has described as constituting "the pure milk of Irish calligraphy."

One of the monasteries founded by Columba in the sixth century was Dearmach, or Durrow, a name meaning "the plain of oaks." It is described in records of that early time as a place renowned for its books and learning, "a devout city with a hundred stone crosses." It was the birthplace of the earliest great Irish Gospel book with full-page decorations, the Book of Durrow, in the mid-seventh century A.D. There is a tantalizing postscript to the book, called a *"colophon,"* which states that the manuscript was written by Columba himself, and completed in 12 days. This assertion is not believable, since the style of the book's handwriting postdates the time of Columba's death, but the *colophon* does suggest that the Book of Durrow was copied from earlier books penned by the nimble-fingered saint, including, perhaps, that celebrated "battler" for the faith, the Cathach of St. Columba. Like many of the books linked in some way with Columba, the Book of Durrow was thought to possess magical properties, and, in particular, to be blessed with inks and colors that were immune to damage by water. As late as the 17th century, a scholarly visitor to the monastery at Durrow stood idly and confidently by while the manuscript's custodian immersed the book in water in order to prepare a medication for cattle (this action had a certain poetic appropriateness, since the wealth of the early monasteries was not reckoned in currency, but in cattle). The scholar reported some time later that "I saw the cattle returned thereby to their former pristine state, and noted that the book received no loss" (unhappily an inaccurate report, since water damage may be remarked on a number of the manuscript's folios).

Parallels to a previous and concurrent tradition of metalwork are visible throughout the decoration of the Book of Durrow. For example, the book's first page of abstract ornament, called a "carpet page," shows linked circles filled to their rims with closely packed spirals, as in the brooches and chalices of the period (superb examples of these in the exhibition are the eighth-century Tara brooch and Ardagh chalice). These objects of adornment and ritual of the Early Christian period, in turn, were inspired by pre-Christian metalwork of the so-called La Tène style—a link to the "pagan" past of Ireland which tells us much of the pragmatic and ecumenical approach of this early time, where artistic "conversion" was undertaken with a decent respect for the estimable qualities of the "pagan" artists and artisans.

An oddity of the Book of Durrow is that the Gospels follow the order established by St. Jerome in the fourth century A.D. (Matthew, Mark, Luke, John), but the symbolic depictions of the Evangelists follow an older scheme (Matthew, John, Luke, Mark)—one of many "holdouts" of the early Irish church against the standards and procedures of the Church of Rome. As a result, the lion which symbolizes St. Mark finds itself snarling at the beginning of the Gospel of St. John (causing some writers to slip and refer to a non-entity, "the lion of St. John"). The alert ferocity of the creature, conjured up by the lashing tail, the twisted metallic ridges of the body, and its enclosure between tensely wrought interlace patterns, is well suited to an alleged "fact" of biology as then understood by Christian theologians: lion cubs were born blind and dormant, and lay still for three days until aroused "by the voice of the father"—about as apt a metaphor of Christ's Resurrection after three days of "sleep" in the tomb as could be wished.

Toward the close of the eighth century A.D., the monasteries of Ireland, and of those island outposts in other lands founded by Irish missionaries, such as Iona, off the coast of Scotland, and Lindisfarne, off the coast of "Northumbria" (northern England), experienced the trauma of invasion and looting by the dreaded Northmen, or Vikings. The monastic texts of the time speak, with outrage and despair, of church treasures sacked and scattered to the winds, of precious books tossed from high promontories into raging seas. It should be noted, however, that some of the invaders, although uncomprehending and destructive of books written in a strange tongue on the subject of an alien faith, were suitably appreciative of Irish metalwork: If Scandinavian museums today boast excellent examples of early Irish art, it is because discriminating Vikings took objects home with them, adapted them to their own purposes, and later ordered them buried with themselves and other treasured belongings in grave sites. Strange and wonderful are the ways of museum acquisition!

Some think that the great Gospel of Kells was begun in the embattled monastery of Iona, and then removed to safety at Kells in the wake of the destruction of that outpost by the Vikings in 806 A.D. Others hold that it was written and decorated entirely at Kells, and was inspired by the refugee of Iona, who hoped that the book would serve as a bulwark of the faith against the Viking threat. Like many of the most revered manuscripts of the early period, the book was at a later point furnished with a well-wrought metal shrine, called a *cumdach*, a safe enclosure for transporting or displaying the manuscript, but from which it could be removed for reading. The shrine and the book it enclosed were stolen from the church treasury in the early 11th century, allegedly by a "Dane" (a Viking who had settled in Ireland). The shrine was disposed of by the thief, and the book was buried. Upon recovery of the book and apprehension of the suspect, the king of the region judged the case (with what procedural safeguards for the accused we know not), found the suspect guilty, and, with community approbation, ordered his execution. Apt and appropriate punishment, no doubt, for one who would dare to steal what the chroniclers of that day called "the chief relic of the Western World."

The Book of Kells is huge in format, in thickness and in the population of its hundreds of pages with decorated letters seemingly beyond number ("about 2,000" is one scholar's rough estimate). The theory that the manuscript was conceived as an emblem of embattled Irish Christianity in a time of Viking invasion appears to be supported by the extraordinary "Chi-Rho" page: Those giant letters, which look to us like X and P, are the letters of the Greek alphabet which abbreviate the name "Christ." The Chi-Rho monogram was emblazoned on the shields of warriors in the early Byzantine Empire as a magical and protective device—rather like the Irish conception of the *cathach* carried into battle.

The artist or artists of Kells, living and working in accordance with the laws and values of a monastic community, avoided in their art anything that evoked earthly anatomies or actions. In this respect, Irish art is sharply opposed to the Early Christian art of the Mediterranean, and is even somewhat at odds with the traditions in the Irish-founded monastaries of northern England, where a lively curiosity about the issue of representing bodily structure, modeled in light and shadow, occasionally crept to the surface (as in certain pages of the great Gospel Book of Lindisfarne, a northern English work of the early eighth century, now in the British Museum). Take, for example, the depiction of the Evangelists in the Book of Kells. How does a medieval Irish artist interpret legendary Mediterranean authors? He depicts them, first, in terms of their symbols (man, lion, calf, eagle) on a separate page. Then, coming to their human forms, he imagines them as monkish scholars in their writing rooms, holding razor-sharp pens and closed books. They are ceremonially robed, as if writing were sacred ritual—these are no agile "shirtsleeved" authors, such as are seen in Mediterranean Gospel books of the time. And they sit frontally and motionless, pressed flat against the surface of the page and hemmed on all sides by a decorated frame which appears aggressive and elastic, invading every particle of space within its borders. In the St. John page the artist doubles the human image, giving us, outside of the thick and weighty frame, an extra head (nearly missing as a result of clumsy trimming in the 18th century), and extra pairs of hands and feet. Where is the body that goes with these extremities? Perhaps the Evangelist's outer torso is the frame, and so the inner Evangelist is a child of the frame, just as the Gospel book itself is an offspring of the discipline provided by the monastery of Kells against the irregularities of man and nature. Or perhaps, as the art historian O. K. Werckmeister has suggested recently, the gigantic enclosing figure is not a "double" of the interior Evangelist at all, but a fusion of the images of God the Creator, holding the framed image as if it contained the world, and Christ crucified, with fragmentary limbs outstretched. If this suggestion is sound, one must marvel at the liberties taken by the artist of Kells in substituting a scholarly Evangelist holding his book for depictions as portentous as the Creation and the Cross. Does the artist of Kells mean to imply that the essence of creativity, and of passion, lies in the act of writing—and perhaps, too, in the act of decorating a sacred book with pictures.

And then consider what the artist does when the text reaches the events connected with the Crucifixion. He declines to represent that scene, either because its component of earthly physicality is alien to his artistic tradition, or because the scene, at this period in history, presented knotty theological problems better avoided, such as how material paint can properly represent not only the human, but also the divine, nature of Christ. Instead, in rendering the fateful words of the Gospel, "And then they crucified Christ between two thieves," the artist manipulates the "abstract" forms of the words themselves to convey the drama and emotional impact of their message. He splits the words apart into a giant X (intentionally recalling the Chi-Rho monogram) and "torments" the letters above the X into twisted shapes; and in the left margin he paints a lion, its mane streaming like molten metal, its mouth lifted in a mighty roar of agony and anger.

Not everything in Kells, however, is fraught with religious import. In fact, there is something like a surreptitious book of irrelevancies within the Gospel Book, and this parallel work, consisting of hundreds of curiously decorated letters or punctuation marks, or tiny scenes separated from letters, reveals the preoccupations of the artists nearly as well as the full-page decorations clustered about the beginning of each of the four Gospels. Here, we can observe such impertinencies as strutting roosters, hybrids of men and women and beasts, and interlaced chains of birds devouring birds, fish devouring fish. Among these nondoctrinaire depictions is a painting of a horse and rider tucked into the concluding folios of the Gospel according to St. Matthew. With his arms and hands cloaked, as if in a giant insect's wing, the rider appears to point the way with a large, bare foreleg, sniffed at by the horse, whose lower legs disappear in deference to the adjacent line of sacred text. But neither horse nor rider has anything to do with the neighboring words of scripture, in which Christ predicts His impending arrest, Crucifixion, and Resurrection. These portentous lines would seem to call for sterner stuff by way of illustration, but the artist of Kells, in these intermediate pages, relishes an artistic liberty, a limber imagination, which is sometimes heralded as "modern" in its individuality. The term, however, may be misleading: How many modern artists have been in a position to express their idiosyncratic fantasies on one page, and the collective ideals of an epoch on another?

For a "last word" on the beauties of early Irish manuscripts one must turn back to the 12th century A.D., and to the remarks of a Welsh scholar by the name of Giraldus Cambrensis. Although it is apparent that his prime purpose in writing "The Topography of Ireland" was to express satisfaction at the "improvements" in manners and customs wrought by the English invasion effort of King Henry II of England (the scholar's employer at the time), Giraldus is clear-headed and sharp-eyed enough to provide us with a matchless description of the quality of early Irish art. Of the Gospel Book of Kildare, a manuscript now lost, which, by the sound of the author's words, must have been a twin to the Book of Kells, Giraldus had this to say:

"If you observe these pages superficially, and in the usual careless manner, you could imagine them to be daubs, rather than careful compositions—expecting to find nothing exquisite, where in truth, there is nothing which is not exquisite. But if you apply yourself to a more close examination, and are able to penetrate the secrets of the art displayed in these pictures, you will find them so delicate and exquisite, so finely drawn, and the work of interlacing so elaborate (while the colors are so well blended, and still so fresh), that you will be ready to assert that all this is the work of angelic, and not human, skill. The more often and closely I scrutinize them, the more I am inspired, and always find them new, discovering fresh causes for increased admiration."

As a result of the extraordinary pilgrimage of these treasures from their native land, the "close examination" recommended by Giraldus will now be possible for a goodly number of modern amateurs across the breadth of America. *Quid plura*? as the ancient authors liked to say after recounting a miracle: "Need I say more?"

[From European Community magazine, November-December 1977]

"IRISH LEGACY 1500 BC/1500 AD"

AMERICAN EXHIBIT MARKS FIRST TIME EARLY TREASURES DISPLAYED OUTSIDE IRELAND

(By Wendy A. Stein)

The legacy of the past, carried by precious works of national art, does much to shape the identity of a people. When a country entrusts this patrimony to another, it is a great expression of goodwill, and presents a rare opportunity for increased mutual understanding. Despite the close personal, economic, and political ties that exist between Ireland and the United States, most Americans have never had the opportunity to appreciate the rich cultural heritage of Ireland. It is a major source of America's heritage as well, not only for the millions of Irish-Americans, but also because early Christian Ireland influenced all medieval Europe. Now people on this side of the Atlantic can deepen their awareness of Irish national character as it was expressed by her artists spanning 3,000 years of history.

It is the first time ever that these major treasures documenting the achievement of early Irish civilization have gone on display outside Ireland. The exhibition, *Treasures of Early Irish Art, 1500 BC to 1500 AD*, assembles masterpieces from The National Museum of Ireland, The Royal Irish Academy, and Trinity College, Dublin. It is currently on view at The Metropolitan Museum of Art in New York, where it will remain until January 15, 1978, and then travel to museums in four other American cities: M. H. de Young Memorial Museum, San Francisco (February 21–May 21, 1978); Museum of Art, Carnegie Institute, Pittsburgh (June 28–September 24, 1978); Museum of Fine

Arts, Boston (October 24–January 21, 1979); and Museum of Art, Philadelphia (February 26–May 27, 1979). (The assistance of Aer Lingus [Irish Air Lines] was a major factor in bringing the exhibition to the United States.)

The objects selected precede the age of any transatlantic exchanges: They were all made before Columbus sailed for America. Yet they show a precedent for Ireland's membership in the Common Market, for they do reflect relations between Ireland and Western Europe.

As early as 700 BC, Ireland was engaged in active trade. Evidence for this commerce is provided by the discovery in Britain and France of lovely hair ornaments made in Ireland, similar to the lock rings in the exhibition. These appealing gold baubles for holding a lock of hair in place must have been imported by prosperous merchants. Other kinds of jewelry of this age have been found in Germany and Scandinavia, bearing witness to wider economic contacts.

About 400 years later a new group of settlers came to Ireland, bringing a new language, style, and civilization to the island. These were the Celts, a group of people that originated around the upper Rhine and Switzerland, and subsequently spread not only over most of Europe but even as far as modern Turkey. When they came to Ireland, they brought cultural connections from this wide area. Their warrior society immortalized heroes who wore massive neckrings called torcs, like the magnificent example from Broighter in Northern Ireland. Unusual as it is, its spiral decoration and construction share features with Cletic artifacts from Belgium and Britain.

When Christianity was introduced into Ireland about the Fifth Century AD by Saint Patrick and others, new international links were established, both with the Papal seat in Rome and with the monastic centers of the Near East. A powerful missionary movement then reached out from Ireland to northern Britain, and a brillant shared culture was formed whose artistic products are among the world's greatest masterpieces. The objects from this golden age of Irish art—such as the Tara Brooch, the Ardagh Chalice, and the Cavan Brooch—all fuse the native Celtic tradition with patterns learned from foreign peoples, from Germanic tribes to Mediterranean monks.

This was also the time when the Book of Kells was made, a manuscript of awesome complexity and intimate droll wit. It is a luxurious illuminated copy of the four Gospels written in Latin on vellum, a material like parchment made from calf skin. About 150 calves gave up their skins for the making of this book, a considerable investment in an economy based on cattle. The expense of the manuscript also included the import of pigments from places as distant as Afghanistan, but more valuable still was the investment of painstaking labor, skill, and devotion of the monks who created it. The decoration of this book represents a culmination of the international influences in early Christian Irish art. This style also spread with Irish missionaries and scholars to the Continent and influenced the artists and teachers at the court of Charlemagne. The impact of this vibrant period of Irish intellectual history did not end there, but continued in the mainstream of medieval European cultural development. America is the direct heir to this later European tradition that the Irish did so much to shape.

Into the midst of this scholarly and creative civilization the Vikings burst like a storm—looting Irish monasteries, killing their inhabitants, and stealing their treasures to take back to Scandinavia. This was a different kind of international exchange. Nevertheless, in time the Vikings' presence in Ireland became less turbulent, and they contributed to the economy of the land, founded the first cities at Dublin, Waterford, and Cork, and influenced artistic production as well. The patterns made of knotted and coiling animals that decorate the shrine of St. Patrick's bell are related to Scandinavian models. Similar patterns are also on the Cross of Cong, which was made to enshrine and display a fragment of the True Cross sent to Ireland by the Pope in 1119. Such an object provides yet again an example of the diverse and wide-ranging international relations of Irish art.

The objects in this exhibition are not only historical documents providing evidence of a particular national group. Seen in the original, these treasures transcend the context that produced them to stand as masterworks of mankind. The incredible technical virtuosity that produced the Tara Brooch, the balance of shape and detail in the Ardagh Chalice, the intricate mesmerizing patterns so patiently inscribed into the Book of Kells—to see these is to wonder at human skill and imagination. Although they tell us much about Ireland and Western Europe in prehistoric and medieval times, these Irish treasures are captivating for all people, and Americans are fortunate to have this chance to enjoy them for a while. The full force of the impact that the exhibition "Treasures of Early Irish Art" at the Metropolitan Museum in New York has had on the United States could scarcely have been foreseen even by EC Commissioner Richard Burke, whose brainchild the whole spectacular undertaking was almost two years ago.

The first indication of the possibility that such an exhibition, embracing a rich display of the relics of early Irish civilization, was to take place came when a statement was issued on behalf of Burke, then minister for education in the National Coalition Government, in early February 1976. The opening paragraph read: "After consultation with the provost of Trinity College, Dublin, and the president of the Royal Irish Academy, I have, on behalf of the Government, invited the two institutions to mount jointly an international exhibition to consist of manuscripts and objects of art in their possession or on loan to the National Museum."

In the course of the following year the selection of the items which would cross the Atlantic, and the planning in advance of the safeguards which the value of irreplaceable national treasures demands, involved all the special expertise and cooperation of the experts in the National Museum, Trinity College, and the Royal Irish Academy.

"Ireland paying tribute to the American people for the generous help she has received throughout the past 200 years" is the reason for the exhibition given in the introduction to the catalogue. And as Burke said in the beginning, "It is my earnest hope that this exhibition will make a notable contribution to a happier and truer image of Ireland than the one too often propagated at the present time. In mounting it, the organizers wish to persuade as large a public as possible to look beyond our contemporary troubles to the record of a rich and ancient civilization which has left sufficient evidence behind it to make possible one of the most splendid exhibitions to be held anywhere in modern times."

[From the Smithsonian magazine, August 1977]

Great Book of Kells in Shining Exhibit of Ancient Irish Art

(By Alfred Friendly)

(Note.—A multitude of medieval monks created a book so glorious it seemed the work of angels, now to be seen in U.S. cities for the first time.)

"Here you may see the face of majesty, divinely drawn, here the mystic symbols of the Evangelists . . . Fine craftsmanship is all about you, but you might not notice it. Look more keenly at it and you will penetrate to the very shine of art. You will make out intricacies, so delicate and subtle, so exact and vivid, that you might say that all this was the work of an angel, and not of man."

The writer was the medieval Norman-Welsh historian Giraldus Cambrensis (c. 1146–1223) and what he might well have been describing is a masterpiece produced 400 years before his time, the *Book of Kells*. A modern art historian, Bruce Arnold, calls it "the supreme achievement of Irish Celtic art." Kenneth Clark (Smithsonian, August 1977) calls its ornamental pages "almost the richest and most complicated pieces of abstract decoration ever produced, more sophisticated and refined than anything in Islamic art."

Its first viewers, eighth- and ninth-century Irish monks to whom it was probably displayed on occasions of great solemnity and festivity, regarded it as magic. So also will anyone who sees it today, so compelling is its artistry, its lavishness, its grandeur and the profound sense of mystery surrounding it. How, one asks, could such a joyful, wildly colorful, explosively imaginative volume have ever emerged from the cold Celtic mists, from the gloom of the Dark Ages?

For the very first time in America, viewers in five cities will be able to see the *Book of Kells*, the pearl in the crown of an exhibition of Irish art treasures from the Bronze Age to the 15th century. It will open at the Metropolitan Museum in New York on the 15th of this month, remaining there until January 15, 1978, and then will be shown in San Francisco, Pittsburgh, Boston, and Philadelphia, for approximately three months in each city.

Included also are such magnificent pieces as the intricately wrought eighth-century Ardagh Chalice of gold, glass, silver enamel and bronze gilt, the most perfectly preserved such object of any origin surviving from the Middle Ages, and the equally superb Tara Brooch (both p. 73) of silver, gold, bronze, copper, glass and amber, from a period perhaps 50 or 75 years earlier than that of the *Book of Kells*.

The *Book of Kells* is the most breathtaking item in the exhibition. It consists of the four Gospels and certain other preliminaries—canon tables, introductions, summaries and Hebrew name lists—usual to volumes of the kind at the time of its creation, about A.D. 800 or somewhat before. It is by no means the earliest of these decorated manuscripts of Celtic monasteries in Ireland, Scotland and England. Many of these so-called "Insular" manuscripts preceded it as, for example, the magnificent *Book of Durrow* (Ireland) dating from about 670 and equally glorious *Lindisfarne Gospels* (from the monastery on Holy Island off the Northumberland coast) completed in the early eighth century. But the *Book of Kells* is the largest, the most ebulliently decorated and the finest of the genre.

It now consists of 340 folios (double-page spreads, thus constituting 680 pages) averaging 13 by 9½ inches; originally, before it was badly clipped by some ancient binder, the pages were probably an inch or so larger in each dimension. It is known to have been in the monastery of Kells, a great medieval religious center 37 miles northwest of Dublin, at the beginning of the 11th century when there was a report of its theft for the sake of its wrought gold binding. It was found months later, its cover wrenched off and with it probably several of its pages. From missing portions of its text it can be estimated that it originally consisted of about 370 folios.

It remained at Kells until the middle of the 17th century when Cromwell's cavalry was quartered in the church and the governor of the town sent it to Dublin for safety. A few years later it was presented to Trinity College Library where it has since remained.

Initially it was bound in one giant volume. In 1953 it was rebound into four volumes, each roughly corresponding to the four Gospels. Of these, the second, Mark, and the fourth, John, are included in the American exhibition.

ITS ORIGIN A MYSTERY

Its origin remains a matter of conjecture—whether it was written in the mother of the northern monasteries on the island of Iona, off the west coast of Scotland, founded by the Irish Saint Columba (the most widely accepted view), or at Kells itself, at Lindisfarne or some other English or Pictish (Scottish) monastery is arguable.

Mlle. Francoise Henry, an authority on the Insular decorated manuscripts, distinguishes three scribes who wrote the text, in majuscule Latin letters in the so-called "Irish script" and using a mixture of St. Jerome's *Vulgate* and earlier Latin texts. They committed more than a fair share, even for the time, of mistakes and omissions, a failing that did not seem to bother them overly; after all, the volume was kept in a monastery sacristy for altar display on special ceremonial occasions, a book of beauty to be hallowed for itself.

The scribes carefully left space for the illustrators around the margins for initial letters and—what is particularly delightful—for embellishments within the 17 to 19 lines of text on each page. It is thus full of a number of conceits. Mlle. Henry points out, for example, that a scribe would write above a word a letter that he had omitted, not because he had forgotten to set it down originally or because he had insufficient space in the line, but because the addition would constitute an ornament and indeed an excuse for an embellishment, in the form of a little animal curled around the superscribed letter.

Also, the scribes made a game or feat of ingenuity by the use of what is called "turn-in-the-path" or "head-under-the-wing," occasionally indicating the ends of lines not with a conventional sign but by crowds of little figures or animals, sometimes gesticulating to the readers where he should next turn his eye. The figure at the end of the fourth line (p. 68) is perhaps of this category. Note also the little flower or clonelike designs at the end of more than half of the total lines on the page, suggesting that the scribe could not bear to leave a margin without some sort of joyful decoration.

While the scribes worked on setting down the text, additional sheets of vellum were handed out to various artists in the scriptorium for full-page illustrations, to be assembled at the proper places in the completed work. These are the great glories of the *Book*: introductory pages to each of the four Gospels with portraits of the Evangelists; opening pages to each section with fantastically conceived winged "beasts" that symbolized the four authors, a man for Matthew, a lion for Mark, a calf for Luke, and an eagle for John. Other fully illustrated pages include three illustrations of the life of Christ, the Incipits (illuminated text pages at the beginning of each Gospel), the "carpet page," the Chi-Rho page (p. 66), six additional pages of illustrated text and the canon-table arches.

The pigments used by the artists were of vegetable, animal and mineral origin. Curiously, no gold was employed, although there was gold to be had in Ireland; a bright yellow of orpiment (arsenic trisulfide) was used instead. More amazing still, the ultramarine came from lapis lazuli, the source of which (until the secret of its preparation as pigment came to Europe in the 12th century) could not have been closer than Afghanistan It would have been as costly as gold.

In the full-page illuminations, in the portraits, the depictions of Christ's arrest and the temptations at the pinnacle of the temple, and in the borders and the initial letters, the intricacy of the decoration staggers the viewer—the spirals, interlacings, arabesques, convoluted floral designs and grotesque human and animal figures entwined therein.

The full complexity of the patterns, the miniaturization and the fineness of line and color discrimination can be appreciated only under a magnifying glass. Yet, as far as is known, the magnifying glass was not invented until the Renaissance. It has even been suggested that the artist of one or more of the pages must have been nearsighted—for his work, a benign optical defect that was itself a magnifier.

The portraits, the episodes in Jesus' life, the "beasts" of the Evangelists, the representation of angels, were standard subjects of religious illustrations since earliest Christian times. So, too, some of the other smaller illustrations are widely known in Christian iconography: the cross, of course; the peacock as the symbol of Christ; the fish as the acronym (ICTHYS) of the Greek for "Jesus Christ, Son of God, Savior"; human figures in reverential pose; snakes, thought of not as symbols of evil but, since they shed their skins, of resurrection; and perhaps even some birds and animals feeding on fruit as metaphors for Christian's partaking of the Eucharist.

But from figures of deep reverence and religious symbolism, one turns to a welter of border decorations and insertions in the text that appear not merely secular but wildly pagan; many are downright hilarious.

What is one to make of these endless anthropoid, floral, faunal, geometrical and superimaginary monsters? The simplest explanation is that they must have derived from the sheer exuberance and playful imagination of the artists. Yet would a group of Celtic monks, laboring in stony, hermetic retreats, dealing with the most reverential of all texts, and themselves totally dedicated to prayer, poverty and the glorification of God, have been inclined to playfulness and a delight in nonsensicality? Would they have drawn so much as one line without a holy purpose in mind? The more one studies the pages, the more one is mystified.

There are few depictions and decorations in the *Book of Kells* that do not appear at one place or another in other Insular manuscripts. The distinction of the *Book of Kells* is their sophistication and abundance, their greater elaboration and, above all, the emphasis on human figures portrayed both reverentially and in ornamental, often humorous contortions.

The problem for the art historians is the identification of the sources from which those illustrations derive. Some are obvious: early Christian pictures and manuscripts found their way to Iona and its daughter monasteries from Christian enclaves in England dating from the Roman occupation, while others came from Rome. Some scholars profess to see Coptic, Byzantine and even pre-Christian Egyptian influences. Depiction of animals in carvings and metalwork was common to the Irish art from early days, and the fanciful spiral ornamentation seen on the Chi-Rho page can be found in Irish and Celtic art as far back as the Iron Age. Even so, there are elements in the Insular manuscripts and particularly in the *Book of Kells* that seem unique, as if from another world.

In its totality, the *Book of Kells* stands to Celtic art as Chartres to Gothic cathedrals or the Sistine Chapel to Renaissance painting: epitome and climax.

THE AGRICULTURE POLICY ACT OF 1977—S. 2218

Mr. STONE. Mr. President, it is my understanding that the Commerce Committee is interested in examining the bill I have introduced, S. 2218, the Aquaculture Policy Act of 1977.

Although I appreciate the interest of the Commerce Committee, I do not think that the Agriculture, Nutrition, and Forestry Committee should share concurrent responsibilities with the Commerce Committee on this bill according to Senate rule 263(b) 2.

I do feel that recognition of the Commerce Committee's interest should be given. In order to expedite consideration of S. 2218, though, I would prefer that sequential jurisdiction be given to the Commerce Committee instead of a concurrent jurisdiction.

SOUTH DAKOTAN TALKS COMMON SENSE ABOUT ACREAGE LIMITATION PROPOSALS

Mr. ABOUREZK. Mr. President, the New York Times, the Washington Post and the Wall Street Journal, among others, have all printed editorials on the Interior Department's proposed regulations for the sale of excess land in reclamation projects. Frankly, these major dailies have demonstrated an almost complete misunderstanding of the situation. Recently, the Belle Fourche, S.D. Daily Post, which serves an area including the Nation's oldest reclamation project, printed an editorial that spoke to the issue directly and simply I think that everyone concerned with this issue should read this editorial and carefully consider its recommendations. I ask unanimous consent that the text of the editorial be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

160 Acres Isn't Enough

(Reprinted from the Belle Fourche, S.D., Daily Post, Laurence Weyler, Publisher.)

We hope that this matter of the 160-acre limitation on land under federal water projects get resolved pretty soon, because the arguments are getting a little confusing.

We are constantly being reminded of the danger to the family farm and the need to prevent the development of corporation farming. At the same time we are smothered with complaints of excess government control and regulation and how the 160-acre limitation is stifling survival.

Then we read stories about how one California corporation controls 100,000 acres of 160 acre-land. We see complaints about the provision that requires the owner of the land to live within 50 miles of his holdings.

We hope that a little commonsense creeps into the picture when revisions of the 160-acre limitation are discussed.

Granted that there should be some flexibility in the figure because 160 acres in the Belle Fourche project are not going to produce what 160 acres will turn out in California's Imperial Valley, but someone should not forget the original intent of the project was to provide workable homesteads for the little man. It's time the user pays for the water, but the American public footed the major part of the bill for most of those projects and has provided, in effect, a subsidy for those users. If those users are going to draw the subsidies they should reconcile themselves to the fact that someone is going to establish some rules.

Granted the 160-acre limitation became obsolete many years ago, and granted that there have been some rather generous interpretations of the regulations. The problem never got out of hand, however, until someone got greedy and tried to overdo. As usual, when these things happen, everyone is going to pay the bill for that greed.

We don't see anything wrong with a reasonable acreage limitation. We think the original intent of the law was sound and that the intent of those rules should be kept in mind—the benefits of those Federal projects should accrue to family farm operations. There should be reasonable flexibility in the rules, and they should be enforced so that when someone buys one of those units he knows what he's buying and doesn't have to spend the rest of his life trying to find a way to circumvent the regulations.

This is a problem that strikes close to home. We want to see the Belle Fourche valley farmers with holdings large enough to provide an adequate living. We sure don't want to see the valley farms owned by four or five people who live in Arizona or California.

HOUSING AND COMMUNITY DEVELOPMENT BUDGETS

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Maryland (Mr. Mathias).

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Mathias

In the past I have criticized the parsimony of both the Nixon and Ford Administrations when their housing and community development budgets proved inadequate to our needs. To my regret, President Carter is proving to be just as stingy as his predecessors in his budget targets for the cities of America who look to the Department of Housing and Urban Development. And, since I have never held my fire when I found my own party inadequate to great purposes, so I do not propose to remain silent now while a Democratic Administration sells the people in our cities short.

The Federal role in the "plight of our cities" has been a subject of discussion among policymakers since the early 1960's. Declining populations, declining economic base, deteriorating physical plant, increasing dependent population, rising crime and unemployment, deteriorating quality of public education—all of these trends have been documented over the years. And a variety of federal responses has been tried with varying degrees of success. The New Frontier brought us the Office of Economic Opportunity; the War on Poverty brought us the Model Cities Program, Head Start and the Neighborhood Youth Corps. The early 1970's saw a freezing of many of those programs that brought money and expertise to poverty areas, particularly in cities. The nation's social conscience had been overwhelmed by the size and complexity of problems of the poor and the unemployed. We had come to the realization that there were no easy answers.

Many of the dedicated people, who had displayed such enthusiasm for those federal urban aid efforts, were profoundly disillusioned with the slow pace of change and what they saw as the neglect by the national leadership of urban problems. Further complicating matters, the Vietnam War diverted the nation's attention and resources from problems here at home. Those who live in cities, particularly the poor, were most discouraged. They thought that our national leaders had sold them out. And the rallying point of citizen participation, known as "maximum feasible participation" became, in the words of my colleague from New York, Senator Moynihan, a "maximum feasible misunderstanding."

Today we have ended our involvement in the war in Southeast Asia. Watergate is behind us. We can now return to the more pressing and immediate situation in many of our cities. Those trends in cities I have cited here have not changed. If anything, they have worsened for many mayors and urban administrators. Once again, the subject of city decline has become a popular topic of national theorizing and conversation.

The White House has scheduled a well-publicized Conference on National Growth and Economic Development for the end of January. The purpose is to develop a national consensus on the nature of our urban problems as well as to make recommendations to the President on specific steps he should take to improve the plight of our cities.

In addition to this effort, the President has established a cabinet-level "Urban Regional Policy Group", chaired by HUD Secretary Harris. This group has been working since last March to develop a coordinated "package" of programs to aid urban areas experiencing decline in their tax base, deterioration of their housing stock, loss of revenue-producing population and business, and the like.

Quite obviously, the programs of the Department of Housing and Urban Development will play a major role in such an "urban package".

It is, therefore, disturbing to read reports of proposed major cutbacks in the HUD fiscal year 1979 budget. The White House and the Office of Management and Budget apparently believe that a balanced budget must be achieved at the expense of our nation's cities. The President, I am told, has directed the HUD Secretary to almost halve her budget request for the next fiscal year. I find this very disturbing.

Urban administrators, who depend on HUD housing and community development programs to house those who have no other housing choice and to revitalize cities' physical plant which is rapidly deteriorating, need help now.

The HUD budget proposal for fiscal 1979 does not mandate a wild-eyed spending spree. Rather, it contains some modest housing innovations that have been needed for some time.

For example, HUD proposed to target mortgage interest subsidies to inner-city neighborhoods that have been neglected by conventional lenders because of their location. HUD has also proposed an interest subsidy program to stimulate the construction of rental apartments for lower income and working-class families who have been priced out of the housing market by inflation.

Now this kind of a program is clearly on target. One only need look at the low rate of apartment construction starts for the past two years and the unbelievably tight housing markets in so many of our cities to appreciate the soundness of Secretary Harris' proposal.

Other basic HUD programs which have proved their usefulness, such as rental assistance payments, public housing, and housing rehabilitation loans are also apparently on the White House chopping block.

HUD's proposed 1979 budget contemplated a $4.6 billion funding level for the Community Development Block Grant Program; $900 million for the Urban Development Action Grants; $125 million for Sec. 312 low interest rehabilitation loans; and $100 million for the Sec. 701 comprehensive planning program. OMB is insisting that each of these programs be held to the same level as the present fiscal year. Those funding levels are essentially those of the Ford Administration which Mr. Carter, during his election campaign was quick to describe as "benign neglect" of our cities.

HUD's Section 8 housing assistance program was scheduled to move into high gear in the coming fiscal year, financing up to 550,000 housing units. The budget-cutters at OMB and the White House, however, want to cut this program in half. This would cut back subsidized housing production to its initial level of three years ago.

The entire HUD budget for the present fiscal year is $9.1 billion. This represents 2 percent of the total federal budget for this fiscal year. If the White House has its way with the HUD budget for fiscal year 1979, that percentage will remain virtually the same.

Equally disturbing to me are reports that a HUD request for direct operating subsidies and rent supplements for so-called "troubled projects" has been turned down by the Office of Management and Budget. These are apartments for low and moderate income families which are in most cases located in cities where rental revenues are unable to keep pace with rapidly rising operating costs. These apartment buildings were built by church and other non-profit groups to house the poor.

The potential for large-scale displacement of residents of those buildings and the hardship which it brings to families must concern all of us. This is the possible effect of such a budget denial by OMB. The displacement of low income residents from such buildings is almost certain to lead to financial difficulties for their sponsors and eventually to abandonment of the buildings. The President need only recall his October visit to the South Bronx in New York City to appreciate the physical, economic and social havoc caused by large-scale residential building abandonment. I urge him to reconsider his position on this most important HUD issue.

The secondary mortgage market also plays an important part in subsidized housing production. Through the Government National Mortgage Corporation, Section 8 mortgages are purchased in the secondary mortgage market. This "take-out" of Section 8 mortgages is essential if developers are to continue to finance and build Section 8 low and moderate income housing units. Yet, I understand that OMB has sharply curtailed this program, too.

These proposed reductions in the first real HUD budget of the new Administration are indicative of a mind-set in the White House of fiscal conservatism. A balanced budget apparently is the overriding concern of the Carter Administration, never mind who suffers in the process. In this case lower income families will take it on the chin from the budget boys. Personnel at the Office of Management and Budget seem to believe the simplistic notion that an income transfer mechanism can solve the most complex problems of our nation's poor. It is argued that if we assure the poor of a minimum level of income in lieu of decent housing, the housing market will automatically respond by providing decent housing at a place and price they can afford. But the woeful inadequacy of the present housing market and its inability to meet the needs of millions of non-poor, middle income renters and buyers shows us that the income transfer idea will not work.

The Administration attitude toward the HUD appropriation is particularly disturbing because the President has stated that the nation's cities are "America's No. 1 economic problem" and he campaigned on a platform to focus federal aid on those cities. In the summer of 1976, candidate Jimmy

Carter pledged to a U.S. Conference of Mayors meeting in Milwaukee that he would adopt an urban policy based on mutual trust, mutual respect and mutual commitment between the city governments and the federal government. He pledged an urban policy that would be responsive to the multi-faceted needs of American cities—their needs for coordinated economic development, their needs for housing, and their needs for services that would sustain the people in that housing.

On March 4 of this year, HUD Secretary Harris, appearing before the Senate Housing Subcommittee, in good faith emphasized that her Department would become the primary link in the implementation of this new urban policy. Secretary Harris said, "I envision a new beginning for Americans in the realm of housing and urban development. It is a beginning . . . that is based on realistic objectives derived from knowledge of both our resources and our need. It is a beginning that will call upon the good in our nation and its people so that together we can meet the challenge that is before us today."

I fear, however, that Secretary Harris' faith in the good in our nation and its people is being undermined by the expediencies of zero-based budgeting, a concept President Carter would have difficulty explaining to a mother and her children living in a crowded ghetto without money and without hope.

A CHRISTMAS GHOST: PUMPED STORAGE CHAMPIONED BY ENVIRONMENTALISTS

Mr. **MUSKIE.** Mr. President, the many twisted arguments against the Dickey-Lincoln hydroelectric power project on the St. John River in my State are sometimes amusing, sometimes saddening and occasionally so outrageous that I am forced to speak against them.

One such argument has surfaced in the form of pumped storage, touted recently as an environmentally sound alternative by the Boston region of the EPA. EPA should know better. I hope it does. If it does not, I worry about our environmental future.

Pumped storage, of course, is a method of producing power within a system by using excess capacity at times of low demand to pump water uphill to a holding reservoir. Then at times of peak demand, some of the energy is reclaimed by allowing the water to fall from the reservoir through generating turbines. In some cases, it is a practical generating method.

The EPA's comments on the Dickey-Lincoln project, and news reports which followed their release, both pointed to a pumped storage site near Caratunk, above the Kennebec River.

EPA, and the press, demanded to know why this site had not received more study. After all, they claimed, the site would produce more peaking power than Dickey-Lincoln for what they were certain would be less environmental cost.

In the first place, it has been studied, first in the early 1960's when Dickey-Lincoln was first seriously considered. In the draft environmental impact statement on Dickey-Lincoln, a section of appendix I is devoted to analyzing pumped storage, including the Caratunk site.

Let me for a moment merely mention the fact that the water level of the upper reservoir would fluctuate every day by 90 to 100 feet, and by as much as 140 feet. Let me only mention that the lower reservoir, Wyman Lake, would fluctuate every day by 6 feet. Let me only mention that the Federal Government never has been in the business of building pumped storage facilities for private utility companies.

The key objection, conveniently and dishonestly ignored in recent reports, is this: there is no power in New England to store. Building a pumped storage facility would mean building a new baseload powerplant, fired by coal, oil or nuclear power. Now where is the environmental benefit of pumped storage?

In fact, the Army Corps has estimated it would require one third of the total power generation of a new nuclear plant to run a storage facility at Caratunk. Why so much? Because you only get back two-thirds of the power that you use in a pumped storage facility. So the Caratunk facility, which would produce more power than Dickey-Lincoln, would actually cost us 2.5 billion kilowatt hours a year to generate 1.7 billion kilowatt hours of energy for peak demand. And it would only cost us $300 million, if the Government were interested in the first place.

Now where is the power benefit from that?

Dickey-Lincoln combines peaking power, intermediate power and pumped storage to produce its energy. In addition, regulating the water flow of the St. John River would increase energy production downstream. We could reclaim part in the pumped storage feature of the project.

And the entire argument ignores the crucial flood control aspect of the Dickey-Lincoln Dam. The floods will not go away, even if Dickey-Lincoln does.

Mr. President, one aspect of the pumped storage argument being advanced by environmentalists is particularly disturbing. I have devoted a substantial portion of my life and my energy to promoting the cause of a clean, healthy environment. Those of us committed to environmental protection have succeeded because we never attempted to hide the truth. We always described the consequences of our proposals. We have succeeded in part because we forced others who would harm the environment to describe the consequences of their proposals. Collectively we made a judgment on the facts.

It is a disservice to the cause of environmental protection, and a sad reflection on those who advance the argument, to pretend that what is advanced here is any more than a Christmas ghost which will disappear like a wisp of smoke under the howling wind of environmental objections should Dickey-Lincoln not survive.

I further believe it is irresponsible for those who would call themselves environmentalists to proclaim pumped storage as an environmental savior in the Maine case when it was environmental opposition which killed what some considered to be the most environmentally responsible pumped storage proposal in history—the Storm King project on the Hudson River.

The story of how the project was killed, and by whom, was eloquently told by William Tucker in the November 1977, issue of Harper's magazine.

I ask unanimous consent that his analysis be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

ENVIRONMENTALISM AND THE LEISURE CLASS

(By William Tucker)

Four years ago, while I was working at the Bergen Record, a suburban newspaper in Hackensack, New Jersey, a press release crossed my desk from the Scenic Hudson Preservation Conference, a small group with headquarters on Madison Avenue which, by its own advertisement, had been working for more than ten years to "save Storm King Mountain."

Although I had grown up in the New York area, I hadn't been living there much during the 1960s, and my memory of the whole Storm King incident was hazy. The most I could recall was the image of a majestic, looming mountain somewhere along the Hudson, a threat by Consolidated Edison of New York to do something terrible to it, and the recollection of protesters and entertainers strumming their guitars and parading in boats until the apparition had somehow been exorcised.

I doubt if I could have identified the Con Edison proposal as a pumped-storage plant. If I had been asked, I probably would have said it was a nuclear plant. I did not know at the time how many other people, including some of the principals of the controversy, would have responded in the same way.

Yet I was getting awfully suspicious about environmentalists. Their solutions to problems had an inordinate amount of impracticality about them, more than they would have tolerated in their own lives. The environmentalists in any given area seemed very easy to identify. They were, quite simply, members of the local aristocracy, often living at the end of long, winding country roads. They had learned the lessons of conspicuous consumption and had allowed a certain amount of genteel rusticity to enter their lives. Instead of imitating Greeks and Romans, they seemed to be patterning themselves after the English gentry.

The environmentalists knew the language of energy and ecology, and could describe a future filled with windmills and with bright sunshine radiating "inexhaustible energy." Yet one never got the impression that these people were planning to be part of it. The "soft energy" of the future was a vision offered to persuade people to forgo the nastier, more vulgar realities of the "hard energies" of the present. I knew this was mostly a lot of nonsense. Solar electrical generating stations would be massive installations, hiding acres upon acres from the sunlight. Storage problems could prove insurmountable. Solar heating on a large scale could mean rebuilding half the homes in America. When I questioned the environmentalists closely, I found these details rarely intruded upon their vision. "Have faith" was the rejoinder, while economics and matters of sheer quantity were dismissed. "We certainly can't go on the way we're going now" was the comment I heard over and over again. It was difficult to tell just which, if any, of these people really knew what they were talking about.

There was another thing that disturbed me about environmentalism. That was the way it always seemed to favor the status quo. For people who found the present circumstances to their liking, it offered the extraordinary opportunity to combine the qualities of virtue and selfishness. When the first environmentalists were showing up at town meetings arguing against new apartment houses, shopping centers, or whatever, it seemed obvious that they were acting out of the universal human impulse which makes people respond to incursions on their surroundings by saying, "Put it somewhere else." Like everyone, the environmentalists wanted to be left with the illusion that they lived alone in nature without the assistance of other people. They had simply refined their arguments with talk about "ecosystems," "rare, endangered species," and "carrying capacities."

That was before everyone else began catching on to the possibilities of environmentalism. From 1972 to 1974, "protecting the environment" became the favorite argument in the endless debates over new development in the suburban area of Rockland County, New York, where I was reporting. People who would starve to death if they couldn't drive their cars to the supermarket were opposing new road construction because "fossil fuels are disappearing" and "we aren't going to be using cars anymore."

And really, there was nothing in it that was logically inconsistent with the tales of the original environmentalists. Nothing these first country prophets had said ever had much to do with sacrifice or self-restraint. If tweedy people living at the end of country roads with fireplaces in their living rooms could protect their "environments," why couldn't tacky people living in pink-and-gray houses at the end of cul-de-sacs do so as well? "Environmentalism" always seemed to work in favor of the people who were already established in "the environment." I didn't realize how true this was until I learned that a group of middle-class whites in Newark had been able to block a highly controversial low-income housing project by bringing a long series of challenges to the project's environmental impact statements.

In the course of about six months, I saw several garbage-recycling projects and an experiment in pollution-free burning of coal blocked by local residents who were "protecting their environment." It was easy to see that people who talked about "environmentalism" were not terribly concerned with things like recycling, conservation, and biology.

With all this in mind, I decided it might be worth taking a long look at the incident which is considered the "birthplace of the environmental movement," the Storm King Mountain controversy. I admit I started my investigation with certain anticipations. I expected to find a project that had been opposed by a small but determined group of wealthy people. This turned out to be correct. What I didn't expect to find was the degree to which the opponents of the project had managed to commandeer public opinion and win supporters among people whose best interests might have been served by supporting the plant. Among these was the entire government of the city of New York.

What is most astonishing is that the whole issue is still alive, miraculously embalmed in the deep-freeze storage of the court system. The crowds have departed, the newspapers have stopped covering the story, and no more than a few people can remember even the sketchiest details of the issue. Only Con Edison and its little band of determined opponents remain in deadlock, struggling far into the night.

The chronicle as it comes to us now is really a historical saga. The written record would probably fill a wall of bookcases. I have read the New York Times file on the subject, the Bergen Record file (which includes most AP dispatches), and several books relating to the subject; I have visited the Storm King area many times, and interviewed close to forty people who played major roles in the controversy. Yet most of the testimony from the fifteen years of court cases and Federal Power Commission hearings is known to me only through excerpts and newspaper reports.

Nevertheless, there is a consistent pattern in the Storm King Mountain controversy, one which, I think, offers an answer to the big question—Why has this particular plant stirred up so much opposition?

The question has long tantalized nearly all the participants. One can see editorial writers, utility executives, residents of the Storm King area who favored the plant, and even the environmentalists themselves reaching for an answer over and over again. I wasn't able to make more than a few vain stabs at it until this year, when I went back and finished a book I should have read in college, Thorstein Veblen's Theory of the Leisure Class. There, in a slim fourteen-page chapter called "Industrial Exemption and Conservatism," I found an explanation of "environmental" behavior which I believe goes far beyond the issues at Storm King Mountain. It bears most specifically upon our present industrial crisis—the prospect of fossil-fuel shortages, the conversion to new technologies, the support for "no-growth" economics, and the general future of the industrial system.

I believe the Storm King Mountain controversy contains a story that has never been adequately told but has enormous bearing on the future of our economic system. It is offered here in the hope that, once understood, it will not have to be repeated on a large scale.

THE CHRISTMAS-LIGHT DEMAND

> The leisure class is in great measure sheltered from the stress of those economic exigencies which prevail in any modern, highly organized industrial community. The exigencies of the struggle for the means of life are less exacting for this class than for any other; and as a consequence of this privileged position we should expect to find it one of the least responsive of the classes of society to the demands which the situation makes for a further growth of institutions and a readjustment to an altered industrial situation. The leisure class is the conservative class.
>
> —THORSTEIN VEBLEN,
> The Theory of the Leisure Class.

In 1962 Consolidated Edison Company, the sole supplier of electricity to New York, was the giant of the industry. The company had some of the most skilled and innovative engineers in the business, and was generally regarded as the most progressive utility in the country. This was hardly a matter of chance, because whatever problems occurred in the utility industry were sure to happen first in New York City.

In the 1950s Con Ed had experienced almost nothing but major changes. The capital-short years of the depression and the diversion of resources during World War II had left the utility almost a generation behind in construction of new generating plants. In 1952 the company had eleven power stations, all of them in New York City and all but three built before 1933. They could produce a peak output to meet a demand of 3.3 million kilowatts.

But the arrival of new energy-consuming technologies—particularly air-conditioning—was changing the entire pattern of electrical consumption in New York City. Throughout the history of the utilities industry, peak demands always occurred at night. Right through 1957, the biggest strain on Con Ed's system occurred when midwinter lighting and heating demands were at their highest. Old-timers in Con Ed's control command could fondly remember a time when the annual peak usage occurred on Christmas Eve, when tree lights and toy trains put the largest demand on Con Ed's generators.

But by the early 1950s it was obvious that the city's systems were on the verge of enormous changes. Daytime peaks, particularly during the summer air-conditioning season, were growing in gigantic leaps and would soon be overtaking winter nighttime demands. Carrying summer loads was soon going to be the utility's biggest challenge.

Con Edison responded with actions that can only be called appropriate. In the late Fifties the company contracted with the Allis-Chalmers Corporation to build a 1 million-kilowatt coal-burning plant—later to be nicknamed "Big Allis"—that would be more than twice the size of an existing plant, yet would hold off the rising peak demands for only four years.

At the same time, Con Ed ignored the conservatism of other utilities and began developing a nuclear technology. The only atomic generating stations had been built by the U.S. government, and other utilities were avoiding the risks of pioneering in the field. But Con Ed did not have time for such caution. The company bought an abandoned riverside park at Indian Point in upper Westchester County and contracted with General Electric to build, for $140 million, the first privately owned nuclear station in the world. Indian Point would provide only 237,000 kilowatts—less than the next year's projected increases in demand—but would open the way for larger efforts in nuclear technology.

On June 26, 1957, with both Big Allis and Indian Point One still in construction, the company passed a watershed. During the midafternoon of an extraordinarily hot day, Con Ed's demand rose to 3.5 million kilowatts. It was the first time a daytime peak had surpassed the annual nighttime peak, and it also put Con Ed over its own capacity. Electricity had to be imported from Long Island and New Jersey over lines that were originally built so Con Ed could sell power to neighboring utilities. All during the long afternoon, Con Ed executives sweated it out at the Manhattan control center, praying that the improvised system would work. Over the next three years, demand would grow at an average rate of 300,000 kilowatts per year.

Big Allis and Indian Point One came on line as scheduled, but the exasperating situation of "peak demands" was leaving Con Edison and other utilities playing a losing hand. New generating capacity was going to have to be added almost continually, yet this capacity would remain idle during most of the year. It was like building an extra wing on a house to accommodate a guest who visited only at Christmas. There were extraordinary inefficiencies in building and maintaining generators whose average "load demand" over the entire year was only about 55 percent of their full capacity.

The problem is that electricity must be used as it is generated. It cannot be stored in normal generating systems. The only proven method of storage—then and now—is "pumped storage," a system whereby water is pumped from a lower to an upper reservoir during off-peak hours and released during peak hours to create hydroelectric power.

A few utilities had built pumped-storage plants during the 1940s, and 50s, but they were clumsy, costly affairs. Two separate water tunnels were required—one for pumping, the other for generation. Then, in 1960, engineers perfected a reversible turbine that could serve as both pump and generator. One tunnel could be used for both purposes, cutting construction costs nearly in half.

Several utility companies in areas where mountains and rivers would make pumped-storage systems feasible started exporing the new techniques. Con Ed did not make a deliberate investigation, but in 1961 one of its executives received a call from a manager at Central Hudson Gas and Electric in Newburgh, who said his company had been investigating what appeared to be two excellent pumped-storage sites on opposite sides of the Hudson River within five miles of Newburgh. The first, below Breakneck Ridge on the east bank, would suit Central Hudson, but the second, just south of Storm King Mountain, was too large for the Newburgh utility. It might, however, be on a scale required by the New York City company.

Con Ed made its own investigation of the Storm King site and found it was highly suitable for pumped storage. The generating plant could be tucked into a small inlet in the Palisades Interstate Park just south of Storm King. An upper reservior for drinking supplies had already been developed about two miles behind the mountain. It belonged to the village of Cornwall, which lay just north of Storm King. The village would probably be happy to have the reservior put on the tax rolls, and could be furnished with new wells by the company for about $3 million.

Working covertly to avoid land speculation, the utility acquired most of the property around the upper reservior during the spring and summer of 1962. Then, in July, Con Ed broke the news to political officials in Cornwall. Mayor Michael Donahue was delighted—almost overwhelmed—at the idea of having the huge enlargement of the upper reservior on the tax rolls. The benefits to the community would be enormous.

On September 27, 1962, village officials and Con Ed made a joint public announcement of the new plant, which they predicted would win quick approval from village residents and from the Federal Power Commission, the licensing agent. In his first interview with the presss, Mayor Donahue, a Cornell-educated veterinarian who had grown up in Cornwall noted, "There's no chance that the building will reduce the aesthetic qualities of the area" because it would be located "on the waterfront, not on the hills."

Five miles downstream however, a part-time resident on the east bank looked out the front window of his mountain retreat, one of many luxurious second homes in the area, and found a different view of the matter. William Osborn, an engineer whose family owned 2,000 acres and a mountainside castle, and who served as president of the Hudson River Conservation Society, realized that he would have a clear view of the transmission lines that Con Ed was planning to string across the river to connect the Storm King plant to its circuits in Putnam and Westchester Counties. Osborn called a few of his neighbors in similar mountaintop hideaways and found that they too were upset about the plant, which would be visible from several lookouts on the east side of the river. Osborn, whose brother Frederick was a commissioner of the Palisades Interstate Park, was soon on the phone to Con Ed to see if it couldn't be persuaded to make a few slight changes in the layout of the plant.

At the time, "ecology" was an obscure discipline found only in a few biology textbooks, "conservation" was a movement whose main impetus had occurred around the turn of the century, and "environmentalism" was a word that didn't even appear in the dictionary. But most people familiar with the history of the Storm King Mountain controversy rightly consider William Osborn's phone calls to his mountaintop neighbors as the birth of the environmental movement.

HUDSON RIVER VISTAS

The scenery along the Hudson River's 130-mile lenght from New York to Albany can hardly be characterized in a few simple phrases. Nor can its long history. Both are notable for their diversity.

The Hudson's scenery ranges from the rocky columns of the Palisades at the lower end to the dreamlike vista of the Catskills along its upper reaches; from the beauty of mountainside farms to the leaden industrial shores of Haverstraw and Newburgh Bays. The latter are two of the larger industrial centers that sprang to life during the early nineteenth century, when the Hudson became the main thoroughfare for most of the new nation's commerce.

Between them lies a stretch that has remained largely untouched. These are the Hudson Highlands. Here, for a length of fifteen miles, the mountains rise straight from the water's edge like the burly shoulders of huge animals. The stretch is the point where water from a preglacial lake broke through on its way to the Atlantic. It is the only breach in the Appalachian Chain, and thus forms a natural pathway from the Eastern coastline to the hinterland of the American continent, making the Hudson the nation's first main highway.

The highlands offered few footholds for commercial and industrial settlement, however; they served instead as a retreat for the wealthy. During the Revolution, they housed the biggest concentration of Tories in the thirteen colonies. As New York City prospered in the early 1800s, some of the area's most successful citizens began trekking up the Hudson to find solace on riverfront properties. The east bank of the river had been "estate country" ever since the Dutch made their first land grants along its shores while the west bank remained "Indian country," and was first settled only by small farmers who were willing to risk confrontations. As the nineteenth century progressed, the distinction remained. The Astors, the Goulds, the Vanderbilts, the Roosevelts, and the Rockefellers all took up residence on the east bank, while the western shore remained in the hands of small farmers except for the large holdings of the Harriman family in Orange and Rockland County utilities.

The highlands were the scene of some of the more elaborate attempts to mimic European nobility. A succession of wealthy stockbrokers and businessmen built mountainside castles in the region. Some proved drafty and uninhabitable, and were succeeded by less ambitious but still impressive second homes. Eventually, many of the great estates became unmanageable and were sold to charitable institutions. But the little colony of wealth in the highlands persisted. A group of artists and admirers of the past clustered around it, and an aristocratic, inward-looking community was formed, with the hamlet of Garrison as its center.

In the cities to the north and south, the story was different. Commerce declined, and industries deteriorated or departed. A wave of urban-renewal projects in the 1950s sent displaced blacks moving from city to city along the river looking for homes.

In the period of 1955–61, two striking incidents occurred within ten miles of each other on either side of Storm King. A group of wealthy activists moved an eighteenth-century mansion piece by piece all the way from Peekskill to Garrison after the federal government threatened to tear it down. It became the Boscobel Restoration, a minor tourist attraction. On the other side of the river. Newburgh was also briefly in the news. Exasperated by the number of welfare recipients moving into the community, the city manager, Joseph Mitchell, announced that all able-bodied welfare clients would have to perform city jobs to receive their payments. The directive was quickly overturned in the courts, but city officials said it had highlighted the community's economic plight.

Less than a year later, Consolidated Edison of New York arrived on the scene with a proposal to spend $115 million to build a pumped-storage plant at the base of Storm King Mountain.

An advance in technical methods, in population, or in industrial organization will require at least some of the members of the community to change their habits of life . . .; and in doing so they will be unable to live up to the received notions as to what are the right and beautiful habits of life.—The Theory of the Leisure Class

Right from the beginning, Con Edison was willing to compromise. It may have been their biggest mistake.

When Osborn made his objections known to Con Ed, the utility quickly agreed to move the plant around to the north side of the mountain, so that, instead of lying within the narrow gorge of the highlands, the plant would be facing the dilapidated scenery of Newburgh Bay, and sitting almost atop the burned-out ruins of Cornwall's abandoned waterfront. The company also agreed to run the power lines through an underwater cable beneath the Hudson. The relocation of the plant would mean a slightly longer tunnel, but it would also put the generating station within the village of Cornwall, which would make local residents even more willing to welcome the project. The additional expense would raise the total cost to only $121 million. Osborn registered his satisfaction, Cornwall was even happier about the plant, and the matter seemed settled. But not quite.

Other owners of weekend homes and small estates on the east bank of the highlands were unhappy about the transmission lines, which, in some cases, would run near to or over their properties. If Con Ed was submerging its cables under the river, why couldn't it bury the lines near their properties as well? Con Ed executives replied that burying all the wires would run the costs far beyond acceptable levels for its New York City and Westchester customers. The estate owners were not satisfied.

As they voiced their complaints, they heard that they had counterparts across the river in a little colony of about twenty-five families of wealthy New York City businessmen and attorneys with summer and weekend homes behind Storm King. These "weekenders" and "mountain people," as they were known in Cornwall, lived around a private compound developed in the 1880s by James Stillman, the president of National City Bank and one of the organizers of the Consolidated Gas Company, the forerunner of Con Ed. Stillman had been regarded as a nouveau riche when he tried to gain entrance to Tuxedo Park, the exclusive community at the other end of Orange County. Rebuffed, he expanded his family holdings at Storm King and started his own private community. Many of the current residents are descendants of the original families, although one of the reigning patriarchs, Chauncey Devereux Stillman, had moved further north, to Columbia County, where he kept a set of four-in-hand coaches and raised peacocks on his property.

The "mountain people" were also unhappy about the new plant. A parade of bulldozers and construction workers threatened havoc for their quiet weekend retreats. Some would lose property holdings around the upper reservoir. In addition, the plant would mark a kind of symbolic invasion of their privacy.

The "estate country" people made contact with the "mountain people," and together they talked about the possibilities of blocking the plant. One of the Cornwall people, Stephen Duggan, was a senior partner in the blue-chip Wall Street law firm of Simpson, Thacher and Bartlett. Duggan felt that if the group could harass Con Ed for a while, the economics would change and the company might give up the project. The Cornwall Stillmans polled their relatives and found they were nearly all opposed to the plant. Benjamin Frazier, a Garrison antique dealer who had led protest marches in front of the Boscobel mansion when the federal government had wanted to tear it down, felt the same technique might work at Storm King. Alexander Saunders, a Garrison resident, felt a case could be made for keeping industry out of the area, even though in 1964 he would move his own family business, a small tool-and-die factory, from Yonkers to the highlands. The group found its ranks joined by another activist, Leopold Rothschild (not a *real* Rothschild), a well-connected New York City attorney who liked to hike in the Storm King area and had been active in conservation groups since an attempt to oppose construction of the George Washington Bridge in 1927.

They decided to attend Cornwall Village meetings and express their views, but soon found themselves facing almost unanimous public hostility. There were even few threatening phone calls. Mayor Donahue, although quietly appalled that the "mountain people" might try to block the plant, made several efforts to mediate. Years later, when I visited his home, he told me of the time when he was invited "up the mountain" to a cocktail party where the Storm King project was to be discussed. "Nobody said much during the entire afternoon," he recalled, "but toward the end a retired West Point general took me aside and said, 'Look, we've got it nice and peaceful up here, why do you want to spoil it?' I bit my tongue and didn't say anything, but what I wanted to say was 'What about all the little people down there in the village who need this plant? Did you ever think about them?' "

Things did not look promising for the fledgling opponents during the early months of discussion, but in April 1963 Con Ed made a bad mistake. In its annual report, the utility printed on artistic rendering of the proposed pumped-storage plant. In an effort to highlight the technical aspects, the artist drew the plant larger than its actual size. As one writer would later describe it, the drawing showed "a portion of Storm King mountain missing, like a slice removed from a tub of cheese." Rothschild wrote letters of protest to both Governor Rockefeller and John B. Oakes, the editorial-page editor of the *New York Times*.

Rockefeller, an aristocrat among aristocrats, made the half-serious suggestion that if the group didn't want the plant they should buy the mountain. (His brother, Laurance Rockefeller, was later to use the family money to buy the Breakneck Ridge site from Central Hudson.) Oakes, however, was more responsive. On May 29, 1963, the *Times* ran its first editorial on Storm King, asserting that "it is almost as bad to plunk down a couple of power installations right in the heart of one of the most stunning natural regions in the Eastern United States, Storm King Mountain" as it would be to put a power plant in the middle of Central Park. The paper had proudly taken its stand. It has not wavered one iota from its original position over the succeeding fifteen years.

Duggan, Rothschild, Saunders, and their associates spent the rest of the summer looking for checkpoints where the plant could be temporarily delayed. The village had waived a referendum on selling the upper reservoir, so they asked that the vote be held. The result was a 499–25 defeat in 1964.

The only other possibility was the Federal Power Commission, which would be licensing the plan under its authority to regulate all hydroelectric projects. The little group of opponents discovered the deadline for filing for appearance at the FPC hearings had already passed, but through Rothschild's connections they were put in touch with Dale Doty, a Washington, D.C., attorney who had sat on the FPC during the 1950s and had once persuaded it to reject a dam proposed in Wisconsin because it would ruin recreation for the area. Doty was eager to argue a case before the FPC in which scenic and conservation values would be an issue.

On the evening of November 8, 1963, Rothschild met with representatives from four national conservation groups in the living room of the Westchester home of Carl Carmer, a popular historian who had written a book on the Hudson. Together they set up the Scenic Hudson Preservation Conference, an alliance of conservation groups that would devote itself to the Storm King case. Carmer was named honorary chairman, and Rothschild was elected president.

Through a combination of Doty's influence and the FPC's desire not to ignore any of the issues, Scenic Hudson was granted permission to appear at the license hearings even though the deadline had passed. Doty felt that a case could be made on the basis of the FPC's responsibilities to consider the total impact of the plant. He felt scenic values should play a part. For Rothschild, Saunders, Carmer, and Duggan, it was chiefly a matter of keeping the plant from going ahead on schedule. When the FPC hearings opened in Washington on February 25, 1964, they and their little band of followers from Garrison and Cornwall were waiting to speak in their turn.

> As population increases, and as man's knowledge and skill in directing the forces of nature widen . . . the habitual methods of carrying on the life process of the group as a whole, no longer give the same result as before. . . . If the scheme according to which the life process . . . was carried on under the earlier condition gave approximately the highest attainable result . . . in the way of efficiency or facility . . . then the same scheme of life unaltered will not yield the highest result attainable . . . under the altered conditions.—The Theory of the Leisure Class

Con Ed officials believed that the huge, 2 million-kilowatt pumped storage plant at Storm King would offer three major advantages to its electrical system.

First, it would solve the problem of peaking power at bargain rates. For an investment of only $121 million, Con Ed would be able to increase its current capacity of 5.5 million kilowatts by more than 33 percent, enough to carry it through to 1969. Building the same capacity with fossil fuel or nuclear plants would cost more than $200 million.

Second, the Storm King plant would create greater efficiencies in Con Ed's existing systems. Instead of adding new generating capacity, it would use existing capacity more efficiently. Coal- and oil-burning plants could be operated at higher levels and would consume less fuel per kilowatt, just as cars burn gas more efficiently at fifty-five miles per hour. Con Ed would be able to retire four of its oldest, least efficient plants. This would be doubly important, since the oldest plants were the worst contributors to air pollution, a growing public concern.

The third advantage was reliability, an increasingly important concern among utilities in the early 1960s. As generating plants became bigger and as transmission lines stretched longer, the possibility of widespread power failures was increasing. Ordinary steam-driven plants could not cope with emergencies because it took from fifteen to thirty minutes to stoke them up to higher capacities. But a pumped-storage plant, with enormous quantities of water sitting behind simple sluice devices, would be a godsend in an emergency. The Storm King plant could go from zero to 2 million kilowatts of power in less than a minute. The man-made waterfall could be used to restart other generators after a widespread power failure. The plant could prevent some blackouts and limit the effects of others.

Fifteen years later, New York City public officials would have done well to remember the reliability promised by the Storm King plant The city had suffered two major blackouts in twelve years, the second leading to widespread looting and costing the city more than $1 billion. But by 1977 hardly any political officials could recall more than a few sketchy details of what Storm King had been all about. And none could remember that the city itself had been the major opponent of the project for nearly ten years.

A CONFLICT OF INTERESTS

The FPC hearings added many novel aspects to what had formerly been a staid and pro forma proceeding. The members of Scenic Hudson presented their arguments under Doty's examination. Rothschild warned that the transmission lines running down the east bank of the highlands would cut a "raw scar" into the landscape. Saunders went even further. "This historic area will be permanently defaced," he warned. The plant would "set a precedent for other projects," while "crisscrossing the area with overhead power transmission lines would destroy many beautiful views."

Carmer made the most eloquent summation of Scenic Hudson's position:

"We believe that ugliness begets ugliness and that nature's beauty, once destroyed, may never be restored by the artifice of man. . . . We would offer the peace and healing our river gives, as it has always given, to those who seek its water for respite from the tension of their lives. . . . The real question is whether the river's national importance shall be sacrificed to these enterprises which would change the shoreline, lower high peaks [sic], destroy groves of trees. . . . The Hudson answers a spiritual need more necessary to the nation's health than all the commercial products it can provide, than all the money it can earn."

Carmer's interpretation of Hudson River history was a limited one. It ignored the river's combined role as the first highway of the nation's commerce, the birthplace of the steamboat, the home of one of the nation's first railroads, and the breeding ground for many of its first industries. The suggestion was that the river would now serve only as "respite from the tension of [the] lives" of people who presumably made their living elsewhere. The same kind of reinterpretation of history was taking place along the river, where the interest arising from the Storm King case was bringing suggestions from conservation groups that power boats be banned on the river and no house worth less than $50,000 be built on its shorelines.

The hearing officer, Edward B. Marsh, took their testimony into account, and in June 1964 recommended to the full five-member commission that the plant be granted a license. Con Ed had proposed to turn the rotting waterfront area into a park, and Marsh noted that recreation in the area would actually be improved. He said the plant would not affect the scenery of Newburgh Bay, but found sympathy with the argument that the transmission lines would despoil scenery in the highlands. He told Con Ed to find an alternative route that would take the lines behind the mountains at Breakneck Ridge. Marsh called the project "an exceptionally fine pumped-storage site" and suggested that Con Ed might even consider enlarging the reservoir to 12 billion gallons for storage of 3 million kilowatts of electricity.

By the time Marsh was issuing his recommendation, it was obvious that the approval of the Storm King plant was not going to be a routine matter. The New York newspapers had discovered the issue and already, on the pages of every city newspaper (there were then seven), the "Storm over Storm King" was brewing.

"The fact that the usage, actions, and views of the well-to-do leisure class acquire the character of a prescriptive canon of conduct for the rest of society gives added weight and reach to the conservative influence of

> that class. It makes it incumbent upon all reputable people to follow their lead."
>
> —The Theory of the Leisure Class

As soon as the New York newspapers woke up to the controversy in the early months of 1964, they lined up almost unanimously against the plant. Con Ed, after all, did not have a glowing reputation in New York City. For one thing, the utility made the mistake of charging people for the amount of electricity they used, whereas the other utility, the New York City Water Department, charged according to fixed "frontage" charges that allow residential customers to consume unlimited amounts of water while extra costs were hidden on the tax rolls. Then, too, Con Ed was constantly digging up the streets to get at its hard-to-service underground lines. Its slogan was "Dig We Must for a Growing New York," and in 1965 *Fortune* magazine was to label it "the company you love to hate." So the discovery that Con Edison was planning to "destroy" a beautiful historic mountain somewhere up the Hudson certainly came as no surprise.

The issue was particularly suited to the practices of editorials. Reporters who visit the scene of a controversy are often forced to trim their sails and adjust their preconceptions. Finding, for example, that an entire village of 3,000 people—indeed, almost an entire county of 200,000 people—was in favor of the project was bound to give some pause. Over the years many extremely balanced stories question the "scenic" objections to the plant were filed from Cornwall. But editorial writers are under no such constraints. They can proceed without too much attention to details. In the case of Storm King, two fundamental misconceptions emerged: that Newburgh Bay was virgin territory rather than a declining industrial area, and that it was the highlands themselves that were threatened. What is interesting to note is that there was never any question about the economic advantages of the plant.

"Beauty over Electricity," proclaimed the Herald Tribune in a May 10, 1964, editorial which stated:

> The Hudson Highlands are . . . a great scenic asset for all the people. And despite the great virtues of Con Edison's cheaper power, the fact remains that this industrial project (for all the intended landscaping works) will detract from nature's beauty. . . . It is well and good that Con Ed wants to bestow so many benefits. . . . But an undefiled Storm King Mountain is worth more than cheap electricity.

The Times offered its own summation on May 23, 1964:

> We do not dispute Con Ed's experts to the effect that this is probably the most economic and efficient means of supplying the next increment of power to meet New York City's constantly growing needs. If the required power plant is not erected at Cornwall but at some other place of less notable scenic and historic interest, doubtless the consumers of New York will have to pay more than they would otherwise pay for their power. We think this choice should be faced frankly; and we also think that in the present instance, preservation is worth the price.

The possibility of there being other sites for the pumped-storage plant was occurring in other people's minds, and at one point a reporter asked Rothschild if he was making any attempt to help the utility find a difference location. Rothschild wasn't: "That's their problem," he said.

HOLDING ACTION

A complete review of the examiner's report would ordinarily take the full FPC about four months, but the mounting pressure of public debate was having its effect. The FPC did not issue its final decision until March 1965, nine months after the original recommendation. By then Scenic Hudson had changed its tactics and was mounting a many-sided campaign. The editorials in the New York newspapers had given the opponents of the project a strong indication that there was fertile territory to be mined among the city's celebrity-conscious media. Pete Seeger composed a ballad in honor of the mountain. James Cagney and Aaron Copland went on record against the plant.

In August 1964 the conservationists, as they were being called, hired Selvage, Lee, and Howard, a small Fifth Avenue public relations firm that had just finished trying to persuade the American public to take a more tolerant view of Portuguese colonial policies in Angola. James Cope, one of the more ambitious account managers, found himself immediately attracted to Rothschild and his group.

Cope arranged a favorable story for publication in *Reader's Digest*. He also hit upon the idea of a "sail-in" around Storm King. On September 7, 1964, all seven New York newspapers carried broad coverage of the "waterborne picket line" protesting the plant. The *Times* noted that "fifty yachts, led by the *Westerly*, flagship of the New York Yacht Club," paraded from the Highlands Yacht Club in Garrison to Storm King, with "Commodore Chauncey Devereux Stillman, whose family gave the Black Rock Forest [behind Storm King] to Harvard in the 1920s," in command. Aboard the *Westerly* were Rep. Robert R. Barry of Westchester and State Sen. R. Watson Pomeroy of Dutchess County. "Opponents say the power plant will leave an enormous gash up Storm King and will set a precedent for defilement of the historic valley," noted the *Times*. The sail-in made *Newsweek*, and within weeks forty conservation organizations were offering assistance. The fight to "save Storm King" was becoming a national issue.

Senator Pomeroy was soon able to create an even more favorable publicity platform for the opponents of the plant. He offered his New York Legislature Committee on Natural Resources as a forum for Scenic Hudson. The pretext was legislation on the development of the Hudson, but a reporter at the scene noted that "it became obvious that [the] purpose was to give those people opposed to the . . . project an opportunity to express their views for the national press."

The Pomeroy Committee hearings inaugurated a pattern which was to succeed over and over again as a delaying tactic for Scenic Hudson. Initiated *after* the official FPC hearings had been closed, their aim was to petition the commission to "reopen" the hearings to permit the presentation of "new evidence," which was placed on the record under highly favorable circumstances. Con Ed's attorneys, of course, were not allowed to cross-examine witnesses before the Pomeroy Committee. When the "new evidence" was later subjected to stiff scrutiny, much of it proved to be fraudulent or nonsensical. But after the hearings had been closed yet again Scenic Hudson would return with more "new evidence" and ask for further reopenings.

The Storm King project has *never at any time* been disapproved or rejected by any court or licensing agency in the federal or state government. It has simply been delayed and delayed over and over again by agency and court decisions to reopen the hearings in order to consider "new evidence." In the entire fifteen years of the controversy, through literally tens of thousands of pages of transcript, the Federal Power Commission has never finished hearing all the evidence.

The star witness at the Pomeroy hearings was Alexander Lurkis, a recently retired chief engineer with the New York City Bureau of Gas and Electricity. Although the papers never mentioned it, Lurkis had been hired several months before as a paid consultant for Scenic Hudson on technical matters. He became Scenic Hudson's mouthpiece on "alternative" forms of generating electricity.

Lurkis shocked the hearings by testifying that Con Ed could produce adequate peaking power through "gas turbines," actually jet engines driven by the hot exhaust gases which Lurkis said could be run with Con Ed's "surplus natural gas."

As it happened, Con Ed had no "surplus" natural gas. Federal price controls were already upsetting natural-gas distribution, and utilities were being rationed by the FPC. Con Ed had recently lost an appeal for more gas rations before the U.S. Supreme Court.

But there was another problem. Although gas turbines are very good for restarting downed generators, they would not be as useful as Storm King in supplying emergency power. Con Ed board chairman Harland C. Forbes wrote the New York Times: "Mr. Lurkis . . . completely ignored the value of the Cornwall project's ability to provide immediately available operating reserve which cannot be furnished by jet-engine equipment—a matter of extreme importance in maintaining reliability of our electric service to the people of New York City."

In fact, Lurkis' testimony proved so full of holes that Scenic Hudson eventually withdrew it after Lurkis had been cross-examined by Con Ed's attorneys before the FPC two years later. But the testimony led to a reopening of the hearings, and that was probably its main purpose.

The second issue raised at the Pomeroy hearings involved fish kills. Con Ed was already installing screening devices at Indian Point after encountering large fish kills there, but witnesses before the Pomeroy Committee said the problem at Storm King would be different. They noted that eggs and larvae from spawning fish would escape any kind of screening devices, and be sucked into the plant. It was a good point, and Con Ed quickly offered to spend $175,000 to study the problem. But within days the newspapers were carrying statements about how "the Atlantic striped-bass population which spawns in the Hudson will be destroyed for all time."

Robert Boyle, an editor of Sports Illustrated, became a participant, forming the Hudson River Fishermen's Association, consisting of the two dozen or so commercial fishermen who still made a part-time living from the river, with "sports fishermen" like Boyle to handle the public relations aspects. There was a certain irony here, since sports fishermen had long since destroyed major stocks in almost every river and stream in the Northeast, and the federal and state governments were annually spending hundreds of thousands of dollars for restocking so that they could continue their pastime. Con Ed also made an offer to restock the river if there was any significant damage to fish life. The opponents again were not satisfied.

But the Hudson River Fishermen soon found themselves facing a formidable obstacle which might be called "nature." Although it was not widely known, scientists were aware that there were tremendous mortality rates in the river, and killing large amounts of eggs and larvae would not necessarily mean disaster for the population. A single female striped bass lays up to 5 million eggs—enough to renew the river's entire stock. Only one egg in 1,000 ever survives to maturity. But such sophisticated understanding of nature's ways didn't tone down the opposition to the plant.

On March 9, 1965, the FPC approved the license for the Storm King plant in a 3-to-1 vote. Despite the acrimony, the impression remained that the conservationists had made important contributions in the hearings and that the utility was making every effort to accommodate them. If compromise had been the goal, there would have been enormous achievement. But the conservationists' purposes were quite different, and their success was to take a much different form.

> The exigencies of the general economic situation . . . do not readily produce, in the members of [the leisure] class, that degree of uneasiness with the existing order which alone can lead any body of men to give up views and methods of life that have become habitual to them. The office of the leisure class in social evolution is to retard the movement and to conserve what is obsolescent. Thorstein Veblen, "The Theory of the Leisure Class."

Scenic Hudson immediately filed an appeal with the Second Circuit of the U.S. Court of Appeals, arguing that the FPC should reopen the hearings for more testimony on scenic values, fish life, and alternative sources of energy. Con Ed officials responded by charging that the opponents had "given up trying to defeat the plant on its merits" and were "trying to drag the project into a long war of attrition in the courts."

In any case, the FPC review had already taken far longer than expected, and, with the court case still pending, it was obvious that Storm King was not going to be on line in time to meet the growing power needs. So in November 1965 the utility announced that it would move up plans for a second nuclear plant at Indian Point. The project would cost $90 million but would generate only 800,000 kilowatts—less than half the capacity of Storm King. For New Yorkers, electricity was going to be more expensive.

The dramatic power failure in the Northeast on November 9, 1965, illustrated the dangers of widespread blackouts. Con Ed officials said that Storm King could have shortened the blackout by restarting other generators, but the incident stirred little support for the plant.

Scenic Hudson, for its part, was taking the final step into the big leagues of public relations by hiring Rod Vandivert, a Long Island advertising salesman, as its full-time public relations director. Vandivert started going after Con Ed executives with a mixture of scorn and sarcasm that was to characterize the conservationist attack for many years. This year I visited Vandivert at his oceanfront home in a small, exclusive community on Fire Island. A big, shambling man with a firm handshake, he wore baggy dungarees and had a patch over his right eye when I saw him.

"We engaged in a technique you might call 'overstatement'," Vandivert explained. "We learned how to do things like calling in stories to the newspapers on deadline so they couldn't get Con Ed's reaction until the next day, or several days later. The newspapers were very responsive. I remember dictating editorials over the phone to them dozens of times. All along, I think Con Ed was really the underdog in this thing."

I asked Vandivert if he ever thought that Scenic Hudson could simply drag the project on and on through continual rehearings and court delays so that Con Ed would finally give up. "Oh, I'd say we thought it about every third day," he said cheerfully.

The Court of Appeals took only until December 29, 1965, to throw out the first FPC license as "incomplete" and order a reopening of the hearings. The decisions, still regarded as the original landmark of environmental law, ruled that scenic and environmental issues must be considered in large projects, and that Scenic Hudson could intervene on behalf of the "public interest," even though its members had no economic standing in the case. Vandivert, for one, was willing to believe that the publicity campaign had played a part. "Court decisions aren't made in a vacuum," he told me. "Judges read newspapers."

FOUR YEARS OF HEARINGS

The second round of FPC hearings lasted for almost four years. When they began on November 14, 1966, Lyndon Johnson was President and the country was just entering the full-scale conflict in Vietnam. By the time the FPC issued its final decision on August 19, 1970, the Kent State shooting had already occurred, and Richard Nixon had been President for nineteen months. Yet this decision was also eventually remanded for further hearings by the Court of Appeals.

I will not attempt to go into anything more than an outline of the proceedings, but it must be noted that the FPC examiner and the commission itself took extraordinary pains to compile an exhaustive record on every aspect of the case. Scenic concerns, the threat to fish life, alternative forms of energy, and aesthetics of the Hudson were all discussed almost to the point of irrelevancy. At one point, the hearing examiner, Ewen G. Simpson, had to decide whether the upper reservoir would disrupt a scenic vista from a point twenty miles away. By the time the hearings were over, Con Ed had spent $15 million on studies and attorneys' fees, while Scenic Hudson had spent $1 million (the organization had managed to tap a foundation supported by the estate of Andrew Mellon.)

Before the hearings began, Con Ed announced that it could bury the entire plant on the Cornwall waterfront, raising the cost to $169 million. They said that would solve the scenic problems, although Scenic Hudson continued to argue against a visitors' booth on the site. But the new plan created other problems. The Catskill Aqueduct, which carries 40 percent of New York City's water supply, runs under the mountain, and Scenic Hudson immediately claimed that it would be endangered. Con Ed offered to pay the entire cost of relocating the aqueduct 400 feet below the plant, but nothing definite was settled and negotiations dragged on between the city and the utility.

Throughout the hearings, reporters from the Times (now one of only three remaining newspapers) gave accurate and unbiased coverage, but the editorial page remained heavily confused on the issues. At one point, it was "discharges from the tailrace tunnels" that endangered fish life. At another, it was "thermal pollution." And despite the plans for an underground plant, the facility remained "on" Storm King Mountain, and wouldn't move to "near" Storm King Mountain until 1969.

The issue of air pollution also became a point of contention at the hearings. Scenic Hudson claimed that Storm King would actually produce more air pollution because they said the power to pump the water up the mountain at Storm King would have to come from fossil-fuel plants within New York City. They said the one-third loss of energy in the pumped-storage process would mean a 50 percent increase in fuel burning. Con Ed had long noted that it could buy off-peak power from neighboring utilities, and that in the long run Storm King would be pumped by nuclear plants. But the notion that Storm King would produce "more air pollution" slowly started to become an accepted fact.

The New York City government had also become involved in air pollution before the FPC hearings, and in early 1966, Mayor John V. Lindsay set up a special Task Force on Air Pollution to negotiate with Con Ed. After several months of studying the problem, the task force decided that Con Ed was correct in its contention that Storm King would mean less air pollution. It signed a memorandum of understanding with the utility, agreeing to back construction of Storm King and help the company appeal to the FPC for more natural gas. In exchange, Con Ed would spend millions of dollars in cleaning up stack emissions, and would promise not to build any more fossil-fuel-burning plants in the city.

The city thought it had struck a good bargain, but the Times, in a May 19, 1966, editorial, remained unhappy:

> We deplore the unwarranted concession . . . to [support] a giant hydroelectric plant on Storm King Mountain. Some experts believe that this would increase rather than decrease air pollution here. . . . Why should New York City for the first time inject itself into the controversy now, particularly when the Scenic Hudson Preservation Conference promised to present expert engineering testimony of the availability of ample other power sources?

The "experts" on air pollution, of course, were also Scenic Hudson.

On May 23, 1967, Simpson closed the hearings after listening to over 5,000 pages of testimony. They did not stay closed for long.

First, Scenic Hudson wanted to "correct" Lurkis's "expert" testimony, which had been refuted by Con Ed's cross-examination. Scenic Hudson petitioned to present another "alternative" plan, and its request was granted.

Its proposal, presented through attorney David Sive, representing the Sierra Club in the case, was that Con Ed should build a third nuclear generator of about 1 million kilowatts. It didn't say where. The remaining 1 million kilowatts needed in Con Ed's system would be supplied by turbines burning kerosene. There was nothing unusual at the time in conservationists proposing nuclear plants as the solution for energy problems. During the 1960s, the Sierra Club and other environmental groups supported nuclear energy as the best form of power generation.

On August 7, 1968, almost a year after the closing arguments had been presented, Simpson issued the first of three favorable reports on the plant. He said there was no alternative for equally reliable power for New York, and that the hazards to fish life would be minimal. While acknowledging that the mountain was "a surpassing scene," he noted that "it must be said that Storm King does not exist in an environment of untouched natural beauty as in the idyllic past, but rather is all but irrevocably associated with the present realities."

Responding quickly, the *Times* said: "[The] findings on the scenic effects are at odds with the virtually unanimous opinion among conservationists and nature lovers, who have no economic interest other than the preservation of a majestic national heritage." The paper found the conclusions on fish life suspect because Simpson said the plant should be monitored after it was constructed.

One week later, Con Ed officials announced they might have to consider putting a nuclear plant in Long Island Sound, on an island near New Rochelle. The *Times* said that proposal must also be regarded "with great reserve" because of fish kills and radioactive wastes. Where New York City's power was coming from was obviously someone else's problem.

> "Even in cases where one recognizes the substantial merits of the case for which the innovator is spokesman . . . still one cannot but be sensible of the fact that the innovator is a person with whom it is at least distasteful to be associated, and from whose social contact one must shrink. Innovation is bad form."—The Theory of the Leisure Class.

Less than two months later, New York City became the major opponent of the plant. On October 28, 1968, Deputy Water Resources Commissioner Robert Clark petitioned for a reopening of the hearings, saying that the negotiations over the water tunnel "had not been fruitful." It is difficult to assess exactly what happened, but it is interesting to note that when the New York City Democratic boss Carmine DeSapio was convicted on corruption charges in 1970, he was found guilty of attempting to extract bribes from Con Ed officials in exchange for permission to build over city water lines.

While the city was joining the ranks of the "nature lovers" opposed to the plant, the economic scenery around New York City was taking a turn for the worse.

In 1962, when Storm King was proposed, Con Ed officials said they thought they would have to provide 7.15 million kilowatts of power by the summer of 1969. The entire increase in demand could be met through Storm King. As the summer months of 1969 rolled around, Con Ed's seven-year-old predictions were coming in right on the button. The city set a midsummer peak record of 7.26 million kilowatts—only 4 percent above Con Ed's original predictions.

The only trouble was, power wasn't there to meet it.

Indian Point Two was supposed to come on line by 1969, but the Westinghouse Corporation had failed to meet its deadline. (What with fish kills and environmental suits, the plant was not put into operation until 1974.) Con Ed contracted to buy 915,000 kilowatts of peak-time power from other utilities—the most expensive way to provide electricity—but was still left with only a 14 percent reserve margin, well under the industry standard of 20 percent.

On July 31, 1969, the troubles began. Big Allis fouled temporarily after the installers of a new turbine forgot to remove some insulating equipment. Under the increased strain, two older plants scheduled to be retired by Storm King also broke down. In a matter of hours, more than 20 percent of the utility's power was gone.

For the next two weeks, New Yorkers began to experience what quickly became known as the "power crisis." Air conditioners were turned off, manufacturing plants cut their schedules, businesses closed down. While people throughout the country were celebrating the first moon landing, New York City turned into a sweltering steambath.

Charles F. Luce, a former Undersecretary of the Interior who had just taken over as board chairman of Con Ed, said the problems were due to "a feeling on the part of the public that even though a particular new power plant were not built, somehow the needed power would be provided." He asked for "a better general public understanding that there must be additional power and that . . . we cannot provide it without some impact on the environment."

Vandivert, now being quoted regularly after every statement by Luce, almost as if Scenic Hudson had become Con Ed's alter ego, saw the problem differently, claiming that opposition to Storm King "is not a narrow conservation battle. It's really the public interest versus the big brother or big daddy approach of Con Edison, which assumes we should let it tell us what is good for the public." Scenic Hudson had obviously assumed the task of representing the public on power and energy as well as conservation.

By early 1970, Storm King was still far on the horizon, and Con Ed told the city it would have to build another oil-burning plant in Astoria. City officials were livid. Robert N. Rickles, head of the Department of Air Resources, called air pollution "already an intolerable public health problem." Jerome Kretchmer, head of the Environmental Protection Administration, said the battle over the Astoria plant would be "much deeper than the struggle at Storm King." But it was obvious to some city officials that power plants had to go somewhere, and the Mayor's Interdepartmental Committee on Public Utilities voted 3–2 in favor of Astoria.

But while city officials were voting to accept more air pollution, the corporation counsel's office was throwing in the city's lot with the nature-lovers of the Hudson. On February 12, 1970, after a previous rebuff, the city once again petitioned for *another* reopening of the hearings on a "nonquantifiable yet nonetheless real hazard to the aqueduct."

Was the city simply interested in protecting its aqueduct? It seems unlikely, for, when examiner Simpson allowed a second reopening of the hearings in May 1970, city attorneys quickly said that they were opposed to the plant, whether it endangered the aqueduct or not, because of *scenic* considerations. "The city's concern is for the environment as well as economics," corporation counsel J. Lee Rankin told the FPC. "When we speak of preserving the area, the city is not talking about a superficial or cosmetic job; rather it seeks assurance that an area of exceptional natural beauty be preserved for future generations just as it is."

The *Times* rejoiced that "New York City thus joins the battle waged for years by Scenic Hudson Preservation Conservationists against utility incursions on the river." But, strangely enough, the *Times* had harsh words for Attorney General Louis Lefkowitz, who was trying to block the opening of Indian Point Two after trial runs produced kills of 120,000 fish a day in January and March. "The right answer, given the imperative role Indian Point now plays in meeting metropolitan power demands," said the same editorial, "is not to shut it off precipitously but to see that its plant deficiencies are corrected. Proper steps are already being taken by the Atomic Energy Commission."

Potential fish kills at Storm King were intolerable, but real fish kills at Indian Point, where the problems were complicated by thermal pollution, could be corrected. In addition, Indian Point Two, which was built *in place* of Storm King, was "imperative," while Storm King was unnecessary. It obviously took the skilled eye of a conservationist to be able to make such distinctions.

THE POWER CRISIS

Things turned out to be much worse than anticipated during the power crisis of 1970. In May, Indian Point One was closed by a defective cooling pipe. Indian Point Two was still far from completion. Then, on July 21, Big Allis went down for extensive repairs immediately projected to last through midwinter. Con Ed had begun installing gas turbines over the winter as a substitute for Storm King; by mid-July one of the turbines had also failed, and Con Ed's total capacity was below the previous year's peak. The result was a summer in which voltage reductions and power failures became almost a daily occurrence. Even rush-hour subways didn't have enough power.

In its scramble for power, Con Ed paid premium prices, importing electricity from as far away as Canada, New England, and the Tennessee Valley Authority. Con Ed's profits, already at the lowest rates of any utility in the country, weer getting lower. When another heat wave struck in September, voltage reductions were put into effect for the fifteenth time, and a blackout hit a sixty-five-block area in Queens. *The Wall Street Journal* quoted a Canadian woman who was cutting short a visit to Forest Hills. "You can have New York City," she said. Apparently others agreed. The steady exodus of manufacturing firms and corporate offices was suddenly turning into a rout. From 1969 to 1976, the city, now widely regarded as "unlivable," was to lose 650,000 jobs. Other factors certainly contributed, but the shambles of Con Ed's power system and its soaring rates didn't help. Nothing ripples through an economy more completely than the costs of energy.

On August 19, 1970, the full five-member FPC finally reached its decision to grant a second license for the pumped-storage plant at Storm King. It was Con Ed's one note of optimism for the entire summer. Still, in the midst of the power crisis, the *Times* took the trouble to be gravely disapproving: "Essentially nothing about the plan has changed in the seven years since Con Ed first proposed [it]," said the editorial, without considering that the whole plant would now be built underground. "We are glad that Scenic Hudson intends to carry on the fight in the courts."

Indeed, the possibilities of appeals seemed endless.

Six months after the 1970 power crisis, seven litigants were appealing the FPC's Storm King license to the Second Circuit Court of Appeals. They were the Scenic Hudson Preservation Conference, the Sierra Club, the Wilderness Society, the Izaak Walton League of America, the Audubon Society, the National Parks and Conservation Society—and New York City.

City attorneys must have been dazzled by the company, for, by March 1, 1971, they were telling the Court of Appeals that the project "would be worse from an air-pollution standpoint than construction of additional plants in the city," and were calling the Hudson Highlands "a national treasure" where it would be unlawful to license any site unless there was "a mandate that the site chosen be exactly restored" to its natural state.

But on October 22, 1971, the Court of Appeals upheld the license by a 2-1 vote, and by June 19, 1972, the U.S. Supreme Court had refused to review the decision. A challenge in the state courts followed.

Finally, in August 1973, after more than ten years of effort, the project was suddenly completely free of license requirements and litigation. City officials were furious. Grasping at straws, they took the only possible remaining action and cancelled their ten-year-old agreement to allow the village of Cornwall to tap the aqueduct as part of the plan to replace the upper reservoir. That took another year to overturn in the courts.

Neither had Scenic Hudson run out of "new evidence." On the day of the final state-court decision, Albert Butzel, its new attorney, made a solemn and foreboding statement. "New and revealing evidence has been uncovered which raises serious questions about the viability of this proposed plant and the citizens' need for it," said Butzel. "The evidence is so convincing that the Scenic Hudson group will petition the FPC to reopen the entire case." Butzel said the "new evidence" concerned "fuel cells" which were "just on the horizon."

But in truth the arguments about "alternative sources of power" were wearing a bit thin, particularly since Con Ed was so strapped for power that it was using its peak-load gas turbines for base-load generation, burning fuel at about half its normal efficiency. And so, Scenic Hudson decided to concentrate its best efforts on the fish study that had been made by Con Ed from 1965 to 1968 at a cost of $450,000.

The report, supervised by a panel of high officials from the New York State Department of Conservation, the New Jersey Fish and Game Division, and the Bureau of Sports Fisheries and Wildlife and Bureau of Commercial Fisheries, both divisions of the U.S. Department of the Interior, had found that the plant would draw in no more than 3 to 4 percent of the total number of eggs and larvae that drifted past during the May–July spawning season. Hydrological studies showed that the plant would suck in 4 percent of all the water that passed by the plant each day. Assuming an even distribution of eggs in the river would mean that about 4 percent of the eggs passing each day would be taken into the plant. Assuming that all those eggs would be killed (there was plenty to suggest they wouldn't be) meant that 4 percent of all the eggs that passed the plant would be killed. A fair percentage of eggs was spawned below Storm King and never passed the plant, so the final estimate was a 3.6 percent mortality rate of all eggs and larvae. Since 99.9 percent of all eggs and larvae died before maturity under natural conditions, the conclusion was that the plant would have no effect on the total fish populations.

Scenic Hudson, however, wasn't satisfied. They decided there was a "fatal flaw" in the analysis. The "flaw" was the panel of scientists and federal and state officials had "forgotten" that the river was tidal. The group said that the eggs and larvae would be "washing back and forth" in front of the plant and would have "more chance of being caught." The Scenic Hudson members found a hydrologist who said that the river sometimes washed back and forth ten times in front of certain places in New York Harbor. They decided to multiply 3.6 percent by ten, arriving at a mortality rate of 36 percent.

The whole argument, of course, was a lot of sophisticated nonsense. The study had considered all the tidal movements and arrived at an average figure for the net downstream flow of the river. Once the average was known, it wouldn't matter if the river washed back and forth 10, 50, or 100 times, as long as the net flow had been determined correctly. The point was that the plant could take in only so much water per day.

It is easy to imagine the problem causing some consternation in a fifth-grade math class, but it is difficult to see this logic finding acceptance before such bodies as the Atomic Energy Commission and the U.S. Court of Appeals. Nevertheless, it did.

Scenic Hudson had its "rebuttal" to the fish study. The problem was to get it on the record. But with their multiplying contacts in government and uncritical treatment in the press, this was a relatively simple matter. The target became Dr. Philip Goodyear, a marine biologist in the AEC who was strongly sympathetic to Scenic Hudson's cause and had been a guest speaker at a fund-raising dinner of the Striped Bass Fund, the financial arm of the Hudson River Fisherman's Association. Dr. Goodyear believed—undoubtedly with sincerity—that the three projected Indian Point plants, plus Storm King, would have significant effects on the river's fish life. Whether Goodyear acted with scientific integrity in the Storm King affair will have to be judged from the record.

Scenic Hudson's connection to Goodyear was Sen. Abraham Ribicoff of Connecticut, also sympathetic to its cause. (Since Connecticut was getting many of the corporate headquarters leaving New York City, he certainly had no reason not to be.) In October 1973 Ribicoff delivered the FPC fish study, plus Scenic Hudson's critique, to the AEC and asked for an evaluation "within two months." Dixy Lee Ray, chairman of the AEC, said it would take at least six months, but, as arranged before hand, the report arrived on Goodyear's desk at Oak Ridge Laboratories after only two. "It was a situation where they knew what pitch was coming to them and we knew what hit was coming back at us," Vandivert explained to me.

By mid-December, a "preliminary report" was back in Ribicoff's hands. Dr. Goodyear confirmed that the report was "in error" by ignoring the tidal movement, but did some fast footwork to show that "compensating errors" made the figures correct anyway. He then went on to make his own monumental error by deciding that the entire annual kill of 3 percent of all the eggs and larvae in the river would occur each day the plant was in operation.

"If [the estimated removal of 3 percent of eggs and larvae] is applied over a period as short as ten days, nearly 25 percent of the larvae population would be withdrawn," he reported. "If the daily removal estimate [is applied] over the entire seven-week [spawning] period . . . then approximately 75 percent of the annual hatch might be destroyed." The "daily" estimate, of course, was actually an *annual* estimate.

Ray attached a letter that was as long as the report itself, warning Ribicoff to "use caution in drawing conclusions" because of "the probable absence of completely adequate data." After reviewing the report, she added sardonically that she continued to believe that "a critical analysis of this problem would take a minimum of six months." But the cat was already out of the bag, and so by December 1973 Scenic Hudson was back in business. Within days, a letter was printed in the *New York Times* stating that "the Atomic Energy Commission has reported that the Storm King hydroelectric power project might destroy 75 percent of the annual hatch of striped bass in the Hudson River." Sen. Edward Kennedy asked the FPC for a "brief and worthwhile delay" because of the impending "destruction of 75 percent of the striped bass" off the coast of Cape Cod. Ribicoff sponsored an "information meeting" on the report, and a Congressional hearing was eventually arranged. The testimony was inconclusive, but the environmentalists simply declared themselves the winner and carried the "new evidence" back to the Court of Appeals. The court ordered the FPC once again to reopen the hearings for a new study on fish life in the Hudson.

VICTORY OF ATTRITION

The "brief and worthwhile" delay has cost Con Ed $20 million—one-sixth the original cost of the plant. The money was spent for a third major fish study which took four years to complete, involved seven major universities and scientific institutions, and came to essentially the same conclusion reached by Con Ed's lone scientists more than ten years before—that about 4 to 5 percent of the eggs and larvae would be entrained by the plant, and that the total fish population would not be affected.

Two observations show that there may be something to the utility's side of the story. The three Indian Point plants now take in more water than the Storm King plant would, yet after nearly three years of operation AEC scientists admit that there is no evidence that any portion of the river's fish population has been affected. (The amount of fish scraped off the screening devices each day would fill an average bucket.) There are other pumped-storage plants in operation, and they have fish problems of a different sort. At the Muddy Run plant in Philadelphia, the problem is that eggs and larvae drawn into the plant quickly produce sizable fish populations in the upper reservoir. Their numbers can get to be a problem, and Philadelphia Electric allows fishing on the upper reservoir to keep them under control.

All this hardly matters now. The "long war of attrition" predicted by Con Ed executives in 1965 has been fought and lost. Con Ed's finances fell apart in early 1974—a direct result of the high costs of buying outside power, the utility's enormous tax burden (25 percent of its revenue from customer billings goes to taxes), the overwhelming expenses of having to buy low-sulfur oil for city generation, and the resistance to rate increases. The quarterly dividend was cut, and Con Ed's stock—already known as a "widows and orphans" holding (median shareholder, a fifty-year-old woman)—dropped to the floor. "We wanted them to go into receiverships so that even we could buy them out—then they would be a true public utility," said Vandivert. But instead the New York State Power Authority authorized the purchase of two uncompleted plants, and Con Ed managed to avoid bankruptcy.

The Storm King plant, of course, could probably have prevented the July 13 blackout. John B. Oakes, now senior editor of the *New York Times;* Walter Brown, director of the National Electric Reliability Council; and Rod Vandivert all agree on that. After all, that was what the plan was *designed* to do. City officials investigating the power failure said they were amazed to learn that "the generating capacity was available, they just couldn't bring it up in time." Con Ed, of course, had been saying that for fifteen years. The city investigation found that the crucial loss of power didn't occur until the last two lines from the north failed because they became overloaded carrying 2 million kilowatts. The lines from Storm King, which were to run along the same coridor, were to be designed to carry 2 million kilowatts.

But there is hardly a political official in New York who even remembers what the whole Storm King controversy was about. Ed Koch, the leading candidate for mayor, said the problem at Storm King had been "thermal pollution," and didn't know the city is still the major opponent, nor did Paul O'Dwyer, who has now been City Council president for four years. He said the plant hadn't been built because "Pete Seeger and the environmentalists all over the country didn't want it." (He is undoubtedly right.) State Assemblyman Andrew Stein, who has made a political career out of attacking Con Ed, said about Storm King: "I'm against nuclear plants. I think we should keep the ones we have, but I don't think we should build any more." Stanley Steingut, the Brooklyn Assemblyman who is Speaker of the State Assembly, also told me that Storm King was "a nuclear plant."

What is most remarkable is that Scenic Hudson itself now appears to be the city's expert on the matter. When I called Dr. Carolyn Broncato, staff director of the Mayor's Special Committee on Inquiry into Energy Failures, she admitted she remembered nothing about Storm King, but said, "If you want to know more about Storm King, call Al Butzel." When I talked with Carol Bellamy, who will probably succeed O'Dwyer as president of the City Council, she said that "the person to see on that would be Dave Sive" (the Sierra Club attorney).

Even Norman Cousins, the editor of *Saturday Review*, who voted in favor of Storm King as chairman of the Mayor's Special Task Force on Air Pollution, remembered vaguely that the problems had something to do with "radiation." When I asked him what he remembered best about the environmental opponents, he had one clear recollection: "They had a lot of lovely ladies working for them."

By virtue of its high position as the avatar of good form, the wealthier class comes to exert a retarding influence upon social development far in excess of that which the simple numerical strength of the class would assign it. Its prescriptive example acts to greatly stiffen the resistance of all other classes against any innovation, and to fix men's affections upon the good institutions handed down from an earlier generation.—The Theorv of the Leisure Class.

And so we are brought to the point where we can legitimately ask, What in God's name has been going on in New York City for the past fifteen years?

The answer, I believe, can only be understood in terms of Veblen's analysis of leisure-class behavior. It was obvious to anyone willing to look that the opposition was coming from the petty aristocrats of the Hudson Valley who were annoyed that their solitude was being invaded by the advancing society. There was nothing terribly new about this. The Hudson River Railroad laid its tracks right across the front lawns of Washington Irving, John J. Audubon, and William B. Astor in 1842. All were upset, but eventually agreed to yield in the name of the public good. Yet in the Storm King case this did not happen. The question is, Why?

Both critics and defendants of the plant have always assumed that anyone standing in the way of progress could only be acting out of financial self-interest, and that, once a money interest was disproved, the opponents would have to be accepted at face value. The Times expressed this so perfectly in defending the conservationists in its August 8, 1968, editorial that it is probably worth repeating: "[The FPC examiner's] findings on the scenic effects are at odds with the virtually universal opinion among conservationists and nature lovers, who have no economic stake other than the preservation of a majestic national heritage" (my emphasis).

Veblen, who found this interpretation of leisure-class opposition to progress naive, wrote:

> When an explanation of this class conservatism is offered, it is commonly the invidious one that the wealthy class opposes innovation because it has a vested interest, of an unworthy sort, in maintaining the present conditions. The explanation here put forward imputes no unworthy motive. The opposition of the class to changes in the cultural scheme is instinctive, and does not rest primarily on an interested calculation of material advantages; it is an instinctive revulsion at any departure from the accepted way of doing and of looking at things—a revulsion common to all men and only to be overcome by the stress of circumstances.

But what about the newspapers and the politicians, who are presumably responsible for informing the public and acting in its interest—why were they so completely taken in by sophistries and the publicity gestures of the "environmentalists"?

Here is Veblen's answer:

> Since conservatism is a characteristic of the wealthier and therefore more reputable portion of the community, it has acquired a certain honorific or decorative value. It has become prescriptive to such an extent that it is imperatively incumbent on all who would lead a blameless life in point of social repute [to share these views]. Conservatism, being an upper-class characteristic, is decorous; and conversely, innovation, being a lower-class phenomenon, is vulgar.

This is the puzzle that no one in the entire controversy was ever able to quite figure out. Voting to "save Storm King" gave each of the participants in the political arena the chance to participate in a noble cause, to share an aristocratic vision. It wasn't a matter of money, it was simply a question of good taste. The effort might require of a person that he gaze upon the litter of industrial ruins on Cornwall's waterfront and see "a landscape rich in beauty and history," but isn't selectivity the key to being an aristocrat anyway? It wasn't money that was being passed out aboard Commondore Chauncey Devereux Stillman's yacht as it passed Storm King Mountain on that September morning. It was respectability.

The environmental vision is an aristocratic one, conjured at the point where an idyllic past blends nicely with an imaginary future. It can only be sustained by people who have never had to worry much about their security. They are, in Veblen's term, "industrially exempt" from the normal fluctuations of the economic system.

Nuclear energy, for example, was part of that vision when it was a "bright promise" in the 1960s, but now that the realities are here it looks problematic. Tom Wicker writes in the New York Times:

"In three decades of experience with nuclear power, the radioactive waste disposal problem has yet to be resolved. Plant decommissioning costs and problems are not fully known. Nuclear power has grown vulnerable to shortages, breakdowns, and poor productivity; the Federal Power Commission reported 229 plant-months of delay for such reasons at 24 reactors in 1974. The amount of electricity actually produced have averaged, overall, only 55 to 57 percent of full potential."

The litany could easily be made about any new technology. Nothing in the industrial system is "fully known" until it has been done a few times. The "55 to 57 percent" figure is a familiar one, however—it is the average production for the entire electrical industry, due to the problems of peak-load demands. In actual operation, nuclear plants have been slightly more reliable than fossil-fuel plants.

But Wicker has a brighter vision:

"Solar energy, by contrast, is available everywhere, has no public opposition and offers no safety or environmental hazards. It is highly suitable for such low-quality energy demands as space and hot-water heating, while to use electricity produced by nuclear fission for such homely needs is an expensive form of overkill."

Solar energy, of course, has the advantage of not being a reality as yet. A small-scale solar electrical station would be enough to scare the wits out of any environmentalist (one square mile of collectors for a town of 30,000 people with little hope for reducing its size through technological improvements. In any case, if all the country's heat and hot water were produced from solar energy, the demand for electricity would decrease by less than 5 percent.

But the message here is clear, and it should not be obscured by the facts. Nuclear energy is "hard" and "dirty" and involves nasty realities of life. Solar energy, on the other hand, is "soft" and "clean." It is most notable for the lack of effort it promises. The future will hold no more grubby realities such as digging coal out of the ground or drilling for oil—no more handling of dangerous materials. There will be nothing to do but sit back and watch the windmills revolve and the sun shine. The correct word for the environmental vision is not clean or soft. It is genteel.

It is also a vision that will call us to disaster.

Veblen's great fear was that, as innovation fell behind under the retarding influence of the leisure class, society would split into two extremes—the permanently wealthy and the permanently poor. Each would be even more resistant to change for its own reasons:

> The abjectly poor, and all those persons whose energies are entirely absorbed by the struggle for daily sustenance, are conservative because they cannot afford the effort of taking thought for the day after tomorrow; just as the highly prosperous are conservative because they have small occasion to be discontented with the situation as it stands today.

Veblen predicted that this polarization in society would lead to the loss of the entrepreneurial classes, which operate under what he called "the instinct of workmanship." The result would be permanent stagnation.

THE LIMITS TO "NO-GROWTH"

There is no doubt that much of our response to the present industrial crisis is being formulated by the leisure class marching under the banner of "environmentalism." This is not to say that we do not face enormous and critical environmental problems and that there are not enormous numbers of people who are dedicated to trying to solve them. My quarrel is with the political "environmentalism" that offers no reasonable alternatives but proposes solutions which entail delaying or abandoning present, feasible, and proven technology and "waiting for" solutions that are "soft," "attractive," and "just on the horizon."

The leisure-class environmentalists will be perfectly content to leave things the way they are, regardless of the economic consequences, since, as Veblen notes, "at any given time this class is in a privileged position, and any departure from the existing order may be expected to work to the detriment of the class rather than the reverse. The attitude of the class [is] to leave well enough alone."

The fundamental environmentalist assumption is that we can "stop growth," at least until the "right" solution to our technological problems comes along. This is foolishness. "Stopping growth" simply means falling behind, with all the economic consequences. It is only the accumulation of social wealth from previously successful technologies that makes it possible to introduce new technologies. The people of New York City will find this out when they realize that they cannot easily turn the clock back and adopt pumped-storage technology. In the 1960s the plant could have offered enormous savings. Now it would cost $1 billion; the people of New York City can hardly afford it."

The great misconception about "stopping growth," is the assumption that things will stay pretty much as they are. They will not. The stagnation of the industrial system will not keep the numbers of the poor from growing. On the contrary, the universal historical experience has been that people do not limit family size until they have achieved a measure of social security. The only way this can be achieved is by the continuing expansion of the industrial system. "No progress" doesn't mean "no growth," and those countries, such as China and India, that have spent the longest periods of their history struggling under the changeless mores of an entrenched leisure class are hardly noted for their achievements in population control.

The great appeal environmental solutions offer is that they can be worn like a badge of success. To say that one is an "environmentalist," or that one favors "no-growth," is to say that one has achieved enough well-being from the present system and that one is now content to let it remain as it is—or even retrogress a little—because one's material comfort under the present system has been more or less assured.

To quote Veblen:

"The institution of a leisure class, by force of class interest and instinct, and by precept and prescriptive example, makes for the perpetuation of the existing maladjustment of institutions, and even favors a reversion to a somewhat more archaic scheme of life."

Environmentalism has presented itself to us as a form of "science," but it only borrows the language of science to serve its purposes. It is not scientific, either in its origins or its methods. It could easily turn anti-scientific, and already has in many instances.

Yet there is no doubt that the environmental vision is winning widespread acceptance and is having an enormous effect on our economy. The Edison Electric Institute, the research arm of the utilities industry, is now warning that large portions of the country face widespread power shortages and blackouts within the next few years because the introduction of nuclear technology is not going ahead on schedule. Environmentalists' opposition and regulatory delays have brought new construction almost to a standstill. Power reserves will fall below 20 percent around the Great Lakes by 1979, and in the Southeast by 1981. By 1986 reserves will have dwindled to 14 percent in North Dakota, Minnesota, and Nebraska, to 3.2 percent in New England and New York State, and to 10.1 percent in Illinois, Missouri, and Wisconsin. The nuclear-reactor industry says it is already facing "enormous erosion of skills" and "technological regression" simply because there is no work available in building new plants.

"We're going to see a crisis atmosphere," John O'Leary, deputy secretary of the new Department of Energy, said recently. "By the mid-1980s, we may have very severe economic consequences as a result of our improvident attitudes of the late 1970s."

Yet environmental opposition is now working to hinder not only nuclear-plant construction, but also off-shore oil drilling, importation of liquid natural gas, coal-mining, gasification of coal, hydroelectric plants, and practically every conceivable form of producing energy.

Where is the power going to come from to meet the needs of the next decade and the next generation?

The environmentalists say there are alternative means available.

A CURRENT ASSESSMENT OF SOVIET-AMERICAN RELATIONS

Mr. MUSKIE. Mr. President, 30 years ago, George Kennan, under the pseudonym X, wrote an article in the magazine Foreign Affairs which had a deep impact on Soviet-American relations. Ambassador Kennan has remained one of the country's foremost analysts of the Soviet Union. Recently, he presented to the Council on Foreign Relations a most cogent assessment of the current status of United States-Soviet relations. I commend to my colleagues his call for a special effort to think freshly about problems in Soviet-American dealings. I ask unanimous consent that his remarks be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

A Current Assessment of Soviet-American Relations

(By George F. Kennan)

Before we move to the substance of this evening's discussion, I have to note a certain symmetry in the dates that relate to this occasion. It was just 60 years ago, as we are all aware, that there came into being the political regime in Russia with which we are now concerned. And it was exactly at the half-way point of that span of time—30 years ago—that I chanced to deliver, also at a meeting of the Council on Foreign Relations, a talk on this same subject which became the basis for an article in the magazine Foreign Affairs signed by the pseudonym X. This article, as many of you will recall, attained a certain melancholy notoriety and has dogged my footsteps ever since, like a faithful, but unwanted and somewhat embarrassing animal.

I trust this occasion will not have similar consequences; but this coincidence of chronology naturally leads me to reflect on the changes that have occurred since that year of 1947 in the background against which Soviet-American relations have had to proceed. The Russian political scene was then dominated by a single great personality—a man whom Churchill very aptly called a "crafty giant"—a man of enormous political-tactical genius—a formidable opponent on anyone's terms, but one who in a portion of his psychic make-up was paranoic and whose combination of paranoia with cruelty and political mastery had then served to create one of the great totalitarian monstrosities of our time: a personal despotism as ruthless and far-reaching as anything the modern world has ever known. By 1947 this despotism had already cost the Soviet peoples several millions of lives. And it had not stopped at the old Russian borders but had been extended—and this with our tacit blessing—to nearly one-half of the remainder of the European continent. And no one could be sure, in 1947, that it would stop there. The danger was not one of further military conquest. (Actually, it never has been that.) The problem was that Western Europe, still dazed, shaken and jittery from the effects of the Hitlerian conquest, did not know what to expect. Its peoples lacked confidence in themselves. They had a tendency to rush for safety to the side of whoever they thought was likely to win in the end. They would have been quite capable of throwing themselves into the arms of their own Communist Parties—to commit suicide, as my friend Bohlen used to say, for fear of death—if they gained the impression that those Communist Parties represented the wave of the future. And to this had been added the fact that the Moscow center, and Stalin personally, enjoyed at that time a total monopolistic control over the world Communist movement—a control which meant that any success by any Communist Party anywhere in seizing power within its own country had to be regarded as equivalent in its effects to a military conquest by the Soviet Union.

It is enough to cite these circumstances, I think, to make clear the magnitude of the changes that have occurred in this 30-year interval. The Soviet Union remains, of course, an authoritarian state—much as was the pre-revolutionary Tsarist Russia; but there is very little to be seen today of the terror that prevailed in Stalin's time; and the regime is headed by a moderate, in fact, conservative man; a man who, whatever other failings of outlook he may have, is a man of the middle, a skilled balancer among political forces—a man confidently regarded by all who know him as a man of peace.

Moscow's monopoly of authority over the world Communist movement has been thoroughly disrupted—so much so that even in the case of those Communist parties that still ostensibly recognize the Soviet leadership, the lines of authority leading from Moscow are tenuous and incapable of bearing much weight. It is a case where the semblance of authority can be retained only by the sacrifice of much of the reality.

And finally, in place of the anxious, jittery Western Europe of 1947 we now have an area which is unquestionably the seat of some of the most successful civilization, economically and socially, that the modern world has to show. The change, to be sure, has not been complete. People have not fully overcome the trauma of two world wars. Many still lack confidence in themselves, see dangers on every hand, require to be reassured periodically, like frightened children. This situation has its military implications, and plays a part, of course, in Soviet-American relations. But it cannot be compared in seriousness and danger to the situation we faced in 1947.

Now all these changes, and others I might cite, have run in the direction of an improvement in the objective possibilities for a better Soviet-American relationship. This does not mean, of course, possibilities for a complete normalization of those relations. For that there remain too many obstacles, historical, psychological and ideological. There has always been, and remains today, an area in which no complete political intimacy is possible, where interests must remain competitive and in part conflicting.

But there is also another area, an area in which interests largely coincide and limited collaboration is possible. In the light of the changes we have just had occasion to note, this latter area has ended, slowly but steadily, to grow. And where sensible efforts have been put forward on both sides to take advantage of this situation where people have tried, in other words, to create a balanced, business-like and realistic relationship between two very disparate political systems—the results, given patience and persistence, have not been discouraging. This was true, among others, in the period of the Nixon-Kissinger detente. Progress was made in a number of fields which was more than negligible and from which both sides are continuing to benefit today. The fact that these achievements were somewhat over-dramatized, that they lead to unreal expectations, and gave rise to some disillusionment when these expectations were not met, should not blind us to their positive residue.

Nevertheless the effort to pursue a balanced and useful middle course in the relationship with Russia has never been an easy one for American policymakers to follow; and one of the main reasons why this has been so difficult is that seldom, if ever, have we had an adequate consensus in American opinion on the nature of the problem and the most promising ways of approaching it.

Prior to the late 1940's—prior, that is, to the Korean War and the death of Stalin—the difficulty seemed to come primarily from the left: from people who had a naive, over-trusting, overidealistic view of what was then Stalinist power—people who thought it really possible for this country to ingratiate itself with the Stalin regime by various one-sided gestures of confidence and generosity and reproached our government for not doing so. It was, incidentally, against this sort of Left-wing deviation that the X article and the policy of containment, were directed.

But since Stalin's death, the opposition to an even-handed and realistic policy toward Russia has tended to come from the opposite end of the political spectrum: from people who were unable to see the curious mix of the negative and the positive, of the discouraging and the hopeful, in the Soviet political personality—people who could see only the negative, and who feared the consequences of anything less than a total rejection and hostility from our side. There has never been a time in these last 25 years, it seems to me, when this opposition has not made itself felt. There has never been a time when American statesmen concerned to find and develop a constructive middle-ground in relations with Russia have not felt their efforts harassed from that direction.

And the harassment has not been minor in intensity or in power. Every administration has been to some extent afraid of that hard-line opposition. It has behind it the power of chauvinist rhetoric as well as that of strict military logic. It has the capability of hurling at any and all opponents the charge of being "soft on Communism"; and however meaningless this phrase may be, it is a formidable weapon in a society unhappily vulnerable to the power of the slogan.

In the heyday of the Nixon-Kissinger detente, this opposition was almost silenced—partly by Mr. Nixon's formidable credentials as a hard-liner, which bewildered many critics; and partly by Henry Kissinger's diplomatic fireworks, which dazzled them. But the resulting silence was one of frustration, not of acceptance. When Watergate drained the authority of this political combination, the opposition broke forth once again with redoubled strength and violence. It has raged over the entire period from 1975 to the present. It sufficed to knock out the 1974 trade agreement and to lower the level of Soviet-American trade. It sufficed to delay the approach to a new SALT Agreement. And it has achieved today, against the background of a new administration and a somewhat unstructured Congress, a power it never had before. It now claims to have—and for all I know it does have—the power to veto any Soviet-American agreements in the military or the economic field that do not meet with its requirements; and such are its requirements that I come increasingly to suspect that this means in effect: any conceivable agreements at all.

I have made my best efforts to understand the rationale of this opposition. Many of the bearers of it are my friends. I know them as honorable people. I do not suspect, or disrespect their motives.

It is clear that we have to do here with a complex phenomenon, not a simple one. This body of opinion embraces some people whose trouble seems to be that they are unaware of the changes to which I referred a few moments ago as between 1947–1977, who talk of the problems of Soviet-American relations in terms identical with those used at the height of the Cold War—who sometimes seem in fact unaware that Stalin is dead.

Then, there are others whose emotions have been aroused over the question of Human Rights or Jewish emigration and who would like to see American policy directed not to an accommodation to Soviet power as it is but to the changing of the very nature of the Soviet regime.

More important, however, than either of these are the people who view the relationship exclusively as one of military rivalry—who see in it no significant values or issues or possibilities other than ones relating to the supposed determination of the Soviet leadership to achieve some sort of decisive military ascendancy over the NATO coalition—and this, of course, with the most menacing and deadly of intent. These include outstandingly the military planners, whose professional obligation it is to set up a planner's dummy of any possible military opponent, to endow that dummy with just the motivation I have described, and then to treat it as if it were real. But this group also includes many non-military people who, accepting this dummy as the reality, lose themselves in the fantastic reaches of what I might call military mathematics—the mathemathics of possible mutual destruction in an age of explosively burgeoning weapons technology.

Like many of the rest of you, I have made my efforts to understand the arguments of these military enthusiasts. I have tried to follow them through the mazes of their intricate and sophisticated calculations of possible military advantage at various future points in time. I have tried to follow them in their recital of the letters and numbers of various weapons systems, some real, some imagined, their comparisons of the reputed capacities of these systems, their computations of the inter-actions of them in situations of actual hostility.

I come away from this exercise frustrated, and with two overpowering impressions. The first is that this entire science of long-range massive destruction—of calculated advantage or disadvantage in modern weaponry—has gotten seriously out of hand; that the variables, the complexities, the uncertainties it involves are rapidly growing beyond the power of either human mind or computer.

But my second impression is that there is a distinct unreality about this whole science of destruction—unreality, that is, when you view it as the plane on which our differences over policy have to be resolved. I doubt that we are going to solve our problems by trying to agree as to whether the Russians will or will not have the capability of "taking out" our land-based missiles at some time in the 1980s. I doubt that this is the heart of the problem. I suspect that something deeper is here involved. And if I had to try to define that deeper something, I would have to say that it is the view one takes of the nature of the Soviet leadership and of the discipline exerted upon it by its own experiences, problems, and political necessities.

There are basically two views of leadership: two ways in which it is seen in this country. In one of these views, the Soviet leaders appear as a terrible and forbidding group of men—monsters of sorts, really, because lacking in all elements of common humanity—men totally dedicated either to the destruction or to the political undoing and enslavement of this country and its allies—men who have all internal problems, whether of civic obedience or of economic development, essentially solved and are therefore free to spend their time evolving elaborate schemes for some ultimate military showdown—men who are prepared to accept the most tremendous risks, and to place upon their people the most fearful sacrifices, if only in this way their program of destruction or domination of ourselves and our allies can be successfully carried forward.

That is one view. In the other view, these leaders are seen as a group of quite ordinary men, to some extent the victims, if you will, of the ideology on which they have been reared, but shaped far more importantly by the discipline of the responsibilities they and their predecessors have borne as rulers of a great country in the modern technological age. They are seen, in this view, as highly conservative men, perhaps the most conservative ruling group to be found anywhere in the world, markedly advanced in age, approaching the end of their tenure, and given to everything else but rash adventure. They are seen as men who share the horror of major war that dominates most of the Soviet people, who have no desire to experience another military conflagration and no intention to launch one—men more seriously concerned to preserve the present limits of their political power and responsibility than to expand those limits—men whose motivation is essentially defensive and whose attention is riveted primarily to the unsolved problems of economic development within their own country. They are seen as men who suffer greatly under the financial burden which the maintenance of the present bloated arsenals imposes on the Soviet economy, and who would like to be relieved of that burden if this could be accomplished without undue damage to Russia's security and to their own political prestige. They are seen, finally, as men who are, to be sure, seldom easy to deal with, who care more about appearances than about reality, who have an unfortunate fixation about secrecy which complicates their external relations in many ways, but who, despite all these handicaps, have good and sound reason, rooted in their own interests, for desiring a peaceful and constructive relationship with the United States within the area where that is theoretically possible.

I would submit that it is these two conflicting views of the Soviet leadership that lie at the heart of the conflict between those in our government who are attempting to make progress in our relations with the Soviet Union and those who are attacking this effort from the Right. And the burden of what I have come here today to say is that I think we can no longer permit this great conflict of outlook and opinion to go on in so large degree unreconciled as it has gone in recent years—that the moment has come when we can no longer carry on safely or effectively in our relations with the Soviet Union without the creation of a much wider consensus of opinion behind our policies of the moment than anything we have known in this recent period.

We stand, as you know, at a crucial point in Soviet-American relations. The expiration of the 1972 SALT Agreement has confronted us with fundamental decisions. Either we move forward, boldly, confidently, and imaginatively to the creation of a new relationship with that country in the military field, or we deliver up ourselves and the rest of the civilized world to the appalling dangers of a nuclear weapons race totally out of control—a development devoid of any visible hopeful end, devoid of any imaginable end at all other than a wholly disastrous and apocalyptic one.

But our ability to pursue the more hopeful of these alternatives is today seriously jeopardized by lack of the consensus to which I just referred. The opposition now being brought to bear against the efforts of the President and the Secretary of State to carry forward negotiations in the field of the limitation of armaments has reached a degree of intensity that seems to me to exceed anything we have known in the past. Powerful efforts are being made—the tendency of which is not to bring about the failure of ratification of instruments already negotiated (nobody could object to that as a matter of procedure) but to discredit the very process of negotiation, and this at a very early stage. People are being attacked not for what they are known to have done in the negotiating process but for what they are presumed capable of doing—presumed capable on the basis of rumor or of calculated leak. They are being attacked, in other words, not for their actions but for their supposed intentions.

I am not questioning the motivation for these attacks. I can conceive that it may be, in many instances, of the highest. But I find myself wondering whether effective negotiations can be conducted in the face of opposition of this nature, particularly when we, as well as our Soviet counterparts, are being assured daily that the people who carry forward this opposition have not only the political power to torpedo any agreements or understandings that might realistically be arrived at, but also the firm intention to do so. Negotiating policy it seems to me cannot be effectively made or implemented against such a background.

And this present moment is one at which we simply cannot afford to have the force and momentum of our policy lamed in this manner. The stakes are too high. The penalties of failure are too serious. The implications of such a failure would carry even farther than just the prospect of an unlimited weapons race. A breakdown of the relationship on the military level could not fail to have—indeed, has already had to some extent—effects on other levels as well. And here, too, we have—and the world has—too much to lose to permit such a failure to occur.

We face in this coming period a tragically high probability of deepening crises in Southern Africa and in the Middle East. It may well be that the peace of the world will depend, as these crises develop, on the ability of the American and Soviet governments to remain in close communication, to give each other reasonable reassurance as to their intentions, and to coordinate their actions with a view to preventing local conflicts from growing to global dimensions.

Beyond this, we have the fact that these coming years are bound to see extensive changes in political leadership at the Soviet end. Nothing could be more unfortunate, surely, than that a new and inexperienced team of leaders should come into power in the Soviet Union confronting what would appear to be a blank wall of hostility and rejection at the American end—a situation in the face of which they would see no choice but to look for alternatives other than those of good relations with the United States. This is no time to foreclose other people's options, and particularly not the options of people new to the experience of power and obliged to define new lines of policy that may represent commitments for many years to come.

These, then, are the reasons why it appears to me as an inescapable necessity that we should move promptly and resolutely to the achievement of a more workable consensus behind our policy toward the Soviet Union to take the place of the resounding disagreements that affect, and threaten to paralyze, the formulation and execution of policy in this field today.

I realize, of course, that it is easier to call attention to the need for such a consensus than to chart out the ways in which it could be achieved.

I realize, too, that behind a certain portion of this critical opinion there are commitments of an emotional or political or professional nature which are unlikely to be overcome by appeals to mere reason, and which will have to be confronted, as a political problem, by the responsible political leaders.

But in another portion of this spectrum we have to do with sincerely held and rational opinions, with conclusions drawn from what people believe to be the facts—from the spectrum of facts, supposed facts, that they now have before them, and I wonder whether, in the case of these people in particular, approaches and devices could not be found—approaches and devices of a basically intellectual nature which would help us importantly, and possibly even decisively, to get on with the solution of this problem. The problem is, after all, a cognitive one; and there is no reason why men of good will should not be able to come to some elements of agreement on the implications for policy of a given body of factual material if they can be brought to a common acceptance of its validity.

And here there are, as I see it, two requirements. First of all, I would propose that we lay aside completely, at least for the moment and for purposes of this exercise, the whole question of the military relationship and all the arguments about who could conceivably do what to whom if their intentions were of the nastiest; and that we elevate our vision, at least for the time being, to the question of the real nature and situation of the particular foreign power we are dealing with.

And then, starting with that resolution, it seems to me that I can see in my mind's eye a series of private gatherings in which would be included not only high-level policy-makers of the moment but leading figures of this opposition as well as possibly a few of the others of us who are interested in Russian affairs—gatherings where we would come together not primarily to discuss matters among ourselves—not to air our prejudices and convictions on the basis of our present knowledge and our present ignorance, but where we would all listen humbly to what could be told to us by the most experienced and knowledgeable people who could be found in the respective fields—I avoid the word "expert" because it implies something more narrow than what I have in mind.

What I am thinking of, in other words, is a certain process of re-education in the realities of Soviet power and leadership—a common effort on the part of all of us who have been prominently involved in this debate—a process in which we would check our existing views at the door, together with our hats, and would listen and ask questions and try to get a new view of the facts before we drew conclusions. I suspect that in an experience of this nature, designed not to promote the clash of old views but to make possible the common development of new, more realistic and more up-to-date ones, we would come closer than in any other way to the composing of our differences.

And there is room for this, I assure you, because no more in the Soviet Union than anywhere else have things been standing still. There are available to us today masses of new factual material on conditions in the Soviet Union—material which, given the rather low state of Soviet studies in our country, have scarcely been digested by the scholars, much less by the policy-makers, the critics, and the old-timers in this field of expertise. And in this latter category, I include myself, I am much aware that it is exactly fifty years ago this year that I entered on my own career as a so-called Russian expert, and I think that because of this long preoccupation with the subject—not despite it, mark you, but precisely because of it—it is time that my ideas, too, were taken thoroughly apart and put together again with relation, this time, to the present scene, and not to all the memories I cherish, and all the anecdotes I have been accustomed to telling, about the earlier years.

Such seminars would not, I think, serve their purpose unless they were the product of very high-level initiative and enthusiasm within the Administration. But if that initiative and enthusiasm were there, the institutional facilities to organize and accommodate them would not be hard to find.

That, gentlemen, is the burden of the song I have come to sing this afternoon. I am suggesting that the angry controversies over policy towards Russia that are now marring our public debates and threatening the success of any and all American policies towards that country are not to be solved within the terms of the argument as it is now being conducted—that a solution lies only in a common act of humility—only in the confession that none of us knows too much about what we are talking about—only in the willingness to stop at this point and to learn a little more before we shout each other down. Only in this act of humility will we find the way to a future of Soviet-American relations that offers hope rather than horror.

MUSIC UNDER BOSTON

Mr. KENNEDY. Mr. President, growth of the arts depends on the strong support and cooperative efforts of Government, local planning groups, and private industry.

A unique example of such cooperation is the program, Music Under Boston sponsored by the Massachusetts Bay Transportation Authority and coordinated by ArtiCulture, a local arts planning agency. The program allows volunteer entertainers—both young and old—to perform their varied music in Boston subway stations for the benefit of rush-hour commuters, as well as MBTA employees.

Not only do the participating musicians gain needed exposure, and even some financial payment, but the people of Boston are given an opportunity to enjoy the talents of local artists free of cost. Of equal importance, in being exposed to the riches provided by the arts, local residents will hopefully increase their interest in and support for local arts groups and cultural institutions.

December's issue of Boston Today includes an article by Kimberly McCarthy which describes the very imaginative Music Under Boston program. I urge my colleagues to take note of this effort, which not only benefits young artists, and increases the arts awareness of area residents, but has the added benefit of enriching the quality of life in the city.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUSIC UNDER BOSTON

(By Kimberly McCarthy)

No, you are not hearing things. That really was Vivaldi's Concerto in A minor you heard while waiting for the train in the Harvard Square subway station. Thousands of commuters at the Park Street and Government Center Stations have been hearing music too.

That might have been violinist David Hayden playing Vivaldi. He and other volunteer performers are part of the Music Under Boston program sponsored by the Massachusetts Bay Transportation Authority and coordinated by ArtiCulture, an arts planning agency. The entertainers perform weekdays during rush hours.

Why would a musician want to play for a crowd that rushes off every few minutes?

"Well, I guess basically I do it because I like people and want to add something to their day," David said.

Playing his violin for passing crowds is not all that new to him. Young David played for crowds in Harvard Square several years ago.

Money is another reason for performing in the subway program. "On opening day I made 94 dollars," David recalled. "But that was the first day, I don't expect to earn that much again."

Young performers are not the only ones filling the stations with music. 65-year-old Fred Peterson says his family and doctor think it's a wonderful idea to "go down and play his music and just have fun."

"When I get depressed I just get out my fiddle and things get better," Mr. Peterson said. "Sometimes if you put all your emotions into your instrument, beautiful music happens. Maybe I can play some nice music for those people in the subway."

Music Under Boston is the first organized program of its kind anywhere, but Mr. Peterson remembers other less organized performances. "When I was growing up in Germany, the really good musicians would go from backyard to backyard just playing for enjoyment. That's why I want to play, not for money but for fun."

Not only do single performers participate in the program for fun, money or exposure, but bands and duets are also scheduled.

David Johnson and Gary Mermel are a pair of serious New England Conservatory students who seem oblivious to the madhouse around them when playing their music.

David says the crowds have not been much of a problem. "At first it was hard to concentrate with people rushing all around, but you get used to it. Usually commuters stand away from us and listen while waiting for the train. Occasionally they will come up and talk about the music."

Richard Russell was one of those commuters listening to Gary and David play. Mr. Russell said he enjoys the program. "Sometimes if I've had a difficult day at work or just felt a little blue, hearing that music puts me in better spirits."

What kind of public reaction has the MBTA received?

"They love it!" said Jeanne Luppen, MBTA director of Music Under Boston. "There has been such a positive reaction from the public that the program will probably go on indefinitely."

The public is not the only group pleased when music greets them in the morning. MBTA employees at the stations are happier too. Complaints have dropped since the program began.

The music that commuters hear ranges from Classical to Country Western. There is even a place for those who are not musically inclined. Clowns and mimes are used for special events. ArtiCulture is the agency which schedules these musicians. Anyone wishing to play has to be registered with ArtiCulture. To find out details about the program and registration, contact the agency at 547-2541.

SCHWEIKER TO INTRODUCE HMO LEGISLATION

Mr. SCHWEIKER. Mr. President, as the ranking Republican on the Senate Subcommittee on Health and Scientific Research, I rise to announce my intention to introduce legislation to revitalize and further encourage the development of Health Maintenance Organizations.

One of the most pressing issues facing this Nation today is the skyrocketing cost of health care. Last July I introduced a comprehensive measure to encourage containment of hospital costs. The new HMO legislation I intend to introduce will go even further to curb sharply rising health care costs.

As my colleagues are aware, Health Maintenance Organizations are prepaid health plans in which members make fixed regular payments entitling them to the variety of services provided by the organizations. Since payments are made in advance, there is an economic incentive for HMOs to maintain the health of their members and also to avoid costly and unnecessary treatment. Traditionally, physicians and other providers of health care have profited from illness; in an HMO system, they profit from health.

HMOs have now had the time to prove their cost savings abilities. We know that HMOs can achieve overall cost savings of from 10 to 40 percent. According to a new HMO census, inpatient hospital utilization under Health Maintenance Organizations is only 488 days per thousand per year—compared to a national average of over 900 days under the traditional fee-for-service system. Physician vists under HMOs are 3.8 per member per year, compared to 5.1 visits of HMOs. The more information we get on HMO performance, the more certain we can be of their cost savings potential.

Since 1971, Federal HMO policy has been ragged and confusing. The Health Maintenance Organizations Act of 1973 was designed to encourage the development of HMOs through Federal grants and loans, and through a number of devices to help HMOs compete with more traditional health systems in the health insurance marketplace. However, it became apparent that the 1973 act contained too many restrictions which kept HMOs from being financially viable. A long implementation process, regulations that made the original law unworkable, and years of inattention by the Department of Health, Education, and Welfare all kept the HMO movement from getting off the ground as it should have.

For years the HMO movement foundered badly. But thanks to the perseverance of all who are dedicated to this innovative prepayment concept, a very difficult beginning became a constructive, educational foundation. After studying the HMO concept and becoming convinced of its potential, I was pleased to introduce the HMO amendments of 1976, which were signed into law last December. That legislation freed HMO's from a number of restrictive regulations that hampered their ability to compete in the health insurance market. It made real progress in the areas of benefits restrictions, open enrollment, community rating, and dual choice. I will always be grateful for the support of the American labor movement, the business community, the insurance industry, and the HMO's themselves for their unique effort to help pass one of the historic pieces of health legislation of this decade.

Now, 1 year after the signing of the 1976 amendments, we believers in the HMO movement have many reasons to be encouraged. The number of converts to the HMO concept is growing. The debate on cost containment has convinced many more people that structural reform must come through the kind of positive incentives offered by HMO's—incentives which make the health care system more self-regulating with a minimum of Government oversight. HMO's offer real hope for badly needed competition in the health care industry. I am particularly pleased that the administration has made HMO development a high priority.

However, it is now clear that HMO's will not be able to achieve their true potential under existing law. Only about 6 million Americans now belong to HMO's. There has only been a 5.2-percent increase in HMO enrollment over the past year. A number of new steps are necessary to encourage their development, assure their financial independence, improve the administration of the program by HEW, and insure that HMO's will not be abused by health care profiteers. Through this new legislation, I propose that we seize the opportunity for the meaningful health care reform offered by HMO's and move further to encourage their development.

We need a revitalization of the Federal HMO program The administration's announced priorities on HMO's are an essential and encouraging step. But equally, if not more important, is new legislation—legislation that will correct past mistakes, overcome present difficulties facing HMO development, and create a climate for future growth.

The new HMO bill I intend to introduce will give the administration new tools to implement a positive HMO policy. It will encourage HMO development with a more flexible and well-funded program. It will provide more technical expertise for new plans and strongly discourage fraud and abuse. The bill I introduce will reflect the views and interests of everyone dedicated to HMO development; labor, business, the HMO's themselves, and health care insurers. I will do everything I can to make it a bipartisan effort.

More specifically, my bill will contain the following key elements:

1. Removal or substantial extension of the time limitations on federal authorizations for HMO development, burying once and for all the idea that HMOs are simply an experiment;

2. Broader discretion for the Secretary of HEW in the financing, development, and qualification of HMOs;

3. A new purpose clause for the HMO Act;

4. Increased funding for grants and loans to developing HMOs;

5. Provisions for continued federal funding of HMOs, even after they achieve federal qualification, for purposes of expansion or new development;

6. Removal of impediments to the use of HMOs by Medicare and Medicaid programs;

7. Extension of the protection currently provided to group enrollees in the event of an HMO bankruptcy to individual enrollees;

8. Provisions to deter fraud and abuse, and self-dealing among HMO sponsors, owners, and directors;

9. An exemption for HMOs from the Health Planning Act;

10. Authorization for a more unified HEW administration of the program outside the Assistant Secretary's office.

In addition, my legislation will attempt to meet the pressing needs of viable HMO's for additional capital. New facilities and other capital equipment should be available to HMO's where it will enhance their financial independence and cost savings abilities. I will examine this important issue and look to the availability of local financing, loan guarantees, and the like and will attempt to devise an appropriate congressional response which is fully sensitive to the cost containment issue.

Mr. President, these are the key elements of my proposal for a new stage to the HMO movement. A number of other ideas deserve further study, and I am anxious to hear the suggestions of all persons concerned and affected by HMO development.

I look forward to the cooperation of my colleagues in the House and the Senate, as well as that of the administration, in passage of this legislation to fully implement this important health care reform.

AD HOC LOW INCOME HOUSING COALITION VIEWS

Mr. BROOKE. Mr. President, recent press reports indicate that the Carter administration is proposing to reduce the level of Federal assistance to low-income housing in the fiscal year 1979 budget for the Department of Housing and Urban Development. I hope that these press reports prove to be inaccurate and that President Carter will heed the message contained in a letter to the President from the Ad Hoc Low Income Housing Coalition which was sent this week. The coalition wrote on behalf of 56 public interest organizations representing a broad spectrum of housing advocates.

The coalition's letter observes that a HUD budget in the range of $29 to $39 billion (which are the figures used in these news reports) would mean a level of subsidized housing for low-income families and the elderly which is below that of the Ford administration and the early years of the Nixon administration. In fact, the letter indicates that such a budget would permit less than two-thirds of the number of subsidized housing units authorized in the last year of the Ford administration, when HUD approved almost 500,000 subsidized housing units.

It would be tragic for thousands of low-income families and poor elderly persons if President Carter were to propose a HUD budget at levels below those requested by the previous administration.

I urge the President and my colleagues to carefully consider the views of the Ad Hoc Low Income Housing Coalition which recognizes the urgent need for decent housing for low-income families and for revitalization of our older city neighborhoods. Mr. President, I ask unanimous consent that the text of this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AD HOC
LOW INCOME HOUSING COALITION,
Washington, D.C., December 10, 1977.
President JIMMY CARTER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We write to urge your immediate and personal attention to a major policy question facing your administration as you prepare your budget for fiscal 1979. This is the level of federal assistance to be provided for low income housing and the related programs of the Department of Housing and Urban Development.

Recent press reports state that the Office of Management and Budget has "recommended" to HUD that it resubmit its budget for 1979, with an approved total of less than $30 billion in budget authority, and that no new initiatives will be approved. If these reports are accurate, your administration will be substantially reducing the level of federal commitment to meeting the housing and community development needs of low income people.

Last year, the outgoing Ford Administration requested $29.7 billion in budget authority for HUD. Your February revision raised this to $39.2 billion. Both provided for 400,000 subsidized housing units and for some other new initiatives, though relatively modest ones.

A HUD budget for 1979 in the range of $29-39 billion represents a deep cut in real terms. It will mean that hopes for new and effective solutions to the problems of our neighborhoods will be dashed or deferred. It will mean that there will be no effective ways to help most of the low income people now being displaced by the revitalization of urban neighborhoods. It will mean no assistance to elderly home owners, unable to heat their homes or pay their taxes. It will mean no jobs for people who could have put their skills to work in restoring our housing stock or providing new homes for our growing population. It will mean that hundreds of thousands of people now living in federally subsidized housing will be displaced, through no fault of their own, because HUD will be incapable of providing the operating subsidies and other assistance needed because of rising utility and other costs.

Worst of all, a HUD budget in the range of $29-39 billion, most of which is allocated to subsidized housing, will still hold HUD-subsidized housing at levels below those which prevailed during the three years before the housing moratorium imposed at the beginning of President Nixon's second term. It will permit less than two thirds of the amount provided during the last year of the Ford Administration, when HUD approved almost 500,000 subsidized housing units—the highest level in history.

We recognize that federal resources are limited and must be used wisely. The HUD programs that are threatened with curtailment meet present needs, provide employment as well as shelter and improved communities, and are, as well, an investment in the future. Their high price tag is in part because of this. The federal government manages its housing investments much as individuals do: paying over a number of years rather than all at once. But it budgets them very differently, including in HUD budget authority the total run-out costs in the year in which the investment is made.

Had we made the necessary investments of federal funds to maintain and improve our housing stock during the 1950s and 1960s, we would have fewer needs today. Failure to fund housing and community development programs adequately today will mean greater costs in the future. These higher costs—in human as well as in dollar terms—must be weighed along with the federal financial commitments incurred in subsidizing housing.

Last October, the Ad Hoc Low Income Housing Coalition, on behalf of almost 40 public interest organizations, wrote you urging that HUD-subsidized housing programs for low income people be doubled in the coming fiscal year. We recognize that there may well be fiscal constraints which prevent adoption of this recommendation. But we cannot conceive of any realistic evaluation of all the factors involved which would justify reducing the level of federal commitment to low income housing programs and other measures needed to fulfill the 1949 commitment to "a decent home and a suitable living environment for every American family."

The OMB recommendation on the HUD budget must be rejected.

Sincerely,

CUSHING N. DOLBEARE,
Chairperson.

For:

Ruth Clusen, President, League of Women Voters of the U.S.

Aaron E. Henry, Chairman, National Rural Housing Coalition.

Mathew H. Ahman, Associate Director, National Conference of Catholic Charities.

Women's Lobby, Inc.

STATEMENT OF SENATOR EDMUND S. MUSKIE ON THE DEATH OF LAURENCE N. WOODWORTH

Mr. MUSKIE. Mr. President, the untimely death of Laurence Woodworth shocked and saddened me. The country will feel the loss of his expertise, skill, and energy.

Larry Woodworth was already on Capitol Hill when most of us arrived. His decision to leave here after 33 years to write the President's tax reform proposals was a personal opportunity for him. It was also an opportunity for the country to see real improvements in the system. Larry's death will not stop that work, nor diminish the opportunity. But the fight for tax reform will be different without this quiet, effective advocate.

The most serious loss, I believe, was Larry's talent for putting the complexities of the Tax Code into terms that all Americans, particularly the 535 who vote here, could understand. We could never honestly hide behind ignorance, though some of us sometimes might have been tempted to do so.

I hope each of us will pause during the holidays to remember what Larry spent his life working toward. It is a job of enormous proportions. It will be no easier now that Larry is gone. But perhaps his memory will strengthen our resolve.

FEDERAL PROGRAM INFORMATION ACT

Mr. KENNEDY. Mr. President, the Senate has the opportunity again today, as it has twice in the past, to overwhelmingly approve legislation that will bring Federal domestic assistance into the computer age. The bill establishes a Federal Program Information Center in the Office of Management and Budget to serve as a single, comprehensive source of timely information on all Federal domestic assistance programs.

I originally introduced this legislation in 1966 when it became apparent that communities across the country were swamped with massive amounts of information generated by the Federal Government. And in that decade since the legislation was first introduced, domestic assistance programs have increased dramatically, until, in fiscal year 1976, the annual expenditure for these programs topped $60 billion. Today, there are over 1,000 Federal programs, administered by 52 separate agencies, that provide financial and technical aid to State and local governments and other eligible recipients.

These programs all have different regulations, different requirements for eligibility, different application forms, and different deadlines. In many instances, State and local governments have simply been ovrwhelmed; and many potential beneficiaries have been denied access to this assistance by virtue of the difficlty of learning about Federal programs and applying for them on time.

The General Accounting Office quite candidly reported to us that:

> The Federal Government has no single source of complete information on the type and availability of Federal assistance programs for State and local governments. Because of the proliferation of such programs, State and local governments have devoted considerable time and effort to identifying, keeping informed of, and availing themselves of Federal assistance. Despite these efforts, many State and local officials do not learn of available Federal assistance, or learn of it too late to apply.

The tragedy of this information gap is that a community seeking to build a hospital, a school, or a sewage treatment plant, may spend months just trying to identify Federal programs for which they are eligible. Many States and large cities have been forced to spend a considerable amount of money maintaining Washington representatives to keep abreast of changes in Federal programs. Smaller cities and towns that cannot afford full-time Federal relations personnel are penalized by receiving less than their fair share of Federal funds.

Every congressional office knows the problems these communities face. Caseworkers spend countless hours working with local officials trying to unravel the Gordian knot of Federal assistance programs.

We in the Congress have received thousands of letters and phone calls supporting any reform which would make our assistance programs understandable and accessible. We have a chance today to respond to those pleas with a center that can provide simple, quick, effective answers.

Using modern technology, the Federal program information center will develop a computerized system to facilitate the wide dissemination of program information by use of remote computer terminals. A potential applicant would feed into the computer some basic information on his project needs and would provide a simple profile of his community. The computer would then furnish a listing of all programs for which the individual meets the basic eligibility criteria. This system offers a major improvement over the cumbersome methods now in use.

Countless Americans these days are questioning the capacity—and sometimes the willingness—of the Federal Government to place people's interests ahead of the bureaucracy's interests. Despite the remarkable advances that have been made in the computer and telecommunications fields, the Federal Government has failed to make full use of these technologies to provide the most effective service for our State and local governments.

I strongly urge my colleagues to support this bill, a bill that will move us closer to the goal of reducing government redtape and insuring that Federal funds are distributed fairly and efficiently.

BOSWELL IN SEARCH OF MATCHING FUNDS

Mr. MATHIAS Mr. President, today as the first session of the 95th Congress ends and as another year draws to a close, I would like to take a moment to reflect on the immutable aspects of our lives as politicians—to explore the rewards and satisfactions of political life that don't alter from session to session, or from year to year, or even for that matter from century to century.

Recently, I reread a passage from "Boswell for the Defence" in which Boswell describes making a visit to a Scottish member of Parliament living in London. The visit took place on March 22, 1772, and yet, across a span of more than 200 years and 3,600 miles of water, it is remarkable to see how little the pleasures and pains of political life have changed.

James Boswell writes:

> I breakfasted with Dempster, whom I found as agreeable and as friendly as ever, improved much in speaking English, and appearing to be as happy as I could wish him. Parliament . . . had acustomed him to manly employment and I could see he was really satisfied with his situation. He is conscious of acting with honour and fidelity and spirit, and he feels himself happy in having a share in the great deliberations both as to this nation and the Empire of India. He said he would not give up the enjoyment of the two sessions which he had sat in Parliament for any consideration. . . . He kept out all company till we had taken a hearty draught of free and friendly conversation. But then I saw a specimen of his inconveniences; for in came Angus Lairds, speaking with a most uncouth tone, and beings of other disagreeable kinds, to all of whom he was obliged to be very courteous.

Like Dempster, despite occasional "inconveniences", I too am "happy to have a share in the great deliberations . . . as to this nation."

A special element of my satisfaction as a politician derives from the knowledge that, as popularly elected legislators, we are all part of a continuum—we are participants in the process that produced our democratic institutions and which still refines them.

Without such chroniclers of their times as James Boswell, however, our pleasure in the practice of politics would be infinitely less informed. Boswell's little vignette of the life of an 18th century parliamentarian is a delightful reminder of the eternal verities of political life.

Boswell's witty political observations are, of course, barely the tip of the iceberg of the Boswell Papers. The collection contains documents that span 3 centuries and provides a rich and variegated guide to Scottish feudal life. These papers are a treasure trove not just for literary historians, although they are certainly that, but for scholars in many other disciplines as well. And, for the likes of me, the 10 volumes of Boswell's Journal that scholars engaged in The Yale Editions of the "Private Papers of James Boswell," have edited are a source of continuing pleasure and enlightenment.

It is, therefore, extremely gratifying to learn that the National Endowment for the Humanities (NEH) has provided a new grant to the Yale Editions of the Private Papers of James Boswell which should enable the project to complete the Catalogue of the Boswell Papers and the final volumes in the trade edition of the Journal.

This second award from NEH provides an outright grant of $143,657 which will support the project for another year-and-a-half. In addition to this grant, NEH has also offered $75,000 to match gifts to the project on a one-to-one basis, and has given the project 3 years in which to raise its $75,000.

NEH's earlier award to the project for for $110,408. Made in January 1975, it was intended to help support the project until April of this year. But, because Project Director Frederick A. Pottle, sterling professor of English emeritus, and his dedicated associates are as meticulous in their budget management as they are in their scholarship, the initial NEH grant was husbanded so skillfully that it lasted until August.

The National Endowment for the Humanities deserves great credit for making these grants. They are a major contribution to one of the most important scholarly endeavors of any age. The Yale Editions of the "Private Papers of James Boswell have more than justified the confidence these grants imply. I am sure that every Member of the U.S. Senate believes, as I do, that these NEH grants are money well and wisely spent. I am confident that the project will have no trouble raising the $75,000 it needs to qualify for matching NEH funds. It is, after all, a very small investment measured against the dividends it will pay.

In his "Life of Johnson," Boswell reports that Dr. Johnson use to quote "with great warmth" these words of Aristotle: "Educated men are as much superior to uneducated men as the living are to the dead."

Publication of the Catalogue of the Boswell Papers and the final volumes of the Journal will be a significant contribution to the education of mankind. I am grateful to the National Endowment for the Humanities for making this possible. I am grateful to the small band of dedicated scholars at Yale for making this possible. And I am grateful to those educated men and women who will surely come forward now to insure the matching funds necessary to bring this great undertaking to fruition.

Mr. President, I ask unanimous consent to have printed in the Record an article by Israel Shenker, which appeared in the New York Times on July 15, 1975, conveys the flavor of this remarkable scholarly project far better than anything I can say.

There being no objection, the material was ordered to be printed in the Record as follows:

[From the New York Times, July 25, 1975]

Boswell's Life a Thriving Industry at Yale

(By Israel Shenker)

(The Yale editions of the private papers of James Boswell, "The Boswell Factory," Frederick A. Pottle, chairman; Frank Brady, F. W. Hilles, H. W. Lieoert, Thos. Quinn, Irma S. Lustig, Harriet Chidester, Rachel McClellan.)

New Haven, July 24.—In the Boswell Factory—room 331–A of Yale's Sterling Memorial Library—the casement windows are flung open to catch the breeze. A sudden gust lifts a batch of handwritten notes which are to be used in a forthcoming installment of the chronicle of James Boswell, the great 18th century biographer.

The papers swirl in disarray, then settle slowly to the floor. Another gust lifts a final sheet and it floats magestically before fluttering to rest. "Irma," Prof. Frank Brady calls, "It's just under your foot."

This project has long been down-at-heel, limping along on $10,000 a year, and about four years ago the factory almost closed. Then Dr. Irma S. Lustig decided to apply for a grant from the National Endowment for the Humanities. She drafted an application and called Yale's Professor Emeritus Frederick A. Pottle, the factory's boss, for his approval.

"I told you I'm going up to Maine," he said. "I have to plant peas. Besides, it's humiliating to ask for money."

He finally agreed to have a look, then to lend a hand and the National Endowment for the Humanities has now given the Yale Boswell Editions $110,408 to support operation until March 31, 1977.

"But we're still a shoe-string edition," said Professor Brady, "every piece of paper used twice, every pencil counted."

He spends his summers at the factory, and the rest of the year teaching at City University of New York. Professors Brady and Pottle are collaborating on the second volume of a biography of Boswell. Professor Pottle—who is 77 years old—having written the first.

"Boswell was like all the rest of us, only more so," said Professor Brady. "He drank a lot, but so did everybody else in the 18th century. He ran around with women, but so have others since the 18th century. I'm rather fond of him." "Of course Boswell's drinking and his sexual excesses show considerable weakness," noted Professor Pottle. "Fundamentally he's a good man—his morals were generally very good, but his behavior was very bad. One of the things that pleases me most and impresses me most is his complete truthfulness. He seems unable to tell a lie and he can't even deceive himself."

Boswell's "Life of Johnson" was the biographer's monument to honesty and art, and Christopher Morley, the late essayist, called its author "the greatest biographer who ever lived . . . the greatest of all self biographers."

"We probably know more about Boswell than we know about any other 18th century figure," said Professor Brady, "He is very much like Norman Mailer in some ways—a man who swims in print. The two men have the same acuity of perception—you get a very sharp idea of what people are like."

Boswell was born in Edinburgh in 1740, and died in 1795. His passions were literary, bibulous and libidinous, and he wavered firmly between principles and debauchery, new resolve and renewed debauchery.

Friendship with Samuel Johnson was the great event of his life, but his superb reporting also delivered great portraits of other central figures such as Voltaire, Rousseau, Oliver Goldsmith, and Sir Joshua Reynolds.

He was a compulsive keeper of records—journals, memoranda, register of letters, record of books sold, book of company (guests received), book of liquors (drinks dispensed), and expense accounts ("Maid for sitting up for me"—1 shilling, "dancing pumps"—8 shillings 6 pence). Even when Boswell wrote to give his own heart away, he asked for the letter back.

His heirs were scandalized by his confessions, and led the world to believe that nothing survived. And yet a question remained: did Boswell's executor write that material "had been burned in a mass of papers" or "buried in a mass of papers"?

LETTERS SOUGHT

In 1920, Yale's Prof. Chauncey B. Tinker asked publicly if anyone knew of Boswell letters in private hands. He received an anonymous note: "Try Malahide Castle." There—guarded by a Boswell descendant—he found what he described, in heady frustration, as "the Valley of Rubies."

But he failed to get the gems. Then a Lt. Col. Ralph Heyward Isham set patiently to work, and finally—for a good sum—winkled the great Boswell collection from the hands of Malahide's master, Boswell's great-great grandson, Lord Talbot.

More manuscripts turned up in a box that was supposed to contain croquet equipment, and two chests of Boswelliana were discovered in a Malahide outbuilding. Then a Scottish professor, searching the estate of one of Boswell's executors, found—in sacks, bundles and bags—over 1,600 more letters.

Eventually Colonel Isham took title to everything, and when he ran short of funds he sold out to Yale, which paid $500,000 with money from Paul W. Mellon, and from McGraw-Hill as an advance against royalties.

The publishing company—awarded rights to publish the Boswell works—pays Yale a royalty of only three per cent, which is less than the office costs of producing the printer's copy and reading proofs.

MILLIONS VOLUMES SOLD

The world sale of the trade edition has been well over a million volumes. What gave the books "larger" circulation, as Professor Pottle noted, may have been prurience about Boswell's confessions and publicity about the discoveries.

But what gave them "large" circulation was that Boswell was a great literary artist, a distinctly modern writer. To edit his work said Professor Pottle, "is to be connected with a new or emergent work of literature."

Boswell's descendants censored his frankness with India ink and the factory has been assiduously deciphering the original state. Infrared light was no help, but sometimes pristine Boswell beckoned through when the manuscript was held up to less exotic illumination.

By extrapolating from peaks and valleys protruding beyond obliterations, much has been reconstituted. "The deleting strokes are generally pretty symmetrical," said Professor Pottle. "They go up and down like a wave." He often finds Boswell bobbing unscathed, brown ink beneath the carbon spume.

"N's and r's are impossible," said Professor Brady. "You never know whether it's 'ever' or 'even.' "

CODE WORDS USED

Boswell often crowded words into illegible propinquity, and he sought translucence behind a screen of primitive code: Latin words that even mediocre scholars could grasp, a V standing for the Latin "voluptas," and Greek letters as well.

The letter π, which is usually used in other circles, stood for "pleasure," and Boswell wrote that he had shared π with Ysteb Htims—a prostitute whose name can be recovered by reading it backward.

For a time he kept notes in rudimentary Italian, inventing words such as "solitariamente" (for single or only) and "armeo" (instead of "esercito," for army).

Marion S. Pottle, the professor's wife, is the principal specialist at cryptanalysis, and she works in the Beinecke library on the definitive Boswell catalogue. Some of her treasures are tiny scraps of script, mounted on gauze, which she tries to fit together like a jigsaw puzzle.

Originals are stored at the Beinecke. Photostats of the entire Boswell collection—except locks of hair—are in the factory and in Room 331–C, which is shared with the [Horace] Walpole Factory and is therefore known as the Bospole room.

No book is published without Professor Pottle's intense, almost anguished, scrutiny. He is a perfectly gentle tyrant, taming the smallest clue into relevance, and showing the hand of the master in writing the narrative large.

One series of volumes—the annotated Boswell journals—has been emerging since 1950. Ten have come out. Four to go.

They all have individual scholars as editors, and Professor Pottle as final authority and co-editor.

Volume 12 will include the text of what the factory calls "The Extraordinary Johnsonian Tacenda" (a Latin word meaning "things not uttered"), an account of Boswell's interview with Mrs. Desmoulins, who lodged in Johnson's house, about Johnson's sexual life.

JOHNSON'S BRINKMANSHIP

Mrs. Desmoulins tells how Mrs. Johnson repelled Dr. Johnson's advances, and how Mrs. Desmoulins responded to them. Never in history, she said, was there anyone

* * * * *

Dr. Johnson—but he mastered them with consummate brinkmanship.

There is also a research edition blossoming with scholarly minutiae, and Professor Pottle estimates that the two volumes thus far published will be joined by about 38 more.

He has worked on Boswell for 52 years, and thinks the factory could wrap up the great Scot in another 20 years—given sufficient money.

Dr. Lustig: "The reason it takes so long is that it's a scrupulous operation."

Professor Brady: "It has to funnel through Pottle."

Dr. Lustig: "He won't relent."

Professor Brady: "He says he never wants to publish anything he doesn't understand, and lots of scholars pass over things."

UNFINISHED ESSAYS

"There's nothing I'd rather do than Boswell," said Professor Pottle. "I have a number of unfinished essays on Shelley, but these things in Boswell are more absorbing."

Stray material is still turning up, and the factory is of two minds about it. "If any more comes I'm going to burn it," said Professor Brady in jest. "We already have too much."

He and his associates hope that one day the great Mountain of Rubies—the Johnson-Boswell letters—will be discovered.

There would be a celebration in the factory (which has outlived an attempt to dignify it as the Boswell Scriptorium—a copying room in a medieval monastery). "I'd stay drunk for a week," said Professor Brady.

Noted Dr. Lustig: "Mr. Pottle would say 'Great,' and keep on working."

That would be in character, quite unlike the outrageous suggestion he once made when he looked up from behind his green eye shade and suggested—with the tone of a man who could not believe what he was saying: "Let's make up a footnote. Nobody will ever know."

NEW HOUSING FOR LOWER INCOME GROUPS CAN HELP CREATE NEEDED JOBS NATIONALLY

Mr. STONE. Mr. President, in the November 17, 1977 issue of the American Banker, Mr. Arthur H. Courshon, chairman of the Washington Federal Savings and Loan Association of Miami Beach, Fla., discusses a creative proposal to use savings and loan institutions to promote construction of housing for low and moderate-income individuals.

Under this proposal, a small Federal contribution and a new type of mortgage instrument would allow private financial institutions to use their substantial resources and expertise to finance many low- and moderate-income units. Since these are not good private investments at present, the Federal budget must bear the major burden for their financing.

The indirect benefits of this proposal are also significant. An increase in housing construction would have a strong impact on America. New housing construction creates additional jobs and promotes a healthy economy. The jobs created by this plan would result in increased tax revenues. There is no question that efficient economic stimulus costs the Government must less than, and is preferable to. creating public service jobs.

This article presents new ideas to provide adquate financing for low and moderate income housing. This problem and that of high unemployment become more difficult for Government to solve as pressure mounts to balance the Federal budget. Therefore, new ways must be explored to increase private investment.

Mr. President, I ask unanimous consent that this article be printed in the RECORD. I commend it to my colleagues' thoughtful consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Banker, Nov. 17, 1977]

NEW HOUSING FOR LOWER INCOME GROUPS CAN HELP CREATE NEEDED JOBS NATIONALLY

(By Arthur H. Courshon)

Construction of housing for lower income groups can help create badly needed jobs in the country, and the savings and loan industry can be the vital link between the government's commitment to make that happen and the need to do it on a fiscally sound basis.

But the first step must be for the Administration to understand the extent of the housing industry's offset on our national economy.

The housing industry's problems have always been the problems of the general economy—and therefore the problem of whichever Administration is sitting in the White House. When an economic recovery has turned things around, it has been the housing industry that has often led that recovery.

Study after study shows that for every 100,000 additional units of housing produced, nearly double that number of jobs are created. And most of that does not even take into account a second layer of economic stimulus and jobs created because of increased need for furniture, appliances, and various services purchased by housing consumers.

We are not—as is popularly believed—a nation that depends entirely on the automobile as its primary economic barometer. In peacetime, housing is the single industry that has the most direct impact on employment and the U.S. economy.

It is tragic then, that the multi-billion dollar savings and loan system in this country has not been used to its fullest extent to help provide financing for construction of housing for low and moderate income families—and jobs.

One of the most effective means of building that housing and providing those jobs could be an indirect government tax relief subsidy used through the savings and loan industry.

One of the most influential spokesmen for housing in Congress has said that the right kind of housing program stimulus can create nearly one million new jobs, with an impact on the Federal budget of only about $500 million.

That's $500 for each new job, a paltry sum when compared to estimated costs to the government of $25,000 per job for some public works job, $16,000 per job for highway jobs and $8,000 per job for public service employment.

By the effective use of the savings and loan system and taking into account additional tax revenues that go along with the creation of new jobs, the impact on the Federal budget could be even less.

The potential benefits to be gained—better housing for low income groups and more jobs—make this an attractive program indeed.

Establishing a new type of mortgage loan, to be used by the savings and loan industry, should be one of the first steps. That new loan type can be designed to encourage financing for low income families directly by the S&L industry itself, rather than making it a budget consideration of the Federal government.

And it can be done in a fashion that makes these new loans a safe and sound investment, and not an undue risk to the lending institutions, their shareholders, or the Federal Savings and Loan Insurance Corporation.

A third element of the plan must be to insure that interest rates on the loans are low enough to enable the low income borrower to carry the debt—while at the same time making it a sound investment for the balance sheet of the lending institution.

There is a way that each of those critical elements of the program can be met.

The Federal Home Loan Bank Board, either through law or regulation, could create a new, permissible class of loan limited to a house or apartment with a certain square footage.

That upper limit must insure that the unit meets the needs of low income families, such as perhaps a 1,500 to 2,000 square foot limit. Just what is required could be worked out in much greater depth, taking into account family size and location of the property, later.

This special new class of loan would be limited to borrowers whose income did not exceed a certain level.

The Bank Board, in conjunction with the Department of Housing and Urban Development could set that limit consistent with what it feels is a tangible limit for what could be called "low income" borrowers.

Certainly there are already many studies that go into detailed classifications of low income families, already being used for existing low and moderate housing programs at HUD.

This new class of loan would also be fully insured by the Federal Housing Administration or some other agency of the government. Just where insuring authority and responsibility would fall could be determined by HUD and the Bank Board. The full insurance would be critical to making the loans safe for private lenders, and not just the creation of a loss on the balance sheet.

A ceiling should also be placed on the interest rate allowed for those new loans, perhaps of around 4½ percent.

In the case of new housing, the FHLBB regulations might also permit the loans to self amortize over a 40 year period.

The incentive for savings and loan associations to make such loans should be that all income derived from this special class of loan be tax free to the lending institution. To a savings and loan industry watching taxes rise to nearly 30 percent while other types of lenders pay an effective tax of only about half that, the tax break would hold considerable attraction.

We might find that the results would be dramatic. The savings and loan system—with all of its resources and experience as the primary housing lender in this country—would be armed with a new instrument, fully insured by the Federal government, and which has tax free income.

That tax break would also apply to any subsequent holders of the mortgage to facilitate a secondary market in the instruments.

Because the new loan would be fully insured by the Federal government, S&L would be making qualifying loans to the low income segment of the population—many times in inner city areas—without creating an unsound or unsafe portfolio asset.

The tax free income generated for the savings and loan industry could assist in building the industry's reserves to further protect the underwriting of the FSLIC.

That strengthening of savings and loan reserve positions is critical. Ever since the late 1960's when the thrift industry was stuck with a much higher tax burden, the capital base of the industry has been in rapid decline.

Study after study of savings and loan association capital adequacy has shown the direct link between the declining reserve positions and the growing portion of income taxes paid by S&Ls.

The savings and loan industry has lost what once was an indirect subsidy in the form of a very low tax base. That tax structure was there for a purpose, however, to help the system build its capital base. That aid was eventually returned in the form of mortgage financing to the public.

By creating a new qualifying mortgage with tax free income, the savings and loan system could be allowed to increase its liquidity potential. These mortgages could be sold to increase the loans to the general public on a "without recourse" basis.

The investors in turn would be purchasing an asset fully insured by the Federal government, whose income would be tax free to the holder of the loan paper.

And that would have a yet another benefit. S&Ls, in order to continue the massive support to the housing industry, would not be entirely at the mercy of disintermediation. The new instrument would provide an additional source for S&L to bring in money to continue ongoing mortgage lending.

The full Federal insurance will take the savings and loan industry out of the regulatory cross fire when it comes to inner city lending.

Associations that do make loans in certain blighted areas are subjecting themselves to taking on unsafe and unsound investments that endanger the associations standing with Federal regulations against such practices.

Associations that are more prudent in developing a loan portfolio, face the criticism that they are involved in redlining.

The country should face up to the fact that this practice is not the right way to use the savings and loan industry to support housing for low income families.

The right way is to use its potential by allowing it to make loans to the low income families that meet the needs of those groups, that create jobs, and that do not run the risk of destroying the Federal Savings and Loan Insurance Corporation.

That means these loans should be insured by an instrumentality of the Federal government, other than FSLIC. It would be up to the Administration to set any limits on the amount of insurance to be issued on these loans, as needs change.

This program is not, however, a carte blanche for savings and loan associations to flood the country with tax free housing programs for low income families. The Federal government, most likely through HUD or the FHLBB, would set up the annual insurance limits, to control the need for housing, employment, or the use of additional tax income for the Federal Treasury.

One point is not debatable. The interest rate must be kept very low, or the program will not reach the borrowers that need the aid most.

The incentive for lenders to keep the interest rates low is the tax free status of the loans. That makes it an indirect government subsidy. But if the homes are not built by private financing, and jobs are not created the same way, the government subsidy will be much greater.

The stimulus to the economy by creating the new housing produces new income for the Treasury that more than offsets the subsidy of having tax free mortgage interest on this specialized form of loan. The exact spot the interest rate ought to rest is of course open to discussion. The 4½ percent mark is only a suggestion, as is the 40-year amortization period.

The savings and loan industry's potential in this area has been sadly underestimated. This $450 billion industry is making close to 70 percent of the mortgage loans now in this country. Surely an industry with that kind of economic clout can go a long way toward helping to solve the economic problems of this country, as well as the social problems of unemployment and inadequate housing for the disadvantaged.

Administrations up until this time have rightfully been concerned with a safe and sound savings and loan industry—to protect shareholders and the FSLIC. But based on changing economic conditions, the S&L industry has either aggressively promoted housing, or severely restricted its home lending. And it has done so not just out of economic necessity, but also because of the outmoded legal structure of the savings and loan system itself.

Most of what this country has come up with to promote housing for the low income segment has been through HUD's subsidy, housing grant, and public housing programs.

But that has not been enough, and has been too expensive. The evidence is plain in many urban neighborhoods. Congress in 1968 concluded that there is a need for production of 600,000 housing units for the low income segment each year—a goal that is far from being met.

But a program that could meet the needs can be developed using the resources of the vast savings and loan system.

That program could provide low interest financing for the poor, jobs for the unemployed, help for the neighborhoods, and a strengthened capital adequacy picture for the savings and loan industry.

ON THE DEATH OF JOHN McCLELLAN

Mr. MUSKIE. Mr. President, John McClellan's death is a loss to the country, and a personal loss for those of us privileged to know him.

John spent more than 40 years in the Congress and 35 in the Senate. They were years of distinguished service to his State, his country and his fellow Americans.

Most Americans know him as the man who led the Senate investigations into union corruption and the TFX scandal; as the strong and influential chairman of the Senate Appropriations Committee; as an expert on criminal law who worked many years to fashion a new criminal code.

But his constituents in Arkansas also knew him as a superior representative who worked hardest for their needs. The lives of the people of Arkansas are better today for his efforts.

I sometimes did not agree with John McClellan's political philosophy or sense of the proper direction for the country. But our differences were on questions of policy only.

From my first years in the Senate, I found him a fair-minded, honorable man. The Subcommittee on Intergovernmental Relations, which I chair, was established during John's chairmanship of the Government Operations Committee. I always valued his advice, even when his thinking did not agree with mine.

More recently, I had the opportunity to work closely with John in the past 3 years as the Senate Budget Committee began its work. I found him a strong ally in the committee's work, and his support was invaluable.

The Budget and Appropriations Committees were potential adversaries. His insightful leadership helped make them effective partners in the struggle for fiscal responsibility.

It is sad that John will not witness the enactment of major criminal code reform, nor help see the Budget Committee through its future tests.

The Senate will miss him, as will I.

BALTIMORE'S RENAISSANCE

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Maryland (Mr. MATHIAS).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MATHIAS

BALTIMORE'S RENAISSANCE

Mr. MATHIAS. Mr. President, the City of Baltimore has had a fascinating and significant history since its founding 248 years ago. It has seen good times and bad times, times of pessimism and times of hope, times of peril and times of tranquility, times of solemnity and times of jubilation. The Baltimore seaport which actually took root in 1706 at the northernmost reach of the Patapsco River's Middle Branch, was different from the two earlier attempts to establish a Baltimore town in Maryland—one on the Eastern Shore, the other in what is now Harford County. The new Baltimore was located on sheltered waters far inland. It stood at the apex of a vast hinterland which was to become the agricultural and industrial heartland of our young nation. It was located near many fast-moving streams where grain milling prospered and grew.

By 1758 an enterprising Irishman named James Stevenson had set up shipping operations in what is now the Fells Point section of Baltimore City, and began moving grain by ship to cities both to the north and south of Baltimore, to the West Indies and to South America. Throughout the next century, the City of Baltimore grew up around this new inland seaport, as its location became more and more strategic to the developing nation beyond the Appalachians. By 1812, Baltimore was the country's fourth largest city and its location astride the main north-south post road of the young nation made it an ideal target for British attackers who sought to cut off the new capital at Washington from the rest of the nation. Every informed American knows what happened at the Battle of North Point and at Fort McHenry.

Later, naval architects and shipwrights at Fells Point built the United States Navy's first frigate, the U.S.F. *Constellation*, and the Baltimore Clippers which dominated merchant shipping on the North Atlantic and brought the world to the foot of Broadway. Next the age of steam connected the westernmost outpost of the New World, the Village of St. Louis, with the Old World, as the Baltimore and Ohio Railroad brought its overland tracks down to the water's edge at the Port of Baltimore. In the 1850 census, Baltimore ranked second in population, passing Boston and Philadelphia.

Historically, the City of Baltimore's destiny has been inextricably bound to the great seaport on the Patapsco. And that historic tie endures to this day.

Since World War II, Baltimore has seen a renaissance under the leadership of four imaginative and progressive mayors—Thomas J. D'Alesandro, Jr., Theodore R. McKeldin, Thomas J. D'Alesandro III and William Donald Schaefer. As a result of their dynamic leadership, a new city is rising along the historic waterfront. Yet, today Baltimore is less a city of glass and steel and concrete, than one of communities, neighborhoods and individuals intensely proud of their heritage and accomplishments.

Mr. President, the new spirit of Baltimore is chronicled in three recent articles which have come to my attention. One, from the London Economist, describes Baltimore's highly successful rebuilding and revitalization program; a second from the Washington Post, by James Young, a Baltimorean and former member of my staff, captures the essence of Baltimore from afar, and a third from the Baltimore Sun by a native son, Gwinn Owens, imparts a Baltimorean's pride in his hometown.

These three articles are as follows:

[From the Economist, Oct. 1, 1977]

BALTIMORE AWAKE!

"I don't have any feelings about Baltimore", complained one businessman recently to the city's chamber of commerce. Nor, it seems, have many others, despite the city's efforts to revive itself. Companies are still reluctant to locate plants and offices in Baltimore, which in turn erodes the base—jobs—on which the whole attempt at renewal must rest. While buildings were mushrooming in the first half of this decade, 41,000 manufacturing jobs were lost.

Twenty years ago Baltimore was declining from wartime heights of vitality, when its port and its industrial capactiy gave it strategic importance. It was not a financial centre, nor a cultural one. It had a respected newspaper, the morning Sun, but its circulation of less than 200,000 in a city of nearly a million made it, as its staff lamented, "the country's best unread paper". Nor had Baltimore ever been a town for night life, with the single exception of "The Block", a garish row of strip joints and then the only place in the East where the girls could "work heavy", as they referred in the trade to taking it all off.

With the inner harbour falling into disuse, the abandoned warehouses and decaying piers added to the air of stagnation. Travellers along the Washington New York axis called the city "Washington's Brooklyn", and were much relieved when the interstate highway system tunneled underneath Baltimore harbour, allowing them to avoid the town completely.

Perhaps because of the harbour tunnel bypass, even nearby Washingtonians are unfamiliar with the changes in the face of Baltimore. In the late 1950's a newly formed group of regional business leaders known as the Greater Baltimore Committee declared that the downtown decay must end. They talked the city into making a large plot of valuable land available for an office complex, which meant condemning not only Baltimore's most famous restaurant, Miller Brothers, but also the city's own new parking garage. The result was Charles Center, a grouping of offices, shops and a cinema.

Hardly was One Charles Center (designed by Mies van der Rohe) finished when the redevelopment of the inner harbour began. The warehouses and docks, which jutted almost into the business district, were demolished to make way for a pentagonal office tower, a science museum, an apartment house for the aged, playing fields and walkways. Of the original buildings, only the News-American newspaper and the McCormick spice factory, which sometimes mingles the scent of cinnamon with more familiar maritime smells, remain.

Until recently, it never much bothered Baltimoreans that their city rivalled Philadelphia for the honour of most belittled city in the East. They are in some ways an insular people. They have a strong sense of neighbourhood and clan—the Poles and Greeks in the east Baltimore area of Highlandtown, the Lithuanians just west of downtown, the Italians in a central enclave called, of course, Little Italy. Each group has its characteristic restaurants and grocers, even its own radio programmes. Baltimore also speaks a dialect all its own. The name of the town is, variously, "Bawlamer" or "Bawlteemore". Its predominant religion is "Calf lick", and its top political office is the "morality".

The sense of locale that gives Baltimore much of its considerable charm is also in part responsible for its most successful experiment in urban renewal, "homesteading". Under this programme, the city acquires abandoned houses and sells them for one dollar each to people who are willing to rehabilitate them and live in them for at least 18 months afterwards. Rehabilitation costs are currently averaging over $25,000, and the city will furnish loans at below market interest rates. With 333 houses homesteaded by the end of 1976, the programme is now so popular that Baltimore has started to make whole blocks available, and has resorted to a lottery to cope with demand.

Typically, these houses draw middle class white couples into the poorer areas. In theory, this should halt housing blight, enriching the neighbourhoods and fostering an atmosphere of improvement generally. In practice, it may produce class antagonisms if the upgrading of houses leads to real estate speculation, as it has in other "revitalised" American cities. Baltimore's population is about half black, largely poor blacks.

At the end of July unemployment in Baltimore stood at 9.1 percent, compared with a nationwide average of 6.9 percent. The renewal of downtown has done little to reduce the joblessness endemic to older industrial cities. So, again in conjunction with the Greater Baltimore Committee, the city is at last embarking on a campaign to lure industry to the area. The campaign, inspired by Pittsburgh's recent success in creating an image attractive to manufacturers, will pit Baltimore against the other eastern seaports of Philadelphia, New York and Norfolk. It will focus on businesses, both domestic and foreign, related to or requiring shipping facilities, because these are the ones that generate the most secondary employment. But success in the campaign may depend on whether Baltimore markets itself as a single metropolitan region, or includes itself with Washington in a kind of megalopolis: a move which could either earn the city more attention, or more humiliation.

[From the Baltimore Sun]

BALTIMORE: THE LONG CLIMB UP FROM NOWHERESVILLE

(By Gwinn Owens)

BALTIMORE, for all of its genuine physical and social advances in the past decade, remains America's most maligned city, the joke-town of the U.S.A. It doesn't matter that we who live here experience the sheer delight of its people, its achievements, its variety, its vitality and its uniqueness. We know it, but no one else does, and until they do, we will not attract culture, money or people.

Let me start out with a piece of useful trivia. I've long had the feeling that Baltimore's descent into Nowheresville began sometime around the early 1940's. To support that contention I did a little research, and it is illuminating, to say the least. In the 15-year period from 1926 to 1940, no less than 15 Baltimoreans appeared on the cover of *Time*. By Baltimoreans I include those who were working here or, for one reason or another, were closely identified with the city. After 1940 there is not single Baltimorean on the cover of *Time* until 1963. From 1963 through 1973 there were 10, but six of these were Spiro T. Agnew and three were Sargent Shriver (who is only marginally a Baltimorean). If you subtract Agnew and Shriver, the score comes out to 15 Baltimoreans in the 15 years, 1926–1940, none in the 22 years from 1941 throngh 1962.

In June of this year I took my first trip to Atlanta to attend a broadcast editorial writers conference. The visit was a shock and a revelation. America's most publicized city is a wasteland compared to Baltimore. Why, then, does the whole nation flock to Atlanta? One of the speakers at our conference was city planner Larry Halprin, who extolled some of his achievements in (I believe) San Francisco, Spokane and Seattle. One of the audience rose to ask him what he thought of Atlanta. His reply: "A terrible city." This led me to believe this was a man who knew a good city from a bad one, so I asked him what he thought of Baltimore. "Baltimore," he said, "is a mess." I asked him how long since he'd been there. "At least ten years," he replied.

There was a man, a city planner to boot, who knew Baltimore only from its physical and cultural nadir of a decade or so ago. The question has to be raised: Why didn't he know more about Baltimore? This was only the beginning of Atlanta-shock. One of the editorial writers, when I spoke of my home city, said "I always think of Baltimore and Newark the same—cities with nothing but problems."

The insults come from other sources. The *Sunpapers* have nurtured me one way or another all of my life. I still like to think of them as great newspapers. A year ago I was co-author of a book published by Putnam. The reviews were mostly very good, but the worst review of all was in *The Sunday Sun*. When I complained to my Putnam editor, he advised me: "Don't worry—nobody in the publishing world gives a damn what the Baltimore *Sun* says. It's just not an important newspaper."

Now let me quote a portion of a paragraph from "A Heartbeat Away," the best-selling story of Agnew's downfall by Washington Post reporters Cohen and Witcover:

"Even by Maryland standards the city [Baltimore] stood alone. It even had its own accent—or accents—and it was the city that saw no future in Babe Ruth, that horrified even Edgar Allan Poe, and whose major literary figures, H.L. Mencken and Ogden Nash, were eccentrics. The city was forever playing the role of dead-end kid."

Can you imagine such monstrous misinformation, such garbage coming from reporters in that quagmire known as Washington? The fact is, however, that millions of people read this offal and believe it.

As I suggested above, the big question is why. Here I have to say that a great deal of Baltimore's trouble is Baltimoreans. This is the land where the apostles of smallthink, of badtaste, of secondrate, seem to be forever in control. Let me cite a monstrous example. Some 15 years ago I worked on an expose of the zoning commissioner of Baltimore county. It turned out he accepted $12,500 from Food Fair "for consulting work in Pennsylvania" while cheerfully rezoning county land for Food Fair shopping centers. The zoning commissioner was fired in disgrace, as he deserved. The area vice president for Food Fair did better. He has a magnificent monument, the Joseph Rash Athletic Fields in the Inner Harbor. God Almighty! Who is responsible for naming this garden spot for the procuror of free food for Spiro T. Agnew? Why not Thurgood Marshall Field? Lefty Grove Field? Home Run Baker Field? Brooks Robinson Field? Theodore R. McKeldin Field?

Baltimore seems to take pleasure in smothering its history—not the "Flag House" type of history that means nothing outside of Baltimore, but its history that stirs the interest of outsiders. Ten years ago I suggested that Hopkins Plaza (an utterly meaningless name in a city with too many Hopkins already—it's merely because it's adjacent to Hopkins Place) be changed to H. L. Mencken Plaza. It is adjacent to the Sunpapers corner where he worked, and it's our "Hyde Park Corner" where people speak their minds, a practice Mencken thoroughly endorsed. My idea made its way through the City Council, the Park Board, but was shot down when Merc-Safe protested that it would cost them $175,000 to shift from Hopkins to Mencken (Merc had just moved into its new building). My next proposal would have been to rename Center Plaza, Ogden Nash Plaza and Charles Plaza, Dos Passos Plaza. These were world-famous men who nonetheless chose Baltimore.

This is also the city of the mealy-mouth. Fourteen years ago when the Chamber of Commerce and the Port Authority gave their support to the B&O-C&O merger it was under condition that the word "Baltimore" be included in the combined corporate name. This became a legal part of the agreement. But the new leadership has simply ignored this through a loophole that is probably not legal if anyone in Baltimore has the guts to challenge it. The B&O still exists, as does the C&O, but under a nickname "Chessie System" and a holding company, Chessie System Inc. Any lawyer who cannot reverse such a blatant violation of a written agreement ought to go back to law school.

I could go on and on, about our gutless bankers (a Baltimore industrial leader told me he has to go to New York for money because Baltimore bankers don't believe in Baltimore business), our powerless congressmen (Why did we let the State Department rule out for the forseeable future any and all service between BWI and London? We're the only city in the United States that lost the service it was already entitled to.)

Everything I have said may seem based in the zeal of civic pride. That, of course, is part of it, but fundamentally I am an economic determinist. Baltimore needs not just payrolls from companies based in Kansas City or Oshkosh, but economic power in its midst. But why do people, talent, corporations, culture, come to a city? Because they want to enjoy where they live and that means being proud of where they live. There is no point in telling Baltimoreans this is a great city—they know it. We have to tell the world, and the world, at this point, doesn't give a damn.

Now I'd like to make two original, practical suggestions. We have been through the stupidity of "Charm City" and the ultra-stupidity of "Baltimore than you know." Yet I am not one to sneer at nicknames or slogans if they are not excessively contrived and have some validity to the situation at hand. What is true about Baltimore? That's very obvious. For some reason, our people love festivals. The City Fair is the best example (perhaps the largest urban event in history), but the Preakness Festival does almost as well, the Fells Point Festival and the Oktoberfest suffer only from success—they are too crowded. Just call it a festival and Baltimoreans will turn out. We are truly and honestly "The Festival City"—a name full of joyful connotations. Charm won't turn people on, nor will the gamble that a city has "... more than you know," but festivals do draw.

Obviously, I have to end this with a plan for action. I have one, and it's very simple. The insults, the jokes, the criticisms, continue to plague Baltimore, sending us two steps backward for every step we take forward. I would form a committee—with some money—to meet each individual critic head-on. If Larry Halprin says "Baltimore is a mess," invite him here. Let him see the Inner Harbor, walk through Charles Center, visit the B&O Museum, the Cone Collection, Fells Point, Union Square, Washington Hill, the Walters Gallery, eat a crab cake at Thompson's Sea Girt, some oysters at Faidley's, a whole meal at Marconi's or Haussner's, let him experience this city with all of his five senses. Do the same for the *Sports Illustrated* writer who called this "a grimy, workingman's town," or for Mark Russell, the comedian who amuses Washingtonians with Baltimore jokes "The best thing about Baltimore is the tunnel under it"). Bring the editors of the Washington *Post*, The New York *Times, Time, Newsweek*, the network executives here for a visit. Until the moguls of the media see us for what we are, the positive impression will never filter down to the country as a whole. We have to accomplish a 180-degree turn from Nowheresville, U.S.A., to a city that is chic, not-to-be-missed.

Despite his occasional highhandedness, we have the best mayor of this century in Don Schaefer. We now will have a powerful business organization in the new Greater Baltimore Committee. We have a core of enlightened citizens, both black and white. What are we waiting for?

[From the Washington Post, Oct. 31, 1977]
1977]

GOING HOME TO BALTIMORE

(By Jim Young)

Of all the people who daily swarm into Washington to help or divert the course of the nation, there is no stranger band than the few hundred who commute by train from Baltimore, only 45 miles away on the map, but a psychological distance equal to that of Denver or Seattle.

This diverse group of men and women includes young and old, black and white, lawyers, scientists, environmentalists, clerks, lobbyists, interns, congressional aides, flacks, regulators, administrators and a White House aide or two, each of us tied by career to Washington.

We would be a cross-section of this town's workers, except for one thing: None of us has chosen to live in it. We have stuck with Baltimore, even though we must come to the District to do our jobs.

To be able to go home to Baltimore, we commuters choose to endure up to three hours of travel a day, victimized by the vagaries of the railroads and the growing pains of Metro. We have seen Union Station misused as a visitor's center, just in time for the end of the Bicentennial, and no doubt will see it reconverted to a train station one of these years. We have ridden in heated railroad cars in the summer and unheated cars in the winter. Stranded in the Baltimore Tunnel, we have missed suppers or dates, and we have missed appointments while the lobotomized voices of Metro politely told us things were being corrected as quickly as possible.

We have compounded the uncertainties of Washington commuting by adding the uncertainties of Amtrak and Conrail. Conrail, stuck by the Congress with continuing commuter service, provides pre-World War I cars that actually have working fans in their ceilings. The only source of replacement parts is other cars of equal venerability.

Amtrak, which honors our commuter tickets on some of its trains, has its own style. For instance, there was the day we walked the last 200 yards to Union Station because the electrically powered engine had been switched to a track that was not served by overhead wires.

We sit still for this (or, when there are no seats, we stand for it) because each of us feels that Baltimore gives us something that Washington never will.

With a metropolitan area now reaching out past Columbia to Frederick farmlands and deep into a Virginia that is doing its best to ignore the phenomenon, Washington seems unwilling or unable to come to terms with its metropolitan essence. It is first a national capital—and only then a city. We need only compare it with Paris, London or Tokyo to see the difference.

You can add to this the turnover of officialdom, both in government and out, which superheats the Montgomery County housing market and makes it impossible for a major segment of the population to have any continuing policy role in the development of the community. Indeed, the short-termers may care little for that, keeping emotional ties to their city of origin or abandoning them altogether in careers that hop from place to place.

We have the alternative of a separate city, which we can go home to each evening.

Baltimore has a geographical raison d'être (its port), ethnically diverse mini-cultures and a varied economy. Its identity as a city predates Washington's—and so does that of many of its neighborhoods.

Baltimore's renewal began many years ago and the urban homesteading and reinvigoration of central Washington has two cycles of precedent there.

Perhaps most important for the commuters, however, is the ability to re-enter daily a different world, where the alphabet soup of federally oriented conversation is unknown, where problems have human rather than statistical form, and where people don't give parties in honor of people they have never met.

Baltimore even has its own dialect, its native dish of crabs and beer and a talent for spawning sui generis politicians ranging from Theodore McKeldin to Hyman Pressman to Spiro Agnew to Andy Easter, who used to campaign in an Uncle Sam suit.

To sum up, Baltimore, with all the problems of any major city, has for us the character of home, which Washington, single-focused and changing with the political winds, cannot provide.

Baltimore, however, has a new problem, now on the far horizon but getting larger. The problem is Washington. Even now, Baltimore business spokesmen are beginning to talk of our town's possibilities as a "bedroom" community for Washington. Our ranks gradually increase on the train platform. A local newspaper now carries trendy Washington gossip as if it mattered to anyone north of the Capital Beltway. They're even working on improvements to the railbed.

We look on in horror at the prospect of our good little thing getting out of hand, drafting plans for guerrilla action to sabotage this trend before it matures. We wish to maintain our daily duality, and don't want to have federal pay scales and the progress of legislation become the backyard conversation of two cities rather than one. We might urge a hasty decentralization of the federal establishment, with the balance moved to Alexandria, or perhaps a legal challenge to the cession of the District of Columbia.

But it would be far better for Washington to become a city in its own right, in spite of, rather than because of, the national government, to give up its sprawl and to continue development as a place to call home.

Rational traffic patterns, diversified business, stiffer parking restrictions and the panoply of revitalization moves, plus a championship major-league sports team—these would help, for starters. They may sound like a large order, but it can be done. Look at Baltimore.

POCKET VETO STATUS

Mr. KENNEDY. Mr. President, a number of colleagues have asked me in recent days about the status of the pocket veto issue, in light of the forthcoming sine die adjournment between the first and second sessions of the present Congress.

One aspect of particular concern has been the loose talk in recent days in connection with the tuition tax credit issue, to the effect that a graceful exit from the controversy might have been to shift the tax credit from the social security bill to a minor tariff bill, which could then have been quietly pocket-vetoed during the adjournment. But that avenue was not open.

Under the decisions of the U.S. Court of Appeals for the District of Columbia Circuit in *Kennedy* v. *Sampson* 511 F.2d 430 (1974) and the U.S. District Court for the District of Columbia in *Kennedy* v. *Jones*, 412 F. Supp. 353 (1976), a pocket veto has been ruled unconstitutional duradjournments with a Congress—such as, during adjournments within a session or during the sine die adjournment between the first and second sessions of a Congress. Thus, a pocket veto would be invalid during the forthcoming sine die adjournment.

Under the present law, therefore, a pocket veto can be validly used only during the final sine die adjournment at the end of the Congress. In all other cases, legislation disapproved by the President must be returned to Congress in the normal manner, giving Congress an opportunity to override the veto.

Mr. President, I ask unanimous consent that a statement I made on this issue last year and accompanying materials may be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

[From the Congressional Record, Apr. 26, 1976; page 11202]

Resolution of the Pocket Veto Controversy

Mr. Kennedy. Mr. President, on April 13, 1976, the Department of Justice announced that it would no longer oppose the lawsuit I had brought to settle the scope of the President's pocket veto power under article I, section 7, clause 2 of the Constitution.

Henceforth, according to the decision made by President Ford, a pocket veto will be used only during the sine die adjournment of Congress at the end of its second session. During all other adjournments—including intrasession adjournments, such as the recent Easter recess and the summer adjournment, and the intersession adjournment between the first and second sessions of a Congress—the President will use a normal or return veto, not a pocket veto. That is, the President will return the bill to Congress, so that Congress will have the opportunity to override the veto.

According to the Department of Justice announcement, the only requirement for the use of normal vetoes during an adjournment is that the Senate or House must designate officers to receive a vetoed bill during the adjournment. In recent years, the Senate and House have routinely made such designations during adjournments and the practice will certainly continue.

President Ford's recent action is a generous and complete vindication of the rights of Congress and its role in the enactment of Federal legislation, and I welcome the President's decision.

The current controversy began in 1970, when President Nixon used a pocket veto to nullify the Family Practice of Medicine Act during the 5-day Christmas recess of Congress that year. In August 1974, in a lawsuit I initiated, the U.S. Court of Appeals for the District of Columbia Circuit ruled that this pocket veto was unconstitutional. See *Kennedy* v. *Sampson*, 511 F.2d 430 (1974).

President's Ford's recent action involves a second law suit I had brought, which was pending before Judge John J. Sirica in the U.S. District Court for the District of Columbia. That suit concerned a pocket veto by President Nixon during the intersession adjournment of Congress in January 1974, and a pocket veto by President Ford during the 31-day intrasession adjournment for the congressional elections in November 1974. The Department of Justice has filed a statement with the court consenting to the entry of a judgment in my favor in this litigation, and Judge Sirica has now ordered the judgment to be entered.

Over the years, many Senators and Congressmen have supported the effort to limit the use of the pocket veto. In particular, Senator Sam J. Ervin, Jr. of North Carolina was especially active in defending the role of Congress in this area, and I am pleased to pay tribute at this time to his strong leadership in protecting this important aspect of the legislative prerogatives of Congress under the Constitution. I also commend the Senate and House leadership for their strong support during the litigation and for the effective steps taken to insure that the pocket vetoes in question could be successfully challenged in the courts.

I think I speak for many members of both the House and Senate in saying how pleased I am that this decades-old controversy between Presidents and Congresses over the scope of the pocket veto power is now finally ended.

Mr. President, I ask unanimous consent that the Department of Justice announcement of April 13, 1976, the Department's statement filed the same day in the District Court, and the order of Judge Sirica of April 21, 1976 may be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

Department of Justice—April 13, 1976

The Department of Justice announced today that it will no longer oppose a suit questioning the scope of Presidential authority to use the pocket veto.

Attorney General Edward H. Levi said the action was based on a Presidential decision concerning the use of the pocket veto.

Vetoes are provided for in Article 1, Section 7 of the Constitution.

That section requires the President to act on a bill within 10 days. Sundays excepted. He may sign it into law. Or he may return it with his objections to whichever chamber it originated in, which constitutes the usual, or "return," veto. If Congress remains in session and the President does not act within 10 days, the bill becomes law.

A "pocket" veto occurs when the President fails to sign a bill within that period and the Congress, by its adjournment during that period, prevents its return. It takes its name from early references to a President putting unwanted legislation in his pocket.

The present suit was filed January 29, 1974, by Senator Edward M. Kennedy (D. Mass.), raising the question whether two bills passed by Congress but not signed by the President had become law.

One of the bills amended the Urban Mass Transportation Act of 1964 to permit buses purchased under that Act to be used to provide charter bus services. The time for Presidential approval of that bill expired during an intra-session adjournment of Congress.

The other bill amended the Vocational Rehabilitation Act by extending the authorization of appropriations for certain programs for the handicapped for one year, making certain changes in federal programs for blind persons, and providing for the convening of a White House Conference on Handicapped Individuals. The time for Presidential approval of that bill expired during an intersession adjournment of Congress.

The substantive provisions of these bills have been superseded by subsequent enactments.

The Attorney General said, in announcing the Department's position, that:

"President Ford has determined that he will use the return veto rather than the pocket veto during intra-session and intersession recesses and adjournments of the Congress, provided that the House of Congress to which the bill and the President's objections must be returned according to the Constitution has specifically authorized an officer or other agent to receive return vetoes during such periods."

[U.S. District Court for the District of Columbia, Civil Action No. 74–194]

Statement

Edward M. Kennedy, Plaintiff, versus Thomas M. Jones and Jack M. Eckerd, Defendants.

Defendants hereby consent to the entry of a judgment as prayed for in the supplemental complaint and in plaintiff's motion for summary judgment.

Respectfully submitted,
Rex E. Lee,
Assistant Attorney General,
Earl J. Silbert,
U.S. Attorney,
Stuart E. Schiffer,
Attorney, Department of Justice Attorneys for Defendants.

[U.S. District Court for the District of Columbia, Civil Action No. 74–194]

Order

Edward M. Kennedy. Plaintiff, versus Thomas M. Jones and Jack M. Eckerd, Defendants.

The Court having considered the plaintiff's supplemental complaint and plaintiff's motion for summary judgment, and the entire file in this case, and the defendants having filed a statement of consent to entry of judgment with the Court on April 13, 1976, it appears to the Court that the plaintiff is entitled to entry of judgment.

It is therefore this 21st day of April, 1976,

Ordered that plaintiff's motion for summary judgment be, and the same hereby is, granted; and it is

Further ordered that judgment be entered for the plaintiff in the above entitled matter.

John J. Sirica,
U.S. District Judge.

THE 75TH ANNIVERSARY OF INMAN MILLS

Mr. THURMOND. Mr. President, I would like to call the attention of my colleagues to an important event which is now taking place in my State. Inman Mills, of Inman, S.C., is celebrating its 75th anniversary.

Inman Mills is one of the most successful manufacturing operations in the textile industry. The company has 4 separate plants in Spartanburg County with an aggregate of 2,500 looms, 103,000 spindles, and 5,000 open-end spinning units. It employs 1,700 workers. Despite the fierce competition from larger companies, it has preserved its independence, maintained the high quality of its products, and won wide recognition for sound management and high productivity.

What makes the Inman story all the more remarkable is the extent to which it has been dominated by the members of one family. Inman Mills has had only three presidents in its history, and they have all had the same name—James A. Chapman. These three men—grandfather, son, and grandson—have one after the other faced and surmounted all the challenges that three-quarters of a century could provide. In this endeavor they have been ably assisted by various other family members, notably including Robert H. Chapman, the brother of the second James Chapman. Seldom do we see so much talent and initiative passed so unerringly across the generations. It is a heritage of which not only the Chapmans but everyone connected with Inman Mills can be proud.

It is no exaggeration to say that Inman Mills shows the free enterprise system at its finest. Success has not been achieved at the expense of the individual worker or the community. Rather, the management of Inman Mills has a consistent record of responsible and humane concern for both. Wages at Inman have always kept ahead of industry standards.

Working conditions, too have seen steady improvement. Inman can claim the first completely air conditioned cotton mill in the world. As a result, it is hardly surprising that the company has enjoyed excellent labor-management relations over the last three decades.

In addition, the Inman-Riverdale Foundation, founded by the Chapmans in 1946, diverts 5 percent of the company's before-tax profits to the use of schools, churches, and deserving students. More than $650,000 has been distributed in this way.

Mr. President, the textile industry is of vital importance to my State. The anniversary celebration now underway is one in which all South Carolinians can join with enthusiasm. I take this opportunity to extend to everyone at Inman Mills my sincere congratulations on the achievements of the past and to express my wishes for continuing and increasing success in the years ahead.

Finally, Mr. President, a number of newspaper articles have appeared recently giving further information about the history of Inman Mills. This subject is both interesting and instructive. In order that my colleagues may learn more about it, I ask unanimous consent that several representative articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, Oct. 20, 1977]

"Family" Mill Turns 75

(By Scott Sunde)

INMAN.—Despite two world wars and the Great Depression, Inman Mills has continued to turn out textile products.

And unlike the route some other Piedmont textile operations have taken, Inman Mills has remained a family-controlled operation. This week the firm will celebrate 75 years in business—75 years of family operation.

As James A. Chapman Jr., president and treasurer of Inman Mills, puts it: "There's been three generations of us at the mill."

BEGUN BY GRANDFATHER

He remembers how it all began.

"My grandfather started getting a group together in the early 1900s. My grandfather—he was a lawyer—came down here and got a group together. He started all of this going with $150,000 cash.

"Now that wasn't much money—even then. He borrowed it from relatives and friends from here in Spartanburg County.

"The first mill opened in 1902. It was a very modest operation. It only had about 1,500 spindles and 400 looms."

But in a few years, he recalled, his grandfather managed to pay the firms for the machinery he bought to open the first mill in Inman.

And Inman Mills continued to grow. In 1928, Chapman's father and grandfather agreed to run a bankrupted mill in Enoree. Later that mill became part of the firm.

Nearly 20 years ago, the family-controlled business bulit a new mill in Inman. That was Spartanburg County's first new mill since 1925, according to Chapman.

Later the firm built a new mill in Enoree.

Today, Inman Mills operates four plants employing 1,700 persons. Its major products are apparel fabric and carpet yarn.

The growth, however, wasn't all easily accomplished. For example, in the late 1930s and early '40s, the mills had labor problems,

Inman employees were unionized then, Chapman says. "There were a few other plants here in the county with unions. We didn't like our uniqueness (of having a union) very much."

The plants had not one but two unions. Those were the years when the AFL and CIO were different union federations and battling each other for representation rights.

Inman Mills' labor problems eventually resulted in a strike during the war, Chapman says.

"After all the dust settled, our people voted the union out. They voted them out by a majority of three to one."

Through it all, Inman Mills managed to survive as a family operation.

"There's a few of us hanging on. We just like being independent."

And the future?

"We hope that somebody will be around here 75 years from now. We are small when you compare us to the giants, but we have a spot in the market place."

To celebrate its 75th anniversary, Inman Mills will have open all its mills for tours at 2-5 p.m. Sunday.

[From the Spartanburg (S.C.) Herald, Oct. 24, 1977]

Inman Mills Grew up With County

Inman Mills, Spartanburg County and the Chapman family have been synonymous with textiles since 1902.

But the family's roots go even deeper in the Carolinas—back to 1812 when they came south from Connecticut.

The story of Inman Mills begins with the late James A. Chapman, founder.

Pages of history are still being written as the third and additional generations of Chapmans celebrate Inman Mills 75th anniversary. This weekend.

James A. Chapman was reared by aunts and uncles around Spartanburg and Union after the deaths of his parents when he was three years old.

He graduated from Wofford College in Spartanburg. With the help of his uncles he attended Harvard Law School where he graduated Magna Cum Laude in 1886.

For a time he practiced law in New York. He later moved to Middlesboro, Ky.

Around the turn of the century, Chapman became intrigued by textile mills being built in the Spartanburg area.

In 1901 he managed to raise what was then an almost unattainable sum, $150,000 in cash. With this he bought some 600 acres near Inman and built his first plant.

The mill began operation in 1902 with 400 looms and 15,000 spindles.

For the first 15 years it was a struggle, but growth came quickly.

By 1909, Chapman was able to double the mill size, increasing productivity to 33,000 spindles and 840 looms.

In 1916, he was joined by his son James and for 20 years the two-man team headed the company's operation. The younger Chapman was named mill superintendent at age 24.

In 1928, a second four-floor addition was made to the original plant, increasing total production capacity to 48,000 spindles and 1,368 looms.

Also in 1928, the Chapmans were asked to take over management of Riverdale Mills at Enoree. Built originally in 1883 as Enoree Manufacturing Co., the plant had a history of unprofitable operation under a succession of owners and managers.

The Chapmans acquired control of the Enoree plant in 1934. In 1954 the plant was fully merged with the Inman Mills company.

The second James A. Chapman was elected president and treasurer of Inman Mills in 1937 after the death of his father in 1936.

The new president was joined by his brother, Robert Hett Chapman, as vice president and assistant treasurer.

Robert was elected board chairman of Inman Mills in 1964. He served in this capacity until his death in 1975.

Under the second James A. Chapman, Inman Mills launched a major modernization and expansion program, beginning in the early 1950s. Chapman died in 1964. He was succeeded as president and treasurer of the company by his son, James A. Chapman, Jr.

Now under the third generation of Chapmans, the mills' family successor, James A. Chapman Jr. says, "Inman was the first carded yarn textile mill in the country to have its carding, spinning and spooling and warping facilities completely air conditioned and refrigerated.

"Inman Mills has accelerated its modernization program, and the company's plants are among the most efficient in the world."

The first major building expansion in the 1950's was construction of the Saybrook plant, named in honor of the Connecticut area settled in 1635 by a multi-great-grandfather of the family. The plant represented an investment of $5 million.

In 1959, Inman Mills undertook a 10-year expansion and modernization program highlighted in 1966 by construction of the Ramey Plant at Enoree which cost around $7.5 million.

The Ramey Plant is located west of U.S. 221, and just a half mile from the Riverdale Plant. The old and the new had come together.

Chapman, Jr., born in 1921, is a graduate of Davidson College. He worked at Pacific Mills before coming to the Riverdale Plant in 1946, and was made superintendent in 1947. He was president of the Southern Textile Association in 1955–56 and was president of the South Carolina Textile Manufacturers Association in 1972–73.

He was president of the South Carolina State Chamber of Commerce in 1964, and has honorary degrees from Wofford and Presbyterian Colleges.

Other members of the family, now reaching to the 12th generation, have joined Inman Mills operations throughout the years.

This weekend is a very special time for Inman Mills as the family celebrates the 75th anniversary of the company.

All the plants will have Open House from 2 to 5 p.m. Sunday.

To begin the celebration, there was a tour of the plants at Enoree Friday morning. This was followed by an old-fashioned country luncheon served in the basement of the Enoree Baptist Church.

The formal celebrating will come to an end Monday with a luncheon at 12:15 p.m. in the arena of Spartanburg Memorial Auditorium.

But that's just the formal program. The real celebration has been Inman Mills' progress through three-quarters of a century, and there are no plans to stop now.

[From the Charlotte (N.C.) Observer, Oct. 22, 1977]

Renovation Makes an Old Mill Just as Modern as Tomorrow

ENOREE, S.C.—Veteran employes remember when a fog of cotton dust clouded the carding room at Inman Mills' ancient Riverdale Plant, and heat pursued millworkers through the dog days of summer.

But, they say, air conditioning, dust-control equipment and other innovations have brought improvement in working conditions in the latter part of Inman's 75-year history.

"I've seen the mill in the good times and bad times," recalls J B. Waldrop of the firm's Inman division. "I can remember when the mill had windows and was terribly hot and we'd be wet when we came out after work."

Waldrop, whose grandfather, mother and father, sons and daughters all work for Inman, says improved equipment has brought a revolution since the early 1950s.

He quickly adds, "I've worked for good people all my life."

As the firm celebrates the 75th anniversary of its 1902 founding with an open house at its four Inman and Enoree plants this weekend, the evolution of textile plants is most visible at its Riverdale plant.

At the Riverdale plant, whose looms once were powered by the Enoree River that flows beneath the brick facility, the old and the new coexist in a single structure.

Built by a predecessor company in 1888, the plant is an oddity that made Ripley's Believe-It-Or-Not newspaper column because visitors can enter any of its four levels from the ground, because of the hilly terrain.

Despite its turn-of-the-century facade, the Riverdale mill "is as modern as tomorrow," according to James A. Chapman Jr., the patrician 56-year-old president who followed his father and grandfather in the company's leadership.

Chapman told a press conference Friday Inman has pumped $4 million into the Riverdale plant over the past six years to make it as up-to-date as any in the industry.

Some $1 million has been invested in clearing the air and computerizing the troublesome carding room where cotton bales are opened and fibers blended.

Open-end spinning now combines three yarn-making steps in one process, a technical innovation that Inman's newest plant, the $8 million Ramey plant, can't match.

Chapman said the company opted to upgrade the Riverdale facility rather than to replace it with a newer plant as "a question of economics."

Several other mill owners, making their own economic decisions, have chosen to shutter old plants and consolidate their activities in more up-to-date facilities.

Enoree's economy is dominated by the mill, as it has been since the era when the firm built and owned all its employe housing. It still owns 28 homes and provides for most community recreation through a foundation.

Although many family-owned mills in the industry have fallen along the wayside, Chapman speaks confidently of Inman's future despite such challenges as surging textile imports.

"We stay lean and hungry, as you've got to do to survive in this business," says Chapman.

"There's no reason Inman can't be around to celebrate its 100th anniversary."

[From the Spartanburg (S.C.) Herald-Journal, Oct. 23, 1977]

An Anniversary of Significance

Inman Mills' celebration of its 75th anniversary is, in a real sense, an observation of the textile industry's immense role in Spartanburg County and the state.

Many times it has been said, in terms of economy, that "when textiles sneeze. South Carolina catches pneumonia."

Industrial diversification has come to the Palmetto State during the past couple of decades—much of it among textiles themselves. Still, the yarn-twisters and the fabric-weavers are known as our "umbrella" industry.

Inman Mills is symbolic of the major place textiles have in the community life of Spartanburg County.

The firm is, with proper pride, family-owned—founded by the grandfather of the current president, James A. Chapman, Jr. Two of his brothers, Joe and Marshall, and a cousin, Robert H. Jr., are executives.

Two other brothers are highly successful in other pursuits, Robert F. Chapman is a federal judge; Hugh Chapman is chairman of the board of C&S Bank in South Carolina.

The company operates plants in the southernmost part of the county at Enoree, and others at the home base of Inman.

Its four plants include one among the oldest—Riverdale at Enoree, which was built in 1883—and others among the newest.

Riverdale once made Robert Ripley's famous "Believe It Or Not." The mill has four floors, each of them a ground floor because of the steep hill on which the plant was built. A sizeable stream runs underneath the building. Once, in the days of the T-Model, a road ran alongside the stream.

For generations, the Chapman family has given this country strong and good leaders. In church, education, community, business and public affairs, their presence is notable and beneficial.

Lou Parris, Herald-Journal reporter, who toured the Inman Mills facilities, was much impressed by the genuine friendliness between top executives and employees at every level.

To all of them on this 75th Anniversary: many happy returns!

[From Textile News, Oct. 24, 1977]

One Man's Mill and How It Grew

The South had survived the defeat of the Civil War (1865), the ravages of Reconstruction (1875), the era of Redemption (1885) in which the Redeemers were southerners who wanted to build a New South, and northern and foreign capitalists who wanted to exploit such opportunities as offered, or as could be made.

Then, there was the period of the unbelievable land give-away. Not the "40 acres and a mule" offered freed slaves, but a new federal land policy toward southern states. In 1861 there were about 47,700,000 Federally owned acres in the public-land states of the South. This was about one-third of their total area. In 1876 an act was passed by the United States Congress repealing all limitations on sales of Federal lands and they were opened to unrestricted cash entry and wild speculation. Special trains were run to bring in land speculators who came stampeding to get their share or more, if possible. Rich timber lands and mineral areas were gobbled up by Yankee money and European purchasers. The going price was 4 acres for one dollar.

One member of Congress bought more than 100,000 acres in Louisiana, a group of Chicagoans bought close to 200,000; a Michigan firm acting as brokers selected and purchased nearly 700,000 acres of pine land; a purchaser from Grand Rapids acquired more than 600,000 acres in Louisiana. In the ten years, 1877 to 1888, more than 5,692,259 acres of Federal lands were sold in southern states. Out of this total only some 350,000 acres were bought by Southerners. The balance went mostly to Northern and English speculators.

Twenty years later a govenment forestry expert labeled exploitation of all the acreage by lumber interests as the "most rapid and reckless destruction of forests known to history." A hundred years later, this generation (1977) can add the words, "and most permanent."

State legislatures were equally eager to sell state-held land. More than 9½ million acres were sold to British speculators. The price for all this was 25 cents an acre more or less. One and a half million acres along the Louisiana Gulf-Coast to the Texas border were sold in 1882 to an English syndicate at 12½ cents to 75 cents an acre. This sale to the British-owned North American Land and Timber Company, Ltd. proved to be a bonanza to the British and of some benefit to the Gulf-Coast South because Seaman A. Knapp of Iowa was employed to head the operation. He introduced rice planting and production with methods used on upland prairies for wheat. That system, applied to rice planting, placed Louisiana, in just five years, as the leading rice producing state.

This was the era, also, of the great railroad speculation. In 1880 southern states east of the Mississippi had only 13.259 miles of rails and that was narrow gauge. But in the years 1881 to 1890, one hundred and eighty new railroad companies started operation in southern states east of the Mississippi. Then smaller companies were swallowed by bigger companies. The Richmond Terminal Company launched a movement of consolidation of small railroads and wound up with the largest system in the South. Later, switching over to standard gauge, it became the basis for J. P. Morgan's empire.

President of the Richmond Terminal Company was a former Tennessean named John Inman, one of the founders of the Tennessee Coal, Iron, and Railroad Company and of the New York Stock Exchange. His success in New York business circles was described as "from broker's clerk to Fifth Avenue Mansion," and his methods earned him the sobriquet of "Southern Carpetbagger" in Wall Street. But John Inman gathered and merged railroads in the South, and, where railroads were laid, cotton mills were located.

In the South in 1880 there were 161 cotton mills, in 1890 there were 239, and by 1900 there were 400 despite the Panic of 1893 that wiped out many industries and companies and bankrupted cotton planters. It was one of the most vicious depressions ever known. The textile industry of the South, however, felt the '93 Panic hardly at all. Geared to great extent for coarse yarn fabrics for the markets of the Orient, southern mills continued to operate and continued to undersell their northern competitors. One historian said they "out-Yankeed the Yankees.

In the Carolinas, Georgia and Alabama, the number of spindles rose from 422,807 in 1880 to 3.7 million in 1900. Between 1880 and 1900 the number of operatives in those mills increased from 16,741 to 97,559; the number of bales of cotton consumed from 182,349 to 1,479,006; the capital invested in cotton mills rose from $17.3 million to $124.5 million.

South Carolina, the last southern state to be Redeemed, made a fast recovery. Employees in textile mills increased from 8,071 in 1880 to 30,201, in 1900; the payroll of $1.5 million in 1880 rose to $5 million in 1900. Most of the new mills were equipped with more up-to-date machinery than those in the older textile regions such as New England, and the return on investment in southern cotton mills in 1900 greatly exceeded that of cotton factories in the North, according to the United States Census.

Into this climate of growth came James A. Chapman to organize a cotton mill. Over six feet tall, well proportioned, he was a handsome and an engaging man who made plans and carried them out. His ancestral background was many, many generations of educators, ministers, patriots.

James Alfred Chapman was orphaned when he was only three, and he was raised by uncles and aunts who lived in the Spartanburg and Union areas. He was a graduate of Wofford College (1883) and Harvard Law School where he graduated Magna Cum Laude in 1886. He practiced law in New York City, married Rachel Buchanan McMaster of Winnsboro, South Carolina (1899) and established his law business in Middlesboro, the coal and iron area of Kentucky.

But Spartanburg County, South Carolina, and the growing textile industry enticed him with his wife, his two young sons and his daughter.

Apparently he had no difficulty in organizing his mill, the first textile mill of the area to be north of the Southern Railroad. About 600 acres of land was purchased from his brother and his uncle and J. R. and B. F. Brown. The latter two took 60 shares of common stock in exchange for their portion of the acreage. The land lay along the right-of-way of the railroad being built from Spartanburg to Asheville, and a nice ploy resulted in a railroad stop for the textile mill to be named for railroad tycoon, John Inman.

J. A. Chapman was a financier as well as a lawyer. He invested $20,400 in preferred stock and $5,800 in common stock in Inman Mills. His family invested $400 in preferred and $24,600 in common; his uncle, Alfred Foster, took $10,000 preferred and $24,000 common stock; local investors of the area took $15,200 in preferred and $52,700 common. W. B. Smith Whaley & Company, textile engineers who designed the building, took $1,500 common stock; Carey, Bayne and Smith, building contractors, took $10,000 common; John Hopkins Oil Company took $1,000; Southeastern Lime and Cement, $1,000; Wm. M. Bird and Company, $500 common. Textile machine builders and suppliers including American Card Clothing, C. E. Riley and Company, T. C. Entwistle Company, Easton and Burnham Machine Company, A. T. Atherton Machine Company, Saco-Pettee Machine Shops, Stephen A. Jenks, Albert A. Jenks, LeRoy Fales and Warren Fales made up $74,100 of preferred stock. The mill was to be all electrically operated, and it was Entwistle who furnished, as agent, the huge steam engine to generate the power.

This financial strategy followed the traditional southern textile finance pattern: local investors plus vendors. The latter willing to buy stock in order to have inside track on the business. The Inman exception to the usual pattern is that no commission house was approached for finance and none is included as stockholder.

Years later, in an interview with Broadus Mitchell, Chapman said that there were instances of bad practices among commission houses but most had disappeared by then. It is probably true, whether participation by commission houses in financing cotton mills was damaging or beneficial, it was necessary and that the industry owes its establishment as much to them as to any other factor.

Inman Mills have never sold through a commission house. The vendors who originally purchased stock were bought out by Chapman as rapidly as possible, in a matter of a very few years.

Inman Mills was issued a charter to operate under laws of South Carolina on January 16, 1901. The charter authorized common capital stock of $200,000 to be issued. On the following December 4, 1901, stockholders of Inman Mills elected the following directors: A. H. Foster, T. C. Duncan, A. H. Twichell, James R. Gibson, James A. Chapman. The latter was elected president and treasurer, positions he held until his death in 1936.

At the December 4, 1901, meeting, an increase in capital stock of $50,000 and an issue of preferred stock of $250,000 was voted to raise the mills capitalization to $500,000.

The mills' machinery and equipment was purchased from General Electric Company, Saco-Pettee Machine Shops, Woonsocket Machine Company, Fales and Jenks Machine Company, and Crompton and Knowles Loom Works. By 1902, 15,000 spindles, 400 plain looms, produced carded yarn sheeting which was shipped to New York on consignment. In 1904 Joshua L. Bailey Company became selling agent for Inman Mills.

When establishing his mill, Chapman, the founder, had every consideration for his employees. A well laid-out-village was built near the mill. One of the first structures was a chapel that cost $730.50 for the use of all religions. James Chapman, Jr., current president of Inman, says, "It was right behind the house where I was born." A manse was furnished free of charge for a minister and an annual contribution was made, a custom that still prevails, toward the minister's salary. Sunday School was held regularly and, by 1906, had an attendance of 200.

In 1907 the mill's success brought about an expansion of spindles to 19,421, and upped the looms to 500. By then the mill had 191 employees, none under the age of twelve. One hundred and ninety three children were enrolled in the school in which the mill had invested $8,000. One hundred and fifty of these enrollees were in regular attendance.

Inman was then consuming 2,732 bales of cotton a year and its annual production was evaluated at $300,000. Its sheeting was of good quality and was in great demand. To keep up with orders, it was necessary to run longer hours or an additional shift. August Kohn, columnist for the Charleston (S.C.) News & Courrier, wrote (1907), "There are very few cotton mills in this state that run at night. . . . As a matter of fact, if the mills wanted to run at night, they could not do so on account of the lack of labor. These few mills that do run at night pay the help from 10 to 20 percent more for night work than day work and, even for this additional inducement, they are unable to get any considerable amount of night help. . . .

"Within the last few days Inman Cotton Mill has started to run part of its machinery at night. . . . Inman Cotton Mill pays 15 cents per side for its night spinning."

A young man or woman can readily run 10 sides, he said. A weaver could operate from 8 to 10 plain looms (non-automatic).

James Chapman founded his mill, but he also ran it. There is the story of a new hand in the spinning room who asked his foreman, "Who is that great big man in the Panama hat that comes through here so often?" Of course, it was Chapman, the Founder and the Boss, but who was at the same time a reticent, shy person. He had a legal mind of steel, and a big heart as soft as putty. The youngster, toddling by his father's side on the daily trips through the mill, was his young son, James, known, then, to the mill workers as "Little Jim."

During summer vacations from high school, Jim Chapman (the second) worked as a machinery erector. Later, after he had graduated from Wofford College, and after he had studied engineering at Cornell, he came back to the mill to work under Gordon Cobb, then superintendent. In 1916 Cobb decided to leave for another job and told Chapman, the President, he wanted to recommend a good man to take his place.

"Who is he?"

"Your son, Jim," was the answer.

"Oh, pshaw," he said. The Inman President whirled his chair around, turning his back on Cobb. He wanted no further discussion.

Later, he suggested to young James that he hold things together until he could find a replacement for Cobb. Some months later, on his 24th birthday, Chapman said to his son, "How does it feel to be Superintendent?" He had given him the chance, and Jim had made good.

Years later, James, then called "Mr. Jim" recalled that it felt fine to be superintendent at 24, in the year 1917. He said, modestly, "Prosperity covered my mistakes and the job was not as burdensome as on today's standards: one shift operation, producing 39″, 72 x 76 4¼ yard goods using one warp and one filling. I took to raising chickens to keep myself occupied." In that, too, he was successful, winning many silver trophies and blue ribbons from various County Fairs.

In 1920 James Chapman married Miss Martha Marshall of York. They had five sons, three of whom made textiles their business.

In 1923 the young James Chapman was elected president of the Southern Textile Association, the leaders in textile mill operation on the superintendent level. Later he was president of the South Carolina Cotton Manufacturers Association, the state association of top-executive level.

In May, 1935, following the decision of the Supreme Court on the Schechter case invalidating the National Industrial Recovery Act and likewise all codes under which industry operated, the Print Cloth Group of the Cotton Textile Institute, in a meeting in Spartanburg, South Carolina, announced that by unanimous decision it would continue the code program. T. H. Webb, president of the American Cotton Manufacturers Association, appointed a self-governing committee that recommended no change be made in the conduct of the cotton textile business. Young James Chapman was one of the eleven textile executives appointed to that committee.

Ten years later when the Cotton Textile Institute inaugurated an industrywide public relations program, Jim Chapman was appointed to its Committee on Public Relations.

In 1959, he was elected president of the American Cotton Manufacturers Institute, a position he considered a call to a high responsibility, the welfare of the entire American textile industry. It was a position he held with honor and integrity; and he was the only South Carolinian to hold all three of the top honorary and distinguished positions of leadership in the textile industry.

The executive-superintendent team of Chapman & Chapman brought new success to Inman. In 1920 the mill had 40,000 spindles and 1,000 looms. In 1924 automatic looms replaced nonautomatic, more floor space was added, then the two-shift around-the-clock-operation was started.

In 1928 the Chapmans were asked to take over management of the ailing Riverdale Mills, located at Enoree some forty miles away. Years later "Mister Jim" Chapman told the Riverdale employees that, had they seen the plant in its run-down condition before taking the job, they would never have gone into the venture. Under Chapman management and with cooperation of the people of Enoree, the Riverdale operation was successful. In 1934, James A. Chapman and his associates acquired control of the mill.

In 1936, upon the death of James A. Chapman, the founder of Inman, his son, James A. Chapman, Jr., became president-treasurer. He dropped the Jr. from his name at that time and never used it again. So, today, when we see the name, James Chapman, Jr., it is the grandson of the founder—and will be used that way from now on.

When James A. Chapman succeeded his father as president-treasurer in 1936, he had been nominal head of the mill for quite a long time. Inman Mill and Riverdale had survived the crash of the stockmarket, 1929, the great Depression of the early 1930's, the general strike of 1934, and the Blue Eagle. In 1937 James Chapman's brother, Robert Hett Chapman, joined Inman Mills as vice-president and assistant treasurer.

He attended Wofford College for two years and graduated in Mechanical Engineering from Cornell University in 1917. During World War I he served in the Navy and afterwords went with J. E. Sirrine of Greenville. He was head of the Mechanical Engineering department and a partner in the firm where he left to come to Inman. He had designed and supervised the construction of steam plants all over the Southeast. In 1918 Bob Chapman married Miss Sadie Lipscomb of Gaffney, South Carolina. They had a son for the textile business.

When the Fair Labor Standards Act covering all industries engaged in interstate commerce became effective October 24, 1938—thirty-nine years ago—it stipulated a minimum wage of 25 cents per hour and 44½ maximum hours per week before time-and-a-half-pay. The schedule was to increase at intervals over the years. At the time of enactment, most cotton mills were paying more than the minimum rate and voluntarily were upholding the forty-hours-maximum week. Robert Chapmain was appointed as an employer representative, to the Textile Industry Committee No. 1. This committee rendered most valued service and, after public hearings following their report, made recommendations for 32½ cents minimum wage. Approved by the Administrator Elmer F. Andrews, it became effective in 1939. This rate of pay actually applied to only 120,000 of the 365,000 cotton textile workers as mills had already voluntarily brought wages to above that level. Robert H. Chapman's contribution to the industry by his service on the special Committee No. 1 has resulted in 30 years of relative quiet in labor-management affairs in the textile industry as wage rates have increased continuously on a basis considerably exceeding the legal minimum.

Robert Chapman was Chairman of the Board of Trustees of the J. E. Sirrine Textile Foundation which works with Clemson College. He was also Chairman of the Inman-Riverdale Foundation.

In 1939 a new cloth room was added at Inman. Spindles were increased to 48,000 and all the 1,368 looms were automatic, made by Draper.

Another James Chapman came to Inman in 1946. The grandson of James Chapman, the founder, became superintendent of the Riverdale Plant in 1946. It was not because he was grandson of the founder, or son of the Boss, but because he was able and willing. James Jr. worked at Pacific Mills for three years following his graduation from Davison College in 1943. He was well prepared in background and in practical work-knowledge to enter the family company.

So again we see an executive-superintendent team of Chapman & Chapman, headed toward greater success for Inman Mills. In 1952 to 1960, Inman kept pace with the machine developments and improved technology introduced by machine builders. The time had come to completely modernize and keep modernized or to go for broke. The Chapmans voted to modernize and stay in business.

Spindles were increased to 56,000 at Inman. Riverdale was merged with Inman (1954). New and wider automatic looms at Inman cut the total to 992, new spinning cut the number of spindles to 43,600 but increased production. The new plant, Saybrook, was completed with 30,000 spindles and 460 looms.

James A. Chapman died in 1964—a few weeks after he and his family had an employees picnic. Wade Buchanan, overseer of the card room, took a picture of the Chapman boys to commemorate the occasion.

James Chapman, Jr. (actually the III) succeeded his father as president and treasurer of the Inman Mills. James Jr. had grown with the industry and proved to be the type of business leader identical to his predecessors. In 1955–56 he was president of the Southern Textile Association. Later, 1972–73, he was president of South Carolina Textile Manufacturers Association, and the South Carolina State Chamber of Commerce.

By now this company had grown to the point where numbers of spindles and looms did not represent production compared to earlier years. New, wider looms increased production. New type spinning cut the number of spindles but increased production; so with modernization, production increased with lower per unit cost.

The Ramey plant was added to the Inman Mills. A new carpet plant has been added. Diversification is in the picture.

Today at Inman there is quite a line-up of Chapmans in the management field. James A. Chapman, Jr., President and Treasurer: Robert H. Chapman, Jr., Vice-President, a Clemson man, and a cotton man who worked with Cannon Mills and in the cotton brokerage business before joining Inman; James' brother, Marshall Chapman, Vice-President, he is a Clemson graduate and worked at Cannon Mills and in New York before joining Inman; another brother, Joe Chapman is Technical Manager. He graduated from Clemson in 1948 and worked for Springs Mills before joining Inman. Robert H. Chapman III is on a training program and, guess what? There is another James G. Chapman, IV knocking at the door.

The Chapman family still runs the $7.8 million mill investment that employs 1,700 employees. It is the only cotton mill started by one man that in 75 years has had only 3 presidents, each with the same name; James A Chapman, the Founder; James A Chapman, the Second; James A. Chapman, Jr., the current President.

If hard work, integrity, knowledge of the business and understanding of one's fellow man may be called a "dynasty", this is it.

[From the Textile News, Oct. 31, 1977]

INMAN MARKS 75TH ANNIVERSARY

INMAN, S.C.—Inman Mills, parent facility of a large and thriving Spartanburg County multi-plants textile manufacturing operation, is celebrating its 75th anniversary.

Starters for the festivities who recently staged public open house receptions at all plants, including parent Inman and subsequent Saybrook, located in this upper Spartanburg County industrial and "peach country" community, and Ramey Plant, Carpet Yarn Unit and Riverdale Plant at Enoree, lower Spartanburg County.

New plant and expansion investments aggregating many millions of dollars have marked the progressive presence of these mills on the South Carolina textile scene.

Inman-Riverdale Foundation, founded in 1946, has bestowed 118 scholarships and gifted more than $650,000 to churches, schools and students. Five per cent of Inman's profits before taxes go to the Foundation.

President-treasurer of this three generations Chapman family operation is James A. Chapman, who moved up to the chief chair in 1964. James A. Chapman, founder, was 1909–1936 president-treasurer; and second generation James A. Chapman held these offices, 1937–1964. The parent plant was founded in 1902.

The history of the Chapman's industrial ingenuity and service and of the mills constitute one of the oldest and most eventful in the annals of Spartanburg County textiles.

Total employment of the plants is around 1,700.

Their chief products are apparel fabrics and cotton yarns in wide variety.

"There's been three generations of us (the Chapmans) at the mill", present president Chapman proudly points out. "We are small when you compare us to the giants but we have a spot in the market place. We just like being independent."

Additionally, the Chapmans have been active in many fields of civic and educational endeavor and substantial foundation service other than Inman-Riverdale Foundation.

The second James A. Chapman held a special distinction as the only man to serve as president three well known textile industry organizations: Southern Textile Association, South Carolina Cotton Manufacturers Association and American Cotton Manufacturers Institute.

Modesty marks the Chapmans, the same as their many decades of firmly established close and warm relations with employes.

The fact is that they and their mills are widely known in the textile industry and its market place where they "have a spot".

After all, they've had it for 75 years.

A HISTORIC TRANSFER ARRANGED BY EDWARD PISZEK

Mr. MUSKIE. Mr. President, on November 2, 1977, a widely disparate group met in Philadelphia to witness the transfer of nearly 400 rare documents from the Polish Government to a group of Hasidic Jews in America.

The transfer was arranged by Edward Piszek, president of Mrs. Paul's Kitchens. Mr. Piszek has long been involved in public service, and is a personal friend.

Mr. Piszek's willingness to volunteer his time, energy, and considerable talent to this cause is no more than those of us who know him have come to expect. Saying that does not diminish our respect or appreciation for his untiring work in behalf of others.

John Cardinal Krol spoke at the ceremony on November 2, and provided us with a fascinating history of the relationships between the Polish and Jewish people. As he says, it "is not without blemish." Cardinal Krol also summarized the importance of the Philadelphia meeting, saying it "reflects the best and most noble tradition of the Polish people." So does Ed Piszek's work to make the transfer possible.

Mr. President, I ask unanimous consent that Cardinal Krol's remarks, and a New York Times article from the November 3, 1977, issue, describing the meeting, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REMARKS BY JOHN CARDINAL KROL

Presentation of a collection of religious books and manuscripts to the Hasidic Lubavitcher Group at Independence Hall, Philadelphia, on November 2, 1977 at 11:30 a.m.

RARE IF NOT UNIQUE CEREMONY

We witness a rare, if not unique ceremony—the presentation by a Christian gentleman of Polish ancestry, Mr. Edward J. Piszek, of an irreplaceable collection of religious books obtained from the Polish Regime, which ideologically is committed to the eradication of all religions, to an American Hasidic Lubavitcher Group of Jews.

WHY?

This presentation evokes two questions. Why should Mr. Piszek be so concerned with the preservation of this valuable collection of Jewish religious books and manuscripts? Why should a Polish Regime committed to the total abolition of religion, release to and through Mr. Piszek, this collection of religious books and manuscripts?

THE ANSWER

I suggest that the answer to both questions is in the one thousand year history of relations between the Polish and Jewish peoples.

Jewish history in Poland dates to the very beginnings of Poland's history as a nation 966 AD. That history, like the history of any nation, is not without blemish; not without shameful violation and repression of rights; not without sorrow and not free of bloodshedding.

However, the fact is that not only did the Jewish people find refuge from persecution in Poland, but they enjoyed a privileged status. This is evident from the fact that some of the early coins in Poland had Jewish inscriptions.

The great influx of Jews came into Poland in the 11th and 12th centuries. Jewish communities developed and flourished, and their contributions to the cultural and economic development in Poland were invaluable.

In 1264, King Boleslaus—the Pious—enacted the celebrated charter—the Statutes of Kalisz which guaranteed equal protection of the law to all and specifically to the Jews, with a guarantee of freedom of worship, with sanctions for anyone who would desecrate a Jewish synagogue, religious school or cemetery. The Book of Jewish Knowledge refers to this statute as the "celebrated charter—the only one of its kind in the history of Christendom."

When the Jews fled the "Black Death" persecution in the West in the XIV century, King Casimir affirmed the Kalisz Charter and welcomed a new flood of Jewish refugees as integral members of the Polish community.

In 1414, Paul Wlodkiewicz, Rector of the Catholic University of Krakow, submitted a memorandum to the Council of Constance, in which he averred the right of non believers to worship in their own fashion. The principles of civil and religious liberty expressed in the Kalisz statutes and the Wlodkiewicz memorandum provided a healthy climate for religious worship and culture, and provided a welcome shelter for all persons persecuted for their religious beliefs.

It should be noted that the principles of civil and religious liberty expressed in the Statutes of Kalisz and the Wlodkiewicz memorandum were articulated with clarity, 700 and 550 years later respectively in the II Vatican Council's declarations on relations with Jew and on Religious Freedom. These principles found their way into the Pacta Conventa, which proclaimed for the first time anywhere in Europe constitutional guarantees of religious worship for all citizens.

King Sigismund II enhanced the tradition of Jewish civil rights in Poland by granting the Jewish communities practical autonomy under the direction of a body of local notables and rabbinical courts. At the apex of the pyramid was a "Council of the Four Lands" which could legislate and adjudicate according to the Jewish laws. This arrangement gave the Jews the nearest approach to self-government since the Sanhedrin of antiquity.

During the cossack revolt and the Tartar invasion, Poland was ravaged and the Jews were the special targets of invaders. During the Russian and Swedish invasions, Jews were singled out for harsh treatment, not only by the invaders, but regrettably by some Poles who suspected some Jews of being in league with the enemy. In this case, insecurity led to intolerance with the result of unrelieved disaster. When Poland lost its independence in 1795, the condition of the Jews, like that of the Poles, depended upon the dispositions of the occupying forces. When after the first World War, Poland regained its independence, Jews were accorded minority rights.

Even though the spirit of the Kalisz statutes was at times marred by invaders, and at times by some Poles, the Jewish community flourished and developed and became the largest and most significant Jewish cultural center in the world. Warsaw was renowned for its Talmudic, rabbinical and teacher training seminaries and schools. Yiddish and Hebrew periodicals were produced in Jewish publishing houses, and outstanding writers and leaders made lasting contributions to Jewish culture and life.

In the II World War, Poland lost 15 of her 35 million inhabitants. No ethnic group bore the fury of Hitler's hatred more than did the people in Poland and especially the Jews. The vast majority of the Six Million Jewish victims lived in Poland.

It is the tradition of binding ties between Polish and Jewish peoples that provides the answers to the two questions: Why does a Christian gentleman of Polish ancestry, attempt the seemingly impossible task of obtaining from a Polish Regime, ideologically committed to the total abolition of all religions, an irreplaceable collection of Jewish religious books. I can only suggest that both Mr. Piszek and the Polish Communist Regime are living up to the very noble one thousand year tradition of relations between the Polish and the Jewish people.

MY PRESENCE AT THIS EVENT

I am grateful for the invitation to witness this presentation. As a Catholic religious leader of Polish ancestry, I am pleased with and applaud the efforts of Mr. Edward J. Piszek for his concern and for his efforts in behalf of the Jewish Hasidic Lubavitcher community. By his action, he exemplifies Christ's command of love of neighbor, and also continues the noble tradition of Poles of living with peace and harmony with their Jewish neighbors.

At the same time, I am pleased to commend the Hasidic Lubavitcher goups of Jews for their fidelity to a common legacy which we share. We live in a climate of secular and atheistic humanism. It is a joy to acknowledge that Jesus and Paul sprang from the deepest soil of Jewish history, and that the Catholic Church is born out of Israel's loin.

We recall the Jewish legacy to humankind and the indebtedness of our civilization and our religion to the Jews.

The first legacy is a firm belief in one personal God who is the Master of all creation, and who has the right to impose his laws and commandments upon all.

The second legacy is the Bible—the Torah, which is the source of the first formulations of social justice which provides us with a moral code—a moral rectitude governing man's relation with his God and with his fellow men.

The third legacy is the doctrine of man's immense and incomparable dignity as expressed by the Psalmist: "What is man that you should be mindful of him. . . . You have made him little less than the angels and crowned him with honor and glory. You gave him rule over the works of your hands, putting all things under his feet" (Ps. 8, 5–7).

The fourth legacy is the doctrine of moral choice. God gave man mastery over His world, through the divinely given capacity to "Choose Good and Reject Evil." This reality of man's freedom of choice contradicted the old pagan philosophies of fatalism, disguised and adopted by Karl Marx under the name of economic determinism. This divergent outlook on man's freedom of choice is a principal cause of the radical and irreconcilable division between the free world and the world of communism today. This doctrine of moral choice carries with it social implications. The command "Thou shalt love they neighbor as thyself" provides the concept of the solidarity in human relations, and the concept of a moral law applicable to societies as well as individuals.

The presentation of this collection of religious books and manuscripts reflects the best and most noble tradition of the Polish people, and at the same time highlights the legacies of the Jewish cultural and religious heritage.

Today, I pay tribute to Mr. Edward J. Piszek for continuing a noble Polish tradition and for giving our communities an example of sympathetic concern and solidarity in human relations.

I pay tribute also to the Hasidic Lubavitcher group of Jews for their interest and efforts in preserving Jewish legacies—religious and cultural, and for giving witness to the joys of living a life of faith—a life of fervent love of, and dedicated service to God, the Creator, Master and Ruler of the Universe and of all life.

Hasidic Feat: Simple as Aleph, Beth, Gimel

(By Israel Shenker)

Philadelphia, Nov. 2.—This was not one of your garden variety historic events at Independence Hall, such as a meeting of the Continental Congress or the signing of the Declaration of Independence.

Today, some bearded Hasidic Jews met here with representatives of Poland's Communist-atheist Government in the presence of a Roman Catholic Cardinal and a consul general from Israel, with which Poland does not have diplomatic relations. The ceremony was made possible through negotiations conducted by a manufacturer of nonkosher frozen seafood.

It was as simple as aleph, beth, gimel.

When the Polish Government turned over crates filled with 130 handwritten books and 240 rare printed books, Rabbi Abraham Shemtov, local representative of the Lubavitch Hasidic movement, was the first to open a volume. He declared it to be in the handwriting of the third and sixth Lubavitcher Rabbis. After looking at the text a moment, he lowered his head and, his red beard quivering, kissed the open page.

"Pardon me for getting emotional," he said.

These were all works lost in the flight of the sixth Lubavitch Rabbi from the Nazis, in 1940. He came to America with only part of his library. "The missing books were all thought to be lost, burned, destroyed," Rabbi Shemtov said.

But the Lubavitchers discovered them in a Warsaw library and tried unsuccessfully to persuade the Polish authorities to restore them to their rightful owner, Menachem Mendel Schneerson, the seventh Lubavitch Rabbi and son-in-law of the sixth, who died in 1950.

About three years ago, Rabbi Shemtov went to Edward J. Piszek, the founder-president of Mrs. Paul's Kitchens, the seafood company, and asked him to help. Mr. Piszek, a patron of the arts who is a trustee of the New York Public Library, has nurtured good relations with Poland. Some years ago he donated medical equipment to Warsaw and, as he said, "helped put tuberculosis to bed in Poland."

"They knew I was a friend of theirs," he said, "and I told them they could do something that would be good for both sides. Here I am, a Christian American of Polish descent who put himself on the line for something his Jewish brothers believe in. The Lubavitchers are like Jesuits—these are their records, and they mean a lot to them."

Rabbi Shemtov went to Warsaw twice to identify the Yiddish and Hebrew handwriting of successive Lubavitch leaders, and Mr. Piszek used all his charm. "There were times," Mr. Piszek recalled, as he stood here today with Rabbi Shemtov, "when the rabbi called me every day and said, 'Where are the books?' "

"Correction," the rabbi said. "Three times a day."

The first public sign that anything was going on came earlier this week in quarter-page advertisements in The New York Times, The Washington Post, The Chicago Tribune, The Los Angeles Times and two Philadelphia dailies. The text began:

"We thank the Polish authorities and our friends in Poland for their efforts. . . ." It was signed "Philadelphia Friends of Lubavitch."

In his brief address to the small group gathered here, John Cardinal Kral, who is of Polish descent, spoke of the Polish Government's dedication to the eradication of religion. He acknowledged that Poland's attitude to Jews had been "not without blemish, not without shameful violation and repression of rights, not without sorrow and not free of bloodshed."

He also cited instances when Polish Governments had extended protection to Jews, and he hailed "the very noble 1,000-year-history of the Polish and Jewish peoples."

James A. Michener, author of "The Source," also spoke, and praised the Polish Government for having "the wisdom and generosity to set these books free."

From Philadelphia, the books will go to the movement's headquarters in Brooklyn, geographically distant from the former seat in the Byelorussian village of Lubavitch but hardly removed in tradition and ritual.

The Lubavitchers, now in many countries, go back to a group of believers who attached themselves to a disciple of Hasidism's founder, the Baal Shem Tov (Master of the Good Name), an 18th century mystic who taught that a simple man who prayed sincerely was better than a Talmudic scholar whose heart was cold.

SOVIET'S MORE VULNERABLE TO NUCLEAR ATTACK THAN THE UNITED STATES

Mr. PROXMIRE. Mr. President, I would like to draw the attention of every Senator to an important article which appeared in a recent issue of the National Review. This article effectively debunks some of the recent hysteria about Soviet civil defense efforts.

During the past year, many commentators have suggested that Russia has embarked on a major program to protect its population and industry from the threat of American nuclear attack. This program, according to some, could upset the strategic balance by negating the American deterrent threat. This line of reasoning holds that increased dispersal and protection of population and important industrial facilities would allow the postattack survival of the Soviet Union as a major industrial power. These critics further suggest that unless the United States initiates a crash civil defense program, we will find ourselves subject to Soviet nuclear "blackmail."

The National Review article demonstrates the absurdity of these fears. Written by Ellsworth Raymond, a former economic research analyst at the U.S. Embassy in Moscow, and a professor emeritus of Russian Affairs at New York University, this article points out that the Soviet Union is, if anything, more vulnerable to attack than the United States. Essential industries are highly concentrated in a small number of gigantic facilities, and transportation systems are, at best, primitive. Population, like industry, is highly concentrated in densely populated cities, making it similarly vulnerable to attack.

This article supports conclusions drawn by the Joint Committee on Defense Production after a year-long review of civil and industrial defense programs. The committee also found reports of massive Soviet programs to protect population and industry to be greatly exaggerated.

Mr. Raymond's article presents further evidence that the civil defense "scare," like the earlier bomber and missile gaps, is based on erroneous information. Mr. President, I ask unanimous consent that the full text of the National Review article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the National Review, Nov. 25, 1977]

Could Russia Survive a Nuclear Attack?

(By Ellsworth Raymond)

If Soviet-American nuclear war ever erupts, vulnerability to hydrogen bombing can mean the difference between victory and defeat. The Soviets argue that Russia would suffer smaller bombing losses because of its immense territory and dispersed industry and population. Actually, Russia may be more vulnerable to hydrogen bombing than America. Let's start with city size.

Since 1928, when serious Soviet industrial growth started, over 100 million peasants have moved into Russian cities to work in the newly built factories. But the Kremlin never built enough city housing for the hordes of peasant migrants, so more people were squeezed into the same space. In the average city apartment, each room is occupied by a different family, all unhappily sharing the apartment's kitchen and bathroom.

So Soviet cities are small in land area, about half the size of U.S. cities with equal populations. Many more people would be killed by one hydrogen bomb hitting Moscow, for example, than by one bomb hitting New York.

Russian railways are also very vulnerable. With an area two and a half times that of the United States, the USSR has only two-fifths as much railway footage. Because trains can operate during the frigid Russian winters, when rivers freeze and roads are snow-bound, rail lines are the backbone of Soviet transport, hauling four-fifths of all internal freight: In European Russia the rail network is fairly dense, but in Soviet Asia there are only solitary lines.

Russian military writers admit the bombing of bridges and junctions could paralyze railways, and therefore say that in wartime freight and fuel must move largely by road and pipeline, not by rail. Yet the USSR has only one-tenth the road network of the U.S. and one-fifth as many trucks. Most American highways are paved, while the majority in Russia are dirt lanes, which in rainy seasons turn into seas of mud. Less than a dozen long-distance paved highways exist in all of European Russia; Soviet Asia has only three.

Soviet oil pipelines are still in their infancy, totaling only one-sixth the length of those in the United States. Furthermore, most American long-distance pipelines are underground and thus are partially protected from bomb explosions, whereas, to save time, most Soviet lines are laid on the ground or in shallow ditches. Highly visible, they wind across the Russian steppes like defenseless worms.

Soviet military theory assumes that World War III will be shorter than World War II, yet will last long enough to require huge wartime manufacture of munitions. America's war-potential industry is fairly well dispersed in a number of small factories, many of them located in suburbs or even in rural areas.

Despite Russia's vast size, its industry is not dispersed. Moscow and Leningrad, the two largest cities, together contain one-sixth of all Soviet industry. Both there and elsewhere, much of the war industry is jammed into a small number of gigantic plants: Russia thinks huge factories are more efficient, and it likes to flaunt huge industrial showplaces.

During World War II, half of the Soviet artillery was produced in just four factories, one of which was in Moscow. Half of the tanks came from two Ural factories in the cities of Nizhni Tagil and Chelyabinsk. One of every ten wartime airplanes came from Novosibirsk, the Siberian Chicago. Every third shell fired by the Red Army was encased in steel smelted at Magnitogorsk in the Urals, Europe's biggest steel mill. Half of Russia's WW II explosives were made by the Chirchik nitrate plant in south-central Asia. The nearby Chimkent lead factory bragged that its metal went into nine of every ten Red Army bullets. All this dependence on big plants was revealed by postwar boasting in the Soviet press.

Since the war these giant plants have been expanded and new industrial monsters built. Today the Soviet Union operates the four largest hydroelectric and the five largest steam power stations in the world, all built since Stalin. Two are located in Siberia, two in the Volga valley, and five in the Ukraine. Taken together, these mighty nine produce one-eighth of all Soviet electric power.

The Brezhnev regime recently built a Ukrainian blast furnace which smelts one-tenth of all the USSR's iron. Right now Russia is completing the Kama truck plant, another Siberian hydroelectric power station, and the Leningrad atomic power station, each of which will be the largest in the world. Either Brezhnev expects no nuclear war, or his industrial construction is insanely reckless.

Hitler lacked the long-range bombers to destroy Russian industry and railroads during World War II. America, however, has plenty of bombing equipment.

OMA NEGOTIATIONS ON SHOES

Mr. MUSKIE. Mr. President, the United States recently concluded historic negotiations with the Taiwanese and Koreans to limit the import of nonrubber footwear into this country. The resulting agreements at last give the American footwear industry a chance to compete fairly in the marketplace.

William Scanlon of the Boot and Shoe Workers Union attended the talks as an advisor to the U.S. negotiators. It was his judgment that the agreements carry "more potential for the American footwear industry than we'd been able to win in 20 years of battle to save jobs."

He described the talks in an entertaining and insightful article in the November 1977 issue of Leather & Shoes magazine. I commend it to my colleagues and ask unanimous consent that it be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

OMA Negotiations Behind Closed Doors—An Exclusive Eyewitness Report

(By William Scanlon)

Note.—The recent orderly marketing agreements with S. Korea and Taiwan, by now, have been well discussed, argued and analyzed. However relatively few people within the allied industries know the true 'inside' story that went on prior to the signing of these somewhat abstruse accords. William Scanlon, representing the Boot and Shoe Workers' Union and the United Shoeworkers of America, AFL–CIO at these delicate bargaining sessions, relates a personal tale of setback and satisfaction that went into the formulation of these trade agreements.)

It was one year, four months and six days since the opening of the first International Trade Commission hearing on an Escape Clause case that gave the American shoe industry a favorable decision by allowing that it was being damaged by too many imported shoes.

From President Ford, however, the decision got the industry complete inaction. Now, in May, 1977, five months after the ITC's second finding of damage to the industry, here was a team actually in the field and involved in direct negotiations with the governments of Taiwan and South Korea. When President Carter had acted on the ITC's second finding he had directed that the shoe industry and government solicit "voluntary" quotas from these two countries whose 1976 exports to the U.S. were greater than those of any other nations.

So, there were no real hammer-on-anvil directives to get quotas. Whatever came out of the talks was to be voluntary on the part of the two target countries. In this quest for orderly marketing agreements, the whole ball game was up for grabs.

Here was the lineup. The Government's negotiating team led by Stephen Lande and made up of representatives from State, Commerce, Treasury, and Labor; a group of shoe industry advisors and a labor advisor representing the concern of the industry's two unions; the Taiwan Shoe Manufacturers Association, the Korean Shoe Manufacturing Association, the governments of these two countries, the two groups of Americans representing the volume footwear dealers and the retail shoe interests. This was the heavy artillery. When the line was drawn, the U.S. Government team was right in the middle of the opposing forces.

At first look it seemed that the American footwear industry was out-gunned. Here on the home turf of the "enemy" the industry people were seemingly alone. Both the Volume Footwear people and the National Retailers Association were quite at home with their Korean and Taiwanese business partners. Here were people making big money on shoes exported to the United States. They were determined that nothing was going to upset that arrangement. Very early on we saw the workings of the American-Taiwan and American-Korean network beginning to operate. Eddie Atkins, a retailer's representative and a longtime opponent of quotas and tariffs, stood in the doorway of Haneda airport in Tokyo as we arrived.

He was waiting for his Japanese agents to further his trip to Seoul where the talks would open the next day. Remembering the numbers of Japanese, Taiwanese, and Koreans at the Washington ITC hearings we got the feeling that Atkins and his side of the case was going to have great moral support in this arena.

Ultimately, the fact that the Government's team was able to develop agreements cutting Korean imports to the U.S. by 11 million pairs, Taiwan by 22 million pairs, in the first period of a four period term, was an emphatic win in the face of the determined opposition it faced. Too, it was more proof of the reasonableness of both ITC decisions in the escape clause cases.

How was the battle fought? From what we could see of it, the fight was staged in hotel rooms. Day long sessions with their opposite numbers followed long evening social events staged by the Korean and Taiwanese negotiators for our team. With these ended, the team came back to the hotel dragging with exhaustion, whereupon we would get a full briefing on the day's events. That done, the arguments began.

Categories, shifting, spacing, export-import dates, style factors of vinyl, vis-a-vis polyurethane, definitions of vulcanizing, cementing, bonded warehousing to get around shipping date restrictions, TSUS numbers and definitions again, manipulation of payments through Swiss banks to disguise tricky billing practices used to hide overvaluation and underpricing of shoes to get around category limitations with the differences made up by later adjustments with the Swiss banks. All the tricks in the multinational handbook came out in these late night sessions. These round robins often went to 5:00 a.m. giving everyone but a few hours of sleep and thought alignment before the formal talks started all over again.

We didn't know what opportunities were given the Eddie Atkins, Frank Rooney, Larry McGourdy, and Norman Mercer group to argue with Lande's team. There wasn't enough time in the day to have accommodated them and us in our advisory roles. But they were getting their points across in some way.

Evident, too, was the fact that Taiwan and Korean negotiators in their respective sessions, were well aware of the presence of the two opposing forces on the scene to advise our negotiating team.

A reception at the home of the U.S. Embassy's Commercial Attache, one evening, had brought us all together in one room with Kim Sun Kil, the chief Korean negotiator. This "party" developed into a retrial of the ITC hearing in Washington five months before. Standing in a circle, faces wreathed in social smiles, arguments were swapped toe-to-toe. All this to the great delight of Kim Sun Kil, who said to the group, "So, even your people are split on this imports question!"

At one point in the debate, Larry McGourdy, a representative of Melville Shoe, was asked by someone why American manufacturers with superior expertise and advantages could not manage to get U.S. labor costs competitive with Korean costs. His response was that his company was pretty close to doing that . . . had actually reached the point where American labor costs were only 50 cents higher than Korean costs. Next question, naturally, was "How have you done this?" His answer, apparently a serious one, was, "We are working with Haiti on this." So, the impression was given that one American shoemaker is lowering his labor costs close to home!

Norman Mercer, agent for an American import operation called "Impassa" stepped to the fore and claimed credit for having brought a big American rubber footwear maker into the imports fold. He gave the group the same old heart-rending story of the poor U.S. consumer being the ultimate victim of any cutback whatsoever in the volume of footwear from Korea to the U.S. He implied that the culprit was the American shoeworker whose greed for higher wages had brought about the need to trade with Korea and other low wage countries.

He was quickly told of the shopping experience our group had that afternoon which had produced several pairs of the very jogger type shoes Mercer had mentioned as a boon to the American consumer. The shoes, bearing brand names like John Havlick, Puma, Addidas, were sold to us at a flat $4 a pair in a Korean retail shoe store! How, it was asked can a $4 pair of shoes in a Korean retail store command prices of $29.95 and up when they are brought to the U.S.?

Why this huge difference in price? It isn't shipping costs. It isn't high duty. It isn't distribution costs. Is it then the extreme and very profitable markup taken by the retailer? Is the difference between the $1.40—$2 cost at a Korean factory, and the American selling price of 15 times this cost, an actual reflection of the cost of doing business with Korea?

If the reduction in Korean exports of footwear to the U.S. is going to hurt anyone in the next four years, it won't be the "poor American consumer" for whom Mr. Mercer wept. The consumer seems to be paying through the nose as it is. It's going to be the retailer and his supplier. These people are going to have to live with fewer pairs of Korean shoes to overprice.

We didn't see much of the volume footwear group after this quasi-social confrontation. So, we don't know how they kept up their pressure on the negotiators. When we left the Embassy that evening, there was a feeling among all of us that the Commercial Attache of our Embassy was opposed in principle to our purpose in being there.

Speaking with other Americans in Seoul during these talks, we learned something of the Korean side of the coin. Koreans have the positive belief that they are about to reach the point of economic achievement which will soon take them out of the role of a developing nation. Naturally, they are disturbed about the possibility of losing the physical support of American ground troops whom they feel are a bulwark to the country's growing industrial economy.

Koreans, are, on the other hand, philosophical about what happens to them . . . about what happens if America does cut back shoe imports. Resignation is one expression of this philosophy. They say, "What real difference will shoe export cuts mean to us who have been kicked around for 6,000 years by the Mongolians, the Japanese, the Chinese, and others? We've survived everything the world has thrown at us . . . we'll certainly survive cuts in our U.S. shoe exports. And, besides, there are other markets we can go after".

But philosophy or not, the Koreans were hard-nosed bargainers. We left Seoul without an agreement and were to return there twice more before an agreement was reached. We now headed for Taiwan and its capitol city, Taipei, to meet the Taiwanese.

And meet them we did. First there were the agents on hand to meet their American clents, actually to welcome them to Taiwan. They have a most impressive way of doing this with Chinese food and hot rice wine. Not even the physical deterrent of having to use chopsticks could keep us from enjoying the Chinese banquets laid on by our hosts, a Chinese shoe manufacturer and his son with whom some of our group had had, or was having, dealings.

Then there was the dinner by the Taiwan Shoe Manufacturers Association, whose president Mr. Y. T. Wong, was also the negotiator for the Taiwanese government in the Orderly Marketing talks. For purposes of protocol, I suspect, Y. T. Wong did not attend this dinner. It was a carefully orchestrated affair at which each manufacturer had an opportunity to have at each one of us with arguments against cutbacks. They had not only arranged the seating so that a Chinese and an American would sit together, but the Chinese kept rotating from table to table and from American to American proposing toasts and presenting arguments.

A few of the young Chinese were aggressively and articulately opposed to any cutback of footwear from Taiwan to the U.S. Bashfulness was not one of their shortcomings. Together they drove hard to get their feeling across to us. So, the very pleasant dinner was laced with the spice of debate.

Then, again, in this new country, we began the exhausting routine of staying up all night in endless discussion with our government team after its long day of negotiation with Mr. Y. T. Wong and his group. This was a repetition of what we'd done in Korea. Here, I must say that I have great admiration for Stephen Lande and every one of his entourage from State, Commerce, Treasury, and Labor. They were cool under pressure, reasonable in argument, in full control of their tempers under the trying circumstances of 18 to 20 hour days, and most of all, patient with all of us in these grueling after hours sessions.

On May 17 the team informed us they had reached an agreement with Taiwan. Taiwan would reduce its exports to the U.S. by 21 percent in the first year beginning in June. This was 34 million fewer pairs than they had shipped in 1976. In each of three successive years they would be allowed to increase the shipments by 3 million pairs to a maximum, in 1980-81, of 131 million pairs. This added 3 million pairs to be a normal factor of growth in the market. The agreement covered all non-rubber footwear except paper disposable footwear, wool felt liners, and zoris.

The agreement included a side letter with the full force and effect of the pact itself, to limit the shipment of uppers to the 1976 figures. Taiwan, said the letter, had no intention of disrupting the American market with increased uppers shipments, nor to undermine the effectiveness of the agreement on non-rubber footwear.

Korea followed with its agreement to cut U.S. shipments by 11 million pairs in the first year of the four year pact. They got the same growth factor of 3,000,000 pairs in each of three years following the first year. Korea also wrote a side letter of agreement not to increase exports of leather work shoes other than at a moderate rate to be agreed on by the U.S. as a result of monitoring shipments. Unless careful monitoring of each point of each agreement is carried out on a regular basis, neither of the agreements will be of more than token usefulness.

There is work to be done, therefore, for the next four years on the monitoring front.

Stephen Lande and his people had whipped its agreements into acceptable temporary shape. A feeling of relaxation began to be felt. None of us of the advisory group was especially overjoyed with the results. But I think there was a consensus that a start of major importance had been achieved.

From the viewpoint of American labor in the footwear industry, for instance, nothing but a flat and total barring of all shoe imports, after our 20 years of losses to them, would have made us rejoice. But the reality of the situation made us realize the practicability of what we'd won . . . more potential for the American footwear industry than we'd been able to win in 20 years of battle to save jobs.

There's little point in telling the world that American footwear labor had pointed out in 1958, Cassandra-like as it turned out, the development of the very situation we had come to the Orient to correct in 1977. If the American shoe industry had applied its considerable talent, very evident on this trip, to leading off the imports problem in 1958, our trip would not have been necessary in 1977.

It was interesting to meet the U.S. shoe technicians who now live and work in Taiwan, Korea, and other places showing these people how to produce shoes salable in America. There's Mike . . . the ex-Haverhill shoemaker who does his job here for Melville Shoe. Mike's in Taiwan today and will be in Brazil or somewhere else in the low-wage world tomorrow imposing a kind of quality control over workers who earn $7 a day in 98 hour work weeks making shoes for "the poor American consumer."

Then, in Korea, we met Armand, a Canadian shoeworker from Montreal who does this same kind of job for H. H. Brown, an American shoe manufacturer heavily involved in importing footwear. Armand talked of spending his time between Korea and Bogota, Colombia on his job.

Because one of our advisory group members was fortunate enough have a Taiwan agent who was interested in getting his client into one, we visited a shoe factory, the Fu An Industrial Corp., in Sanchung City, a 15 minute Mercedes-Benz ride from our Taipei hotel. This was a suburb of Taipei where one would rarely see American tourists. It was here that we saw how Taiwan shoeworkers earn their living and compete with American shoeworkers. In a dirty grey concrete block building, three stories high, Mr. H. F. Ong presides over the operation with the resounding title of the Fu An Industrial Corp. In the middle of an area teaming with people who seemed to be living in the streets, the factory stood alongside other similarly drab buildings. Alleys ran off the main road at right angles and small shops and selling activities lined every foot of the streets.

Fu An was special. Out of the street floor of the building oozed a stream of tannery wastes. Two skinny, mangy-looking dogs tied to stakes paid no attention to the stinking ooze, nor to us, as we picked our way around it and climbed a flight of stairs to the second floor of the building. Up the stairs, and out of the direct aroma of the tannery, the good smell of leather cleaned the air until we reached the shoe factory floor and its overpowering smell of cement. This was a work area populated by women workers cementing soles to uppers.

At the feet of each woman, right in front of her machine, there seemed to be a child sitting, some free to move about, others confined to boxes or bamboo pens. The children were probably from one to three years old. There they sat impassive, immobile, inactive without so much as a simple toy to district or amuse them. They watched mother work as they got indoctrinated for their own futures.

A verse that said something about the drudgery of shoeworking in Lynn, MA's early factories, has the line about ". . . Hannah at the window binding shoes". This came to mind with a lot sharper impact than Hannah's fate had made as I watched the children sitting on the factory floor. One child, a girl, sat in a bamboo pen as though she were a run down mechanical doll. Her eyes were terribly crossed. She sat docilely by her mother's machine where she had probably been sitting since early morning.

There was a police dog on a long leash hanging around the work area. He barked ferociously at us and lunged toward us to the limits of his leash. What his role was in the factory we didn't learn. But we formed some conclusions of our own.

These workers live in the factory. They eat and sleep there. For their 14 hour day they earn up to the equivalent of 50 cents an hour. The work week is seven days. Taiwan law says they are to have two days off each month. They rarely take this time. The work day is officially 10 hours and for the additional 4 hours they work they earn a bonus for the added production made in the extra hours. Overtime is an unknown word . . . they need a union. But the concept of unionism is a dirty one in Taiwan. These are the low-wage competition for American shoeworkers.

I thought of the speech one of the American importers had made at that Korean reception at the U.S. Embassy, citing his deep concern for the "poor American consumer who would suffer from footwear cutbacks." I think that this very "poor American consumer," who could see how, and with whose lives, his bargain shoes from Taiwan were made, would be the first one to say, ". . . let's not continue to exploit these women and their kids. If this is the way it's got to be, I don't want any part of the shoes they make."

But Mr. Ong was a very friendly man. He served us tea, offered us cigarettes, and got immediately down to business with our colleague in the advisory group who was, it appeared, on a busman's holiday and riding the business-as-usual bus.

Another member of the advisory group, also a shoe manufacturer in the U.S., saw one of his company's shoe boxes in this factory. How it got there, or why, we didn't learn. But it was evident that this factory had at one time or another made the shoes that were packed in that box . . . and in how many thousand of other similar boxes?

In spite of its almost 18th century appearance and equipment, Fu An Corp. was a going operation. One of the workers told us that they had just completed a shipment of 40,000 pairs of army boots to Kuwait.

Some of the members of our group went individually to other shoe factories. Two men went to Pusan where one reported seeing an operation turning out 100,000 pairs a day. This was the Sami-Iwa Co., Ltd.

The story of these negotiations could go on in endless interest and significant detail. There is little room to tell it all in one article. This much, at least has now been told with many of the subtle nuances of self interest and dedication suggested.

For myself, as the representative of the American shoe industry's two labor unions, I was honored to have been part of the advisory group. The members of the group were excellent companions, great to be with under the intimate conditions of the three weeks of frantic traveling from country to country imposed on us. Each member of this group proved to be sharp, knowledgeable and articulate. They were a good complement to the government team. Together, their tireless efforts accomplished more for the American shoe industry in three weeks than had heretofore been achieved in many years . . . a good beginning.

Now, it is up to the shoe industry itself to build on this beginning. A new era of progress for American shoemaking and for the thousands of American shoeworkers, whose lost jobs can be restored, can be a reality.

There is much work to be done; particularly in preventing importers from increasing their purchases from other low-wage nations. This method of offsetting the small gains made in Korea and Taiwan has to be stopped by further negotiations with other countries found to be injuring the domestic shoe industry.

HUMAN RIGHTS AND THE SUPPRESSION OF DISSENT

Mr. PROXMIRE. Mr. President, on December 2 the New York Times ran an article entitled "Soviet Workers Tell of the Hazards of Complaining." Although this particular article emphasizes domestic issues within the Soviet Union rather than international questions of human rights, the injustice it finds could concern either subject and could be found throughout the world.

Above all, this article illustrates the fallacy of believing that simply because we do not hear an outcry there is none being made. The President of the United States has made the guarantee of basic human rights a national commitment. When a government will not let its internal criticism see the light of day, the commitment of this Nation to human rights becomes a commitment to insure that these voices are heard.

Mr. President, I want to remind my colleagues not to forget this responsibility, and urge them to support President Carter's initiative. In addition, I urge immediate ratification of the Genocide Convention as one essential step toward the creation of any effective human rights policy.

I ask unanimous consent that the New York Times article I refer to be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Soviet Workers Tell of Hazards of Complaining

(By David K. Shipler)

Moscow, December 1.—What happens when a Soviet worker asks for a raise, or complains about safety violations on the job, or uncovers corruption among his employers?

The chances are he will be insulted, reprimanded, or dismissed and, if he persists, confined to a mental institution, according to a group of workers who say they have been persecuted for exercising what they call "the right of complaint."

Half a dozen of these workers gathered the other day in a small apartment on the southern edge of Moscow to tell their stories to American correspondents. It was a rare event in this country, for these were not dissidents seeking political freedom or Jews to emigrate to Israel.

They were ordinary workers—among them a waitress, a coal miner, a locksmith and a housing-maintenance man—who seemed basically loyal to the Soviet system and who had dutifully reported wrongdoing to every conceivable agency of the Government and the Communist Party before turning, as a last resort, to the Western press.

What they had to say revealed a pervasive contempt in Soviet society for workers' safety and interests, a widespread tolerance of embezzlement and corruption and intense friction at times between employees and their bosses.

Their stories cannot be verified because of the Soviet Union's practice of refusing comment on criticism. But the workers insisted that their experiences were common, and that the places where they all first met each other—the reception rooms of the Central Committee of the Communist Party, the prosecutor's office and the Supreme Soviet; the nominal parliament—were filled every day with at least a hundred people who had come to Moscow in the faulty belief that higher authorities might listen to them sympathetically.

The leader of the growing group is Vladimir A. Klebanov, a 45-year-old coal miner from the Donets Basin who found trouble when, as a shift foreman, he became concerned about the safety of his men.

Because of what he called his mine's "unrealistically high plan" of coal production, miners often had to work 12-hour days instead of the normal six hours, he said. As a result, they became tired and careless, he said, and accidents took the lives of 12 to 15 people a year and injured 600 to 700 in his mine alone.

The authorities kept the deaths and injuries as secret as they could, he charged, and refused to investigate the causes. For his complaints, he said, he had been dismissed after 16 years in the mine and then had been sent to a psychiatric hospital for four and a half years.

Nadezhda V. Kurakina, worked for 25 years as a waitress in a Volgograd restaurant run by the local party organization.

"Fidel Castro was in our restaurant," she said. "Comrade Brezhnev, Kosygin—I served all of them."

Mrs. Kurakina said she had discovered that the restaurant administrators were stealing crockery by reporting it broken and then docking the salaries of waitresses they accused of breaking it. She said she had first written letters but had not gotten any response, so she had complained at an open meeting of restaurant workers.

She had been dismissed, she said, and her husband had also lost his job. The party secretary of the Volgograd region, whom she had served for 20 years, would not even see her, she said. Nor did higher officials in Moscow want to hear her complaints.

She lost her pension and was unable to find other jobs, she said. As in all these cases, her dismissal was noted in her "work booklet," a passport-like document she must show wherever she applies for work. As a result, no agency, factory, office or retail outlet will employ her or anyone else who had been dismissed on such grounds.

Anatoly N. Poznyakov, a thin, bespectacled epileptic, worked as a locksmith for 75 rubles, about $103, a month at Moscow's Institute of Biochemistry. When he asked for a raise, "they insulted me crudely," he said. When he appealed to the local party organization, he reported, he was told that he had apparently forgotten that his destiny in life was to eat from a pig's trough.

Angry, he continued his protests and was dismissed from his job. At the age of 39, he receives only about $28 a month for his disability, and lives on his mother's small pension of about $62 a month. It is not enough, but when he asked for help from the Academy of Sciences, which oversees the institute, an official told him: "If you can, live. If you can't, die."

Valentin T. Poplavsky, 44, worked for a factory in Klimovsk, near Moscow, as a supervisor of maintenance in workers' housing. He said that officials had used factory funds to finance drunken parties, and when a woman employee complained, he had been ordered to write a false criticism of her in her record.

When he refused, he said, the factory's party organization admonished him, the county prosecutor warned him that if his accusations could not be proved "we'll take the strongest possible measures against you" and he was finally dismissed from his job. Because of the entry in his work booklet, he said, he cannot find another position.

Shagen A. Oganesyan, a 37-year-old Armenian, was an engineer at an agency in Yerevan that repaired and renovated electrical plants. Elected to the People's Control Commission to guard against corruption, he took his job a bit too seriously, checking to see that work paid for had actually been done.

He found that about half of it had not been, that the money had simply disappeared. His insistence in reporting the irregularities, he said, had caused rejection of his application to go to Poland on a job and his transfer to a lesser post. He had then quit in protest.

According to case histories compiled by the group, psychiatric hospitals are often used as a weapon by the authorities against stubborn complainers. Picked up by the police, workers are frequently subjected to "conversations" with psychiatrists and sometimes given jail sentences of 10 to 15 days for "hooliganism," they said.

Sitting around the living room, they were fired with an outrage seldom seen in political dissidents, many of whom abandoned faith in the system long ago. By contrast, these are people who still seem startled by the emptiness of the rhetoric they have heard from the country's leaders.

"Our unions don't defend our rights," said Mr. Klebanov, the miner.

"Our unions aren't like Western unions," said Mr. Poznyakov, the locksmith.

"Our unions have no power," said Mrs. Kurakina, the waitress.

In all these voices there ran the sound of amazement.

ALCOHOL FUELS AND ALEXANDER GRAHAM BELL

Mr. BAYH. Mr. President, during the last several months many of us in the Senate have been seeking to develop incentives for the production of alcohol fuels from our farmland and forest land and from other abundant or renewable domestic resources. I was pleased to learn today that our enthusiasm for this idea was shared more than 60 years ago by Alexander Graham Bell.

This morning's Washington Post contains an article by Joanne Omang which quotes the eminent Mr. Bell's farsighted observations about the potential of alcohol fuels. I would like to have the article printed in the Record for all of my colleagues to share.

There being no objection, the article was ordered to be printed in the Record, as follows:

Mr. Bell Had A Solution to Energy Crisis

(By Joanne Omang)

Alexander Graham Bell, who invented the telephone, the airplane aileron and the three-wheel airplane undercarriage, among other things, predicted the coming energy crisis in 1917. He also proposed a solution.

The prediction was unearthed (last week) by scholars at the American Telephone and Telegraph Co. who recalled that a Washington scientist, W. King Hubbert, won a Rockefeller Public Service Award for his prediction of an energy crisis. Hubbert made his prediction in 1948, 31 years after Bell made his.

"There is one obstacle to further advance" of society, Bell had told the graduating class at the District of Columbia's McKinley Manual Training School on Feb. 1, 1917. "The increasing price of fuels necessary to work machinery.

"Coal and oil are going up and are strictly limited in quantity. We can take coal out of a mine, but we can never put it back. We can draw oil from subterranean reservoirs but we can never refill them again. We are spendthrifts in the matter of fuel and are using our capital for our running expenses.

"In relation to coal and oil, the world's annual consumption has become so enormous that we are now actually within measurable distance of the end of the supply. What shall we do when we have no more coal or oil?"

Bell, who died in 1922 at the age of 75, answered that question with a proposal that is causing increasing controversy and interest today. Burn alcohol, he said.

"Alcohol makes a beautifully clean and efficient fuel . . . we can make alcohol from sawdust, the waste product of our mills . . . from cornstalks, and in fact from almost any vegetable matter capable of fermentation. Our growing crops and even weeds can be used. The waste products of our farms are available for this purpose, and even the garbage from our cities."

Hubbert, told of Bell's remarks, called it 'beautiful. Of course," he added, "I never claimed responsibility for the idea of a coming shortage, which was common at that time. I just put the figures together and they turned out to be fairly accurate. I haven't been embarrassed yet."

AMERICAN CITIES

Mr. BROOKE. Mr. President, I shall ask unanimous consent that an address recently given by Assistant Secretary of HUD for Research and Policy Development, Dr. Donna Shalala, be printed in the Record. The speech was given before the Joint Center for Environmental Studies, a group recently formed under the leadership of Maryland State Representative Larry Young. Mr. Young, also urban affairs director of the Izaak Walton League, has been working since early this year to firmly establish JCUES, and in so doing, has attracted a board of directors of unusual ability and representative of diverse viewpoints but who bring together the common objective of solving urban environmental problems. One of my staff members, Dr. Meg Power, serves on the advisory board of JCUES, a group likewise composed of talented men and women who have joined Larry Young with their commitment and dedication.

Dr. Shalala was introduced by a former staff person of mine, Joseph E. McMahon, now with the Westinghouse Electric Corp. who spent 5 years working with John Doar and Franklin Thomas at the Bedford-Stuyvestant/D. & S. Corp., the urban community development corporation conceived by the late Robert F. Kennedy, in close cooperation with my distinguished colleague, Senator JACOB K. JAVITS.

Dr. Shalala charts the direction that this Nation must take as we try to improve our urban environment. Our housing problems and urban deterioration continue unchecked. Innovation, vision, and full implementation of Government and private sector development programs must move ahead, and Dr. Shalala points out some of the visions and the efforts we will need.

Mr. President, I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

ADDRESS BY DONNA E. SHALALA, ASSISTANT SECRETARY FOR POLICY DEVELOPMENT AND RESEARCH, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

I came to speak about America's cities. More specifically I came to talk with you about the commitment my department is making to revitalize our cities.

For more than three decades—continuing to this day Americans have been fleeing their cities. There is little question about the reason for this exodus—for those who can afford to move—they went to the suburbs in search of a better living environment.

As one of my friends put it—"I want to live in a place where I can smell the grass and see the stars."

Making cities livable again—places where people want to move back is not so easy.

Indeed some writers have suggested that as our understanding of urban problems has grown our "confidence in our ability to frame solutions has declined."

The theme as echoed in official Washington is somewhat different but it also stresses the limits of what the federal government can do. The *New York Times* recently reported that "the underlying philosophy is that Federal dollars . . . can have only a marginal impact on reversing the urban decay . . ."

Although, as you will hear, I have my own views on how this philosophy is shaping the federal role. it is important to note that just because the federal government does not think it is easy to win, it does not mean that we are not going to play the game.

For at the very same time that this low-key view of urban policy is emerging in academia and in Washington, the federal government is in the process of shaping a new urban policy. and HUD is taking a central role in the process.

HUD is emerging as more than just a housing agency; it is becoming an urban-focused agency. We are beginning to live up to our middle name: housing and *urban* development.

It originally appeared that the current administration would emphasize national policies with urban impacts, such as welfare reform and aid to the educationally disadvantaged, rather than designing programs and policies specifically targeted at distressed cities and regions.

That has changed, perhaps because of the recognition that a different approach could not address the needs of these areas in any efficient way.

The White House is concerned with formulating an explicit urban policy which focuses directly on cities and regions with serious economic and fiscal problems, and HUD has been given a lead role in the formulation of this urban policy.

Because many federal agencies formulate policy that has an urban impact—sometimes positive, too often negative—the administration decided to bring together representatives from the relevant agencies, HUD, Labor, Commerce, Treausry, and HEW, and EPA to form the Urban and Regional Policy Group. HUD Secretary Harris is the group's chairperson, with the title "urban convenor." The group is charged with the responsibility for making specific policy proposals to the White House. Many of these proposals will be submitted by the end of the month.

Part of HUD's role within this group is to serve as an urban advocate. For example, we have already been asked to submit to the White House a statement about the urban impact of the Tax Reform proposal, and we are in the process of framing a general format for evaluating the urban impact of federal policies.

Although you may think it is a trivial accomplishment for HUD to produce an urban impact analysis of major legislative packages of other agencies, it is a significant step in developing our role as an urban agency.

No other federal agency has as its primary concern the well-being of cities and urban areas. At best, their policies are only coincidentally beneficial to the cities—and at worst, seriously biased against them.

As a result of HUD's new responsibility, the new federal role toward cities will be concerned not only with reducing implicit anti-city biases in other programs but also with developing programs whose prime objective is to aid urban areas.

A number of the new policies and programs are in varying stages of the policy but all are explicitly targeted to needy urban areas.

While targeting creates problems—those of choosing the appropriate eligibility criteria or formula and having these criteria survive the political process without being diluted—the emphasis on targeting aid to jurisdictions, and to projects within eligible jurisdictions, is potentially the most efficient approach to reaching troubled cities.

In the past, there was not sufficient political support to harness federal resources to the ailing cities except in the context of increasing resources to all jurisdictions.

General Revenue Sharing and Community Development Block Grants are cases in point.

Indeed, central cities may be relatively worse off than they were without General Revenue Sharing because sharing may have given a competitive advantage to healthier suburbs, metropolitan areas, and regions.

Furthermore, General Revenue Sharing coincided with declines in categorical aid which focused more directly on the central cities. Block Grants, on the other hand, actually made some central cities absolutely worse off than they had been under the previous scheme of categorical grants because of the phase-down of the "hold harmless" provisions of the original Block Grant formula.

It is noteworthy that one of the few policies which has been relatively effective at targeting monies to central cities is the counter-cyclical revenue sharing program. Under it, aid was distributed on the basis of absolute levels of unemployment—a moderately good indicator of secular decline—rather than on the basis of cyclical changes in unemployment rates.

Now the tides have turned—regional decline seems to arouse more concern than central city decline—and HUD and the Federal government are moving ahead with a number of policies explicitly targeted to secularly declining areas.

Because of the anti-city bias of the original Block Grant formula, HUD is about to implement a dual formula in which a community may chose to receive its allocation based on either the original formula or a new formula which takes into account two additional things: the age of the housing stock and "growth lag."

The use of the dual formula will increase allocations to major central cities such as New York, Baltimore, Philadelphia, Atlanta, and Denver. But the greatest number of gainers, in absolute and percentage terms, are cities like Yonkers, Bayonne, Pontiac, and Berkeley—cities that have in the past decade been undergoing the problems common in the large central cities.

HUD's experience in revising the Block Grant allocation formula has served as a guide in its current efforts to develop eligibility criteria for the new Action Grants program—familiarly known as UDAG. This program is the cornerstone of the 1977 Housing and Urban Development Act—which has just been signed into law. It is funded at $400 million for the first year.

Unlike Block Grants, a jurisdiction must apply for an action grant, and the only jurisdictions that may apply are those in cities and urban counties determined eligible by HUD.

HUD is charged with providing a decent home and a suitable living environment for all Americans. To me, a suitable living environment means a place where an individual can live in decent, clean, safe, and healthy surroundings and have personal and economic well-being and opportunity. Because of our mission, HUD must view the urban environment from a people-oriented perspective. We must ask: What are the effects of the mismanagement of natural resources and the man-built environment on urban people and their communities. And what we can do working with these people to prevent and remedy negative effects.

President Carter in his message to the Congress on the environment emphasized the harsh effects of air and water pollution upon urban citizens, but he went on to say that it will take more than stopping pollution to make our cities the congenial, livable places they ought to be. He stressed the importance of neighborhood preservation and specifically directed Secretary Harris to expand the urban homesteading program.

These broad perspectives and responsibilities require HUD to become involved with such diverse and critical environmental issues as:

Neighborhood revitalization and reinvestment;

Urban economic development;

Historic preservation;

Urban design;

Energy and natural resources conservation;

Air and water pollution;

Noise abatement;

Natural disaster mitigation;

Building access to the handicapped, and

Residential and personal safety.

Responding to the mandates of the National Environmental Protection Act, HUD is now active in environmental impact assessment and environmental planning assistance. And we are working to make sure that HUD-assisted projects are begun only after their physical, social, and economic impacts are fully considered.

Aware of the potential cost and time delays that can result from these considerations, HUD is looking into ways of speeding up the assessment process by approaching it from an area-wide rather than a project-by-project direction. We also are moving to assure that Federal actions will grow out of careful planning at all levels—metropolitan, areawide, and local.

Among our important research and demonstration programs, there's one—funded at about $1 million per year—that supports HUD's environmental and land use policies and aids local officials in meeting their increased environmental responsibilities. Very practically, this program provides guidance manuals and information on environmental impact assessment, noise abatement, air and water quality, and growth policy and development.

HUD has also been charged by Congress with the development and implementation of energy performance standards for new construction, and it has joint responsibility with the Department of Energy for a demonstration program to investigate the practical application of solar energy in residential heating and cooling. What we learn should contribute significantly toward residential energy conservation and toward reducing pollution in the cities.

Even these few remarks on solar energy lead me to say a few words about the environmental problem most critical to our well-being: our extravagant use of energy and our delay in moving from fossil fuels toward reasonable energy alternatives.

As you know, last April the President sent to Congress a comprehensive package of energy proposals. They are now moving toward passage, but some are meeting stiff resistance. This is cause for real concern. It is crucial that we meet the goals outlined by President Carter if we are to move out of the deeply troubling situation the nation faces today in the energy area.

But insofar as his program relates to residential energy conservation, things look good. The President has set an objective of bringing 90 percent of American homes up to a standard level of energy efficiency by the year 1985. To do so, he has proposed several substantial incentives, including an expanded weatherization program for low-income persons and a tax credit that will offset the costs of installing in one's home certain energy-conserving improvements like insulation, caulking, weather-stripping, clock thermostats, and the like. These proposals we can expect to see signed into law.

The Department of Housing and Urban Development has not normally been thought of as an environmental protection agency. But very soon the whole country will begin to recognize what the Joint Center for Urban Environmental Studies and the Sierra Club already have recognized—that the environmental problems of the near future are the problems of the city. At that point the role of HUD becomes central. HUD's responsibility to the urban environment has only begun, but I think we have begun well.

I have not always worked at HUD, and I have not always lived in Washington. All of this is very new to me. Born in Cleveland—one of your bigger and better cities, if I do say so myself—I now think of myself as a New Yorker—in exile, as it happens—as someone who does not *want* to live in the suburbs. My idea of a really great living environment is Manhattan Island. But like the friend whom I quoted at the beginning of this talk, I too want to see the stars.

It will not be easy to manage from the 57th Street crosstown bus, but with the help of people like you, deeply involved in the urban environment, with the help of what the administration is planning, and with what we are doing at HUD, I think the residents of all cities can now have real hope. The stars are there; together we can see them.

THE FULL MARRIAGE ACT OF 1977

Mr. MUSKIE. Mr. President, Herbert Stein presented us a holiday treat which should not be overlooked in an eagerness to complete our work for 1977. I ask unanimous consent that his article in the December 6, 1977, edition of the Wall Street Journal be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FULL MARRIAGE ACT OF 1977

(By Herbert Stein)

A bill to translate into reality the right of all Americans able, willing and seeking to be married to full opportunity for a meaningful, nondead-end relationship; to assert the responsibility of the federal government to use all practicable programs and policies to promote meaningful relationships, and to clean up the American economic, social and political system in other respects.

This act may be cited as the "Full Marriage and Political Balancing Act of 1977."

GENERAL FINDINGS

Sec. 2 (a) The Congress finds that 7 percent of the persons in the United States over the age of 16 able, willing and seeking to be married are not married, and that the unmarriage rate is much higher for persons between the ages of 16 and 21. This high unmarriage rate imposes serious costs upon the nation, including the following:

(1) Many of the unmarried and all of their mothers suffer severe mental anguish;

(2) Some of the married suffer envy;

(3) Unmarriage contributes to unemployment, since unemployment rates are significantly higher among unmarried males than among married males of the same age;

(4) Unmarriage contributes to inflation, since two can live as easily as one;

(5) Unmarriage contributes to the balance of trade deficit, since unmarried persons have a high propensity to buy small foreign cars, drink foreign wine and attend foreign movies.

(b) The Congress further finds that the operation of the free market assisted only by aggregate fiscal and monetary policies is not adequate to reduce unmarriage. The rate of unmarriage has risen as the money supply and the federal deficit have risen.

(c) The Congress further finds that achievement of full marriage requires the establishment of goals by the President and the coordinated use of the powers of all agencies of the federal government, along with such private action as may from time to time be found helpful by the Secretary of Health, Education and Welfare.

TITLE I—GOALS AND GENERAL POLICIES

Sec. 101. (a) The Congress declares and establishes as a national goal the fulfillment of the right of all Americans able, willing and seeking to be married to full opportunities for a meaningful relationship.

(b) The Congress further declares that no provision of this act shall be used to exercise mandatory control over any private citizen except as may be necessary to extract taxes from such citizen to achieve the purposes of this act or as it may be necessary to use powers of the federal government previously authorized or hereafter authorized to achieve the purposes of the act.

Sec. 102. (a) The Congress declares and establishes as an interim goal the reduction of the unmarriage rate for Americans over the age of 16 to no more than 4 percent and for Americans over the age of 20 to no more than 3 percent both goals to be achieved by 1983.

(b) For the purposes of this act the terms marriage and unmarriage are defined to mean marriage and unmarriage as defined by the President of the United States.

Sec. 103. The Congress declares and establishes as a goal the equalization of unmarriage rates among the age, sex, and race categories of the population.

Sec. 104. The Congress declares that it doesn't have the foggiest idea of how to achieve the purposes of this act. Therefore, the President shall submit, within 90 days of its enactment and annually thereafter, the Annual Marriage Report of the President, setting forth:

(a) Current and foreseeable trends in births, deaths, marriages, divorces, engagements and disengagements, with an analysis of recent developments;

(b) Annual numerical goals for these variables and others affecting progress towards the interim goal stated in Section 102 (a);

(c) The specific programs and policies which the President deems necessary to achieve the goals.

Sec. 105. The President shall be assisted in the preparation of the Annual Marriage Report by a Council of Marriage Counsellors consisting of three members, one of whom the President shall designate as chairman. The three members shall be chosen to represent equally the division of the American population by age, sex, race, religion, marital status, educational attainment and geographic location.

TITLE II—STRUCTURAL REMEDIES FOR UNMARRIAGE

Sec. 201. The Congress declares that in fishing around for ways to reduce unmarriage no stone shall be left unturned.

Sec. 202. Within 180 days after enactment of this act, the President shall submit to the Congress a report evaluating the effects on the unmarriage rate of present legal restrictions on polygamy, with such recommendations as he or she considers appropriate.

Sec. 203. Within one year after the enactment of this act the President shall submit to the Congress a cost-benefit analysis of divorce by unilateral demand, including an estimate of the extent to which the resulting increase of marriages would exceed or fall short of the resulting increase in divorces, with such recommendations as he or she considers appropriate.

Sec. 204. Individuals or classes of individuals who consider their marriage opportunties to have been injured by the marriage of American citizens with foreigners may file a claim for relief with the International Trade Commission. If, after a hearing, the International Trade Commission finds that injury has been suffered, it shall submit a report with recommendations for corrective action to the President. Corrective action may consist of:

(a) Limitation of the entry of foreigners into the United States for the purpose of marriage;

(b) Limitation on the departure of Americans from the United States for the purpose of marriage; and/or

(c) Adjustment assistance in the form of a three-week, expense-paid trip for the injured party or parties to the foreign country of their choice.

(d) If the President chooses not to follow the recommendation of the International Trade Commission he shall submit a report to the Congress with an explanation of his decision.

TITLE III—SPOUSES OF LAST RESORT

Sec. 301. It is the purpose of this act to promote marriages in the following order of priority:

(a) Marriages made in heaven,

(b) Marriages arranged spontaneously and directly by the participants,

(c) Marriages arranged through the personals column of New York magazine, and

(d) Marriages arranged by mothers.

Sec. 302. Only if he or she finds that promotion of marriages of the kinds listed in Sec. 301 is inadequate to achieve the purpose of this act shall the President recommend to the Congress legislation authorizing the establishment of a reservoir of spouses of last resort. This proposed legislation shall include the following provisions:

(a) The reservoir shall include not less than 100,000 nor more than 200,000 eligible spouses of last resort. These eligible spouses of last resort shall be full-time employes of the federal government engaged for this purpose in accordance with Civil Service regulations and qualifying for compensation at the rate of a GS-9.

(b) Any unmarried American citizen over the age of 16 shall have the right to claim a spouse from the reservoir, subject to the limitation in Sec. 302(c). The Secretary of Health, Education and Welfare shall establish regulations to provide appropriate eligibility criteria to determine the order of priority of access of any person to the reservoir.

(c) No person who has rejected a bona fide offer of suitable marriage of the kinds listed in Section 301 shall have the right to claim a spouse from the reservoir within a period of 6 months following that rejection.

(d) Eligible spouses of last resort who have been claimed and married shall be removed from the reservoir but shall be promoted to grade GS-10 and remain employed at that grade for as long as the marriage arranged under this Title shall last.

(e) As the number of eligible spouses of last resort in the reservoir is depleted by marriage, resignation or death the reservoir shall be restored to its initial size by the recruiting of new employes.

TITLE IV—SEPARABILITY

Sec. 401. Whom Congress has put together, let no man put asunder.

Sec. 402. Amen.

FLOOD INSURANCE PROGRAM

Mr. PROXMIRE. Mr. President, I would like to submit for the RECORD, a copy of the decision rendered by Judge Aubrey E. Robinson, U.S. district judge, in the case of the National Flood Insurers Association versus Patricia Roberts Harris, Secretary, Department of Housing and Urban Development.

Judge Robinson ruled Dec. 9 on the challenge brought by the National Flood Insurers Association to HUD's proposed shift from a part A to a part B flood insurance program.

His decision clearly upholds Secretary Harris' action: "The crux of this lawsuit is whether the Secretary's determination to convert to a part B program comports with 42 U.S.C. The court is persuaded that it does."

Judge Robinson ordered judgment for Secretary Harris, and denied motions by the National Flood Insurers Association for a temporary restraining order or preliminary injunction, or a stay pending appeal.

Mr. President, I hope this decision will end the dispute that has threatened the effective operation of our national flood insurance program. We need a strong flood insurance program. I hope that HUD will now be able to get on with the job Congress has given it.

I ask unanimous consent to have printed in the RECORD the aforementioned decision.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

[Civil action No. 77-2028]

U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

NATIONAL FLOOD INSURERS ASSOCIATION, PLAINTIFF V. PATRICIA ROBERTS HARRIS, SECRETARY, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT, DEFENDANT

ORDER

In accordance with the Memorandum filed herewith, it is by the Court this 9th day of December, 1977,

Ordered, that the Motion of the Housing Research Group of the Center for Study of Responsive Law for Leave to File a Brief *Amicus Curiae* Opposing the Motion of the National Flood Insurers Association for a Temporary Restraining Order or Preliminary Injunction be and it is hereby GRANTED and the brief shall be filed herein; and it is

Further ordered, that Plaintiff's Motion for a Temporary Restraining Order or Preliminary Injunction be and it is hereby DENIED; and it is

Further ordered, that judgment shall be entered for Defendant herein; and it is

Further ordered, that Plaintiff's oral application for a stay pending appeal be and it is hereby DENIED.

AUBREY E. ROBINSON, Jr.,
U.S. District Judge.

[Civil Action 77-2028]

U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

NATIONAL FLOOD INSURERS ASSOCIATION, PLAINTIFF V. PATRICIA ROBERTS HARRIS, SECRETARY, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT, DEFENDANT

MEMORANDUM

This is an action for declaratory and injunctive relief in which plaintiff, a voluntary, unincorporated association of 132 private property insurance companies, challenges a proposed Government takeover of the private insurance aspects of the National Flood Insurance Program pursuant to the National Flood Insurance Act of 1968, 42 U.S.C. § 4001, *et seq.* The matter came before the Court for hearing on plaintiff's motion for a temporary restraining order or preliminary injunction. Given the nature and circumstances of the case, the Court deems it appropriate to consider plaintiff's application for both preliminary and final relief and to enter a ruling with respect thereto. For the reasons discussed below, the Court finds that there exists no basis for granting a preliminary or permanent injunction in this action and that the declaratory judgment sought is improper. The Court is persuaded that there are no genuine issues of material fact and that defendant is entitled to judgment as a matter of law.[1]

The National Flood Insurace Program (the "NFI Program") was established pursuant to the National Flood Insurance Act of 1968 (the "NFI Act"). Since June 6, 1969, plaintiff, the National Flood Insurance Association (NFIA"), has participated with the United States Department of Housing and Urban Development ("HUD") in a cooperative government-industry joint venture under part A of the NFI Act. 42 U.S.C. §§ 4051-4056, providing a national program of flood insurance coverage and sharing with HUD in the financial risk of flood insurance losses. NFIA is an incorporated joint underwriting association and under the 1969 contract, flood insurance policies are issued in the name of NFIA, marketed by NFIA, and serviced by NFIA, through agreements with independent local property agents, brokers and regional servicing companies. The insurance aspects of the flood program under NFIA's management have not been successful. The 1969 contract has been renewed anually since its inception. The present contract expires effective December 31, 1977.

In 1976, NFIA and HUD began to suffer disagreements concerning the administration of the NFI program. Specific problems involved the general authority of the Secretary of HUD to construe the terms of the Standard Flood Insurance Policy, HUD's prior control over NFIA operational expenses, the accuracy of the financial data NFIA was generating, NFIA's refusal to agree to competitive bidding on the service contracts it awarded, and the data processing services provided NFIA. Negotiations toward a new HUD-NFIA agreement began in October 1976 and continued for almost four months.[2] In April, 1977, HUD announced its intention to maintain the 1969 contract and to supplement the contract with regulations. HUD issued proposed regulations on June 9, 1977. NFIA took the position that the proposed regulations were invalid and on July 5, 1977, notified HUD that NFIA would not renew the 1969 contract for another term.[3]

In light of the impasse reached with NFIA, HUD issued on July 29, 1977, a Request for Proposals ("RFP") soliciting entities prepared to participate in the NFI program under either part A or part B of the NFI Act. At the same time, negotiations between NFIA and HUD continued. Negotiations broke down again on August 16, 1977, when NFIA rejected HUD's insistence upon prior approval of NFIA's operating expenses.

Aware of the inability of HUD and NFIA to agree on an extension of the 1969 contract, the House Subcommittee on Housing and Community Development of the Committee on Banking, Finance and Urban Affairs held hearings on the negotiations on September 7 and 8, 1977. Members of the subcommittee reiterated the Congressional preference for a part A program and their desire that HUD and NFIA reach an agreement. Negotiations between the parties resumed in late September, 1977.

In the meanwhile, three bid proposals to participate in the NFI program under a part B framework had been received by HUD in response to the FRP issued July 20, 1977. The best offer was determined to be Electronic Data Systems Federal Corporation ("EDS") and further negotiations were entered into between HUD and EDS. On September 23, 1977, the last day for submission of bids in connection with the RFP, NFIA tendered to HUD a proposed agreement indicating a willingness to continue as risk-bearer under a Part A program pursuant to the terms therein.

On October 19, 1977, HUD and NFIA reached tentative accord as to a number of the problems with respect to operation of the joint venture. This "agreement to agree" was written up but was, however, never signed by the parties.

On November 2, 1977, in light of the course of the negotiations with NFIA and of the projected cost savings contained in the EDS

Footnotes at end of article.

proposal, the Secretary of HUD determined that the operation of the NFI program would be materially assisted by the Federal Government's assumption of the operational responsibility for flood insurance. This determination was submitted to Congress in the form of a report.[4] The report indicates HUD's intention to contract in a part B framework with EDS, promises no diminution in the use of insurance agents and brokers and insurance adjustment organizations in the NFI program, and contains descriptions of EDS' functions which are essentially ministerial. In mid-November, the Chairman of the Senate and House Committees responsible for HUD expressed support for the Secretary's decision.[5]

Thirty days having passed since the report to Congress, and no adverse Congressional action having been taken, the Secretary may implement the proposed conversion to a part B program at any time. EDS' part B proposal expires on December 31, 1977. NFIA filed the instant lawsuit November 29, 1977, seeking to enjoin any action by HUD in connection with the proposed takeover.

Plaintiff's Complaint frames two general issues: whether the Secretary's decision to convert to a part B program satisfies the legal requirements of the NFI Act and whether the proposed contract with EDS is permissible under the terms of the Act. This Court approaches these issues from the standpoint of considering both preliminary and final relief.

With respect to preliminary relief, this Court is not persuaded that NFIA has met any of the standards articulated in *Virginia Petroleum Jobbers Association* v. *Federal Power Commission*, 259 F.2d 921, 925 (D.C. Cir. 1958). Leaving the merits aside, the Court finds no showing of irreparable injury on these facts. The loss which plaintiff confronts is not the sort of loss recognized as necessitating interim relief. See *Virginia Jobbers* at 925; *Sampson* v. *Murray*, 415 U.S. 61, 88 (1974). Further, the Court concludes that any harm to NFIA would be more than outweighed by the injury to the interests of the Government if an injunction is granted. Potential disruption to the NFI program would be intolerable. For the same reason, the public interest militates against any delay in the implementation of the proposed part B program.

With respect to the merits, this Court concludes that the actions of the Secretary have been within her authority under the NFI Act and do not amount to either an abuse of discretion or an error of law. The Court is mindful that its review in the present case is limited. *Citizens to Preserve Overton Park* v. *Volpe*, 401 U.S. 402 (1971). With respect to the report submitted by the Secretary to Congress per 42 U.S.C. § 4071, this Court will not evaluate the substance of that report or substitute its judgment for that of the Secretary or the Congress. See *National Association of Government Employees* v. *Schlesinger*, 397 F.Supp. 894 (E.D. Pa. 1975), *aff'd*, 523 F.2d 1051 (3d. Cir. 1975). The Court is satisfied that the contents of the report meet the requirements of § 4071 (b)(1)-(4). That is enough.

The crux of this lawsuit is whether the Secretary's determination to convert to a part B program comports with 42 U.S.C. § 4071(a). The Court is persuaded that it does. The Court is aware of the strong Congressional preference for a part A program. However, § 4071(a) allows the Secretary to convert from part A if the Secretary determines that operation of the flood insurance program as provided for in part A "cannot be carried out, or that such operation, in itself, would be assisted materially by the Federal Government's assumption" of operational responsibility.[6] While NFIA emphasizes the first clause of § 4071(a) and points to ostensible success of the NFI program under its management, what is crucial in this case is the second clause of § 4071(a) and the "materially assist" provision. On these facts this Court cannot say that the Secretary's determination that conversion to part B would materially assist the NFI program is clearly erroneous or without a rational basis. In light of the course of the negotiations between HUD and NFIA and the disagreements between the parties, and given the necessity of an operational NFI program, the Secretary's decision does not appear arbitrary or capricious. Nor is the Court persuaded that the Secretary applied an incorrect standard in reaching her determination. That determination appears supported on the record in this action and the legislative history of the NFI Act does not compel a different conclusion.[7]

Finally, this Court is not convinced that the proposed contract with EDS violates the terms of either 42 U.S.C. § 4071 or § 4082. HUD proposes to utilize only government employees or insurance entities with respect to the insurance aspects of the part B program and proposes to employ EDS in a ministerial capacity. The Court is satisfied with these representations and any challenge to the functions which EDS performs appears premature.

In conclusion, the Court determines that the Secretary has acted within her authority under the NFI Act and that her actions have a rational basis, are not based upon an impermissible and invalid interpretation of the statute, and are not clearly erroneous. Judgment for defendant is, therefore, in order.

One other issue remains. At hearing in this matter, counsel for plaintiff made oral application to the Court for a stay pending appeal in the event the Court was disposed to rule against plaintiff's position. Counsel for HUD opposed such a stay. The Court deems it proper to rule with respect to the oral motion and for the reasons indicated herein with respect to plaintiff's showing under *Virginia Jobbers*, the Court determines that a stay is inappropriate.

AUBREY F. ROBINSON, Jr.,
U.S. District Judge.

December 9, 1977.

FOOTNOTES

[1] This memorandum opinion shall constitute the Court's findings of fact and conclusions of law pursuant to Rule 52 of the Federal Rules of Civil Procedure.

[2] In January 1977, HUD and NFIA concluded a Tentative Draft Agreement, which was published in the Federal Register, and which resolved some of the issues in dispute between HUD and NFIA.

[3] At the same time, NFIA offered HUD a new agreement based upon the Tentative Agreement and indicated a readiness to continue negotiations.

[4] See 42 Fed. Reg. 58569.

[5] See Attachment O to affidavit of J. Robert Hunter, submitted as part of Defendant's papers in opposition to Plaintiff's motion.

[6] 42 U.S.C. § 4071 provides:

(a) If at any time, after consultation with representatives of the insurance industry, the Secretary determines that operation of the flood insurance program as provided for under part A cannot be carried out, or that such operation, in itself, would be assisted materially by the Federal Government's assumption, in whole or part, of the operational responsibility for flood insurance under this chapter (on a temporary or other basis) he shall promptly undertake any necessary arrangements to carry out the program of the flood insurance . . . through the facilities of the Federal Government, utilizing, for purposes of providing flood insurance coverage, either—

(1) insurance companies and other insurers, insurance agents and brokers, and insurance adjustment organizations, as fiscal agents of the United States.

(2) officers and employees of the Department of Housing and Urban Development and such other officers and employees of any executive agency . . . as the Secretary . . . may from time to time agree upon . . . or

(3) both . . .

(b) Upon making the determination referred to in subsection (a) of this section, and at least thirty (30) days prior to implementing the program of flood insurance . . . through the facilities of the Federal Government, the Secretary shall make a report to the Congress and such report shall—

(1) state the reasons for such determination,

(2) be supported by pertinent findings,

(3) indicate the extent to which it is anticipated that the insurance industry will be utilized in providing flood insurance coverage under the program, and

(4) contain such recommendations as the Secretary deems advisable.

[7] Despite the Congressional preference for a part A program, there is equally strong concern expressed in the legislative history for continuity in the provision of flood insurance. It is that concern which is behind § 4071's allowance for conversion to a part B program and this Court cannot say that the actions of the Secretary are in derogation of that concern.

TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. BAYH. Mr. President, it is with deep sadness that we mark the passing of a friend and colleague, John L. McClellan. His death is not only a great loss to the peope of Arkansas where he led a distinguished public service career of half a century, but the Congress and the Nation have lost a farsighted and able leader of high standards.

I have been one of the privileged few to serve with Senator McClellan on both the Senate Judiciary Committee and the Senate Appropriations Committee. It is from this unique vantage point that I gained insight into the dedication, integrity, and fairmindedness so characteristic of Senator McClellan.

His outstanding service on the Senate Judiciary Committee is marked with an impressive list of legislative accomplishments which include the Omnibus Crime Control Act of 1968, the Safe Streets Act of 1970, and most recently his relentless pursuit of a complete reform of the U.S. Criminal Code, which when enacted, will stand as a lasting tribute to Senator McClellan.

As chairman of the Senate Committee on Appropriations, Senator McClellan gave effective leadership for proper funding of the many important programs which touch the lives of virtually every American. At the same time he constantly sought to improve Government efficiency and eliminate wasteful spending. As chairman of the Appropriations Committee, he undoubtedly held one of the more difficult committee assignments, but it was here that Senator McClellan demonstrated his fair and equal treatment of all committee members, including those with views different from his.

I found his pursuits on both the Judiciary and Appropriations Committees were marked with unquestioned integrity along with diligence and determination. Further, this great elder statesman was always ready to provide advice and counsel to the new committee members.

So it is with great personal sadness and loss that I mark the passing of the great American and great leader of the Senate. His fellow citizens of the great State of Arkansas, who six times elected him to the U.S. Senate, have suffered a great loss, as has the Nation. While he will be greatly missed, the many personal deeds and legislative accomplishments will long foster the memory of John L. McClellan, truly a dedicated and deepy respected public servant. I extend my deepest sympathy to Mrs. McClellan and the other members of the family.

NOTICE OF A DETERMINATION BY THE SELECT COMMITTEE ON ETHICS UNDER RULE 43, PARAGRAPH 4 PERMITTING ACCEPTANCE OF A GIFT OF EDUCATIONAL TRAVEL FROM A FOREIGN ORGANIZATION

Mr. STEVENSON. Mr. President, it is required by paragraph 4 of rule 43 that I place in the CONGRESSIONAL RECORD this notice of Senate employees who propose to participate in a program, the principal objective of which is educational sponsored by a foreign government or a foreign educational or charitable organization involving travel to a foreign country paid for by that foreign government or organization.

The Select Committee on Ethics has received requests for a determination under rule 43 which would permit staff members to participate in a program cosponsored by a foreign educational organization, the Konrad Adenauer Foundation of the Federal Republic of Germany, and by the Center for Strategic and International Studies of Georgetown University, December 3–10, 1977.

The proposed itinerary includes: Departure from Washington, D.C., December 3 for Bonn, West Germany; travel from Bonn to West Berlin on December 8; and return to Washington, D.C., on December 10.

It has been determined that participation by the following Senate staff members in the program in West Germany, at the expense in part of the Konrad Adenauer Foundation, to discuss "National Security Policy and Decision Making," is in the interest of the Senate and the United States:

Jeff Record, Legislative Assistant for Military Affairs, to Senator Sam Nunn.

Dr. Charles A. Stevenson, Professional Staff Member for National Security Questions, to Senator Culver.

FROM THE ASHES—THE NATO SCOUT

Mr. GOLDWATER. Mr. President, a difficult issue that has faced the Department of Defense over the past few years has been that of planning for new weapons that can be used interchangeably by all of our NATO allies. Most agree that our collective military strength could be increased without increasing cost if we could standardize on equipment provided to the armed forces of the NATO partners.

Mr. Hyman Fine, who until his retirement a year ago was a professional staff member for the Research and Development Subcommittee, recently wrote an article that appeared in the October issue of the Armed Forces Journal.

Mr. Fine proposes developing a new Scout helicopter which could meet the requirements of both the U.S. Army and those of our NATO allies. I feel the ideas set forth by Mr. Fine merit consideration and they may be useful in getting the Army's Scout helicopter program off dead center.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE ASHES—THE NATO SCOUT

(By Hyman Fine)

It is a well known fact that the Army has not been able to sell the Congress on a new scout helicopter for the past six years, including fiscal year 1978. To learn what went wrong, and what can be done to set it right, let us examine the history of the program.

As counsel to the Research and Development Subcommittee of the Senate Committee on Armed Services, from 1970 through mid-1976, I wrestled almost every year with the justification submitted by the Army in support of a variety of scout helicopters. The Army did not improve the chance for approval by changing the basic system characteristics during these years. Even the name was changed from Aerial Scout to Advanced Scout Helicopter (ASH) and now Interim Scout Helicopter (ISH).

I believe that there is a need for a new scout helicopter, but that the way to sell it in the Pentagon and to Congress is not as a sophisticated and expensive weapon system. It can be sold as an affordable vehicle, with a minimum of equipment needed to perform its primary scout mission, without weapons, compatible with the performance of the Advanced Attack Helicopter (AAH) and the Utility Tactical Transport Helicopter (UTTAS), and built to meet a set of requirements established jointly by the United States and its NATO allies.

Before considering a plan for a NATO Scout, let us examine the history of the Army Scout Helicopter program to learn what lessons there are from the unsuccessful past. Perhaps the first time the Congress did the most thorough and constructive job of helping the Army properly organize its approach to a scout helicopter was during the fiscal year 1975 budget review.

Prior to that time, for FY 1974, the Army requested $1.0 million to support issuance of a Request for Proposal for an Aerial Scout late in the fiscal year. The Senate Armed Services Committee, sustained by the Congress, denied these funds as being premature.

The Army requested $6.0 million for FY 1975 to begin development of the Aerial Scout, as it was then called. The Army stated that a task force had been established to examine three possible approaches: (1) a modified version of an existing Army helicopter; (2) a military adaptation of a current U.S. or foreign airframe; (3) a completely new development. The potential candidates identified for the various alternatives were:

French Aerospatiale SA 341.
Gazelle.
Italian Agusta 109.
British Westland Lynx.
German MBB Bo—105.
Bell DH—222.
U.S. Army OH–58.
U.S. Army AH–1G.
U.S. Army OH—6A.

The Senate Armed Services Committee (Report No. 93–884, page 101), supported by the Senate and House, denied funds to begin development because the results of the task force study, the recommendations of the Army, and decision by the Department of Defense would not be made until the end of FY 1975. Therefore, no funds would be needed to start development until the Congress had reviewed the results of the study and considered the recommendations of the Department for FY 1976. The committee was open minded about the three alternatives but did point out that a completely new development would be the most costly and take the longest time to obtain.

The Army requested $10.7 million for FY 1976 and $8.8 million for the three month transition period. The Senate Armed Services Committee (Report No. 94–146, page 85) recommended deletion of all these funds except $0.7 million for FY 1976 and $0.2 million for FY 1977 to support in-house efforts. This was done because the Army "had not finally approved the characteristics of the new scout nor determined if a new development or an off-the-shelf helicopter will satisfy the requirement." Final actions of the Congress provided $3.5 million for FY 1976 and $6.5 million for FY 1977 which later were carried over to support the FY 1977 program for Target Acquisition and Designation System (TADS) and Pilot Night Vision System (PNVS) under the AAH program.

The budget for FY 1977 complicated the program even more than before. The request for $26.0 million, as originally proposed, was to initiate simultaneous development of the helicopter and install mission equipment comprising the ASH weapon system. The committee report stated that after the budget was submitted, the Army with Secretary of Defense approval, completely revised the program (this alone normally jeopardizes favorable Congressional consideration) to delay start of helicopter development until FY 1978. The full $26.0 million was to be used instead to begin development of only the mission equipment. This consisted of TADS and PNVS. The House Armed Services previously had deleted the entire $26.0 million because the program was completely up in the air at that time.

The Senate Armed Services Committee had worked closely with the Army to help establish the most effective way to pursue TADS development on a competitive basis, but to be done under the AAH program (Report No. 94–878, page 89). The Committee recommended, with Army concurrence, that $24.0 million for TADS development be deleted from the ASH program, with most of it being transferred to the AAH program to enable the AAH Program Manager to conduct the prototype competition. The TADS development was required to retain compatibility with ASH requirements. The remaining $2.0 million was left in the ASH program to support operation of the Army program office, including preparation of plans for an FY 1978 RFP.

The new Scout helicopter, previously identified as the Advanced Scout Helicopter or ASH, was not proposed for FY 1978. Instead, the Army requested $18.3 million for development of ISH, the Interim Scout Helicopter. In denying these funds, the House Armed Services Committee stated (Report No. 95–194, page 64) "The Army was directed in FY 1977 to formulate a definitized plan for the Advanced Scout helicopter. While the committee supported the requirement for the ASH, there was serious concern over the ambiguity that the Army demonstrated in definitizing the system. In the absence of TADS and PNVS, and an Army plan for the ASH, the committee believes that the proposal to equip an existing helicopter with an electro-optical system to provide an ISH capability is premature."

The Senate Armed Services Committee (Report No. 95–129, page 82) denied the proposed Interim Scout and directed that the $18.3 million be used to begin development of a fully capable ASH. Subsequently, the House and Senate conferees provided only $3.0 million which the Army advised was all it could practically use to start an ASH program in FY 1978. This would allow establishment of a program office and issuance of RFPs. This action turned out to be academic because the House Appropriations Committee, later sustained in conference with the Senate, denied all the funds as being premature.

To date, no acceptable program has been proposed and if there is a basic lesson to be learned, it is that the proposal must be sound and convincing enough to be acceptable to the Congress as well as to the Secretary of Defense. And the need grows more acute each year because the present scout helicopter fleet is old and growing older. The OH–6 and OH–58 helicopters will be unable to keep up with the speed and performance capabilities of the new UTTAS and AAH systems.

This brings me back to my proposal for a NATO Scout Helicopter. In this period of tightened Defense spending, with the FY 1979 budget exercise in the Pentagon taking on more than usual ominous tones, the possibility of a new program getting off the ground is doubtful. The chances for a new NATO ASH would be enhanced if one considers the following:

1. The President has strongly endorsed increased U.S. military commitments to NATO and has expressed his support of standardization and interoperability of military equipment.

2. Secretary of Defense Harold Brown, has echoed these views, and the FY 1979 budget is reported to include a major increase in the program to evaluate new foreign weapons for possible adoption by U.S. forces.

3. If the U.S. and its NATO allies can agree upon a common requirement for a scout helicopter, this would provide an important opportunity for a joint competitive development program leading to co-production by U.S. and Europe.

NATO Transatlantic teams consisting of airframe, engine, transmission and other subsystem manufacturers would participate in a competitive prototype development program.

Two Transatlantic teams would be selected by a NATO source selection board to design and build a number of prototypes which would be matched in a flight competition. The winning team would complete development and test of the helicopter. Co-production between U.S. and European companies would provide employment and work for all countries involved consistent with the quantities which each country would buy for its own forces. Creation of such NATO Transatlantic teams would be quite easy since there are at least three helicopter manufacturers on each side of the Atlantic who are highly experienced in this technology. Furthermore, this provides a rare opportunity because both European and U.S. technology is essentially equivalent so that technology transfer would not be an issue as it has been in other programs.

4. The NATO Scout Helicopter would be designed as an austere, low cost system with enough speed and agility to perform its mission in concert with the AAH, UTTAS and European helicopters of comparable performance capability. It would have only essential navigational and communications equipment needed for all weather operations, with provision for target location and designation equipment. It would contain no weapons or ordnance provisions although provision for space and weight could allow this as an option by individual countries.

5. The economical and operational benefits of standardization, and interoperability would be very substantial and should serve to overcome any significant difficulty encountered by the participants in agreeing upon a common set of performance requirements. Logistic requirements will be minimized and combat effectiveness will be greatly improved.

6. It will establish another important precedent for NATO cooperation, which is needed to demonstrate that there is no divisiveness within the Alliance.

I am convinced that this approach will work, and I urge the Army, the Department of Defense, the Congress, labor and the U.S. helicopter industry, as well as their European counterparts to give this proposal their most urgent and serious consideration. I understand that the Army has included a line item in the FY 1979 budget request for the ASH. These funds would be appropriate to initiate a NATO ASH program.

I have discussed this idea with friends at responsible levels of most of these U.S. organizations and with representatives of our NATO Allies. Their reactions are encouraging.

Clarence A. Robinson, Jr. European AWACS in the August 11 issue of Aviation Week and Space Technology, put his finger on the pulse of this major issue by quoting NATO officials who stated that "The U.S. has only a couple of years to demonstrate to the European nations that an exchange in technology, coproduction and licensing will work to everyone's benefit. Beyond that time, the walls will be up in Europe, and it will become very difficult."

Another opportunity like this may be a long time in coming or may not come at all.

THE JUSTICES SLAM THE DOOR

Mr. METZENBAUM. Mr. President, the November 12, 1977, issue of the Nation magazine carried a thought-provoking article on the rising barriers to citizens' access to the Federal courts. The article, entitled "The Justices Slam the Door," was written by Ralph Nader and Girardeau A. Spann. I consider it a thought-provoking article, and I ask unanimous consent that it be printed in the Record in its entirety.

There being no objection, the article was orderd to be printed in the Record, as follows:

The Justices Slam the Door

(By Ralph Nader and Girardeau A. Spann)

When Bill Richardson learned that the CIA was funded through a secret budgetary process whereby money appropriated for use by innocuous government agencies—perhaps the National Endowment for the Arts or the Civil Rights Commission—was in reality given to the CIA to finance covert operations, he recognized that this funding process violated the public accounting requirement of Article I, Section 9, Clause 7 of the Constitution. But when he tried to tell the Supreme Court about it, the Justices would not listen. They would not even give him his day in court. They said that no matter how blatant the CIA's alleged constitutional violation, Mr. Richardson was not the kind of person from whom they wanted to hear any complaints. Why? Bill Richardson was an ordinary citizen—a taxpayer. People of such little consequence are not permitted to present their constitutional grievances to the courts.

Ned Wolf fared no better. He chose TWA's "Getaway Tour" for his London vacation because its advertised discount price included hotel accommodations for fourteen days, but when Ned landed in London, his hotel turned out to be 350 miles away in Dumfries, Scotland. Although TWA's little deception violated a provision of the Federal Aviation Act, when Ned sued to recover some of the money he had paid, he too was thrown out of court. Citizens cannot sue to enforce that law, even if they are overcharged in violation of it.

Bill Richardson and Ned Wolf are just two of the many victims of the Burger Court's newest technique for implementing its political ideologies. Rather than ruling on the merits of controversial cases, and thus perhaps incurring criticism from the press and legal commentators, the Court now simply refuses to listen to them. The Burger majority employes an array of highly technical and little understood legal doctrines systematically to close the doors of the federal courts to citizens whose constitutional and civil rights are being violated by illegal government and private actions. Moreover, because it is so technical, this process has gone largely unnoticed by the general public. While many of the Court's substantive decisions continue to draw widespread condemnation, the damage done by its access rulings is far more serious. It is bad enough to tell citizens that their legal claims are without merit, but when they are told that their claims will not even be heard, the resulting frustration and distrust can burst the seams of our legal system, forcing recourse to dangerous, extralegal alternatives.

Remedial legislation is urgently needed, but the esoteric nature of access issues has made the task especially difficult. Because the offensive decisions do not purport to deny citizens of their rights, but speak only in terms of standing, or abstention, or other legal doctrines, it is difficult to generate and focus the public anger that would result if the true nature of the Court's rulings were apparent. Therefore, the well-orchestrated response of a sophisticated citizenry will be needed to reverse the Burger Court's regressive rulings. Citizens will have to learn the technical language that the Court is now speaking. The decisions that have been most obstructive to citizen access fall into five general categories, and corrective legislation is now needed in each of those areas.

The most graphic example of the Burger Court's constriction of access is provided by its decisions denying standing to citizen plaintiffs. Standing, a legal term for the right to present an issue to the courts, is granted only to plaintiffs who are injured in some way by the actions they challenge. In theory, injury is a prerequisite because it implies a stake in the outcome that is viewed as necessary to motivate adequate presentation of legal issues in the adversary context upon which our legal system so heavily depends. In reality, however, standing restrictions rarely serve a useful purpose because no plaintiff would undertake the expense and inconvenience of a lawsuit if he had nothing at stake. Until recently, therefore, standing was a little discussed requirement, but the Burger Court has now seized upon it as a device for ignoring the pleas of plaintiffs whom it does not wish to hear.

For example, in the 1975 case of Warth v. Seldin, the Court held that minority plaintiffs who were the victims of housing discrimination lacked standing to test the constitutionality of a restrictive zoning ordinance that kept them from living in a suburb of Rochester, N.Y. Thus the Court could deny those plaintiffs the protection of the Fourteenth Amendment without even considering the controversial constitutional issues related to restrictive zoning. Similarly, in Simon v. Eastern Kentucky Welfare Rights Organization (1976), the Court denied standing to indigent plaintiffs who were unable to afford the high costs of medical care, and who sought to enforce tax laws which would remove important tax benefits from hospitals that refused to give them free emergency care. It may seem obviously untenable to pretend that the plaintiffs in those cases did not have enough at stake for standing, but that is what the Burger Court held.

Bill Richardson's case, *United States* v. *Richardson* (1974), reveals an even more bizarre perversion of the doctrine. Mr. Richardson was denied standing to challenge the CIA's secret budget simply because his stake as a taxpayer was no larger than that of any other citizen. It follows, according to the rule announced in *Richardson*, that the more people who are injured by illegal government actions, the less likely it is that anyone will have standing to challenge those actions. As the Court frankly admitted, the constitutionally suspect funding process at issue in *Richardson* will now be allowed to continue because no other conceivable plaintiff will ever have a stronger claim to standing. The message is clear: the Supreme Court does not want certain social-change or politically controversial cases on the federal dockets; therefore it refuses to entertain them. This is an inexcusable abdication of judicial responsibility which Congress should not ignore.

Senators Kennedy and Metzenbaum, as of this writing, plan to introduce a bill that attempts to restore order to the realm of standing by prohibiting dismissal based upon that doctrine as long as the plaintiff is likely to benefit from a successful suit. The bill also specifically grants taxpayers standing to challenge illegal use of public funds or property, and it precludes dismissal based on the assumption that many citizens share an equal stake in the outcome of a suit. The bill does not create any new rights but it does allow citizens to invoke rights under existing laws. Rep. Herbert Harris (D., Va.) is preparing a similar bill for introduction in the House.

President Carter has condemned the abuse of standing requirements and endorsed broader citizen standing legislation, but Justice Department officials—who frequently use standing as a defense, even when the challenged government actions are of questionable legality—threaten to oppose the bills. If the President cannot rebuff this opposition, Congress should not hesitate to act over the Justice Department's resistance. Prompt enactment of remedial legislation is essential if we are to get the courts back into the business of preventing illegal conduct and protecting citizen rights.

The second problem area created by the Court's access decisions relates to class actions. Class-action lawsuits are the only practical method of redress for consumers who suffer small monetary or other injuries as a result of improper corporate activities. When a company overcharges millions of individuals a few dollars each, no single customer has the incentive to undertake an expensive lawsuit to recover damages. As a result, the company is able to retain enormous profits to which it is not entitled. The advantage of class actions is that they allow many small claims to be aggregated in one economically feasible lawsuit. However, a series of Supreme Court decisions has placed such severe restrictions on the maintenance of those suits that in most instances they are of little practical utility. Corporations therefore enjoy a virtual immunity from liability for their actions, provided that they are careful not to provoke a criminal prosecution.

The Supreme Court's decision in *Snyder* v. *Harris* (1969), and *Zahn* v. *International Paper Co.* (1973) eliminated class actions in areas where $10,000 or more must be at stake for federal jurisdiction to apply by requiring that each individual claim, rather than the aggregate amount, reach $10,000. This, of course, undermines the whole purpose of class actions, which is to allow compensation of small claims. Moreover, in *Eisen* v. *Carlisle and Jacquelin* (1974), the Court priced many of the remaining class actions out of existence by requiring plaintiffs to pay the postage, printing, advertising and other costs necessary to notify the class members of a pending suit before the class action might proceed. Since the plaintiff's claim in *Eisen* was for $70, he was understandably reluctant to advance the $225,000 necessary to notify the 2.25 million members in his class-action suit. The same problem will exist in nearly every other significant class action.

The need for remedial legislation in this area is obvious. The Federal Trade Commission Improvements Act, H.R. 3816 and S. 2188 would, if enacted, facilitate class actions seeking damages for violation of FTC trade regulations and consent orders. While that is a good starting point, what is really needed is comprehensive legislation that would both allow class members to aggregate claims in order to satisfy the $10,000 jurisdictional requirement and to let plaintiffs maintain class actions without first paying prohibitively high notice costs.

The third problem area relates to implied causes of action. Ned Wolf was not able to recover for TWA's deceptively advertised London tour plan because recent Supreme Court decisions have sharply cut back on the recognition of implied civil causes of action arising from the violation of criminal and administrative laws. Although TWA's actions violated a provision of the Federal Aviation Act, no cause of action was implied because that provision did not expressly authorize civil enforcement suits. Until recently, the trend had been toward expanded recognition of implied causes of action, even in the absence of express Congressional authorization, because implied causes of action not only allow victims of unlawful conduct to sue for compensation but also increase law enforcement and deterrence.

In 1975, the Supreme Court reversed this trend, however, when, in *Cort* v. *Ash*, it refused to allow a shareholder suit brought to compel corporate officers to repay the illegal campaign contributions that they made in violation of a criminal statute. That decision was especially unjustifiable because no conflict whatsoever existed with any federal regulatory scheme. Moreover, the benefits of supplemental private enforcement of campaign financing laws would have been substantial. It is time for Congress to respond by enacting legislation declaring that citizens have an implied civil cause of action against wrongdoers who injure them in violation of criminal or administrative laws or regulations, except in rare instances where implication of a private civil remedy would seriously interfere with some superseding federal policy.

The fourth area in which the Supreme Court's decisions have been particularly deplorable relates to the enforcement of individual constitutional rights under the Civil Rights Act of 1871. That law was enacted to provide citizens with a readily available federal forum in which to redress the deprivation of their constitutional rights by state officials. But as in the area of standing, the Court has refused on procedural grounds to adjudicate many important cases. This time, the technical doctrine employed has been abstention—a doctrine rooted in our notion of federalism which prohibits federal courts from deciding a case if its ruling would interfere with an ongoing criminal prosecution in some state court. However, the Supreme Court has extended the doctrine of abstention to noncriminal cases and has applied it even when a state proceeding is commenced after a federal suit has been filed. This means that if a theatre owner, for example asks a federal court to enjoin enforcement of an unconstitutional obscenity statute, or black ghetto dwellers sue to enjoin discriminatory arrests under an unconstitutional anti-loitering ordinance, state officials need only prosecute in state courts under the challenged statutes and the federal courts must step aside. With characteristic reverse logic, the Burger Court's decisions have created an incentive for state officials to enforce, rather than rewrite, unconstitutional state laws.

S. 35 and H.R. 4514 are bills that address these abuses by forbidding abstention unless a state *criminal* prosecution is commenced *before* the filing of a federal court suit. The bills also prohibit an abstention that is designed to allow state courts to rule on questions of state law before the federal courts rule on constitutional questions—another delaying technique on which the Supreme Court has relied in order to discourage recourse to federal courts.

The final access problem area is the inability of members of the public to receive compensation for their participation in government proceedings. In *Alyeska Pipeline Service Co.* v. *The Wilderness Society*, a 1975 case concerning construction of the Alaska pipeline, the Supreme Court held that the plaintiffs, who won an important environmental case benefiting the public at large, could not recover the attorneys' fees expended in that case. However, since the plaintiffs were doing a job that should have been done by a government agency, attorneys' fees should have been taxed to that agency, which was a defendant in the suit. The ultimate effect would have been to spread the costs among the citizens who benefited from the victory. The 94th Congress responded to *Alyeska* by enacting the Civil Rights Attorneys' Fees Act of 1976, providing for court-awarded attorneys' fees in some cases, but that Act solves only part of the problem. Additional legislation is still needed to help finance public participation in the administrative law process.

Inability to recover attorneys' fees in proceedings before administrative agencies has skewed the entire administrative process. Business concerns have enough at stake to foot high bills for lawyers, accountants and expert witnesses, but consumers are in a more difficult position. As in the class-action situation, a single consumer rarely has enough of a financial stake to warrant the expenditures necessary to insure that consumer interests are adequately presented to administrative agencies. Consequently, financial constraints limit access of consumers and citizens to the administrative process just as surely as restrictive standing decisions have limited their access to courts.

S. 270, sponsored by Senators Kennedy and Mathias, and H.R. 3361, sponsored by Representatives Koch and Rodino, attempt to remedy the inherent financial inequality existing between consumers and industry. Those bills allow agencies, in their discretion, to award to citizens reasonable costs of participation in agency proceedings in amounts that correspond to the degree of assistance that they provide the agency. The bills also allow citizens who substantially prevail to recover their costs in judicial review proceedings. These bills are essential to meaningful public participation in government decision making, but they are still bogged down in the Judiciary Committees of both House and Senate.

The country is witnessing the behavior of a Supreme Court majority that, not content merely to rule against citizens who assert individual and consumer rights, also insists upon keeping those citizens out of the judicial process altogether. If a sheriff stood at the courthouse door and forcibly prevented citizens from entering to present their grievances, the public outcry would generate page-one headlines. The Burger Court's restrictive decisions have accomplished the same thing many times over by denying citizens with meritorious claims their day in court. In pursuit of its ideological purposes, the present majority has shown a remarkable indifference to the traditional role that the judiciary has played in safeguarding the fundamental rights of those who have nowhere else to turn. The Court has also ignored its primary constitutional responsibility to protect those rights—a responsibility that should have been placed far above banal political considerations. In issuing its restrictive decisions, the Court has repeatedly challenged Congress to act if it disapproves of the trend toward limiting citizen involvement in the governmental process. If citizens are to continue jousting with public officials who often champion special interests rather than the public weal, Congress must provide them with lances to pierce the bolted courthouse doors.

READING IS FUNDAMENTAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Missouri (Mr. EAGLETON) and the article attached thereto.

The PRESIDING OFFICER. Without objections, it is so ordered.

STATEMENT BY SENATOR EAGLETON

In 1975, I authored an amendment to title VII of the Elementary and Secondary Education Amendments of 1974, authorizing federal funds to pay one-half the cost of inexpensive book distribution programs for children. The impetus for this legislation stemmed from the Reading Is FUNdamental Program, operated at the time with private support.

In my view, the success of these inexpensive book distribution programs is well worth noting. They have succeeded in stimulating an interest in reading beyond that simulated through the school curriculum. The ingredients leading to success appear to be self-selection of books and ownership of books. The latter has an added value in bringing books into the child's community and thereby involving parents. While increased reading motivation will clearly not solve the entire problem in our country, I believe it is a giant step forward. I commend to my colleagues the following article on the RIF program from the most recent issue of American Education.

The article ordered to be printed in the RECORD is as follows:

TO OWN A BOOK

(By Sam Zuckerman)

For Paul, an Illinois third grader just home from a day of school, the title book tucked between his math text and spiral notebook marked a milestone in his life. The book was not a hardcover volume that had been borrowed from the local library or a textbook to be used for an assignment. It was a paperback that Paul himself had selected to read and it was the first book he'd ever owned. Putting the book on his bed, Paul changed into old clothes so that he could join some neighborhood pals in a game of touch football. But, before he went outside, Paul did something he'd never done before: He read the first five pages of the paperback *just for the fun of it.*

Earlier that afternoon, Paul and his classmates had filed into the school library. They had been told ahead of time that the visit would be more than a browse through the shelves. Their teacher, Mrs. Davis, had spent time during their last three reading hours asking each child what books he or she owned. Three or four of the youngsters had even brought in books.

Once they were inside the library, the children noticed two tables laden with several hundred paperback books, spine sides up. Some titles were easily read from a distance: *The Charlie Brown Dictionary, Charlotte's Web, The Borrowers, Winnie the Pooh, Guinness Book of Records, Frederick Douglas Fights for Freedom,* and *Arrow Book of Sports Stories.*

Mrs. David told the group, "You can select one book from the tables to keep for your very own." "Any book?" a child asked. Mrs. Davis answered affirmatively and, in a matter of seconds, 28 pairs of hands began picking through the books. The youngsters examined the covers, leafed through the pages, and weighed the selection of one book against another. A few made on-the-spot choices and took them over to Mrs. Davis or the librarian, but the majority of the third graders patiently sampled among the heap and thoroughly checked out both tables before deciding which book to lay claim to. Like Paul, many of them had never before owned a book. Both Mrs. Davis and the librarian stayed well in the background, ready to answer questions but careful not to interfere with any decision-making.

Paul's classmate Anita, an avid viewer of the television program "Little House on the Prairie," finally chose a paperback based on that series. Pictures of the TV characters were on the cover. For Renee, a blossoming writer who had already written two stories, words held a special fascination. Not surprisingly, she selected *First Dictionary*, exclaiming, "Now I can find more words to make stories." Four other third graders huddled in a corner, proudly passing around their new books: *The Day Daddy Stayed Home, The Amazing Mumford from Sesame Street, The Little Brute Family,* and *The Hungry Thing.*

THE PLEASURE STRATEGY

Behind the giveaway atmosphere and the grab for books lies a sound educational strategy. Those piles of paperbacks on the two tables are really part of a reading-motivation program built upon the idea that, if a child is allowed to select and keep a book instead of just borrow it or have a narrow choice, reading can become a pleasure to be pursued independently.

For too long, the teaching of reading skills was thought to be mainly a matter of technique. The idea behind the thinking was clear enough: If only the right teaching methods were perfected, then Johnny should learn to read. Increasingly, however, reading professionals are recognizing that motivation is the linchpin of any successful instruction program, reading or otherwise. Even the most ingenious technique in the world will run smack into a wall if the student lacks incentive. Technique, then, is not all; there must be motivation on the part of the learner.

To make reading fun—that is, stimulating children to read not so much to please their teachers or fulfill an assignment but because they themselves find pleasure in it—becomes the foundation on which a reading motivation program is built. Somehow reading materials need to be provided for the children if they are to discover books as a source of pleasure. When this happens, the floodgates are opened wide.

In 1975, Congress recognized the value of this approach to reading with enactment of the Federal Inexpensive Book Distribution Program for Reading Motivation, appropriating $4 million for the program in 1976. The Inexpensive Book Program matches, dollar for dollar, money that has been raised locally to purchase books for school reading-motivation projects.

Last September the U.S. Office of Education contracted with Reading Is Fundamental, Inc. (RIF) to administer the program nationally. Previously, RIF had pioneered the technique of distributing inexpensive books to children to stimulate their enthusiasm for reading. Originally begun by Mrs. Robert S. McNamara in 1966 as a pilot program in Washington, D.C., RIF today encompasses hundreds of reading-motivation projects across the country. But, in taking on the administrator role in the Inexpensive Book Program, RIF is involved in a new kind of arrangement that will affect reading-motivation projects in hundreds of communities because, for the first time, large-scale federal funding is available to supplement local resources.

The arrangement means several things to educators and reading professionals. It represents the chance to add a motivation component to school reading programs. Public agencies and private nonprofit groups wishing to operate reading-motivation projects are now eligible to apply to RIF for federal funds to buy program books. This in turn offers schools substantial purchasing power should they want to establish a motivation program as a supplement to their reading curriculum.

The logistics behind the RIF program are relatively simple. Schools or school systems sponsor most of the RIF local projects in the Inexpensive Book Program. Because the program is flexible, the role played by schools or districts can range from direct administrative responsibility to cooperation with an independent group of community volunteers. If, for instance, a reading specialist on the school district staff is coordinating the local RIF project, then he or she often works with an organization of volunteers outside the school system. The volunteers, usually parents of children attending the schools, undertake the project planning and operations. In fact, many educators value reading-motivation programs precisely because they draw parents into the schools for a constructive purpose. Whatever the form of the local RIF project, the aim is clear; building links among reading, books, and pleasure.

HOW THE PROGRAM WORKS

RIF has identified seven key elements of a good reading-motivation program and made them standard for projects participating in the Inexpensive Book Distribution Program. Accordingly, RIF . . .

Gives books to children. The program's definitive feature is its distribution of low-cost books to children. This feature distinguishes a reading-motivation project from, say, the special children's activities of a public library. Past experience with motivation programs has convinced the RIF staff that pride of ownership is the catalyst that helps children discover that reading can be pleasure.

Permits the child to choose the book. If a youngster makes the choice, then the book will have a deeper personal meaning for its owner than a book assigned from school or loaned. What surprises many teachers who watch their students pick over the paperback piles is that most prefer to take their time and check out most every book.

Builds related activities around the distribution. The children select their books on what RIF calls "distribution day," but the day is really the climax of a continuous chain of motivational activities, before and after. Leading up to the day are activities that build up the children's sense of anticipation, and afterward they are encouraged to investigate their new possessions.

One elementary school in Georgia offered a prize to the class with the best ideas promoting book distribution. With that added incentive, the students pitched in and came up with posters, bookmarks, banners, cheers, songs, hats, flags, tee shirts, skits, and other ingenious devices. The day before book distribution, the whole school held an RIF rally, with cheerleaders and specially worded cheers. Later in the day, the sixth graders presented a play about RIF and another group led a songfest. On distribution day, a group of students dressed up as storybook characters and acted as hosts and hostesses.

Once the books have been selected, motivational activities tend to focus on special reading periods. In one junior high, the project director reports, the noise level is so low during these times that the ring of a telephone sounds like a fire alarm.

Involves parents in the project. Since a child's learning hinges a good bit on development of reading skills, parents have an intensely personal stake in encouraging their children to read. Parents are also the natural home-school link in any reading-motivation program. Moreover, when parents do become involved, they are more apt to encourage reading at home. Parent involvement, then, is a must in any RIF project.

Organizes a special committee to select books. Each reading-motivation project has its own committee to oversee the selection or ordering of program books. The committee, usually three or more people, should reflect the community and represent the interests of parents, librarians, teachers, school officials, and area residents. The more balanced the representation, the better chance to have books that appeal to the various tastes of the community's children.

Provides a wide variety of books. A youngster's chance to select a book is wasted unless there is a wide selection from which to choose. The books should span the whole range of elementary reading levels, from the easiest reader to those that challenge a youngster's mind. To give children genuine alternatives in subject matter and reading level, the Inexpensive Book Distribution Program requires that projects have on hand considerably more books than the number of children served by the program.

Provides a minimum number of books for each child. Giving a youngster one paperback to keep does not guarantee that he or she will discover reading for pleasure. Therefore, RIF projects must arrange for each child to attend several distribution days over the course of a school year, selecting a book each time. With three opportunities as a minimum and campaigns built around each, the odds for interesting a young person in reading, the RIF staff feels, are considerably increased.

IS MOTIVATION AN EFFECTIVE TOOL?

Motivation, an abstract quality, is difficult to identify and measure. How, then, can the effectiveness of a strategy like inexpensive book distribution be determined if motivation is its primary goal? Assessment of the RIF projects is based on a mixture of indirect quantitative measures such as use of public or school libraries and local commercial sales of children's books and of nonquantitative measures such as the observations of individuals participating in the program. Teachers, for instance, may report after a RIF distribution day that their students are doing more recreational reading.

RIF's 11 years of success with the free book distribution technique is in itself strong evidence that the method can motivate children to read. In 1972, evaluators of one RIF project—the Houston, Texas, Independent School District program supported in part by ESEA Title I funds—checked out that project's ability to meet three goals: stimulation of the children's interest in books, promotion of recreational reading, and encouragement of pride in book ownership. The evaluators sent survey forms to the project's children and parents and to teachers, curriculum coordinators, and principals of the involved schools. In many cases extensive personal interviews were conducted.

Among the findings, 65 percent of the program children surveyed said that they had bought books for their own personal pleasure after participating in the school's program. Further, 71 percent of the parents indicated that they had bought books for their children because of the youngsters' newfound interest in reading. All 13 curriculum coordinators surveyed said that children in their schools had noticeably increased their recreational reading.

These results are confirmed by what other RIF projects around the country have reported. One school administrator in Kentucky noted that his school district's project has turned "insecure, troublesome, unmotivated nonreaders into confident, enthusiastic, successful readers," progress that any reading teacher would envy. But, the administrator reports, the dividends have also been realized outside of reading classes. "School social workers, classroom teachers, principals, parents, speech therapists, and special-service staff members have seen changes in the children that can be traced back to the RIF project."

An educator in Texas has described RIF as "the only program that is addressed to the affective domain"—that is, the way a child feels about reading. In providing books written for all levels of reading ability and on multiple subjects, RIF is helping to make reading part of a child's lifestyle.

But, given these plus marks for the RIF program, it nonetheless is true that any motivation program has its limits, too. Motivation is an essential element of reading education, but it is no panacea. Reading difficulty is a complex social phenomenon, and its roots are a tangle of social, cultural, and psychological factors. Or to put it another way, lack of motivation may well be a cause of a child's reading problems, yet it is seldom the sole cause.

The school can offer resources like a motivation program to strengthen a youngster's skills. However, it should be understood that such resources can only supplement—not substitute for—quality education. The RIF inexpensive Book Distribution Program will not solve a community's larger problems. What it can do is supply an ingredient that is too often missing in the community's students: motivation to read. As in the case of Paul, a student needs to find out that reading is not only something that has to be done. It can be fun, too.

REVIEW OF LEGISLATIVE ACCOMPLISHMENTS OF THE SELECT COMMITTEE ON INDIAN AFFAIRS AND PLANS FOR 2D SESSION OF THE 95TH CONGRESS

Mr. ABOUREZK. Mr. President, in its deliberations on Senate Joint Resolution 4, the Senate, in its wisdom, recognized the need for a full, albeit a temporary, Select Committee on Indian Affairs. Thereafter, the Committee on Rules and Administration saw fit to provide the newly established Select Committee on Indian Affairs with sufficient funds to secure a highly trained staff experienced with the unique issues affecting Indian people.

Mr. President, as chairman of this committee, I would like to take this opportunity to share with my colleagues the major accomplishments of the Indian Affairs Committee during this 1st session of the 95th Congress and to emphasize that through the efforts of this committee, the Congress has made a start at fully meeting its responsibilities to the Indian people.

Let me begin by very briefly reviewing the justification for the establishment of a Committee on Indian Affairs and then discuss how the Select Committee on Indian Affairs has begun to address the needs which it identified.

Under the Legislative Reorganization Act of 1946, the House and Senate Committees on Indian Affairs which had been in existence since the early 1800's were abolished. Legislative and oversight jurisdiction over Indian matters were at that time vested in Subcommittees of the Committees on Public Lands in the House and Senate. Although several important pieces of legislation affecting Indians were enacted during the next 30 years, this subcommittee arrangement failed to provide a truly adequate forum of legislating appropriate solutions to problems affecting Indian people. Indian legislation could no longer be reported to the floor of the Senate directly from a full Indian Affairs Committee, and legislative jurisdiction over over Indian affairs was fragmented in a number of committees. In the Congress, there were more than 10 committees in all responsible for Indian affairs, a situation which resulted in a disjointed and haphazard treatment of Indian affairs.

While the need for consolidated legislative jursidiction and oversight responsibilities for Indian affairs in a separate committee represented sufficient justification for the establishment of a separate Committee on Indian Affairs, certain developments at the beginning of this year pointed to an immediate need for the legislative capacity to resolve significant Indian-related issues of national importance.

The American Indian Policy Review Commission (AIPRC) established pursuant to Public Law 93-580, submitted more than 100 legislative recommendations to the Congress in May of 1977. The AIPRC was specifically directed by the Congress to review the entire history of Federal-Indian relations as well as the present status of Indian affairs and formulate comprehensive recommendations designed to not only resolve conflicting and inconsistent Federal policies but also to point out a direction for the future. The Organic Act establishing of the American Indian Policy Review Commission required that the appropriate committees in the Senate and the House report to their respective bodies on each of these recommendations within 2 years.

In the first business meeting of the select committee, the committee staff was directed to analyze the legislative recommendations of the American Indian Policy Review Commission report and tentatively identify areas of priority which could form the committee's basic legislative program. In subsequent committee meetings, these areas of priority were fully discussed and agreed upon by the committee. Examples of such priority questions included: First, economic development and natural resources protection of Indian reservations; second, revision and recodification of title 25 of the United States Code; third, development of recognition standards and procedures for nonrecognized Indian tribes; and fourth, reorganization of the Federal administration of Indian affairs.

In addition, a growing number of specific legislative proposals in the area of Indian affairs were identified for early congressional action—these included the Indian Child Welfare Act (S.

1214), Indian Community Colleges Act (S. 1215), amendments to the Indian Self-Determination Act, and the requirements for an annual report on Federal Indian programs to be submitted by the Secretary of the Interior.

The Select Committee on Indian Affairs has also identified and acknowledged a responsibility for traditional or non-AIPRC related legislative and oversight needs in Indian affairs. These include a wide variety of issues addressing long overdue needs of individual tribes in such areas as water rights settlement legislation, petitions for restoration of previously terminated tribes, and fulfillment of longstanding U.S. commitments to transfer various lands in trust for a number of tribes.

Adding to the complexities in Indian affairs which the Congress must face and which the Indian Affairs Committee has begun to address is the resolution of Indian claims for land taken in violation of the Indian Trade and Intercourse Act in the late 1700's and early 1800's. Most widely known are the Passamaquoddy and Penobscot Indian claims in Maine. Similarly, the Catawba Tribe has asserted a claim in South Carolina, the Wampanoag in Massachusetts, Narragansett in Rhode Island, and the Oneida in New York. The committee is attempting to identify a reasoned and principled legislative approach to such situations. The interests and responsibilities of disparate groups must be considered in sensitive negotiations resolving these claims.

SPECIFIC LEGISLATIVE AND OVERSIGHT ACCOMPLISHMENTS

In the 1st session of the 95th Congress, the committee reported out 22 bills, all of which passed the Senate. A backlog of individual tribal legislation has been largely cleared up and several far-reaching legislative proposals implementing specific AIPRC recommendations have been enacted in the Senate. I have submitted with this statement a complete listing of all committee bills indicating their relative status.

I ask unanimous consent that it be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ABOUREZK. Mr. President, one example I would like to bring to your attention is the Indian Child Welfare Act. This bill establishes standards for the placement of Indian children in adoptive and foster homes and authorizes the establishment of family development centers on reservations. The standards included in the bill provide much needed protection for the rights of Indian children and should bring a halt to abusive practices of some State and private child agencies regarding the placement of Indian children in nonIndian institutions and homes. The Senate bill has been referred to the Interior and Insular Affairs Committee in the House where early action is indicated.

The Indian Community College Act which provides administrative operating support for Indian community colleges on approximately 20 reservations has also been favorably reported out of committee and passed by the Senate. Such support is absolutely necessary if these institutions are to continue to provide their reservation communities with extremely valuable higher-education services. This bill has been referred to the Education and Labor Committee in the House where a parallel proposal also awaits committee action. Again, indications are that the House Education and Labor Committee will place this proposal on its agenda early next year.

Oversight hearings regarding significant problems in the administration of Indian affairs have been held and the follow-up committee staff work has resulted in the preparation for introduction of a number of bills which will implement still other priority Policy Review Commission recommendations. The need for this legislation was extensively documented in the AIPRC final report and, again, through hearings conducted by the Select Committee.

I am today introducing a number of such legislative proposals, including: First amendments to Public Law 93-638, Indian Self-Determination Act—these amendments would implement a new and much needed provision in this law which was intended to bring about a transfer of control over the Bureau of Indian Affairs and Indian Health Service services from the Federal Government to Indian tribes. The amendments authorize and direct the Secretary's of Interior and HEW to award a consolidated single grant to each tribe which submits a comprehensive plan for the administration of some or all contractable BIA and IHS services. This single grant mechanism will eliminate the need for individual contracts which, under existing law, tribes are required to enter into for each individual service they desire to administer. Excessive paper work, red tape, and other contract procedures will no longer be necessary. Further, each tribe will be entitled to administer the single consolidated grant with much more flexibility and to design a tribal plan to actually address the needs on each reservation rather than follow the dictates of Federal contracting officials. Finally, the amendments include technical clarifications needed in the law.

Second. A legislative requirement that the Secretary of Interior submit to the Congress an annual report evaluating and documenting the total range of Federal services presently being provided to Indian tribes has also been introduced. For the first time Congress, the public, Indian tribes, and even the executive branches will have available not only information on what the Federal Government is actually doing in the area of Indian affairs, but also an estimate of the tribal needs for such services. The law will require the Secretary to estimate tribal needs in categories such as road construction, housing, natural resource inventories, et creta, and, in parallel column in the annual report, indicate the level of Federal services presently being provided to meet these needs.

Third. Legislation designed to give policy guidance and direction to the Secretary of the Interior regarding the issue of so-called nonrecognized Indian tribes. The Federal Government has been guilty of serious neglect in responding to petitions of tribal groups seeking an acknowledgment of their status as legitimate successors in interest of Indian tribes who have never been brought into the Federal-Indian relationship. The AIPRC established that in most instances the absence of the Federal determination of tribal status has been due to typical bureaucratic procrastination rather than responsible evaluation or legal judgment. However, this policy, of neglect has magnified administration problems leading to conflicting treatment of such groups by the different Federal agencies. The legislative proposal I am introducing sets forth clear guidelines by which an administrative determination of tribal status can be made and directs the Secretary of Interior to take action within set timetables.

Parallel legislation authorizing and directing the Secretary of Interior to act on petitions from tribal groups who were subjected to the termination of their trust relationship is now being prepared for introduction early next year. As a matter of record, the Congress has repudiated the termination policies of the past and specifically restored the Federal relationship of the Menominee Tribe of Wisconsin and, most recently, the Siletz Tribe of Oregon. General legislation authorizing restoral of tribal status under the law to these few tribal groups who have survived will eliminate the need for costly individual legislative efforts on their part.

Fourth. Finally, I am introducing a Senate Joint Resolution directed at clarifying Federal policy relative to the religious rights of Indian traditional groups. Representatives of traditional Indian religious societies have sought to protect their rights, to have access to sacred religious sites, to make use of a variety of natural substances and wildlife in the practice of their religion and to secure privacy for sacred ceremonials. Infringement of these rights have consistently occurred due to enforcement of conservation laws which simply failed to take into account their impact on such Indian religious and cultural practices. While our resolution does not attempt to specifically amend existing legislation, it does call for examination of relevant Federal laws and procedures for the purposes of making appropriate changes in their administration. This fundamental question of Federal policy represents an issue all Americans can readily understand and support. I hope that expeditious action on the resolution will lead to securing the exercise of those rights on the part of all Federal officials.

Although specific legislative proposals are still in the preparation phase, the necessary research and drafting is well underway on the Federal Indian law, title 25, United States Code, recodification and revision project which the committee has undertaken as a priority recommendation of the AIPRC. Several chapters are available in draft form and comments from the public and executive department agencies regarding these draft chapters will be solicited. A comprehensive recodification bill is the objective of the committee and estimates are that such a bill will be available in early summer.

Indian tribal participation in the Federal domestic assistance program system has also been identified as a priority matter. The AIPRC report extensively documents the variety of obstacles which now exist for tribes who seek assistance under these programs which are designed to support local units of government in the delivery of basic services. Committee oversight hearings have made it clear that a combination of legislative approaches must be devised to address divergent statutory and regulatory obstacles to full tribal participation in the total range of these local governmental assistance programs. We anticipate that continued staff research should result in legislatively clarifying tribal program eligibility status and establishment of a coordinating administrative mechanism early this coming year.

Finally, the committee is also considering a legislative proposal designed to address certain legal obstacles to tribes and States interested in entering into compact or intergovernmental agreements. The AIPRC recommended that legislation which would attempt to define or change the jurisdictional relationship between the tribes and States or counties would be inequitable, and unworkable. As documented in the AIPRC report, past attempts by the Congress to legislatively resolve such questions have proved their ineffectiveness. The great variety in the administrative and logistical capacities of Indian tribes and the differences in existing relationships which they now have with local governments are such that no single blanket legislation could ever adequately resolve existing jurisdictional problems nor fairly distribute the assignment of local governmental responsibility.

For these reasons, the AIPRC recommended that no such blanket legislative proposals be adopted but that the responsible solution to resolving such jurisdictional disputes between Indian tribes and local units of government would be in the direction of compacts or intergovernmental agreements which could be tailored to the situation or the status of each tribe. Such compacts could be freely modified by either tribe or State if a change circumstances called for it.

Additional research by committee staff has identified existing Federal statutes which call into question the authority for such compacts to the extent that they may require a transfer of jurisdiction from the tribes to the States or vice versa, in some subject areas. For example, if tribes and States should agree to share responsibility over the commitment of mental patients to State institutions, Federal law would pose an obstacle toward any such sharing of jurisdictional responsibilities. To cure this obstacle, the legislative proposal being considered by the committee would simply provide general authority for such compacts notwithstanding any conflicting provision of Federal law or self-limitation to jurisdiction over Indian matters found in State enabling acts. This authority would be coupled with a provision making available Federal support to States and tribes as needed to meet the governmental responsibilities addressed in such compacts. In most cases, the potential for local revenue raising efforts to pay for Government services provided on Indian reservations is limited. Since Indian matters are first of all a Federal responsibility, it is appropriate that Federal support be made available for such services.

Taken together, these legislative proposals to implement major recommendations of the AIPRC report constitute a very considerable achievement. All represent needed revisions and updating of Federal law and policy as called for by the AIPRC. We are confident that these legislative proposals after they have been refined sufficiently through the committee process and modified in response to public testimony will be readily adopted by the Senate.

Mr. President, as chairman of the Select Committee on Indian Affairs, formerly Chairman of the American Indian Policy Review Commission and chairman of the Indian Affairs Subcommittee during the 93d and 94th Congresses, I believe I have acquired more than a passing familiarity with questions of Federal Indian policy.

I can sympathize with those who may find themselves confused over Indian affairs issues. Many of the legal and policy questions in this field are complex, requiring considerable knowledge and experience to understand and place them in proper perspective.

Yet, lack of coherent policy based on a knowledgeable and balanced perspective has resulted in the past in the adoption by Congress of proposed solutions which have proved to be unwise, inequitable, and, literally, unworkable. In some instances, such as the allotment and termination legislative areas, attempts by Congress to simplistically resolve Indian issues have only compounded the problem.

As you can see from the above survey of the select committee's activities during the past year, we are on the brink of bringing to resolution some very fundamental issues which go to the heart of our Government's responsibilities in Indian affairs. Nearly all of these legislative proposals represent initiatives which are the result of years of effort by the Congress and the Indians themselves. Although the legal and policy propoals are sometimes themselves complex, I am convinced that they are all well thought out, balanced, and most importantly, form a fair, consistent, and workable policy framework.

Mr. President, for the benefit of our colleagues who may still find Indian affairs a confusing field, let me emphasize that there is a single comprehensive and easily understood policy at work here. I refer to the policy of self-determination which incorporates the goal of economic self-sufficiency for Indian tribes. This is a policy and objective wholeheartedly shared by every Indian tribe in this country and has been officially adopted by the last three Congresses.

Simply stated, the policy of self-determination stands for the right of Indian people to choose for themselves, free of Government domination and paternalism, the direction which they will take. Government support for this policy entails support of those means which will best assist Indian tribes in achieving economic self-sufficiency which in turn is the only practical way of moving away from total dependence on the Federal Government.

I submit, Mr. President, that taken singularly or together, the legal and policy initiatives identified by this committee are premised on the policy of self-determination. This legislative program which the committee has adopted works toward the objective of Indian self-sufficiency. Further, this is an objective which, when combined with a balanced and evenhanded legislative policy, is deserving of total bipartisan support in the Congress.

Mr. President, the creation of a temporary Select Committee on Indian Affairs under Senate Joint Resolution 4 represented a major step forward in the Senate's approach to Indian affairs. By this move, the Senate has provided an adequate forum for legislating appropriate solutions to problems affecting Indian people. I believe that through its efforts, the Select Committee on Indian Affairs has thus far enabled the Congress to begin living up to its responsibility to protect the legal status of Indian people and to preserve and enhance their rights and assets. It is my hope that the Senate will see fit to continue viewing the Select Committee on Indian Affairs as an appropriate vehicle for meeting this congressional responsibility.

EXHIBIT 1

LEGISLATIVE ACTIVITY IN THE 1ST SESSION, 95TH CONGRESS

During the 1st session 50 bills, 2 Senate joint resolutions, 2 Senate resolutions, 4 House bills and 1 House joint resolution were referred for consideration to the Select Committee.

MEASURES ENACTED INTO LAW

Public Law 95–5 (S.J. Res. 10): To extend the period of time in which the American Indian Policy Review Commission must submit its final report and to increase the authorization of appropriations for such Commission.

Public Law 95–64 (H.J. Res. 239): To amend the statute of limitations provisions in sec. 2415 of title 28, United States Code, relating to claims by the United States on behalf of Indians.

Public Law 95–68 (H.R. 4992): To amend the Indian Financing Act of 1974 by revising the appropriations authorization for the Indian business development program.

Public Law 95–69 (H.R. 4585): An act to authorize appropriations for the Indian Claims Commission for fiscal year 1978; to facilitate the transfer of cases from the Indian Claims Commission to the United States Court of Claims; and for other purposes.

Public Law 95–103 (S. 1377): To extend the time for commencing actions on behalf of an Indian tribe, band, or group.

Public Law 95–133 (S. 667): To declare certain federally owned land held in trust by the United States for the Te-Moak Bands of Western Shoshone Indians.

Public Law 95–191 (H.R. 6348): A bill to convey to the Ely Indian Colony the beneficial interest in certain Federal land.

Public Law 95–195 (S. 1560): To restore the Confederated Tribes of Siletz Indians of Oregon as a federally recognized sovereign Indian tribe, to restore to the Confederated Tribes of Siletz Indians of Oregon and its members those Federal services and benefits furnished to federally recognized American Indian tribes and their members, and for other purposes.

MEASURES ACTIVELY CONSIDERED

S. 482, Mr. Domenici and Mr. Schmitt: Directing the Secretary of the Interior to acquire for the Zuni Tribe the Zuni Salt Lake; allowing Tribe to have an aboriginal land claim heard by the Court of Claims; and authorizing Tribe to purchase and exchange lands in New Mexico and Arizona.

Passed the Senate on May 3; the House Subcommittee on Indian Affairs and Public Lands has approved for full Committee action.

S. 660, Mr. Bartlett and Mr. Bellmon: Authorizing the Secretary of the Interior to negotiate agreements with the Cherokee, Choctaw and Chickasaw Nations of Oklahoma regarding their interests in the Arkansas Riverbed.

Passed the Senate on June 30; the House Interior Committee in markup session on November 30 voted to recommit the measure to Subcommittee.

S. 661, Mr. Bartlett and Mr. Bellmon: Reinstating the Modoc, Wyandotte, Peoria, and Ottawa Tribes of Oklahoma to Federal recognition and supervision.

Passed the Senate on November 3; hearings have been conducted before the House Subcommittee on Indian Affairs and Public Lands.

S. 773, Mr. Bartlett: Authorizing the Wichita Tribe of Oklahoma to have an aboriginal land claim heard by the Indian Claims Commission.

Passed the Senate on May 5; House Interior Committee has reported a companion measure in the House.

S. 785, Mr. Cannon and Mr. Laxalt: Declaring that certain lands owned by the United States be held in trust for the Paiute and Shoshone Indians of the Fallon Indian Reservation; providing for transfer of certain existing water rights and providing for the development of an irrigation system.

Passed the Senate on October 17; no action yet in the House.

S. 838, Mr. Abourezk: Authorizing the Court of Claims to reconsider the case of the taking of the Black Hills of the Great Sioux Reservation by waiving the defense of res judicata.

Passed the Senate on May 3; House Interior Committee has reported a companion bill to the House.

S. 947, Mr. Bartlett: Transferring five acres of Federally owned land to the Creek Nation of Oklahoma.

Passed the Senate on June 9; no action yet in the House.

S. 1214, Mr. Abourezk, Mr. McGovern, Mr. Humphrey, Mr. Haskell, Mr. Burdick: Establishing standards to govern the placement of Indian children or adoptive care settings.

Passed the Senate on November 4; no action yet in the House.

S. 1215, Mr. Abourezk, Mr. Burdick, Mr. Gravel, Mr. DeConcini, Mr. Jackson, Mr. Goldwater, and Mr. Domenici: Authorizing basic operating grants to tribally controlled community colleges; authorizing construction funds for the Navajo Community College.

Passed the Senate on November 4; the Advisory Study Group on Indian Education of the House Committee on Education and Labor has conducted hearings on a companion bill.

S. 1291, Mr. Bartlett: Transferring 107 acres of Federally owned land in Oklahoma to the Cheyenne-Arapaho Tribes of Oklahoma.

Passed the Senate on June 9; no action yet in the House.

S. 1509, Mr. Domenici and Mr. Schmitt: Providing for the return to the United States of 11.6 acres of land presently owned by the Indian Pueblos of New Mexico to be held in trust for them by the United States.

Passed the Senate August 5; the House Interior Committee has ordered the measure favorably reported to the House.

S. 1582, Mr. DeConcini and Mr. Goldwater: Making available a temporary water supply for the Ak-Chin Indian Community in Arizona until a permanent supply can be delivered.

Passed the Senate October 11; the House Interior Committee has ordered the measure favorably reported to the House.

H.R. 2719, Mr. Lujan: Authorizing the Secretary of the Interior to contract with the Middle Rio Grande Conservancy District of New Mexico to pay operation and maintenance charges on certain Pueblo Indian lands.

Passed the Senate, amended, on November 3; returned to the House.

AUTHORIZATION FOR DEPARTMENT OF COMMERCE TO RETAIN TITLE TO AND JURISDICTION OVER A CERTAIN TRACT OF LAND

Mr. HASKELL. Mr. President, I am introducing legislation authorizing the Department of Commerce to retain title to a tract of land near the National Bureau of Standards in Boulder, Colo.

The citizens of Boulder raised $63,000 to purchase this undeveloped acreage. It was then transferred to the Federal Government with the understanding and hope that it would be protected in its natural state.

The General Services Administration has now declared the land excess, and intends to offer this open space for sale to private commercial interests. Presumably there could be industrial development on the site.

Mr. President, I think that it is very important the conditions accompanying the gift of this land be honored. To do otherwise would spoil a beautiful natural setting contrary to the present wishes of the city officials and many people in the Boulder area.

I ask unanimous consent that the text of the bill be printed in the Record at this point and that the bill be jointly referred to the Committee on Commerce and Committee on Energy.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the bill was ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any other provision of law, title to and jurisdiction over the following described tract of land at the National Bureau of Standards site at Boulder, Colorado, shall be transferred to, or retained by, as the case may be, the Department of Commerce until such time as Congress shall, by law, otherwise provide:

All that portion of the NW¼ of the SW¼ and that portion of the SW¼ of the NW¼ of section 5, township 1 south, range 70W of the 6th PM line westerly of Broadway. The N½ of SW¼ and the N½ of SE¼ and all that portion of the SE¼ of the NE¼, of section 6, township is, range 70W of the 6th PM, line westerly of broadway, except all that portion of the N½ of the SW¼ line within Koehler Reservoir as described in book 982, page 492.

THE PROPOSED COMPREHENSIVE TEST BAN WILL NOT BE RATIFIED

Mr. McCLURE. Mr. President, at present, the U.S. negotiating team is hard at work in Geneva seeking to negotiate a ban on the testing of all nuclear weapons. The objective is to achieve a treaty providing for a Comprehensive Test Ban (CTB). Regretably, I have learned that the United States is being ill-served by our current negotiating posture. Indeed, should our negotiators be successful in achieving a treaty in the context of our current negotiating guidelines, they will have succeeded in making the world far more dangerous for the United States.

Although the details of our negotiating posture are of a complex technical character, the fundamental flaw in our negotiating posture is simple. The U.S. negotiating posture will unequally limit verifiable underground nuclear tests. That is, the limits of verification on underground nuclear tests by any of the means which have been proposed will make it possible for the Soviet Union to continue to conduct a nuclear test program up to militarily significant levels of explosive yield without a significant chance of detection. The Congress would not support a clandestine nuclear test program in violation of a treaty, so the United States would be enjoined from further testing. Unless the content of a future agreement is changed to correct this compelling inequality, I am confident that such a treaty will be vigorously opposed, and ultimately defaulted in the Senate.

A recent essay has been published in the fall, 1977 issue of Strategic Review by one of the Nation's leading experts on nuclear weapons, Donald R. Westervelt. This thoughtful and informative essay explicates the fundamental problems of a CTB, and provides useful guidance to the Congress on this complex subject. I ask unanimous consent that the text of Dr. Westervelt's essay be printed in the Record.

There being no objection, the essay was ordered to be printed in the Record, as follows:

Candor, Compromise, and the Comprehensive Test Ban

(By Donald R. Westervelt)

IN BRIEF

(The United States and its allies rely on a stockpile of thermonuclear weapons for their security. High confidence in that stockpile results from a strong technology base, which in turn depends on a continued research, development and test program. An important assumption underlying the U.S. commitment to a Comprehensive Test Ban (CTB) has been that the CTB would affect stockpile confidence equally in East and West, and therefore not affect the strategic balance. This assumption is false. In the Soviet Union the necessary technology base can be maintained and stockpile problems corrected by testing at yields so low as to be unobservable. Under a CTB, similar tests would not be carried out by the United States, and our technology base and stockpile confidence would erode while those of the USSR would not. If further limitations on testing are desired by the Carter Administration, it should seek a compromise short of a CTB. It should not restrict testing in the United States to levels below those that must be presumed available to the Soviet Union in its closed society, taking into account the best estimates of the U.S. verification capability. Prohibitive activities should be defined in terms of externally observable phenomena. A compromise of this kind would at least partially accommodate the security problems peculiar to nuclear weapons states. It would also lead to an equitable sharing of risks and benefits among all states—nuclear and non-nuclear, parties and non-parties alike.)

In a speech in May 1976, Jimmy Carter proposed that "The United States and the Soviet Union should conclude an agreement prohibiting all nuclear explosions for a period of five years whether they be weapons tests or so-called 'peaceful' nuclear explosions, and encourage all other countries to join." He went on to describe the (as yet unratified) 150-kiloton threshold test ban treaty (TTBT) as "a wholly inadequate step beyond the limited test ban."

On the question of verification, Mr. Carter asserted that "Our national verification capabilities in the last twenty years have advanced to the point where we no longer have to rely on on-site inspection to distinguish between earthquakes and even very small weapons tests." "Very small" was not defined further, but the apparent implication was that no tests the Soviets might conduct under the proposed Comprehensive Test Ban (CTB) could significantly and adversely affect U.S. national security. Within days of his inauguration as President, Mr. Carter announced that he intended to work immediately toward a CTB, and he initiated an interagency study to that end.

President Carter's principal arms control negotiator, Paul C. Warnke, is publicly committed to verifiability as a sine qua non of any arms control agreement. Presumably Mr. Warnke is equally committed to the President's desire to see an end to nuclear testing. But close examination shows that commitments to verifiability and, simultaneously, to a CTB are irreconcilable; compromise thus cannot be avoided. What follows is an explanation of why some continued testing—even if it is severely limited—is essential to the security of any nuclear weapons state, and why the minimum essential testing can be continued by the Soviet Union under any kind of test-ban agreement, but not by the United States unless such tests are specifically exempted from prohibition. It is also suggested how the United States might proceed if limits on testing and preservation of national security are judged to be equally valid goals.

THE CTB AS A NATIONAL OBJECTIVE

The goal of a Comprehensive Test Ban has been an *idée fixe* at home and abroad for roughly two decades. So it remains, although the main alleged benefit from such an agreement has changed, present emphasis being on nonproliferation. Any compromise of the goal of a CTB, in the eyes of those who believe in its linkage to nonproliferation objectives, will naturally be deemed to prejudice those objectives.

A value judgment is involved: It has become fashionable to attach such overriding importance to the problem of nuclear weapons proliferation that any action having even a hypothetical link to its solution is considered by many to be desirable, no matter what its cost in other areas. Such costs have often been unrecognized initially; when they have been articulated later, policy has responded and concessions have—reluctantly—been made.

The CTB is a case in point. The costs to the United States of a CTB have not been fully disclosed. More importantly, it has not been explained that there are technical and political factors operating that will effectively exempt the Soviet Union from those costs, and that this must eventually lead to greatly diminished security in the West. Nor has it been made clear that this asymmetry can be substantially alleviated by altering the declared U.S. policy, and adhering in negotiations to a suitably revised policy.

Dr. Michael M. May[1] and Dr. John C. Hopkins[2] have argued persuasively that a CTB is not in the interest of the United States, even if it is perfectly verifiable; their arguments rest largely on the inevitable decline of U.S. nuclear weapons technology under a CTB and the resulting reduction in confidence in our deterrent forces. Dr. May points out that—

> For the foreseeable future, our relationship with the Soviet Union will involve a mixture of cooperation and deterrence. We must in particular continue to rely on nuclear forces. . . . We may not like this, but short of a verified complete nuclear disarmament we have no choice.[3]

He continues:

> A complete nuclear test ban will not help in that situation . . . its consequence would be to introduce some unmeasurable uncertainty in our deterrent ability without in any reliable way lessening the threat that either side poses to the other. This hardly seems a wise kind of arms control.[4]

CTB advocates tend to discount this argument. A typical statement is the following:

> Any diminution of confidence in the reliability of a nuclear stockpile should operate with comparable effect on all nuclear powers that are parties to the Treaty, and hence a CTB could be a stabilizing factor which would actually enhance the existing state of mutual deterrence.[5]

The allegation of symmetry in effects on stockpile confidence is an essential element of much CTB advocacy, yet it is demonstrably false for reasons that have heretofore not been adequately explained. Since this allegation is false, the remainder of the quoted statement, which is seldom the subject of further analysis (and none is attempted here) is merely a non-sequitur. A CTB at this time would not, in fact, be a stabilizing factor. It would not enhance mutual deterrence; rather it would lead inevitably to a bias in favor of the Soviet Union that the United States could most likely not overcome. In the words of Dr. Harold Agnew,

> Unless really meaningful reductions are agreed to by the U.S.S.R. both in nuclear delivery systems and in conventional forces, I would oppose any further restrictions on nuclear testing. . . . to me a limit on testing without a real SALT and MBFR agreement would eventually be disastrous for the free world.[6]

Why then has a CTB so long survived as a declared national objective of the United States? Why has momentum toward this objective increased under the Carter Administration when MBFR is reportedly in limbo, SALT is facing impediments, and massive nuclear missile as well as conventioned weapons deployments are under way in the Soviet Union? President Carter, in his September 29, 1977 news conference, said: "I recognize that progress on SALT leads to further progress on a comprehenive test ban . . ."; this statement, like Agnew's, suggests that test restrictions and the regulation of arms are interdependent with the former subordinate to the latter.

THE POLICY DILEMMA

For many years "It has been the consistent policy of the United States to support the conclusion of a CTB in an adequately-verifiable agreement."[7] This policy suggests that there should all along have been a corollary policy; to develop, with a CTB in view, a stockpile of "wooden weapons," which could be defined as weapons requiring no technology base or tests for their maintenance or replacement. Many unclassified sources, however, demonstrate that the United States does not now have such a stockpile and that, in fact, just the opposite is true.[8] (The feasibility and desirability of building such a stockpile, and the time and cost to do so, are issues to long ignored by both sides in the CTB debate.)

The United States, further, has defined "adequate verification as that which would reduce to an acceptable level the risk that clandestine test programs of military significance could be conducted under a CTB."[9] However, according to Donald Brennan, "No criteria have been given, or are at all likely to be given, for what would constitute adequately verified.' "[10] Brennan continues:

> Repetition of the standard incantation goes on and on. It enables the Government to pose as if it favored a CTB without really coming to a collective decision whether it does or not. The incantation is not quite an outright lie, but it is certainly dishonest to a degree that I find unworthy in any government, most especially my own . . . I should rather see the Government adopt the position advocated by May, and forthrightly disavow any intention of participating in a CTB, in preference to continuing the sham of favoring an "adequately verified" CTB.[11]

Brennan is correct in his criticism, yet his list of alternatives is not complete; it is not an either/or choice we face but rather a compromise necessitated by technical realities.

Advocates of a CTB consistently question the military significance of clandestine tests the Soviet Union could conduct under such a treaty. A typical statement is that of Halperin et al.:

> Clandestine testing would be limited to detonations of a few to several kilotons—with great effort warheads of a few tens of kilotons might be involved. It is a startling and important fact that no one seems to suggest a way in which even unlimited clandestine testing by the Soviets at this level could shift the strategic balance in any significant way.

To this point their statement has not been publicly challenged, but these CTB advocates go on:

> In effect, if the United States agreed to halt all tests while permitting the Soviet Union to test below the threshold of, for example, 20 kilotons—no important strategic effect is foreseen. Thus, if the test ban is desirable, it is desirable without regard for the problem of cheating, or the problems of inspecting for cheating.[13]

This view is wholly incorrect; for the reasons mentioned above, and explained in later sections, such testing could and almost inevitably would lead to a dramatic change in the strategic balance, favoring the Soviet Union, within a few years.

The statements quoted here illustrate a policy dilemma. Failure to resolve this dilemma has frustrated allies and friends of the United States, and has led to charges of insincerity, duplicity or worse, aimed at both superpowers in such negotiating bodies as the Geneva Conference of the Committee on Disarmament (CCD), and in such sounding boards as th United Nations and the unsuccessful 1975 Non-Proliferation Treaty Review Conference. As Brennan puts it—

> No such (verification) criteria are possible that would not either result in essentially defining a CTB as unacceptable, on the one hand, or in allowing a CTB in which abstention by the Soviets (among others) from all tests of potential significance cannot be verified on the other.[14]

The dilemma is real, and the results is that the United States is in a predicament. We

---

Footnotes at end of article.

reached the predicament in the usual way—by making mistakes. A choice has to be made. The basic one, of course, is between the alternatives of continuing to pursue the objective of a CTB, inadequately verified according to our own definition, or of lowering our sights toward a more modest agreement that can be adequately verified, while recognizing and accepting the resulting political costs. Secondary choices arise if the latter alternative is selected, involving the precise form of verifiable agreement to be reached. The immediate question, however, concerns the first alternative. Is it one that we can safely consider at all? I have already suggested that it is not.

THE ORIGINS OF THE PRESENT PREDICAMENT

The United States is in a predicament on the Comprehensive Test Ban issue because it made mistakes, two of which were of fundamental importance. As May observed, whether we like it or not, most of the U.S. defense posture today, and that of our allies, is based on a stockpile of nuclear weapons in whose performance we have high confidence. We face a potential adversary similarly armed. Deplorable as the present situation is in the view of many sincere and concerned people, the way we got into it is less relevant to this discussion than the fact that we are in it. It follows that national policy regarding nuclear weapons testing must recognize this reality, as well as the problems we face in extricating ourselves while preserving a deterrent capability as long as it is needed. We cannot turn back the clock to the age of nuclear innocence, by ourselves or with the help of others. We can, however, endeavor to back the scorpions out of the bottle, with all the care that such an enterprise demands. A CTB, as May points out, would be counterproductive as a component of this effort, because it would raise serious problems of instability.

It is argued by CTB advocates that the United States possesses 30-odd warheads each for the 219 major Soviet cities, but how is this relevant if destruction of these cities can only be at the cost of our own? Our reported 8,500 strategic warheads are distributed among a small number of relatively large weapons systems, and a flaw—should one develop—in a single major system could profoundly alter the qualitative characteristics of our deterrent forces structure. Edgar Ulsamer has already described such a problem; it developed in the original Polaris SLBM system.[15] A major problem in the more modern Poseidon system could reduce U.S. forces by some 5,000 warheads, and deprive us of what most observers regard as the most stabilizing element of the strategic Triad. (It is worth noting here that there is clearly a strong correlation between strategic doctrinal preferences and attitudes regarding the CTB: the CTB is more acceptable to those who continue to maintain that populations are legitimate—perhaps the only legitimate—targets in a nuclear war, or who favor a posture of "minimum deterrence." Such views are not shared by this author.)

What were the mistakes that "boxed-in" the United States on the CTB issue? First, and this mistake was shared by many states—including particularly those labeling themselves "nonaligned"—the problem of controlling nuclear weapons tests was explicitly divorced from the larger problem of disarmament.[16] It should have been clear that the subjects are inseparable. Reliance on nuclear weapons for their security by major powers can only be lowered by genuine progress in the reduction of arms, conventional as well as nuclear. This, in turn, can result only from political progress leading to lessened dependence on the threat or use of force in the conduct of affairs between states. The nuclear weapons states (NWS), in fact, maintained their position on the importance of this linkage longer than those pressuring them to abandon testing as a "step toward disarmament," but by 1962 the separation of the issues in the multilateral negotiating arena was practically complete. That arena, however, is only one facet of the real world in which the nuclear weapons states live, and conflict between declaratory policy and substantive action was inevitable. The declaratory policy could have been altered much earlier, and today's predicament avoided, if the technical facts had been clearly recognized; but they were not. That was the second mistake.

What the United States did instead was misdirect its public interests, and to a large extent its private concerns, about the risks involved in a CTB. The United States wanted only to obtain adequate assurance that other parties could not test, clandestinely, under a CTB. Actions by the other principal party, the Soviet Union with its rigidly closed society, were the primary, if not the only, expressed concern. If this concern could be satisfied, then—we alleged—a CTB must be advantageous.

A much more serious problem, however, involves not only what the Soviets *could do* under a CTB, but also what the United States *could not do;* with the virtually absolute self-verification imposed by our open society, the United States could do no testing at all, and this is critically important.

It is at least arguable that clandestine development of new weapons under a CTB by either of the major nuclear powers is unlikely to affect the strategic balance in a major way. The real problem, however, involves the effect of a CTB on the strategic balance when, under such an agreement, one side (the Soviet Union) can maintain high confidence in its stockpile, while the other (the United States) cannot. This confidence can be maintained by the Soviets without question, under the circumstances described by Halperin *et al., but it cannot be maintained with no testing at all.* It is clear that the resulting asymmetry should have been the major CTB concern from the outset, but even now it has not been fully explained to the American public or to the Congress.

THE PROBLEM OF STOCKPILE CONFIDENCE

In spite of a highly developed nuclear weapons technology (or more likely because of it), significant problems have emerged in the U.S. weapons stockpile in the past, and we must prudently expect them to occur in the future.

Recognition of these problems, as well as their solution, has depended above all on the existence of a competent nuclear weapons technology, and that competence can be maintained only with continued testing.[17] It is not unlimited testing that is needed; permitted levels of yield and effort could be substantially less than they are today, but they cannot be zero. Given a competent technology base, many identified stockpile problems do not require specific tests for their solution; experience based on other tests may suffice to provide well-founded, professional answers. On the other hand, other problems occur that can be solved only through testing. The essential point is this: Both the maintenance of the necessary technology, and virtually all of the occasional specific tests needed for correction of recognized stockpile problems, can be accomplished in the yield range which is dismissed by Halperin *et al.*—and by many others—as having no significance for the strategic balance. This statement is explained further in the next section; the explanation supports the opposite view, that "much could be achieved by tests which fall into a yield range below the existing estimates of the threshold of a verification system." This remark was made by United Kingdom Ministry of Defense Representative Dennis Fakley in 1976 at an informal meeting with experts of the Conference of the Committee on Disarmament.[18]

Mr. Fakley describes that threshold as "a few tens of kilotons," taking into account potential detection/identification capabilities as well as the effects of low-coupling geologic media and possible evasion techniques. The U.K. statement correctly stresses the importance of tests in that yield range for four main purposes, first of which is "the maintenance of stockpiled weapons in an entirely safe yet serviceable condition." The U.K. estimate of a few tens of kilotons is supported by the analysis of Professor of Seismology Bruce A. Bolt,[19] when his factors for emplacement effects are used, and both are more liberal than the twenty-kiloton figure used by Halperin *et al.* and are probably more realistic.[20]

The asymmetry of concern here results from the fact that in the United States treaties are the supreme law of the land, and an alert public and investigative press would not tolerate violation of that law. Therefore the United States would do no testing under a CTB. However, in the Soviet Union treaties are not self-enforcing; they do not become law unless there is the passage of domestic enacting legislation (which was never done, for example, in the case of the Limited Test Ban Treaty of 1963). Even should such legislation be passed, there exists no process through which a voiceless Soviet public could force compliance.

According to Professor Zigurds Zile[21] of the University of Wisconsin School of Law, nothing in the Soviet legal system could operate to secure enforcement of an agreement whose violation would be unobservable from outside its territory; compliance could only be expected if it were determined by the highest Soviet authorities to be in their own interests (the role of the occasional defector cannot be discounted, but it is a slender reed on which to depend when vital national security matters are at stake on both sides). The problem is further compounded by recent disclosure of a parallel—and secret—legal system in that country, dealing with matters classified as "political."

Thus test activities unobservable from outside the Soviet Union, which include virtually the entire range the United States would consider necessary for basic technology maintenance and stockpile repair, would be subject to no internal constraint. Soviet abstention from such tests would have to be taken on faith by the West.

TECHNICAL EXPLANATIONS

There is, as implied earlier, a specific reason why tests in the low-yield range are of critical importance. It has to do with the way nuclear weapons are built. It is now widely understood that thermonuclear weapons—the ones of greatest importance when one is discussing the strategic balance—are designed on the principle of using energy from a fission device, to trigger a fusion or fusion-fission reaction.[22] A fission device may involve the use of high-explosive components to convert the fissile core from a subcritical configuration to the supercritical configuration required to provide a nuclear chain reaction. The design of thermonuclear weapons is severely constrained by the requirements of the specific delivery systems for which they may be intended, but at the same time it must meet safety requirements arising from the presence of the high-explosive. Safety under any credible accidental condition, and even under deliberate attack by revolutionary or terrorist forces, must be assured. All of these things require extensive testing.

But the entry into stockpile of a fully tested weapon is not the end of the story. Michael May notes that "Weapons are like any other hardware (actually worse than most, because the materials that have to be used are often chemically unstable or radioactive) in that they occasionally have to be repaired, and they will eventually have to be

Footnotes at end of article.

replaced. Replacements will likely be different from the originals because available materials change, as do safety and economy requirements." [23]

Stockpile problems do occur, and they cannot be ignored. Historically, the resolution of such problems, particularly those that have arisen early in a weapon's stockpile life, has been accomplished on the basis of nuclear tests whose yields have been in the range of a few tens of kilotons or less (tests in the lower range being in fact the more frequent).

The kinds of problems encountered have been described by the then Assistant to the Secretary of Defense, Atomic Energy, Dr. Carl Walske.[24] As he pointed out, they have generally made it necessary to change the design of the nuclear assembly system of the warheads in question in some important way. Stockpile problems, he testified, had resulted from developing metallurgical or mechanical problems, or from stricter standards of nuclear safety. In one case not mentioned by Walske, the United States placed a new weapon in its deployed stockpile with high confidence during the 1958–1961 moratorium on testing. This confidence was based on extensive and complex calculations, supported by elaborate non-nuclear testing that appeared to confirm those calculations. Not until 1963 was a nuclear test worked into the post-moratorium schedule to confirm the performance of this weapon; it was found to be totally inadequate and an additional test was necessary during its redesign. The successful redesign effort, as demonstrated by this test, provided assurance that the stockpile deficiency had been fully resolved.

As noted earlier, not all stockpile problems that are identified require a nuclear test for their resolution. They may, however, in some cases be recognized in the first place primarily on the basis of other tests conducted in the continuing Research, Development and Test (RD&T) program, and professional judgments leading to their solution may be based on the results of such tests. The question of nuclear weapon safety deserves special attention in this regard.

Nuclear weapons have been involved in accidents. Palomares, Spain, was the location of one such accident, in which—because of a collision between a B–52 bomber and a KC–135 tanker during a refueling operation—both planes crashed and four B–28 bombs (megaton-range thermonuclear weapons) fell to the earth. Two of the bombs suffered detonation of their high-explosive on impact with the ground; as a result, highly toxic plutonium was scattered widely, although no nuclear reaction occurred.

That no nuclear reaction occurred, which would have gravely complicated the clean-up operation and would have killed or at least severely threatened the health of those nearby, is a result of one of the design criteria for U.S. nuclear weapons: they must be "one-point-safe" in any credible accident or attack (there must be no nuclear yield, for example, if they are struck by a bullet that detonates the high-explosive). The one-point-safety requirement, as noted above, places severe restrictions on weapons design, and it is the cause of significantly more tests during their development than would otherwise be needed.

An important development has taken place recently that will further increase nuclear weapons safety: the development of an "insensitive high-explosive" (IHE). It would have been greatly preferable if no explosion at all had occurred during the Palomares incident; use of IHE in modern designs will successfully eliminate this problem. Its use, however, requires nuclear testing, again in the unobservable range of yields (at least unobservable, were the tests conducted in the Soviet Union), even when the purpose is a retrofit of existing stockpile weapons.

Safety tests are an integral part of the development of new weapons, but full understanding of the one-point-safety characteristics of a deployed weapon has, on occasion, been developed only after it has been stockpiled, as a result of other—seemingly unrelated—tests in the continuing RD&T program. And, in addition, safety criteria have sometimes been modified or reinterpreted after a tested weapon has entered production. In all such cases, successful redesign and the confidence achieved by actual tests of the new designs have made it possible to state that the stockpile deficiencies have been corrected. The new designs are tested because, in spite of the sophistication of available calculations and of non-nuclear laboratory tests, final assurance as to their safety and performance *cannot* be guaranteed without nuclear testing.

This statement is critically important to the thesis, advanced earlier, that some continued nuclear testing is essential for a nuclear weapons state, yet it is precisely here that candor must be compromised by classification. Two points, however, can be made: (1) Nevada Test Site test explosions often deviate significantly from their intended yield; [25] and (2) there is no single or simple explanation for the not-infrequent failure of nuclear test results to confirm expectations based on calculation and non-nuclear tests, but rather a multiplicity of causes, not all of which are fully understood. If it were otherwise and the problem were capable of solution with present technology, there would be no reason for this article.

As John Hopkins puts it, "the basic argument for not stopping testing is that the present stockpile requires experts for its maintenance and *experts cannot stay proficient without an R&D program that includes full-scale nuclear testing*." [26] Continued testing at the yield levels discussed here, even with the most optimistic estimates of future detection and identification capabilities, would be available to the Soviet Union without any possibility of external observation under a CTB, but not to the United States. Such testing would permit the Soviets to maintain high confidence both in their ability to recognize stockpile problems and to fix them while the United States could not. Thus there is no way to "reduce to an acceptable level the risk that clandestine test programs of military significance can be conducted under a CTB," by the Soviets or by other states having similar political systems. The ability to fix problems in the stockpile of one side, while the other is unable to do so, cannot be dismissed as having no significant effect on the strategic balance and therefore on stability. The millenium in which we no longer need our weapons stockpile has not yet arrived; until it does the United States must maintain the technology on which that stockpile depends.

THE NEED FOR ALTERNATIVES

The concerns described here are the fundamental, although heretofor unarticulated, reasons why an absolute CTB cannot safely be accepted by the United States, at least until the world is a very different place. While this should be acknowledged, at the same time there would seem to be an obligation for the United States to replace its declaratory objective of a CTB with something else that is consistent both with its commitment to arms control objectives and with basic national security. This obligation is inseparable from a parallel obligation on the part of the non-nuclear weapons states (NNWS) that are vocal advocates of a CTB: to recognize the special problems faced by the NWS and to refrain from demands whose costs to those states—particularly to those in the West and their allies—would far exceed the cost to the NNWS of a limited continuation of testing. (A step toward such recognition apparently has been taken by Sweden. In its recent draft treaty for a CTB, there is provision for a "phasing-out" period for testing by the NWS. Such phasing out, for example, could allow time for a transition to the "wooden stockpile" mentioned earlier, if that should be found to be desirable and feasible.) [27]

The United States, further, should link any steps to be taken toward such a revised test-ban goal tightly to reductions in levels of forces, both nuclear and conventional. The simplest goal would be that of a finite, but substantially reduced, threshold. Quotas are another possibility that has often been suggested. Either one, or a combination of the two, has advantages, but also serious verification shortcomings. There is an alternative proposal to be considered: The revised treaty objective should embrace fully the verification issue; it should involve a treaty that defines what is prohibited explicitly (there exists no generally accepted definition of a "nuclear explosion"); and that definition should be in terms of appropriate phenomena observable outside the territories of the nuclear states parties by other nuclear states parties, using their home-based national technical means. (Teleseismic observation and identification of hydrodynamic effects are suggested as the most appropriate criteria to be considered in the definition of prohibited activities; very large non-nuclear explosions would in this proposal require consultation and perhaps observation.) Activities that are not observable according to the agreed criteria, which could be designed to ensure fairly equivalent latitudes for the necessary programs on the two sides, would not be considered violations, and legally binding "safeguard" provisions in the United States could assure that U.S. activities are not asymmetrically constrained by over-zealous bureaucrats, as they are sometimes reported to be under the TTBT.

The role of the "Detection Club," the combined teleseimic efforts of the non-nuclear weapons states, parties or not, would appear in this concept to be secondary, but actually the Club would play a vital part in providing assurance to the rest of the world as well as to itself that "superpower collusion" was not frustrating the treaty objectives. The role of the Detection Club could be expanded in the context of a multilateral treaty (the pros and cons of which have not been sufficiently analyzed), if there should come into existence the kind of Global Cooperative Seismic Network proposed by Dahlman and Israelson,[28] having a capability to improve significantly on the ability of the NWS to monitor treaty compliance by each other. It should be noted, however, that even the most optimistic view of the Network's potential leaves a margin for undetectable tests within the Soviet Union that is adequate for the purposes described in this article—even though such tests would be precluded in the United States. Thus the basic argument for a compromise is unaffected by the Dahlman-Israelson proposal. An effective global system could result in a compromise at a lower level, but tests at that level would continue to be of great military significance. The Global Cooperative Seismic Network does not, of course, now exist.

The problem posed by evasion under such a treaty would be reduced compared to that under a CTB. There could well be cases where elaborate and/or costly steps were taken to reduce signals from an event large enough to be observed in the absence of such steps, so that they are below the observable level (which technically might be considered to be elision or elusion rather than evasion). Such incidents should be fairly rare; they could in principle be conducted by any party, so the risk is in theory (less so in reality) somewhat symmetrical;

Footnotes at end of article.

and they should have demonstrably less effect on the strategic balance than would the unilateral complete abstention from testing by the United States that would be the result of a Comprehensive Test Ban. (The possibility of more complex evasion schemes at fairly high yields was, and continues to be, a major concern to many in connection with the 150-kiloton TTBT. Having once accepted that risk, the United States is likely to accept it again.) The intractable peaceful nuclear explosion (PNE) issue would be partially defused, because essential technology could be maintained by both sides, under this proposal, instead of only the one benefiting from its closed society, and greater stability would result.

If the United States moves to a policy objective such as that described here, it can do so with a clear conscience, in that U.S. internal policy based on real security issues need no longer be in conflict with that declared to the world. In doing this there is a political price; a compromise of the Comprehensive Test Ban objective will not appeal to those for whom a CTB has for so long been an obsession. But there should also be a political benefit resulting from the honesty implicit in this approach, particularly if it is linked to greater recognition of the security-assurance needs of the non-nuclear weapons states. If the United States becomes technologically incompetent, it cannot credibly offer the security assurances that are, in the last analysis, the most important alternatives to proliferation.

OBJECTIONS TO A REVISED TEST BAN POLICY

Some critics will object to the proposed compromise because it would be possible to continue the development of small theater nuclear weapons—an argument that points up the illogic sometimes present in CTB advocacy. Madame Alva Myrdal, once head of the Swedish delegation to the CCD, has been particularly outspoken on this issue, as well as in her advocacy of a CTB. In response to a question on the "mini-nuc" issue posed by Mme. Myrdal at the CCD, Ambassador Hainworth of the United Kingdom deftly replied with another question:

> It must be obvious from all that the Swedish and other seismological experts have said on this subject . . . that the testing of such small-yield devices underground could not be detected or identified seismologically from outside the territory of even a medium-sized state. Yet the Swedish statement . . . suggested that the development of such miniaturized nuclear weapons might be a matter of such seriousness and concern that a state might feel that its supreme interests had been jeopardized. My question is: how would the Swedish Government, or indeed any other government, establish the fact that such weapons had been developed, tested, and deployed? Surely this is exactly the sort of issue which shows just how important it is to insure that a comprehensive test ban should be adequately and effectively verified.[29]

But, of course, at this yield level it cannot be verified. A statement abjuring the development of such weapons, made by any country of reasonable size (including Sweden), would have to be taken on faith by others. This example demonstrates the necessity for some balance of risk, and some acceptance of compromise, by all states. The risk that the non-nuclear weapons states would perforce accept under a CTB is minuscule compared to that which they expect the United States to accept; under the proposed compromise the risk to the United States would be incomparably less, while that to the non-nuclear weapons states would hardly increase at all.

Those who are convinced that enhanced prospects for nonproliferation would flow from and be the principal benefit of a Comprehensive Test Ban are also likely to find the proposed compromise less than completely satisfactory. But continued testing that eventually is limited only to programs necessary to maintain a technology and necessary stockpile confidence on the part of the nuclear weapons states is a far cry from the present state of affairs, and this goal could be regarded as a major contribution to global stability. It can also be argued that gradual loss of confidence in its weapons by the United States would increase pressure on some of our allies to provide for their own nuclear defense. Continued testing at the levels suggested here might serve as an excuse for a state that had decided, for other reasons, to develop nuclear weapons; it is hard to see how it could contribute significantly to those reasons.

Finally, it will be argued that a compromise taking any of the forms discussed is discriminatory, on the one hand, or that it actually "legitimizes" proliferation, on the other. But these arguments must be evaluated in the context of the Non-Proliferation Treaty, which already acts as a CTB for the NNWS parties, while a third of the world's nations stand aloof from its restrictions (but demand its benefits). It does not require delicate logic to make the distinction between the two intransitive uses of the verb "discriminate": discriminate between and discriminate against. Not to discriminate between NWS and NNWS in the context of a treaty limiting nuclear testing, in terms of what the treaty permits each to do, or prohibits their doing, is either to discriminate wildly against the NWS in view of the technological problems discussed in this article, or to legitimize similar activities by all parties. This illuminates a major argument for restriction of test-ban treaties to NWS parties: they share common problems and should be capable of commonly agreed upon solutions. These solutions are bound to differ from those available to the NNWS for their own problems, but they should be accepted in good faith by those states so long as there is general and genuine progress in a worldwide effort to reduce dependence on arms. If this progress occurs, a multilateral test-ban treaty is irrelevant, but a compromise treaty meeting the basic security needs of the NWS—all of them—is an important component of that progress. If it does not occur, all talk of the importance of limitations on testing is pure rhetoric. India apparently understands this, but she had many tutors, and probably has even more students.

THE IMPERATIVE OF TESTING FOR THE NWS

On September 27, 1977, Soviet Foreign Minister Andrei Gromyko, in a speech to the United Nations, proposed a moratorium on underground weapons testing for "a certain period of time" with only the United States, Great Britain and the Soviet Union as participants. (The earlier Soviet public position had insisted on participation by France and the People's Republic of China.) "Peaceful" explosions were not to be suspended, however. A continuing obstacle in the American-Soviet-British negotiations on an underground test ban has been Soviet insistence on an exemption to permit underground testing and application of "peaceful" nuclear devices. The West has opposed this exemption, although at one point President Carter allowed in a press conference that, in his view, the Soviets could be permitted their planned river-diversion project using nuclear explosions for excavation.

The Soviet position changed on November 1, when President Leonid Brezhnev, opening the celebration of the sixtieth anniversary of the Bolshevik Revolution, said: "We are ready to come to an agreement to the effect that, along with banning for a definite period all tests of nuclear weapons, a moratorium would be announced on nuclear blasts for peaceful purposes." President Brezhnev further proposed a halt to production of "new weapons" by all nations and reduction of "new weapons" by all nations and reduction of existing stockpiles.

The implied linkage among the several elements is laudable, but the advantage to the Soviets of a complete ban on explosions, spelled out in this article, remains. The peaceful nuclear explosion (PNE) program would be invaluable to a nuclear weapons state having only this means to preserve its technological infrastructure and stockpile, but the United States no longer has such a program and prospects for its revival are dim. However, the policy change announced by Brezhnev costs the Soviets little. First, because the term "moratorium" implies future resumption of PNE activities by the Soviets, and second because, as we have seen, they can maintain their technology, and therefore stockpile, indefinitely, PNE's or no.

Michael May points out that "Nuclear explosives, if used in war, could destroy Western civilization. But the tests which made this outcome possible have long since been done."[30] Neither continued testing nor cessation of testing can alter this fact. The current level of testing, in the short run, is a major factor in preserving relative stability between rival nuclear-armed states. If real arms control (i.e., disarmament) efforts succeed, new weapons to meet new threats may no longer be needed. Even so, the old weapons will remain long after a way is found to diminish their numbers, and it is a doubtful proposition that loss of confidence in those weapons will increase stability and decrease the prospect of their use. Just the opposite might reasonably be expected, even if stockpile degradation were to affect the weapons of both major powers. But under a Comprehensive Test Ban, that cannot be considered the most likely result—there is no basis for any belief that stockpile degradation will be symmetrical.

The United States cannot afford to take that kind of chance with the security of its citizens, nor of others depending on us for their own security. The U.S. declaratory policy favoring a Comprehensive Test Ban, adequately verified, is a mistaken policy. President Carter in his May 12, 1977 news conference, said: "We don't want to cover up mistakes." The President has demonstrated an ability to change his mind when new facts are presented: hopefully he will do so in the case of the Comprehensive Test Ban, while at the same time adopting a new goal—however distant—that is feasible and consistent with the security of this nation.

[18] Mr. Fakley further stated CCD/492, April 21, 1976) that "The maintenance of stockpiled weapons in a safe but serviceable condition is of vital importance whilst such weapons continue to exist. Like all other types of hardware, nuclear weapons age; in fact they tend to age more rapidly than most other weapons because of the characteristics of the special materials used in their construction. From time to time they have to be repaired and this frequently requires one of the components to be replaced. These replacements are likely to be somewhat different from the originals if only because available materials have changed and because safety and security requirements have been made more stringent. The changes involved are usually small but it cannot be ascertained whether or not they are significant without nuclear testing." His argument closely parallels May's.

[19] Bolt, op. cit.

[20] Swedish experts recently have suggested that hard-rock emplaced explosions of about one kiloton could now be detected, located and identified by a feasible international cooperative monitoring system. See O. Dahlman and H. Israelson, *Monitoring Nuclear Explosions*, New York: Elsevier, 1977, p. 355. These authors are associated with the National Defense Research Institute in Sweden.

NORTH CAROLINA'S BUDGET AMENDMENT

Mr. MORGAN. Mr. President, I have often addressed this body on the need to stop the dangerous trend toward ever-increasing deficit spending. I have subscribed to President Carter's goal of balancing the budget as early as possible. I feel that this is an attainable goal. I feel that we should review each tax or appropriation bill with this in mind, and I feel we must do this or risk a very uncertain economic future.

I am proud to be able to tell the Senate that the great State of North Carolina has seen fit to do at the State level what I am urging to be done at the Federal level. On November 21, 1977, the people of North Carolina approved in a referendum, an amendment to the State Constitution requiring that total expenditures in North Carolina do not exceed total receipts for any fiscal year.

Now this simple addition to the State Constitution has actually been in the General Statutes of North Carolina for some time, but I note with pride the fact that North Carolinians have deemed it proper to make this provision more permanent by its inclusion in the State Constitution.

Again I urge the Senators to consult their constituencies to see if support for such a move at the Federal level is desirable. I feel that North Carolina has taken a great step toward fiscal responsibility and I hope that we can make an effort here to achieve a similar result.

I ask unanimous consent to have printed in the Record the amendment passed by North Carolina for the consideration of the Senate.

There being no objection, the amendment was ordered to be printed in the Record, as follows:

Amendment

Article III, Section 5(3) of the Constitution of North Carolina is amended by adding thereto a second unnumbered paragraph as follows:

"The total expenditures of the State for the fiscal period covered by the budget shall not exceed the total of receipts during that fiscal period and the surplus remaining in the State Treasury at the beginning of the period. To insure that the State does not incur a deficit for any fiscal period, the Governor shall continually survey the collection of the revenue and shall effect the necessary economies in State expenditures, after first making adequate provision for the prompt payment of the principal of and interest on bonds and notes of the State according to their terms, whenever he determines that receipts during the fiscal period, when added to any surplus remaining in the State Treasury at the beginning of the period, will not be sufficient to meet budgeted expenditures. This section shall not be construed to impair the power of the State to issue its bonds and notes within the limitations imposed in Article V of this Constitution, nor to impair the obligation of bonds and notes of the State now outstanding or issued hereafter."

HUMAN RIGHTS IN NICARAGUA

Mr. KENNEDY. Mr. President, last August Senator Church and I moved to terminate all military assistance and supply to Nicaragua, whose national guard has been one of the worst violators of human rights in the hemisphere. We did not press the issue to a vote at that time, but I undertook to keep a close watch on the situation and to continue to work with the administration in pressing for human rights improvements in that troubled country.

There have been some improvements and some setbacks in the Nicaraguan human rights situation since then. On September 19, President Somoza lifted the state of siege which he had imposed in late 1974. He thereby ended press censorship and the prohibition of political rallies, restored the right of habeas corpus, and transferred security cases from military to civilian courts. These actions were not unrelated, I believe, to the strong criticism of human rights violations in Nicaragua expressed over the previous months in both Houses of Congress. I ask unanimous consent that a summary of these encouraging developments, prepared for me by the State Department on September 22, be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KENNEDY. Mr. President, on the other hand, I must remind my colleagues that President Somoza has failed to reform or replace the system of police courts. While reports of mass killings of Campesinos in the countryside have tapered off, rough treatment of peasants continues. In addition arbitrary detention and torture of individuals appear to continue with instances of such treatment increasing in urban areas. These are the most serious sources of human rights abuses—including reports of summary executions, torture, arbitrary imprisonment, confiscation and destruction of private property—highlighted in the July 1977 report on Nicaragua by Amnesty International. I ask that an October 5 communication from its Secretary-General, Martin Ennals, to President Somoza be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. KENNEDY. Mr. President, last October, there were further violent outbreaks between the National Guard and the Sandinista National Liberation Front (FSLN), which have caused enoromous suffering to hundreds of innocent civilians in the rural areas of Nicaragua. Reports indicate that the FSLN has been strengthened by increasing anti-Somoza sentiment in the country, with violent disruption compounded by Government incompetence and National Guard brutality. I commend to my colleagues, in particular, an article by Alan Riding in the New York Times, which I ask to be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. KENNEDY. Mr. President, I call upon the Nicaraguan Government, out of common decency, to correct continuing human rights abuses and to take early positive action on the recommendations presented in the amnesty report and in Mr. Ennals' letter.

I fully endorse his suggestion that President Somoza document his actions by granting full access to Nicaragua by an impartial human rights organization, such as the Inter-American Commission on Human Rights.

There have been continued reports of human rights violations and violent outbreaks against the Somoza regime. I have received reliable reports—including an affidavit signed by three doctors who conducted the post mortem—that on August 26 Raul Gonzalez Almendarez, a Nicaraguan agronomist, was bludgeoned to death in Esteli by members of the national guard. In June 1976 his brother Noel was seized in Jalapa by the national guard, which brutally tortured him over the next several weeks. After being hospitalized, he was visited by the Chief of State Security, Gen. Samuel Genie Anaya, who reportedly informed him that his detention and torture was the result of a "simple mistake."

Last September, in the context of extremely tentative human rights improvements, the administration decided to sign the fiscal year 1977 Foreign Military Sales (FMS) Financing Agreement with Nicaragua. I strongly regretted that decision at the time. I must reluctantly conclude that subsequent events have not justified the decision to sign the military aid pact. I ask that the State Department letter of October 6, explaining its decision, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4.)

Mr. KENNEDY. Mr. President, it is clear from this letter that this action only gives the administration the option to disburse credits appropriated for fiscal year 1977 and that it does not commit the United States to grant any FMS credits to Nicaragua.

I appreciate the State Department's explicit assurance that "Approval of specific (FMS credit) requests will be contingent on continuing human rights improvements." I have made clear to the Department, however, that I could not support even the limited step of keeping fiscal year 1977 FMS credits available, because—

Serious problems remain in Nicaragua's human rights record, despite some improvement in September;

It is bad precedent to appear to reward what are still superficial human rights adjustments with military assistance to a repressive government; and

In any event, fiscal year 1978 FMS credits have been appropriated and are also available.

It is therefore my strong hope that the administration will not approve any military supply and will not disburse any military assistance to Nicaragua. Should there be substantial improvements in its human rights performance, including a process of real democratization, I for one would be receptive to providing more economic assistance designed to meet basic human needs of the Nicaraguan people. While I have my doubts as to whether AID funds in Nicaragua are indeed fulfilling basic human needs, economic aid can and should be the "carrot" that is used to encourage human rights improvements.

John Goshko and Karen DeYoung are to be complimented for their report in the October 25 issue of the Washington Post on the decisionmaking which led to the administration's positive action on FMS credits and its negative action on economic aid to Nicaragua. I ask that it also be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 5.)

Mr. KENNEDY. Mr. President, its central message is confusion in the formulation and execution of U.S. human rights policies. We must at all costs avoid "mixed signals" on human rights. Signing the military aid pact with Nicaragua has hindered other administration efforts—sincere efforts—to begin to disassociate the United States from the repressive Somoza regime.

I have been heartened by indications of greater care and sensitivity in more recent administration decisions on aid to Nicaragua from international institutions. Last month, it approved affirmative votes for three World Bank and Inter-American Development Bank (IDB) projects meeting basic human needs in Nicaragua; a U.S. abstention on $500 million in Canadian funds for construction of a Somoza Dam; and deferral of three loans not justified by either basic needs or human rights improvements. All cases of deferral involved the Inter-American Development Bank, where we have a controlling vote.

The approved loans were $10 million for a potable water supply project, $3 million for rural sanitation—both from the World Bank—and $16 million from the IDB for rural health stations and centers. The deferred loans were $32 million for roadbuilding, $6 million for animal husbandry, and $16 million for agricultural research.

These more recent decisions demonstrate how it is possible to relate effectively our foreign aid decisions to the objectives of basic human needs and human rights. They demonstrate that we can assist projects of direct benefit to the rural poor, while basing our decisions for other economic projects on improvements in the recipient's human rights policies and practices. Most importantly, human rights need not and should not be made hostage to military supply and assistance from the United States.

Perhaps the most important element in the human rights/economic development nexus is that aid funds should be used to stimulate community organization. Strong local co-ops and organizations provide a means for the Campesino to market his or her crop at a fair price and, hopefully, a method by which the Campesino can participate in the economic and political life of the country. After all, the best protection for human rights comes from an organized citizenry aware of its rights.

I believe that our experience with Nicaragua over the past 4 months underlines three key principles for future U.S. policy:

First. To the maximum extent possible, the United States should use economic and political, not military, incentives in furthering our human rights objectives. I remain opposed to FMS credits to Nicaragua—just as I do to such credits for any repressive regime unless there are overriding national security reasons for granting them.

Second. The United States should strongly support the recommendations of Amnesty International for improving the human rights situation in Nicaragua. But beyond this, we should persistently encourage development of a more open democratic process in that country, which is essential to forestalling increasingly violent repression of political opposition. It is high time for a meaningful political dialogue between the Somoza regime and its democratic opposition.

Third. Decisions on foreign military assistance should not be isolated from decisions on foreign economic assistance. I would like to think that if both decisions were made in relation to each other last September, the administration would have approved some economic assistance from AID, made some contingent upon improved human rights performance, and would not even have maintained the option of disbursing fiscal year 1977 FMS credits to the Somoza regime. I believe the value of this approach is indicated by our November decisions on economic assistance through international institutions.

At the outset, Mr. President, I expressed my desire to continue to work with the administration for human rights improvements in Nicaragua. I welcome the careful and detailed consultation which we have conducted on this issue in the past. It is clear that in some important respects our judgments have differed, but our objective remains the same: The betterment of human rights and welfare in a country which has long had intimate ties with the United States.

EXHIBIT 1

RECENT DEVELOPMENTS IN NICARAGUA

On September 19, President Somoza announced the Cabinet decree lifting the state of siege (martial law) which had been imposed in late 1974 immediately after a successful terrorist attack which ransomed prominent hostages for jailed guerrillas, a million dollars and transportation to Cuba.

The decree was a significant step since it ended press censorship and the prohibition of outdoor political rallies, restored the right of habeas corpus, and transferred pending and future security cases to the civilian courts. As an immediate result of the lifting of the state of siege, our Embassy reports that the largest circulation newspaper in the country, La Prensa, owned and published by opposition leader Pedro Joachim Chamorro, responded immediately to restored freedom of press by publishing on September 19, previously censored stories and opening paper for airing individual grievances. On September 20, La Prensa published previously censored pastoral letter of January under the heading, "The Censored Pastoral" with lead-in describing its impact in the U.S. translation of Senator Kennedy's August 5 statement on military assistance to Nicaragua is published in entirety as well as a separate story under banner headline, "Kennedy: Eye on Nicaragua." Also published were: policy statement by P. J. Chamorro's opposition political movement, UDEL, an article on how censorship was applied arbitrarily and for apparent political reasons, and examples of previously censored stories. According to FBIS, Cesar Rivas of Managua Radio Corporation in his September 20 commentary took President Somoza and the GON censors to task for the use of censorship. Translation indicates Rivas strongly decried the use of censorship to prohibit "reports that denounce irregularities by a Minister or other official of the regime. That is simply an outrage and affront to intelligence, civic spirit and truth."

Our Embassy has further reported that at least some of the remaining political detainees charged with the insurgent-related activities had already been turned over by military authorities to the civilian courts for indictment or release. Our Embassy added that several habeas corpus actions were already being prepared.

The number of reported incidents of serious misconduct by the Guardia Nacional referring to events since February of this year has markedly declined. Our Embassy is aware of several occasions this year on which President Somoza cautioned National Guard officers against violations of human rights in their counter-insurgency operations.

Terrorist activities by the Sandinista Liberation Front, which has described itself as a Marxist-Leninist revolutionary organization, have continued, but on a more sporadic and reduced basis than was the case a year or two ago. There has been an apparent sharp decrease of incidents involving the FSLN in rural areas, and an apparent increase in such incidents in urban areas of Nicaragua.

EXHIBIT 2

LETTER TO PRESIDENT SOMOZA IN RESPONSE TO THE LIFTING OF THE SUSPENSION OF CONSTITUTIONAL GUARANTEES AND MARTIAL LAW

Gen. ANASTASIO SOMOZA DEBAYLE,
Presidente de la Republica, Palacio Presidencial, Managua, Nicaragua.

YOUR EXCELLENCY: With this letter we wish to express our recognition and appreciation of the lifting on 19 September of martial law and the suspension of constitutional guarantees as essential measures for the improvement of the human rights situation in the Republic of Nicaragua. At the same time, however, we wish to reiterate our concern that many of the human rights violations documented in our July 1977 report on the Republic of Nicaragua related only indirectly to the suspension of guarantees and the rule of marital law. These abuses—including torture and summary executions—occurred under the aegis of the exceptional measures only to the extent that these measures, such as the suspension of habeas corpus and the imposition of censorship, obscured and isolated the actions of the Executive, through the security forces, from other branches of government and from the public. It is the view of Amnesty International, therefore, that further measures are needed to insure the full restoration of the human rights of all Nicaraguan citizens.

The human rights issues raised in the report concerning the system of Police Courts—including prisoners of conscience and serious maltreatment—related least to the suspension of guarantees. It should be stressed that the conclusions and recommendations regarding the Police Courts concern the very nature of that system as well as its practical application. As the Police Court system forms part of the Executive rather than the Judicial branch of government the function of the Police Courts will presumably continue unaffected by the renewal of constitutional guarantees unless special measures are taken toward their reform, or suppression.

Similarly, we did not find that abuses reported in rural areas were directly linked to the suspension of guarantees, and we can not consequently assume an immediate amelioration of conditions will occur there with the restoration of these guarantees. It must be restated that the situation of small farmers in the rural areas has been and continues to be Amnesty International's area of greatest concern in Nicaragua. Despite our requests for information on the situation of the 303 campesinos detained by the National Guard in the Northeast between May 1975 and January 1977, cited in Appendices 5a and 5d of the Report, no official government information has been received indicating that any campesinos who were in fact detained in the Department of Zelaya during the period, were brought before the military courts to testify or were indicted. We hope that free movement of impartial international observers into these rural areas will now be possible, and that more detailed official government information on reported individual cases of human rights volations will be made available.

We feel consequently compelled to repeat all of the recommendations originally made in our report referring to political imprisonment of campesinos and other problems affecting the rural population which result from actions of the Nicaraguan National Guard:

1. That prisoners who have not been indicted by the military or civil courts be immediately released;
2. That local military commanders in the countryside be requested to account for reported detentions of campesinos within their regional jurisdiction;
3. That rural detention camps maintained by National Guard headquarters, as well as the National Guard installations at Rio Blanco, Waslala, Siquia, Amatillo, Ococona, Macuelizo, Dudu and Kilala be opened to inspection;
4. That exhaustive investigations be undertaken from the highest level into reports of summary executions, torture and arbitary imprisonment, as well as into such matters as the arbitrary confiscation, occupation and destruction of private property;
5. That local military commanders be prosecuted under military or civil law for abuses committed by forces under their immediate commands, and that the direct perpetrators of such acts be prosecuted.

As was specified in our report, prisoners who were recognized to be in the custody of the military courts were considered to be a minority of the overall population of political detainees in Nicaragua. Amnesty International's concern for these prisoners has concentrated primarily on the evidence that most of these prisoners were severely tortured, and that no measures have been taken by authorities to either investigate allegations of torture or to sanction those guilty of such abuse.

Further concern was expressed in the report that neither the structure nor the procedure of the military courts offer guarantees for fair trial and the due process of law. We would hope that with the lifting of martial law and the suspension of guarantees, those prisoners previously in the custody of the military courts have been given into the custody of civil courts for trial, and that prisoners sentenced by the military courts will now have the opportunity to present appeals to the higher civil courts. Any information you may be able to provide in this respect would be greatly appreciated.

Finally, we would like to take this opportunity to urge that the restoration of constitutional guarantees, and the lifting of martial law be accompanied by an invitation by the Government of Nicaragua to an impartial international human rights-organization—possibly the Inter-American Commission on Human Rights—to send a delegation of observers to Nicaragua, in order to document the developments in the human rights situation after 19 September.

We believe it essential that such a delegation should be offered the following facilities by the Government of Nicaragua:

i. the full cooperation of the national and local, civil and military authorities;

ii. access to records of the hearings of the military courts during the suspension of guarantees;

iii. access to places of detention including the Carcel de la Aviacion, the Carcel Modelo de Tipitapa and the Oficina de Seguridad Nacional;

iv. the opportunity to speak freely to prisoners in the above-named places of detention;

v. freedom of movement in the countryside.

With the full cooperation of the Government of Nicaragua, such a delegation would be able to accurately assess the progress in the human rights situation in the Republic of Nicaragua which we hope and expect to observe in the near future.

We would very much appreciate receiving the response of your government to these comments and proposals.

Your respectfully,
MARTIN ENNALS.
Secretary General.

IN NICARAGUA, THIS MAY BE THE TWILIGHT OF THE SOMOZAS

(By Alan Riding)

MANAGUA, NICARAGUA.—After 41 years of absolute rule, the Somoza family is losing its grip on Nicaragua. Leftist guerrillas have won the backing of non-Marxist groups and have started an open struggle to topple the regime. A power struggle has erupted within the ruling elite. President Anastasio Somoza Debaye is recovering from a recent heart attack and the Somozas are no longer assured of the automatic backing in Washington.

As heir to a political fiedom and business interests General Somoza is not about to accede to demands that he step down, but the family rule has probably never been more challenged since the President's father, Gen. Anastasio Somoza Garcia, seized power in 1936.

Last week, with the guerrillas keeping up their attacks and influential church, business and political groups adding their voices to the growing demand for change, General Somoza responded defiantly: "I will not carry on a dialogue under threat of assaults, violence and pressure."

For the United States, the situation has important implications. Successive American administrations have seen the Somoza regimes as protection against Communism throughout Central America and the Caribbean and have therefore tolerated their excesses. Today, General Somoza remains the dominant political figure in the fractious group of countries that lie between Panama and Mexico. But United States officials also recognize that the alternative to the Somozas is no longer necessarily Communism and they now must choose between trying to sustain a shaky dictatorship or promoting a moderate and peaceful solution to the conflict that is increasingly troubling Nicaragua.

The Carter Administration's policy toward Nicaragua is still unclear. Earlier this year, Washington harshly criticized the violation of human rights in Nicaragua and threatened to suspend economic and military aid if the situation did not improve. After General Somoza lifted martial law on Sept. 19, the Administration signed its annual military agreement with Managua, although no American funds have yet been released.

Despite pressure from Somoza sympathizers in Congress and in the Pentagon, however, the Carter Administration has not moved to bolster General Somoza during the latest threat to his regime. In a country long overshadowed by the United States, even a seemingly disinterested "handsoff" attitude would be interpreted as a definite policy.

Certainly, the West Point-educated General Somoza has always used Washington's support for his regime to intimidate domestic opponents and impress the military regimes of the rest of Central America. Any evidence that Washington is willing to contemplate change in Nicaragua would therefore produce political shock-waves throughout the region.

Ironically, for fear of alienating Washington, General Somoza has been unable to respond to the new offensive against his regime by declaring a state of siege and unleashing a wave of repression against his opponents. Instead, the traditional strongman has appeared indecisive as the political initiative has slipped from his hands.

The key element in the equation is the general's health. During the two months he was bed-ridden at the Miami Heart Institute following a heart attack late in July, both his friends and foes began mobilizing to fill the political vacuum in case he did not recover, all of them apparently agreed that the successor should not be the President's son, Maj. Anastasio Somoza Portocarrero.

On his return to Nicaragua, General Somoza therefore moved first against the new power centers emerging within the ruling group, dumping Cornelio Hueck after 20 years as secretary-general of the official Liberal Party and even arresting Gen. Ivan Alegret, one of several senior National Guard officers who showed "excessive" ambition during the President's absence.

But with General Somoza under doctors' orders to work only three hours per day, opponents of the regime also felt that the moment had come for political change. And leading the offensive were the guerrillas. The Sandinist National Liberation Front, named after Gen. Augusto Cesar Sandino who fought United States intervention here in the late twenties, has combatted the Somozas sporadically since its creation in 1962 after the Cuban revolution. Until recently, it was dominated by Marxists willing to fight a "prolonged popular war" in order to achieve a Communist victory here. This year, however, the Sandinists revised their strategy—the committed Marxists broke away from the main organization in protest—and began working more closely with "bourgeois" opponents of the regime, ranging from so-called "Radical Christians" and leftist intellectuals to conservative lawyers and dissidents from the Liberal Party. The guerrillas' new objective was also ideologically more modest: to overthrow General Somoza through a "popular insurrection" and to call free elections.

Coinciding with the military offensive launched by the guerrillas on Oct. 13, in which for the first time non-Marxists joined the fighting ranks, a political campaign against the Government was also initiated, with an unlikely coalition of academic, business and church interests calling for a "national dialogue" to bring about much-needed reforms.

One group of 12 prominent Nicaraguans, including the millionaire owner of a supermarket chain and an aristocratic lawyer, even praised the "political maturity" of the guerrillas and warned that the Sandinists must participate in any "national solution". Significantly, many of the guerrillas who have been captured or have been publicly identified belong to wealthy Nicaraguan families. Their participation has apparently played a role in radicalizing the country's middle and upper-classes against the regime.

But while the immediate pressure is for political reform, there is also evident need for measures to improve the living conditions of Nicaragua's 2.3 million inhabitants who suffer from levels of illiteracy, poverty, malnutrition and unemployment that are high even by Latin American standards. Until now, General Somoza has been unwilling to make these concessions. His difficulty is therefore whether to risk appearing weak by giving into outside pressure or to risk further alienating key groups by remaining inflexible.

EXHIBIT 4

DEPARTMENT OF STATE,
Washington, D.C., October 6, 1977.
Hon. EDWARD M. KENNEDY,
U.S. Senate.

DEAR SENATOR KENNEDY: We very much appreciated the consultations my staff had with your office this week on Nicaragua and understand the concerns you have on this question. To confirm what was said to Mr. Kalicki, we are signing the FY 77 Foreign Military Sales Financing Agreement at this time in order to preserve our options for the future use of these funds.

This decision was made in view of the diminution of charges of serious human rights abuses by the Nicaraguan National Guard over the past months and particularly in view of the termination of the state of siege on September 19. This should result in the restoration of the rights of habeas corpus, outdoor assembly and termination of censorship and military court jurisdiction over those charged with insurgency—related crimes. Early reports indicate that there is some progress in these directions.

As is the case with all countries with which the United States has a military sales financing agreement, each purchase and delivery of specific items under the agreement is subject to State Department review. Although the FY 77 FMS Credit Agreement has now been signed, requests will be subject to a case by case review. This review of Nicaraguan government requests for specific commodities will take into consideration the human rights situation prevailing at the time and the progress Nicaragua has made on following through on the implementation of the lifting of the state of siege. Approval of specific requests will be contingent on continuing human rights improvements.

We will continue to be in touch with your staff as the situation evolves and further decisions are made.

Sincerely,
DOUGLAS J. BENNETT, JR.,
Assistant Secretary for Congressional Relations.

[From the Washington Post, Oct. 25, 1977]

U.S. DECISIONS SEND NICARAGUA 'GARBLED' RIGHTS MESSAGE

(By John M. Goshko and Karen DeYoung)

With only 2.2 million people and a land area no bigger than Iowa, the republic of Nicaragua is the sort of country that normally gets dumped into the dusty, attic corners of Washington's storehouse of overseas concerns.

Yet, Nicaragua—and some other tiny backwaters of Central America and the Caribbean—has become a proving ground where the Carter administration is undergoing a trial-and-error test of its ability to translate a concern for human rights into an effective instrument of U.S. foreign policy.

Essentially, it's a carrot-and-stick approach that to use U.S. financial aid as a lever of pressure and persuasion on the military regimes that control many of the region's countries. In theory, a government that violates the rights of its people will find the spigot turned off, while those who ease up on repression can expect a sympathetic hearing for their aid requests.

Since Central America is a collection of client states heavily dependent on U.S. trade and aid, it would seem to be the perfect laboratory for the successful use of these tactics. But, as Washington has been finding out, what looks logical when spelled out in a position paper isn't really that easy in practice.

That was vividly underscored late last month by a pair of State Department decisions involving Nicaragua—decisions so outwardly confusing and contradictory that they seemed to border on the bizarre.

First, the administration decided to move ahead with approval of a military-assistance agreement whose practical effects would be to strengthen the forces holding the reins of dictatorship in Nicaragua.

Then, it turned around and withheld a sizable chunk of nonmilitary aid whose purpose was to help ease the poverty in Nicaragua.

To diplomats and human rights activists, such decisions are clues to Washington's foreign policy direction. In this instance, though, even the most astute State Department watchers were left bewildered about what had happened.

Some concluded that the decisions signaled a retreat from human rights activism, one dictated by pressures from Nicaraguan government supporters in Congress. Others simply saw it as proof that the administration, for all its hymns to the human rights cause, doesn't really have a policy to match its rhetoric.

However, extensive interviews with many of the officials involved tell a different story. Basically, it's one of the difficulties involved in trying to crank a new, still loosely defined concept like human rights into traditional diplomatic decision-making.

Attempts to apply political pressure did figure in the Nicaragua situation. So, too, did the rivalries of government agencies and their conflicting ideas about what best serves U.S. interests.

There were traces of the "clientism" that sometimes makes some diplomats identify more with the country they are dealing with than their own government. There were philosophical disagreements about the meaning and purpose of foreign aid, and there was the attitude of many in Congress and the foreign service establishment that human rights considerations are an unworkable intrusion into traditional diplomacy.

But, while all these factors were present in the Nicaragua decision, they weren't the most important elements. In the end, the decision basically was dictated by the rules that Congress has decreed for playing the aid game.

These rules establish different procedures for the ways military aid and nonmilitary aid are approved. As a result, when the administration tried to apply its carrot-and-stick methods to the Nicaragua case, it unexpectedly found itself in what one participant describes as "a situation where what should have a straight line got bent into a pretzel."

"Our intention was to use aid to send a warning message to the Nicaraguan government," the source says. "But we suddenly discovered that the rules prevented us from using the logical stick to beat the Nicaraguans—military aid—in that way."

"So," he concluded, "we were left trying to dance our way out of the situation by reversing the logical order—using military aid as the carrot and humanitarian aid as the stick. There's no question that the message we were trying to send got garbled as a result, but we did the best we could given the constraints under which we had to work."

Complicating the situation was Nicaragua's position as the touchstone of human rights controversies in Central America. For 44 years, the country has been the personal fiefdom of the family of current president Anastasio Somoza; and, as the man behind the longest running show among Latin American dictatorships, he excites very strong passions in Washington.

Human rights partisans charge that Somoza and his main instrument of power, the Nicaraguan National Guard, have conducted a systematic repression campaign that has included the killings of thousands of opponents.

However, Somoza also has a lot of friends in Congress and other influential places in Washington. His supporters have been so outspoken in his defense that the anti-Somoza forces refer to them collectively as the "Nicaragua lobby."

Last summer, the two groups collided when congressional foes of Somoza tried to block a $2.5 million authorization to sell U.S. arms to Nicaragua on favorable credit terms. The effort failed, partly because of lobbying by Somoza's partisans and partly because the State Department promised not to sign the agreement until the human rights situation in Nicaragua showed signs of improvement.

That then put the ball in the hands of the State Department, or more specifically, of Deputy Secretary of State Warren M. Christopher. In the words of a National Security Council official, "Christopher is Mr. Human Rights—the guy who basically makes almost all the final decisions in these cases."

Technically, Christopher's writ extends only to cases involving nonmilitary, economic and financial assistance. Decisions on military aid are supposed to be made by Secretary of State Cyrus R. Vance.

However, because of Vance's frequent absences from Washington, many of the military decisions—some sources estimate 40 to 50 per cent—fall to Christopher. Nicaragua was an instance where Christopher had to make the calls.

The mechanisms that Christopher uses in making a decision are different in the military and economic assistance areas. On the nonmilitary side, he has set up a body known in the State Department as the Christopher Group.

Its function is to consider the granting or withholding aid to countries with human rights problems. Basically, says one participant, "it's a means of sorting out the guerrilla warfare disputes between the human rights people, the area officers who deal with the country on a geographic basis and the representatives of other agencies with an interest in the matter."

Where military aid is concerned, there is no parallel formal mechanism—primarily because of the need to involve agencies and considerations that don't figure in nonmilitary aid. While rights are factors, they have to compete with national defense, military alliance commitments and arms sale and export policy considerations.

These factors are shepherded up the State Department bureaucracy under the direction of Lucy Wilson Benson, under secretary for security assistance. Ultimately, they are referred either to Vance or Christopher for a decision.

By late September, both mechanisms had brought to Christopher the need for decisions on the military pact and other aid to Nicaragua.

Reinforcing the need for some action was the fact that Somoza had just loosened the screws a notch in his country by lifting a three-year "state of seige" that had suspended all constitutional guarantees. The problem was to find some means of recognizing the gesture while still making clear that the State Department wanted to see even more improvement.

Normally, department sources agree, that would have been done by holding back on military aid and going forward with economic assistance. The problem, though, was that, under Congress' mandate, the military aid authorization, which applied to the 1977 fiscal year, would expire unless the agreement was signed by the end of September.

As Benson notes: "We had to decide whether we were going to throw this weapon away or try to preserve it as an instrument for future leverage."

The result was Christopher's decision to sign the agreement as a means of keeping it alive. But he added a stipulation that no sales or transfers of arms would be made until there was further evidence of human rights improvement.

"That's something a lot of people have failed to grasp," Benson says. "All we did was keep the agreement on the burner as a basis for further negotiation. But Nicaragua hasn't received so much as a single bullet under that agreement."

The next step came on Sept. 27 when the Christopher Group met on what to do about a proposed package of more than $12 million in nonmilitary loans and grants for Nicaragua. Information provided by reliable sources has produced this picture of what happened in the meeting:

Sally Shelton, a deputy assistant secretary for Latin America, described Nicaragua's internal situation as "a mixed bag." She noted that while reports of killings and torture continued to come out of Nicaragua, the lifting of the state of siege also had produced some improvements such as greater freedom for the press.

Shelton and others noted that, unlike the military aid authorization, the funds for economic assistance could be carried over into the next fiscal year without being lost.

She, Robert Pastor of the National Security Council and Mark Schneider, deputy assistant secretary for human rights, recommended that part of the aid package be granted as an encouragement to Somoza and part be withheld for the time being to spur further improvements.

That drew a strong objection from Jessica Tuchman, also of the National Security Council. She argued that it was administration policy not to use aid aimed at directly helping the needy as a political weapon.

After hearing everyone out Christopher said he was "very troubled" by the Nicaragua situation and added: "I feel we are out as far as we want to be in Nicaragua." In the end he decided that, except for some small grants to nongovernmental organizations, the bulk of the aid package would be held back for the time being.

Tuchman interjected that she wished to be recorded as opposing the decision because she felt that "in the name of promoting human rights, we are denying assistance to the needy."

Christopher responded that we were "postponing" assistance to the needy, not denying it. With that action he added he felt that the United States had given the Somoza regime "a big enough signal for the time being."

However, his words seem more than a little over-optimistic in the light of the confusion subsequently generated by the decision. If no one else seems to have understood the point of the message, one participant concedes, there are grounds for supposing that Somoza didn't either.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Benjamin R. Civiletti, of Maryland, to be Deputy Attorney General vice Peter F. Flaherty, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at the hearing which will be scheduled in the future.

AMERICAN AGRICULTURE MOVEMENT AND MONITORING BY THE ASCS

Mr. DOLE. Mr. President, the American farmer is in serious economic trouble. He is expressing this through a movement called American agriculture.

I met with many of the members of this movement in Topeka, Kansas, and also in Washington, D.C.

I have discussed farm issues, policies, and problems with them, and can understand why they are frustrated. They do not want sympathy; they want a fair price for their crops, livestock and other farm products.

Farmers in this movement have been exercising their right of free speech and assembly. Extreme actions have been kept to a minimum.

It is distressing to hear today that farmers are now concerned that the USDA is monitoring their activities.

Farmers are calling and telling me the Agriculture Stabilization and Conservation Service (ASCS) has been ordered to monitor the American agriculture movement.

I do not feel this activity is appropriate and sure believe it should be stopped immediately.

I sent a telegram today to Secretary of Agriculture Bob Bergland asking for information and action. The telegram states my views and my request to the Secretary. The telegram stated:

> Mr. Secretary, I have received calls from farmers concerning reports that the Agricultural Stabilization and Conservation Service (ASCS) has been ordered to monitor the activities of the American agriculture arm strike movement.
>
> Farmers report to me that ASCS employees are sending names, places, and dates relating to the strike to your office in Washington.
>
> This type of unprecedented surveillance activity reminds me of police state tactics and is not appropriate for ASCS employees.
>
> Surely such actions do not foster unity and harmony between farmers and their government.
>
> I don't believe the ASCS monitors other farm organizations activities.
>
> I would appreciate an immediate reply about what your office has requested from the ASCS and ask that if the ASCS has been ordered to monitor the American agriculture

movement that an order be issued immediately to stop this activity.

I am hopeful Secretary Bergland will stop the harassment of the American agriculture movement immediately. Farmers do not deserve this unprecedented action on the part of the Carter administration.

A TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. EASTLAND. Mr. President, divided only by the Mississippi River, which extends the entire length of Mississippi and Arkansas, there is a consanguinity of peoples and interests that has existed during the history of both States. Nowhere has the consanguinity been exhibited more than in the personal warmth and friendship which has traditionally existed between the Senators of these States. They have been melded by a homogeneous people with common ideals and a common philosophy. A street expression used in both States is "neighbors just across the creek."

In August 1942, both John McClellan and I were nominated in the Democratic primary of our States for the office of U.S. Senator. Neither of us had opposition in the general election. We came to Washington at the same time and were sworn into the Senate together. Since that day—January 3, 1943—a warmth sprang up between us that grew with the passing years. In these 35 years of mutual association, I suppose there might have been a few occasions when our votes have differed but, if so, I cannot remember it.

On the Judiciary Committee, which we both served, there was never a single instance in the 20-odd years of association on which we differed on any subject. John McClellan was known on the committee as a work horse. He rewrote our copyright laws, our patent laws, and the first vast codification of our Criminal Code.

Early in his career, Senator McClellan became a member of the Appropriations Committee and, at the time of his death, was chairman of the Senate's most prestigious and powerful committee.

When John came to the Senate, Arkansas was known as the most flood-prone State in the American Union. It not only had the Mississippi River, but it had the White, Arkansas, and the Ouachita focusing their flood waters into the limited area of east and southeast Arkansas. It is a tribute to John McClellan that those days of flood plague are gone. They are part of the history of the State and, controlled as they are today, the rivers constitute Arkansas' greatest assets.

His interests were varied. I recall Senator McClellan's first crusade was to change the discrimination for tax purposes between the community property States and the rest of the Union. Arkanas bordered community States and the discrimination in taxes was obvious for all in Arkansas to see, but McClellan alone, carried this fight to remove this discrimination and, while he was not a member of the Finance Committee, his efforts were capped by a victory, I believe in 1946. The scroll goes on. Thirty-five years of service and 35 years of constant, painstaking labor in spite of the tragedies that befell him during his service here.

His oldest son died in North Africa during World War II. When this son's body was returned from North Africa for reburial in Arkansas, another son was killed almost simultaneously as his brother's funeral. Just a few years later, his third son was killed in an airplane crash. I know of no Senator that has ever suffered such tragedy and travail. While sadness and loss are part of the human experience, John carried a burden that would have broken all but the strongest of men.

A measure of his character is the manner in which he triumphed over tragedy and fashioned a career of service that honors the memories of his loved ones even as it honored Arkansas and America. All through his sadness, his wife, Norma, stood staunchly by his side.

I could not say more than what I said on the day of his death. Arkansas has lost their most distinguished son, and I have lost one of my warmest friends.

THE NATION'S NONFUEL MINERALS POLICY

Mr. McCLURE. Mr. President, the December 8, 1977, publication of the North Idaho Press reported on an address given by Assistant Secretary of Interior Joan Davenport. In her remarks, the Assistant Secretary announced the formation of a Cabinet level committee by the President to review the Nation's nonfuel mineral policies. The Interior Department should take note that Congress, by its passage of Public Law 91–631, created the Mining and Minerals Policy Act of 1970. This act provides a clear direction for our minerals policy for the Interior Department to administer.

I ask that the entire text of the North Idaho Press article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERIOR OFFICIAL DRAWS WRITER'S IRE

(By Nancy Lee Hanson)

Among the speeches given at the Northwest Mining Assn's annual convention held in Spokane Dec. 2 and 3, probably the one which created the most interest was that given at the luncheon Friday by Joan Davenport, the new assistant secretary of the U.S. Dept. of the Interior.

Mining officials and mining organizations were quick to criticize the Administration's selection of Miss Davenport for the Interior Dept.'s division of energy and minerals. They were unhappy with the nomination because her background, which is primarily statistical and environmental, includes nothing having to do with the use of public lands for energy or minerals.

Mining people at the convention said her prominent and wealthy family in the east had contributed generously to the Carter campaign and her appointment was the reward.

She spoke to a skeptical audience. And her speech was not entirely professional. It was not particularly well written, contained several grammatical errors, misuses of words and had what seemed like an overabundance of sentences like, "We must keep the lines of communication open," which was repeated three times. Later it sunk in that she had read the same page twice.

Miss Davenport said she was happy to announce President Carter will create a cabinet level committee to review the nation's nonfuel mineral policies, which Interior Secretary Cecil Andrus will head. It will be composed of 13 cabinet secretaries, federal agency directors and senior presidential advisors. Miss Davenport will assist in coordinating and managing the interagency study.

The only individuals not on the committee, it seems are those who know the most about the subject—mining people.

"Among other things, this committee will examine Federal actions affecting the health of the American mining industry," she said. "Personally, I am enthusiastic about the possibilities of this study. For the first time, this Government will focus its full attention on our mining industry and our mineral supply picture to determine the adequacy of our Federal policies."

A government employee in the mining area remarked after the luncheon, "She makes it sound as if this is the first time such a committee has existed. They have been created many times before."

Miss Davenport also announced President Carter has created an interagency task force on copper because, "The Dept. of the Interior is deeply concerned about the welfare of the domestic mining industry." There are no mining people on that committee either.

Miss Davenport then talked about the Administration's mining bill, which would repeal the 1872 Mining Act. She denied the majority of licenses and leases would be issued competitively, saying only lands which have been mapped and assessed by the U.S. Geological Survey or the Bureau of Mines would be classified as suitable for competitive bidding. She said most of this had been done.

The 1872 Mining Act should be repealed, she said, because the Act does not serve the small miner or prospector in today's world." Her example was the companies in Wyoming holding thousands of claims to search for uranium, something they said was impossible with small holdings. She said the small miner prospecting on a few claims was no longer relevant today.

Apparently she believes that searching for all types of minerals is done in the same way.

One of her points, which could be valid, was about one individual's complaint made during government hearings that one quarter of the public lands in Wyoming had been acquired by speculators who ignored the law. "The small miner is not being helped by such activities," she said. This way of acquiring land would be eliminated by the proposed mining bill.

It is her belief (but not that of the mining industry,) that the bill includes the basic principles the industry considers essential for any effective mining law.

When she said, "I don't believe we have any problems—the Administration and the mining industry—that can't be solved to our mutual satisfaction if we will make up our minds to talk with each other," the skepticism of the audience was obvious.

Miss Davenport repeated several times that Secretary Andrus' and her doors would always be open and they would welcome telephone calls for a discussion of each side's ideas. But one couldn't help thinking that they would do what one always does with children—listen and then do exactly what she and the Secretary thought was best for the mining industry.

In a press conference held that morning, R. J. Bruning, special assistant for minerals to Miss Davenport, used some of the same sentences and words as were in her speech.

It appears he must have written at least some of it.

It is hard to understand, then, why he allowed her to say, "The secretary's efforts on behalf of the mining industry when he served as Governor of Idaho for six years are well known." She was interrupted in mid-sentence by a wave of laughter that rolled over the room. Miss Davenport appeared shocked and Bruning grim.

It is incredible that someone so totally lacking the qualifications for such a responsible and technical position, one that will affect the lives of every citizen for years to come, was appointed by a born-again president.

Miss Davenport, who is just 14 years away from being a teenager, spoke to a room filled with mining people ranging from intelligent to brilliant with a total of thousands of years of experience in the mining field. President Carter owes us all an explanation.

SENATE HEARINGS ON S. 1974—THE REGULATORY FLEXIBILITY ACT

Mr. CULVER. Mr. Prseident, on October 7, 1977, I chaired a hearing of the Judiciary Committee's Subcommittee on Administrative Practice and Procedure on S. 1974, the Regulatory Flexibility Act. Senator GAYLORD NELSON and I introduced this bill in August and it now has 27 additional cosponsors.

I appreciate the cooperation which the chariman of this subcommittee, Senator JAMES ABOUREZK, has given me in scheduling these hearings and in soliciting expert comment on the bill. I will be working closely with Senator ABOUREZK as the legislative process moves forward.

The principle underlying the Regulatory Flexibility Act is that in some cases regulations can and should be tailored to the size and resources of those being regulated.

In brief, the Regulatory Flexibility Act directs Federal agencies to study the economic impact of compliance with new regulations on small businesses, small organizations, and individuals before those regulations are issued. It also requires a review of existing regulations in light of this impact. If the agency finds that a uniform set of requirements applying to small and large concerns alike would place a disproportionate burden on small enterprises, it must determine whether less burdensome reporting and compliance requirements should be developed for the small concerns.

Over the next few months, Senator NELSON and I will be studying the hearing record and working with interested groups and individuals both inside and outside Government in an effort to evaluate and refine S. 1974. I anticipate chairing further hearings on the bill early next session for the purpose of receiving agency comments on the bill.

At this time I would like to provide the Senate with a summary of the major issues, as I see them, raised at the October 7 hearing. I hope that my colleagues will find this summary useful in evaluating the bill at this stage of its development and I welcome any comments and suggestions that they might have.

The summary follows:

DISCUSSION OF MAJOR ISSUES RAISED AT HEARING BEFORE THE SUBCOMMITTEE ON ADMINISTRATIVE PRACTICE AND PROCEDURE OF THE SENATE JUDICIARY COMMITTEE ON S. 1974, THE REGULATORY FLEXIBILITY ACT

Witnesses presest: Senator Gaylord Nelson, Chairman, Senate Select Committee on Small Business;

Dr. Milton Kafoglis, Professor of Economics, University of Florida;

Mr. Carl A. Beck, representing the Small Business Legislative Council. Past President of the National Small Business Association, current member of the Executive Committee of the Board of Trustees of the NSBA and Chairman of the Business Advisory Council on Federal Reports. Accompanied by Mr. Herb Liebenson, Staff Vice President—Government Affairs, SBLC;

Dr. Thomas O. James, Treasurer, Chatham College, Pittsburgh, Pennsylvania. Representing the National Association of College and University Business Officers. Accompanied by Mr. M. J. Williams, Director of Special Programs, NACUBO;

Mr. James D. "Mike" McKevitt, Washington Counsel, National Federation of Independent Business. Accompanied by Mr. William Dennis, NFIB;

Mr. Warren Buhler, Director, Commission on Federal Paperwork. Accompanied by Mr. Michael McGinn, Deputy Director, Commission on Federal Paperwork.

Written testimony submitted by Mark Schultz, Regulatory Affairs Attorney, Chamber of Commerce of the United States.

Issue 1—Do agency regulations of general and uniform applicability discriminate unfairly against small businesses, small organizations, or individuals?

Discussion—The resolution of this question is central to S. 1974. There is a general presumption in a democratic society that people should be treated equally by their government and that special exemptions should not be granted to any group without establishing very good reasons for doing so. When a group seeks an exemption it generally has the burden of establishing that the exemption is justified.

All witnesses before the Subcommittee were asked whether small businesses, small organizations and individuals are in need of special treatment in the area of government regulation. Each provided evidence that "uniform" treatment under regulations does not always result in what could be considered "equal" treatment.

This phenomenon was illustrated by examples of regulations that impose the same total cost of compliance on both small and large firms. Mr. "Mike" McKevitt provided extensive documentation on how uniform requirements result in a higher cost per unit of output on the small firms, placing them at an economic disadvantage. In such cases, "equal treatment" in no sense leads to equal impact and certainly does not protect equal opportunity to compete in the marketplace.

Senator Nelson provided the Subcommittee with instances from recent Small Business Committee hearings of how uniform regulations impose unequal burdens on small concerns. Some examples were:

A pension plan in Montana with 12 members was subject to precisely the same informational and regulatory requirements as a national plan with 843,000 members;

An elderly couple in Arizona, owners of a literal "mom and pop" auto business, testified that they spend an average of 15 hours a week preparing federal reports.

Mr. Carl Beck told the Subcommittee of a small telephone company in Iowa, serving 1,232 customers, which has to comply with all the rules and regulations of the larger telephone companies. This company has had to hire Washington attorneys, CPAs and engineers to present its problems to the Federal Communications Commission.

While more extensive documentation and evaluation will be needed, the October 7 testimony supported the hypothesis that general and uniform regulations discriminate against small concerns. These witnesses also felt that a systematic evaluation of regulatory impact is necessary to develop rules that provide "equal" or "neutral" treatment of enterprises being regulated.

The witnesses stressed that they are not seeking special advantages from exemptions or special requirements, but wish to equalize the relative impact of federal regulations. It may even be useful to add a specific provision to the bill making it clear that the bill does not authorize or require agencies to grant any exemption or set lesser standards that go beyond the need to equalize the burden of federal regulations on different-sized concerns.

Issue 2—Do federal agencies have the capability to carry out the kinds of impact analyses required by S. 1974?

Discussion—Both I and several witnesses raised a number of questions concerning barriers to effective assessment by a federal agency of the impact of regulations on different-sized concerns. Technical questions concerning the state of the art in economic analysis and administrative questions concerning agency resources and possible delays in rulemaking must be answered before the Congress can realistically assess the changes in our rulemaking procedures proposed by S. 1974.

Dr. Milton Kafoglis, who recently served as a senior economist on the staff of the Council on Wage and Price Stability, pointed out that agency capabilities vary widely, depending on the number of industries affected by their regulations and their history of addressing this question of regulatory impact. Agencies which have jurisdiction over a small number of industries could perform such impact assessments with relative ease. Agencies with jurisdiction over many industries, as in the case of the Environmental Protection Agency or the Occupational Safety and Health Administration, would find the job much more difficult. Dr. Kafoglis pointed out, however, that both EPA and OSHA recently have demonstrated improved capability in economic impact analyses.

Mr. Warren Buhler made the point that, in general, agencies currently lack the necessary expertise to meet the impact analysis requirements of S. 1974; but without the requirements the bill sets forth, agencies will be much less likely to develop the ability to assess the costs they impose on society. He argued that as long as the federal government concerns itself only with holding down the budget costs of developing and implementing rules and ignores the costs on others of complying with those rules, the total cost to society will be larger than it would be if we put more effort into establishing fair rules in the first place.

Addressing this question from another perspective, Mr. McKevitt and Senator Nelson cited a number of examples of current regulations containing exemptions for small businesses or setting different standards for small enterprises than for larger ones. Senator Nelson provided the subcommittee with an extensive list of cases where agencies have issued such "tiered" regulations. He pointed out that this list, prepared by the Congressional Research Service, was not an exhaustive review of such rules but represented a sampling of the actions of various agencies in this respect.

These examples demonstrate that agencies do have some capacity to make assessments of differential impact of alternative approaches to implementing the laws under their jurisdiction and that they feel that such considerations can and should be taken into account in rulemaking.

A number of witnesses said that they viewed S. 1974 as a bill to insure that agencies do systematically what some now do on an ad hoc basis. While the burden on federal agencies would be greater under S. 1974, agency capability to perform these impact analyses currently exists to some degree and an enhancement of that capability is likely to require statutory encouragement, together with sufficient budgetary resources.

Issue 3—How can exemptions or different standards of compliance for small concerns be effected without jeopardizing protection of public health and safety or other socially desirable objectives?

Discussion—The authors of S. 1974 have made clear on a number of occasions that the bill is not intended to eliminate any requirements which are necessary to fulfill the intent of the law. It is designed to eliminate superfluous red tape and other unnecessary costs.

The Subcommittee asked each witness to address this question of how the provisions of S. 1974 might adversely affect the public interest, such as in the area of health and safety regulations.

All witnesses indicated that their interpretation of S. 1974 was consistent with the authors' expressed intent. They noted that the point at issue was the distinction between good and bad ways to implement the law, rather than whether or not the law should be implemented effectively. Several different examples and perspectives were offered on this point. Among these were:

Regulations with reporting requirements in excess of that needed to determine compliance with the intent of the law often work at cross purposes with that intent. Dr. Thomas James pointed out that, for small concerns, meeting these information and reporting requirements can absorb so large a share of the available time and resources that the objective becomes one of filling reports rather than meeting the law's intent. In such cases, less burdensome reporting requirements could increase our ability to achieve socially desirable objectives.

Many regulations require the reporting of information in a form that is inconsistent with normal recordkeeping practices. Often regular records, as they are or with minor modifications, could provide adequate information. Small concerns, in particular, lack the sophisticated records necessary to comply with government information requests. This often occurs because small concerns are not consulted during the rulemaking process. If agencies consulted with small as well as large concerns during the rulemaking process, adequate information requirements could be developed which imposed much less burden on small concerns without jeopardizing the relevant social objective.

Many regulations require technical standards; i.e., certain technologies must be employed in order to comply with the regulation. This often imposes a fixed cost on anyone who has to comply with the standards, thus imposing a greater per unit of output burden on small concerns than on large concerns. A standard which required a certain level of performance in meeting objectives would allow the adoption of least cost technology while achieving the same ends.

Agencies often write rules that they do not have the resource to enforce uniformly. At times this results in selective enforcement based on ease of prosecution rather than severity of offense. "Tiered" regulations, establishing objective priorities for achieving maximum social benefit, may increase both the enforceability of rules and the equity of enforcement.

It appears from the hearing that the provisions of the Regulatory Flexibility Act can and should be applied to regulations that affect health and safety as well as regulations affecting strictly economic objectives. It may be necessary, however, in order to insure that these provisions are not misapplied, to make more explicit in the bill that protection of the health and safety of the public must take precedence over the impact of such regulations on small concerns.

Issue 4—S. 1974 presently applies to all agency regulations, even those regulations that affect *only* small businesses, small organizations or individuals. How would the procedures outlined in the bill apply to these regulations since there is no uniform compliance standard from which to exempt small concerns nor from which a different standard could be set? Should these regulations be exempted from the bill's impact?

Discussion—While the question of how S. 1974 might be applied to regulations affecting only small concerns or individuals was not spelled out by the witnesses, all agreed that such regulations should not be exempt from the kind of analysis the bill would require. Dr. Kafoglis pointed out that "regulatory flexibility can be viewed as involving lesser or higher standards on a relative basis, but it can also be viewed as establishing the appropriate level of regulation."

Other witnesses emphasized the inability of small concerns and individuals to participate effectively in the rulemaking process. Although one would suspect that agencies issuing regulations which impact only small concerns or individuals would be especially sensitive to that impact, this does not appear to be the case in many instances. The result often is the promulgation of regulations directed specifically at these groups which make it next to impossible for them to comply with the requirements or take advantage of any benefits that programs are designed to offer.

While some modification of the bill might be needed to address regulations affecting only small concerns or individuals, it appears that greater sensitivity and attention to the needs and special characteristics of these groups are needed, whether they are affected as part of a heterogenous population or a homogenous one.

Issue 5—S. 1974 would require that the federal government obtain more detailed information on the impact of federal regulations on small businesses and other small concerns. How could agencies get the necessary information without creating still another layer of reporting requirements for the groups which the bill is intended to benefit?

Discussion—Mr. McKevitt stated in his concluding remarks at the hearing that "the most difficult problem presented by S. 1974 will be the accumulation of data on which to base the analyses required."

Several approaches to solutions to this problem were suggested. These included:

Greater efforts by government to assimilate the data and other information it already has concerning small businesses and organizations;

Sample survey techniques designed to provide objective information on industry characteristics;

Use of "typical" firm models based on sample data;

Increased representation of small concerns, through regulatory advisory groups, the Small Business Administration, or other appropriate ombudsmen.

There was a general recognition by the witnesses that some new costs for small concerns would probably result from the need for better impact analyses. This was accompanied by a conviction that the increased cost could be more than offset by reductions in the cost of complying with ill-considered regulations. This, of course, would depend upon the agencies using the additional information to write regulations that are, in fact, less burdensome.

The Chamber of Commerce pointed out that "the critical problem today is that the federal government sees information as a 'free good'—and, for all practical purposes, it is a free good for government. However, it is anything but free for the business community."

Dr. Kafoglis and Mr. Schultz both suggested that one way to help insure that information requests are reasonable and directed at obtaining only necessary information is to conduct such information-gathering within agency budgets rather than allowing agencies to transfer most of the burden to respondents. They argued that this would lead to more careful research design and more efficient use of information since agencies could be held accountable for the costs generated by their information-gathering requirements.

Issue 6—Do agencies currently have the legal authority to set different compliance standards or grant exemptions from a general standard for small firms? Or is agency discretion limited to varying the means by which uniform requirements of law are met?

Discussion—None of the witnesses at the October 7 hearing claimed the expertise necessary to answer this legal issue. It is a significant issue about which the agencies should have a great deal to say when they file their comments on the bill.

This issue raises the significant subject of whether the problems which result from the uniform application of federal laws occur because Congress passes laws which are categorical in their requirements. If agencies have the discretion only to minimize the paperwork burden for complying with these categorical requirements, better impact analysis may have only a marginal effect on reducing the social cost of regulations.

Issue 7—S. 1974 encourages agencies to grant exemptions or set different standards for compliance on the basis of size. Are there bases other than size, such as a history of previous compliance, upon which to grant exemptions or set different standards for compliance?

Discussion—The October 7 hearing and other evidence demonstrated that there may be a number of workable and productive criteria upon which to establish regulatory "tiers." Since some of these, such as performance criteria, apply to large as well as small concerns, it is not clear how much criteria might be incorporated into S. 1974.

Some performance criteria, such as the OSHA provision prohibiting fines against inspected workplaces with nine or fewer nonserious first instance violations, have been used with apparent success. It will be necessary to evaluate existing law and agency practice to determine whether size should be the sole or principal basis for granting exemptions and setting different standards for compliance under legislation to encourage regulatory flexibility.

Mr. President, this summary is not meant to be an exhaustive examination of the issues raised by S. 1974. Much work remains to be done in the months ahead and many other issues will require extensive study. I believe, however, that the record already established on S. 1974 clearly demonstrates the need for Congress and the Administration to attempt to correct some of the problems created by government regulation.

I am encouraged by the interest that has been shown by the President and by several of his cabinet members in seeking remedies for excessive and inflexible regulation. The proposed Executive Order currently being considered by the President indicates that there is a strong common ground upon which to base a mutual effort to improve the rationality and equity of government activities in the private economy and in the private lives of all citizens. I am hopeful and confident that we can move forward together in this effort.

TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. HASKELL. Mr. President, as a freshman Senator I was privileged to share my first term in Congress with John McClellan's last. His sense of duty, integrity, and legislative ability were a constant source of inspiration to me. Personally I only knew him a few years but I had known of him through the decades of McClellan-chaired hearings and McClellan-sponsored legislation.

He was indeed a national figure. He never neglected the special needs of his home State in his pursuit of national issues but pursue them he did. Americans, in turn, recognized his efforts on our behalf to be inspired by conviction rather than political ambition. We came to think of him as a champion of our interests, a guardian of our trust.

His tenacious pursuit of those who would abuse this trust was legend. In the early 1950's he was among the first to publicly condemn the late Senator Joseph McCarthy's handling of the Army-McCarthy hearings conducted by the Senate Subcommittee on Investigations. Later, as chairman of the subcommittee, he probed the activities of organized crime, labor racketeering, military service clubs, missiles defense contracts, banks, and registered mail; the list is endless—18 years worth of significant and thorough congressional investigations.

His exposure of crime and depredation resulted in impressive legislation including the Organized Crime Control Act of 1970, the Omnibus Crime Control and Safe Street Acts of 1968 and 1970 and, of course, the revision and reform of the U.S. Criminal Code.

More recently, as chairman of the Appropriations Committee, he exercised effective leadership and fiscal responsibility.

This Thanksgiving, John McClellan returned to his native Arkansas to announce his plans to retire at the end of his sixth term in the U.S. Senate—a remarkable 36-year tenure. A few days later, at the age of 81, he died in his sleep at his home.

Senator McClellan chose to begin his retirement announcement with a quote from Scripture:

> To every thing there is a season, and a time for every purpose under heaven.

How appropriately the verse describes the life and passing of John L. McClellan. His accomplishments were legion but his great achievement was that to which we all aspire—a life of contribution and purpose.

NUCLEAR ENERGY

Mr. McCLURE. Mr. President, the continuing debate between Congress and the administration concerning the future of nuclear energy has resulted in a better understanding of the proposed nuclear export legislation, S. 897. It is essential that the reliability of the United States as a supplier of nuclear fuels and systems be firmly established in the free world. Without such reliability, we face a future of greatly increased foreign proliferation of both nuclear fuels and facilities for fuel enrichment and reprocessing, combined with a serious weakening of our own domestic nuclear energy capability. To insure such a reliability and to forestall nuclear proliferation, I will continue my strong support for the Clinch River breeder reactor project and the Barnwell reprocessing plant.

My colleague from Idaho recently addressed a meeting on nuclear energy concerning the relationship with world peace. His remarks present the factual basis for a continued strong nuclear energy development program within the United States, combined with a nonproliferation policy based on a reliable U.S. capability for meeting the legitimate nuclear energy needs of the free world. So that the full Senate may have the opportunity to review his persuasive arguments, I ask unanimous consent that the full text of Senator Church's prepared remarks, "Nuclear Energy and the Prospects for Peace," delivered on November 30, 1977, be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

Nuclear Energy and the Prospects for Peace

On April 7 of this year, President Carter announced the Administration's nuclear energy strategy. Under the new policy, the U.S. would (1) defer indefinitely nuclear fuel reprocessing; (2) terminate our planned demonstration breeder reactor; (3) seek alternate fuel cycles to the plutonium cycle; and (4) promote the exclusive use of conventional nuclear power plants here and abroad, and provide guarantees of sufficient quantities of enriched uranium to fuel them. By deferring nuclear fuel reprocessing and the introduction of breeder reactors, the Administration sought to avoid entering the plutonium stage of nuclear energy development.

More than half a year has now elapsed since this new policy was declared. It has been marked by rising public resistance to all types of nuclear energy within the United States and around the globe. Recently, in France, some 25,000 protestors clashed with police as they marched on the construction site of the Super Phenix, France's 1200 megawatt breeder reactor. English protestors have delayed the planning for new nuclear power stations in their country, and there is a full-scale inquiry into reprocessing light water reactor fuel at Britain's Windscale. In West Germany, there is currently a moratorium on building any new plants, while that country tries to solve the problem of nuclear waste management.

In light of these much publicized events, what has really happened? Is the plutonium genie actually being stuffed back in the bottle? Let's inspect the record.

Three major objectives marked the Administration's effort to divert other nations away from plutonium: it tried to stop the West German sale of the complete nuclear fuel cycle, including reprocessing and enrichment facilities, to Brazil; to halt the French sale of a reprocessing plant to Pakistan; and to prevent the Japanese from reprocessing spent fuel at Tokaimura. The results? The West German-Brazilian sale will be consummated—with all the reprocessing, enrichment and other sensitive technology included. The French, as planned, will sell the reprocessing plant to Pakistan, while, after a series of moves primarily designed to save face for the United States, the Japanese will operate their reprocessing plant at Tokaimura. Thus, the three major objectives of the Administration's anti-plutonium initiative have all failed to materialize.

Other, less noticed reversals are even more telling. Five Western European nations: France, Germany, Belgium, Italy and the Netherlands, recently signed a series of agreements for joint research and development of fast breeder reactors and the formation of a group to market them worldwide. The pacts seem to be a complete rejection of the Carter Administration's proposal to delay development of breeder reactor technology.

Similar examples abound, and I will briefly mention a few. This past October, West Germany began operating its first fast breeder research reactor and, together with The Netherlands and Belgium, is constructing another 300-megawatt prototype breeder. The British have two research breeders already operating in Scotland and a 1,300-megawatt commercial breeder under design. The Soviet Union operates a 350-megawatt breeder, the BN350, and is now building a 600-megawatt one, the BN600, about the size of the demonstration plant we had intended to build at Clinch River. France, of course, has been operating its prototype breeder, the 250-megawatt Phenix, for several years, and is now constructing its 1,200-megawatt commercial breeder, the Super Phenix. As for Japan, while American attention was focused on our futile attempt to persuade that government to forego reprocessing at Tokaimura, we all but ignored the fact that, just two and a half weeks after Carter's nuclear message, Japan's 50-megawatt Joyo test breeder reactor went critical. Japan's next step is construction of a 200-megawatt prototype, Monju—which is already in the planning stage.

Moreover, several other countries are going ahead with reprocessing. West Germany intends to build a large reprocessing and storage center in Lower Saxony. France has contracted to reprocess Japanese spent fuel at LaHague and is holding talks with West Germany, Switzerland, Sweden and Austria on similar contracts, at an estimated price of $2 billion. The French are asking that substantial sums be paid "up front," so that the money may be used to increase threefold the LaHague plant's current capacity of 800 tons per year.

Ironically, the Administration's policy of opposing the completion and use of our own reprocessing plant at Barnwell, South Carolina, hands the French a golden opportunity to pre-empt commercial reprocessing, permitting them to charge high prices and big "up front" fees for their services. Japanese utilities, for their part, are taking steps to get out from under these onerous French charges. They already have begun discussing arrangements with the Japanese Ministry of International Trade and Industry for site selection and feasibility studies on another Japanese reprocessing plant to handle their own fuel, one with a capacity of 1,500 tons per year, over seven times the size of their present plant at Tokaimura.

It is not difficult to understand why these countries are pushing ahead with reprocessing and the breeder, despite our official opposition. As I have pointed out before, these governments look upon nuclear energy and the breeder as their only hope of achieving some semblance of energy independence. We, in the United States, greatly underestimate the degree to which the 1973 Arab oil embargo and the subsequent 600 percent increase in the price of oil affected other major nations. Our country still produces almost 60 percent of its own oil needs, even though there is much reason to be concerned about our rising imports. But imagine our anxiety if we had to import 80% or 90% of our fuel. What if our import bill for foreign oil this year was not $45 billion, but $100 billion? What if our policies abroad were hostage to the demands of a handful of foreign governments whose interests differed from our own? Yet that is exactly what other countries face. Japan, France and Brazil, for example, import 90 percent of their fuel, primarily in the form of oil from the Middle East.

The Carter Administration wants these countries—and all others as well—to continue to rely on conventional nuclear reactors, fueled by enriched natural uranium. We have proposed an international fuel bank which would act as a repository for enriched uranium, supplied by major producers. Presumably, this fuel could be drawn upon by importers in the event that their normal source was cut off. The hope is that such a fuel bank might provide greater assurance of an uninterrupted fuel supply, and thus reduce the incentive for importing nations to build uranium enrichment or reprocessing plants with which to produce their own fuel, facilities which could also be used to fabricate nuclear weapons.

The idea is not new. In 1953, as part of his "Atoms for Peace" proposal, Dwight D. Eisenhower suggested the same concept, asking that nuclear fuel be contributed to his proposed International Atomic Energy Agency "to be allocated to serve the peaceful pursuits of mankind." Although the IAEA was established in 1957, the United States had by then lost interest in an international fuel bank, favoring instead our own bilateral contracts for supplying nuclear fuel to importing nations. As long as we remained a reliable bilateral supplier, we enjoyed dominant influence in regulating and safeguarding the sale of nuclear fuel. But of late, the United States has itself undermined the confidence foreign purchasers reposed in us. During its review of nuclear policy, the Administration suspended licenses for the export of enriched uranium. Confidence in our reliability as a supplier was shattered.

The result was predictable. Activities mushroomed to break our hold on fuel enrichment services. Other governments were moved to build their own uranium enrichment facilities and reprocessing plants, the better to guarantee themselves a dependable supply of nuclear fuel in the future. There are estimates that, within two to five years, the leadership role of the United States in the global development of peaceful nuclear energy will begin to fade, due to the spread of uranium enrichment and reprocessing plants. President Carter in the best of faith has sought to divert the world away from this dangerous course, with all its pitfalls for nuclear weapons proliferation, the concept of an international fuel bank has been revived. But even if we succeed in establishing such a fuel facility, it cannot provide a lasting solution to our dilemma. For the proposal, much as I welcome it, much as I will support it with my voice and my vote, is inherently flawed. It depends upon deposits of natural uranium adequate to meet world demand.

This just isn't in the offing. As for our own resources, the most optimistic forecast—that of the Ford Foundation—assumes there will be far more recoverable uranium discovered in this country than intensive exploration has yet indicated. The Ford study estimates a 3.7 million ton reserve figure. But other studies by federal agencies, including one conducted by the National Academy of Sciences, hold that the known and probable reserves of uranium in this country total only 1.8 million tons. Such a quantity would provide only one-half of the nuclear fuel required by the United States alone between now and the end of the century. Even if the Ford Foundation prediction proved true, it is still apparent that the United States would be unable to produce, from its own natural uranium deposits, a sufficient supply of enriched uranium to meet our own needs and those of our foreign customers, besides. So, if we take the most optimistic of forecasts, the policy of conventional reactors is based on a false premise.

To be sure, large quantities of natural uranium are to be found outside the United States, notably in Canada and Australia. Doubtlessly, other deposits will be discovered and developed. Nevertheless, as measured against the projected worldwide growth curve of nuclear energy, the argument is not whether there will be enough to last, but rather, how long it can last. Like oil, natural uranium is a depletable resource. From the standpoint of the great majority of countries endowed with neither fuel, of what use is it to exchange one dependency for another?

In the long run, these governments must look beyond conventional reactors and a diminishing supply of natural uranium. The breeder program is the only technology now on the horizon which holds out the promise of relief from an unremitting dependence upon foreign-held fuel supplies. The singular advantage of the breeder is that future models, on the basis of known technology, should produce more fuel than they can consume. And, so you have one real possibility for solving the energy crisis that will expand 100-fold the supply of natural uranium.

Furthermore, alternate energy sources are simply too uncertain. With the spectre of oil beginning to run out, and the price exploding in 1985, countries cannot be expected to shelve their self-sustaining nuclear programs while waiting for some dramatic breakthrough in solar energy. Nor can they rest their future on the energy to be derived from the wind, the waves, or geothermal heat. Our hearings have brought the best experts. We have funded alternatives to the hilt. Coal can help. We should develop these sources of power to the utmost, but at present, all of these alternatives, combined with the expanded use of coal, appear to fall short of the mark. For now at least, the answer these countries see is the breeder, with its self-generating fuel stock and its promise of energy independence for their core industrial base. That's the way they see it . . . we must contend with in embracing the realities of the world we live in.

That is why I believe the President was mistaken in vetoing the Clinch River Breeder Reactor Project. By refusing to build a breeder, while other nations proceed to do so, we not only retreat from reality, but we are bound to lose our leadership role in shaping the global control system which the use of plutonium fuel demands. After all, we must share the same world with other nuclear nations, and we should strive with them to make it safer. No escape can be found in abandoning to foreign governments the development and application of breeder technology.

As the sole reliable supplier of enriched uranium, we once exercised great influence over the development of nuclear energy for peaceful use. By becoming unreliable, we have increased, rather than diminished, the risk of weapons proliferation. The international fuel bank is an effort to again create a dependable source of nuclear fuel for conventional reactors under multilateral auspices; to keep the enriched uranium under tight safeguards; and to prevent the diversion of the spent fuel for bomb-building purposes. In making its proposal, the Administration correctly recognizes the existence of the front end of the nuclear fuel cycle and the need for a global mechanism to manage it. All I would add is that we adopt parallel polices that will recognize and safeguard the back end of the nuclear fuel cycle, as well.

Such parallel policies would call for an international system to safeguard the shipment and peaceful use of plutonium fuel. The system should offer developed and developing countries alike assured access to both enrichment and reprocessing services within the context of these safeguards. Instead of promoting monopoly profits for those governments that elect to sell reprocessing services, thereby encouraging purchasing countries to build their own facilities, we should be working to internationalize these operations in regional fuel cycle centers. This is the best way to separate the commercial nuclear fuel cycle from weapons manufacture while, at the same time, accommodating the legitimate energy needs of non-weapon states.

Any strategy to control nuclear weapons proliferation must include the marketplace and embrace the whole nuclear industry, both here and abroad. In recent years, the United States has effectively curtailed sales of our products abroad because of our growing concern over nuclear weapons proliferation risks—U.S. reactor sales have dropped precipitously in the last five years. Only one was sold in 1976. Other countries, notably France and West Germany, have rushed into the breech to fill those orders. During the same five-year period, their sales have dramatically increased, reaching nine reactors in 1976. What else could we expect? Every stage of nuclear power, from the conventional reactor to the reprocessing plant to the fast breeder requires a huge investment difficult if not impossible to recover if sales are restricted to domestic markets. Further, the smaller the country, the greater the need to export.

As a result, it is all the more important that the United States become the leader in establishing international guidelines for safeguarding the whole of the nuclear fuel cycle in a framework that permits export sales by all suppliers.

S. 897, the nuclear export bill now in Congress, must reflect this requirement. As you know, its initial formulation ignored the existence of the back end of the nuclear fuel cycle, as well as other countries' nuclear plans, and could well have precluded exports of any kind by the United States. In both the Energy Committee and Foreign Relations Committee, I worked to amend the bill in quest of procedures which would wed the realities of the marketplace with the goal of nonproliferation. It has been much improved and I would like to take a fresh look at it and since it was put over, I want to take that look.

Why should we manacle our industry in a manner that will not advance the goals of nonproliferation? Rather, our purpose should be to give our industry access to the world marketplace under internationally agreed upon standards.

I do not mean to suggest that what I am proposing is a system free from risk. Far from it. Serious risks attend the use of nuclear power, and they cannot be ignored. The most pressing problem today is demonstrating that an environmentally safe method can be devised for the final disposal of nuclear waste. Again, I favor an international control system linked to reprocessing. But until that can be accomplished, interim storage of domestic spent fuel at federal repositories, akin to the plan anounced by the Administration, makes eminently good sense. So it's not all black. There are features in this moving in direction we could all applaud.

While there are legitimate concerns about nuclear power, for the most part our fears about weapons proliferation are misdirected. Commercial nuclear facilities have not been the route taken by those governments that have desired to build the bomb. As in the case of India, bombs have come from conventional research reactors and small chemical separation facilities designed for this specific purpose. And these can be developed quickly by any country.

If non-proliferation is truly the goal, our decision not to build a breeder reactor in this country is far removed from the example we really need to set. For the nuclear weapons that endanger the world today, those that the whole human race has most reason to fear, are to be found in the burgeoning arsenals of this country and the Soviet Union. Both countries live in the shadow of these weapons, whose power is so great that we lose count in the Kafkaesque game we play of how many times each of us can destroy the other—and much of the world besides. This is the overriding threat to our survival, and it is here—in the field of nuclear arms control—that we must concentrate our efforts and set the example for the world.

Yet on the horizon looms another threat, subtler but just as real. The world is running short of energy—we appear perilously close to that time. As energy is the basis for the world's economic well-being, it may well hold the key to future peace or war. The possibility that nations will embark on military adventures to secure sufficient energy will increase as supplies dwindle and living standards stagnate or decline. The world could be reduced to internecine warfare for generations to come.

I believe it is within the capacity of the United States to contribute significantly to the future energy resources available to the world, and to materially reduce potential tensions that could lead to future hostilities.

But to do so, we must distinguish between nuclear weapons and nuclear power, between atoms-for-war and atoms-for-peace, for they are not the same. To know the difference and act accordingly is indispensable, if ever we are to succeed.

AN HISPANIC VIEW OF WELFARE REFORM

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD the recent testimony of Mr. Ricardo Zazueta, national director of SER/Jobs for Progress, Inc., to the House Ways and Means Committee on the Hispanic Perspective on Welfare Reform. This testimony, by a group that has assisted over 124,000 persons to find jobs over the last 11 years, identifies the very difficult problems in adequately reaching our Spanish-speaking population in Federal job creation legislation, particularly when in 1976 Spanish-speaking youths suffered a 23.1-percent unemployment rate. One of Mr. Zazueta's important suggestions is the need for far greater emphasis on developing expanded bilingual training and instruction efforts in order to create meaningful jobs for this particular group of unemployed. I trust that my colleagues will find these important and constructive observations very helpful in the next few months as we review the President's welfare reform proposal.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

HISPANIC PERSPECTIVE ON WELFARE REFORM

Mr. Chairman and Distinguished Members of the Committee: I would like to preface my remarks on Welfare Reform with our special thanks to this prestigious Committee for allowing our organization to testify before you on issues confronting thousands of families of Hispanic origin in the United States and its legal territories.

SER/Jobs for Progress is the largest employment and training program in the United States serving the Hispanic unemployed, underemployed, and economically disadvantaged. During our eleven year history, we have assisted over 124,000 persons to prepare for, secure, and retain meaningful and productive jobs. Many of our clients during this period have been welfare recipients who were attempting to improve their lives by acquiring new and more marketable employment skills. Although we are proud of our record over the past decade of service, we are aware that our services have not always been totally successful. Inadequate resources to implement programs for the poor, a lack of government commitment to fully employ all individuals capable of working and the stigma of being poor and culturally different in America, all prevented many poor people from retaining permanent jobs.

In our in-depth research of the plight of the Hispanic community in the United States and the present welfare system, three important facts about poverty and poverty programs have continued to emerge:

1. Poor people in the United States, and particularly the Hispanic poor work and desire to work. The main reason for their poverty is that when they are given the opportunity to work they are not paid enough to move out of a poverty status.

2. The welfare system in the United States encourages greater dependency on itself, destroys the work incentive, and debilitates the traditional family structure.

3. If the welfare system in the United States is to become more equitable and less dehumanizing, a total restructuring of the present system is essential, a strong emphasis being placed on the provision of jobs in the private sector.

Mr. Chairman, in reviewing the various welfare reform proposals that have been developed over the past several years, it has become obvious that the proposal developed by the Carter Administration represents a significant and bold departure from previous piecemeal attempts to improve on the present welfare system. The welfare reform program proposed by President Carter calls for an all out recognization of the Federal, State, and local agencies which are responsible for the delivery of services to the poor. More importantly, the President's welfare reform proposal represents a significant change in the underlying philosophy of the welfare system. President Carter's firm commitment to create decent jobs for the poor, to provide an adequate guaranteed income for poor persons who cannot provide for themselves, and to restore some stability in the families of the United States driven apart by the present archaic welfare laws, all represent significant changes from previous ineffective and more punitive welfare reform proposals presented to the American people by prior Administrations.

Mr. Chairman, to insure that this ambitious and far reaching proposal is implemented equitably for all poor persons in the United States and that the new welfare program which emerges will become more effective in serving persons with cultural and linguistic differences, our organization will offer several suggestions to this committee to consider during their deliberations of new and amended legislation. Our hope is that these recommendations will be accepted in a positive and constructive way and that our suggestions will receive adequate attention by President Carter, the Secretary of the Department of Health, Education, and Welfare, Mr. Joseph Califano, the Secretary of the Department of Labor, Mr. Ray Marshall, and this Committee.

For the purpose of brevity, Mr. Chairman, my testimony today before this committee will focus on those areas of the welfare reform proposal that specifically address employment and programs for the poor. This is the area in which SER/Jobs for Progress has considerable expertise and, as I mentioned in my opening remarks, it is the area that provides the greatest hope for alleviating proverty in America. It is our belief that if the welfare reform program contains adequate resources and a strong commitment to put the poor to work at a decent living wage, a significant reduction in poverty and human deprivation can be expected.

Therefore, briefly, Mr. Chairman, SER/Jobs for Progress, on behalf of the Spanish-speaking community, offers the following recommendations:

1. The Administration and Congress, in finalizing the welfare reform program, should commit sufficient resources to the creation of jobs for the poor. To our knowledge, $5.9 billion will be dedicated to creating jobs and training opportunities through CETA and WIN. This seems to be only a moderate commitment of resources when compared to the overall cost of maintaining these families on public assistance, to say nothing of the loss of human talent to our country, which can never be measured in dollars and cents.

2. The Administration, in dispersing job creation and training funds, must devise a more equitable system for dispersing funds to the various sectors of the country. The plan shows that 4.7 billion dollars or 16.8% of the total jobs programs will be distributed to the West. In comparison, 10.5 billion or 37.6% will go to the South, 6.4 billion or 23.2% to the North Central States, and 6.27 billion or 22.4% to the Northeastern States. As you all know, the rural agricultural economies of the West are being eroded and replaced by more technologically advanced urban centers. This has led to the continued displacement of thousands of Hispanics who have, for years, toiled on ranches and farms to feed the American people. A broad gap is developing in the West between the skills of the Hispanic poor and the skill levels required to compete in urban job markets. As the cities in the East continue to decline in population, due to overcrowded conditions, a significant population increase is occurring in the West. Many of the new arrivals in the West possess marketable job skills and are able to secure the better jobs available. This population shift and increased competition has led to additional displacement of Hispanic workers.

3. By implementing the welfare reform package, the Administration and Congress must provide equitable employment services to both the unemployed and the underemployed. The President's proposal, as presently drafted, stresses that manpower training and public service jobs will be provided to the unemployed who are willing and able to work. As I mentioned earlier, Mr. Chairman, Hispanics in this country have always worked and worked very hard. The problem has been that these hard working Americans were not paid enough to get out and stay out of a poverty status. By serving the unemployed, at the expense of the underemployed, the Administration will be punishing a large segment of poor people who have worked and struggled all of their lives to make a decent living for themselves and their families. This we feel would be a grave mistake.

4. In enacting the legislation for the welfare reform, the Congress should designate Community Based Organizations (CBO's), with demonstrated effectiveness, as the principal vehicle for providing employment and training services to the poor. The ability of these community groups to reach out to the poor and provide them with productive jobs and meaningful training is a matter of public record. In virtually every case, Community Based Organizations have surpassed CETA Prime Sponsors, local welfare agencies, and public employment services in placing the unemployed and economically disadvantaged into permanent jobs. The present draft of the welfare reform proposal makes the provision for the Secretary of Labor to contract for services directly with Community Based Organizations, if it is shown that Governors and other locally elected public officials are unable to provide adequate jobs and training opportunities for the poor. For the record, Mr. Chairman, I would like to share some important facts about the history of locally elected official in providing jobs for welfare recipients under CETA. As of June, 1977, CETA Prime Sponsors had enrolled a very small number of welfare recipients into the Public Service Employment program funded under Titles II and VI of the Comprehensive Employment and Training Act (CETA). Of the total 313,841 people who were employed in public service jobs under CETA Title II, only 5.5% were A.F.D.C. recipients and only 8.6% of the participants received public assistance of any kind. In addition, to the total 371,429 people employed under CETA Title VI, only 8.1% were A.F.D.C. recipients and

only 7.3% of the participants, had received other types of public assistance. This is compared to 16.1% and 10.8% respectively under Title I. In analyzing the placement rate for welfare recipients and other types of public assistance recipients, it became obvious that these participants had a much lower chance of securing employment after CETA participation than other CETA participants did. For example, as of the end of June, 1977, A.F.D.C. recipients represented only 4.7%, 5%, and 9.5% of the total unsubsidized job placements under Titles II, VI and I respectively. These statistics indicate that CETA Prime Sponsors have been unable to effectively outreach those most in need of services. If they were brought into the program they had a minimal chance of getting a permanent job after training or public service employment.

5. When implementing the new welfare program, every effort should be made to provide bilingual training and instruction for those people who are unable to communicate effectively in the English language. Persons with linguistic and cultural differences have long suffered discrimination in jobs and public services due to language and cultural barriers. The Hispanic poor in the United States, as a result have had the double disadvantage of being both poor and culturally different in a society which has very little sympathy for either poverty or cultural differences. If the new welfare program is going to overcome some of these barriers, which have prevented hard working people from having a fair chance to improve themselves, adequate provisions for employing bilingual and bicultural staff must be made part of the law. SER/Jobs for Progress, therefore, recommends that bilingual/bicultural staff, instruction, and training be available to those poor people who need these services to secure permanent and adequate paying jobs.

6. Finally, Mr. Chairman, SER/Jobs for Progress would like to recommend that an interim census be taken as a part of the welfare reform program. This way a better count can be made of the number of persons who will be eligible for the various services to be offered. Virtually, every census, including the most recent, has undercounted the number of poor people and minorities residing in the United States. The U.S. Bureau of the Census, estimated that persons of Hispanic origin were undercounted by 1.5 million persons during the 1970 Census. Our estimate of the undercounting is much greater. This proposed special Census will provide the Congress and the Administration with an updated data base for making decisions on the funding level for each program and the dispersement of these funds across the country.

In closing, Mr. Chairman, I would like to reveal some startling statistics which, I am sure, will interest you, as well as Mr. Hawkins and Mr. Rangel, since you represent a sizeable Hispanic constituency. In 1976 the Hispanic population in the U.S. suffered a staggering 11.5% rate of unemployment. Black Americans are not alone in their concern with regard to youth unemployment. But consider for a moment the alarming rate of over 14% unemployment for Black youth; then consider that in 1976, 44% of all persons of Spanish origin were under 18 years of age; and then consider that Spanish speaking youths between the ages of 16 and 19 suffered a 23.1% unemployment rate. Surely if outrage was the reaction to the 14% Black youth unemployment rate, complete shock is the reaction of the Hispanic constituency in this nation to this statistic. It is our intention to closely watch the implementation of the new welfare program and to speak out loud and clear if it is not being implemented in a fair and effective manner.

I would like once again to express our sincere thanks to the members of this Committee for allowing us the time to make our views known to you. If I can answer any questions on these and other matters of welfare reform, I will be happy to do so. Thank you.

UTILITY RATES

Mr. SASSER. Mr. President, there was an interesting article in the December 7 issue of the Wall Street Journal written by Mr. Byron Klapper which I hope all of my colleagues had a chance to see. The article deals with some rather controversial issues related to the unique economic powers of certain utility companies located in regions where cheap power is scarce. In order that my colleagues may have the benefit of further evidence in support of strengthening the power of the Federal Government to order utilities to cooperate in providing the best possible service to consumers, I ask unanimous consent that this article be printed in today's RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SASSER. Mr. President, I am proud to say that the citizens of my State have the benefit of some of the cheapest power sold in the country. Not only is this of great direct value to consumers and industries in Tennessee, but the existence of low-cost power makes Tennessee an exceptionally attractive place to build a plant or to locate a business. The economic outlook for my State has only been improved by this fact, especially as we watch the cost of energy steadily increase.

Mr. President, the Tennessee Valley Authority has been able to provide this relatively cheap power for decades largely because it oversees a fully interconnected and coordinated power system. Power and resources are, as a matter of due course, allocated throughout the TVA region according to the most efficient formula which can be devised. There is not a need to have the Federal Government intervene between utilities in my State, because all of the utilities under TVA in Tennessee and their customers already enjoy the full benefits of interconnection, wheeling, pooling, and other techniques used to make the generation and transmission of electric power more efficient and less costly.

But it is disturbing to read that, in other parts of the country, consumers suffer from power rate increases which could be avoided if existing power facilities were more efficiently used. I find it especially disturbing that such efficiency is prevented because of anticompetitive conditions. Mr. Klapper's article reveals a need to protect wholesale customers of power who are isolated within the exclusive jurisdiction of a large power company upon which it is wholly dependent. This protection must come from the Federal Government, which has jurisdiction over transmission or sale of bulk power. It would appear that in the absence of such Federal protection, private companies' profits, not efficient use of facilities, is the primary concern.

It is particularly revealing, for example, to find that the residents of a Florida municipality have voted to buy power directly from the surrounding private utility because of continuous wholesale rate increases that utility has been charging to the city power system while refusing to wheel power to the city. It alarms me to hear a city's mayor charge that private utility companies aim to "take over" municipal power distributing systems by charging discriminatory, high rates, to those municipal utilities, which have no alternative source of power.

I believe it is the responsibility of Congress to protect wholesale consumers from anticompetitive practices of power companies concerned only with profits. If the Congress refuses to accept the full measure of that responsibility, then I would hope that the Federal Energy Regulatory Commission will exercise whatever power it has to assure that wholesale customers of power are not subjected to discriminatory rate-setting and other cost-increasing practices of utility companies which have monopolistic control over them.

EXHIBIT 1

POWER PLAY: CITIES PROTEST ELECTRIC-RATE DIFFERENCES CHARGED BY THE INVESTOR-OWNED UTILITIES

(By Byron Klapper)

When Alcan Aluminum Corp. closed its obsolete Riverside, Calif., mill last year, 1,000 jobs were lost in an area already suffering from high unemployment. One of the reasons it wasn't worthwhile to modernize the mill, according to a company spokesman, was a recent boost in its electricity bill.

Alcan bought its power from the city-owned utility, which, in turn, obtained electricity in bulk from Southern California Edison Co. Riverside went to court where it joined with three other cities to fight the tentative $16 million rate increase granted Southern California Edison by federal power authorities.

Riverside's still-pending complaint is similar to scores of actions being brought by cities against investor-owned utilities that supply almost all the cities' power. The charge is that the city-owned utilities are having to bear a heavier share of rate increases than large companies served by investor-owned utilities under retail contracts. As a result of this discrimination, the cities say, they are losing their ability to compete for industry. And some are even coming under pressure to sell city-owned utilities that have helped support sagging municipal budgets.

Investor-owned electric companies counter by arguing they must have higher rates to meet soaring plant-construction costs and to protect their bond ratings. A utility's bond rating, which influences the interest rate on its borrowings, is threatened if the ratio of debt to earnings rises above certain levels. Lower ratings increase the cost of financing expanded power-supply capacity.

RATE DIFFERENCES CONCEDED

Certainly, there are differences between the rates charged municipalities and big corporate customers, the investor-owned utilities concede. But they deny the price gap is their fault or that they are trying to squeeze the cities' utilities out of business. Rather, they say, the differences are due to the fact that wholesale power rates are set by federal regulators, while retail rates are fixed by state commissions.

That is cold comfort for the city-owned utilities that account for about 14% of electric customers nationwide. They range from the Los Angeles Department of Water & Power, which generates and sells power to 1.1 million customers, to the municipal utility of Seward, Kan., with 43 metered customers, according to the American Public

Power Association. Most of the city utilities buy power in bulk at wholesale rates and then distribute this electricity throughout their municipalities. They don't pay dividends to stockholders nor are they subject to federal taxes or local property taxes. And they can borrow money for any generators or transmission lines at lower tax-free bond rates.

Such savings are often passed on to municipal customers through lower electric bills. But as the power suppliers are raising their fees to the cities—with the approval of rate-setting authorities—the savings are disappearing.

For example, Indiana & Michigan Electric Co., a unit of American Electric Power Co., charges Anderson, Ind., 22 percent more for bulk power than it charges a local General Motors Corp. plant as a retail customer, according to Anderson city officials. Riverside, Calif., says its wholesale cost averages 15 percent more than large companies just outside the city limits pay Southern California Edison. "That," says Maurice Smith, assistant city manager, "puts us at a competitive disadvantage."

SUBSIDIES INTRODUCED

Half a dozen companies have rejected Riverside as a relocation site in the 20 months since Southern California Edison raised its rate, for a loss of 1,500 potential jobs, Mr. Smith says. Meanwhile, companies in the city with problems similar to Alcan's were weighing whether to modernize or pull up stakes. To dissuade them from following Alcan and leaving, Riverside's city council has voted to absorb part of the rate increase and to subsidize the electric bills from other city-utility revenue. As a result, rates for large companies now match or are lower than Southern California Edison's in nearby areas even though this means red ink for the city-owned utility. Because of the subsidies, Riverside's power utility had a $330,000 deficit last year, its first.

Even without paying subsidies, city budgets have been disrupted by rate increases affecting their utilities. The Chicago suburb of Naperville says a 50 percent rate boost in its wholesale electric costs three years ago wiped out utility profits earmarked for the city budget, forcing a $400,000 cut in the city's general services. Naperville and five other cities responded with a $37.5 million suit against their supplier, Commonwealth Edison Co., in federal court charging price discrimination and violations of antitrust laws. Commonwealth Edison has denied the accusations.

It reached the point in Vero Beach, Fla., where residents complaining of high electricity bills voted to have Florida Power & Light Co. take over the municipal power system. However, the proposed $42.7 million sale became stalled in hearings of the Federal Power Commission (recently renamed the Federal Energy Regulatory Commission) when a staff member of that agency found that Florida P&L may have been the cause of the rising power costs at Vero Beach. FPC economist Gordon T. C. Taylor charged Florida P&L with "anti-competitive conduct" by refusing to sell bulk power to cities, and by denying them use of its transmission lines to buy cheaper power elsewhere. Florida P&L says the accusations are without foundation and are based on an incomplete review of the situation." An administrative-law judge for the agency is expected to rule on the matter early next year.

American Electric Power has stirred a similar hornet's nest in cities served by its operating units. In a recent annual report, American Electric said it won't make new commitments to municipal customers because of the high cost of financing generating plants. Such costs can't automatically be passed on to the cities because of the regulatory procedures. It also refused to renew long-term contracts with several cities, serving them instead on a day-to-day basis because, it said, it can't guarantee long-term power supplies.

TAKEOVER ACCUSATION

"What they're really after is to take us over," says Mayor William Fryback of Bluffton, Ind., referring to his city's utility that buys 95 percent of its power from American Electric. "We battle them hard on rate increases and cause them aggravation," Mr. Fryback says. "They'd like to get us out of the way."

Last May, FPC administrative-law judge Samuel Kanell found that American Electric "frustrates any effort to encourage new industry or commercial activity" by its municipal customers. He ruled that the company can't pick and choose among customers and ordered it to report on how it would deal equitably with projected power shortages in the area it serves. That isn't the final say on the matter, though, since American Electric can protest the findings before the full commission.

Until recently, federal regulators refused to consider price-discrimination complaints in municipal-rate cases. They argued that state commissions fly retail rates and that they lack jurisdiction over state actions. That left cities without any place to go but the courts, until July 1976, when, in a case involving Conway Corp., the Supreme Court said the FPC had jurisdiction under the Federal Power Act to hear such cases and could "effect a remedy."

Many city officials see the so-called Conway decision as offering them nothing more than a forum for their grievances. They complain that the commission is bogged down in red tape, often taking three years or more to act on rate cases. And they note that it took the agency nine months after the decision to publish procedures for hearing price-discrimination cases.

Moreover, the commission sees its role as a limited one in such cases. In a policy statement last March, the FPC said it could adjust rates within a "zone of reasonableness," which may not end price discrimination. And it said it couldn't deal with past losses or damages to municipal systems.

Cities are optimistic, however, that the price-discrimination issue may soon be decided in Congress, where a Senate-House conference committee is debating the proposed National Energy Act. A section of the proposed measure says that if the cost of serving wholesale and retail customers is the same, rates to those customers shouldn't vary. Says a member of the House Energy and Power subcommittee, "It's designed to take care of price-squeeze situations by federal legislation."

REED IRVINE: HAIRSHIRT FOR A BIASED MEDIA AND THE PUBLIC'S FRIEND

Mr. HELMS. Mr. President, Reed Irvine is founder and chairman of Accuracy in Media, a public interest monitoring group dedicated to fairness and accuracy in reporting.

For more than 8 years, Accuracy in Media has worked diligently to insure that the American people get the truth in press and media coverage of news events. In doing so, AIM and Mr. Irvine have become—and I quote no less authoritative a source that Mr. Charles Seib, ombudsman for the Washington Post—

> Well known in the editorial offices and executive suites of the "New York-Washington axis"—The Washington Post, the New York Times, the networks and Time and Newsweek.

Mr. Irvine has become well known, Mr. President, because of his hard pursuit of the truth, and for holding the media to standards of fair play that otherwise might not be observed.

That there is a need for Mr. Irvine's work is obvious. Almost daily, the major media distort news events, often according to the ideological bias of the writer or editor or newscaster. Or stories of merit are ignored, while other stories of little or no merit are given wide coverage.

Mr. Seib says:

> AIM takes the position that the media have exercised their vast power in a biased and dangerous way. Its avowed mission is to correct that bias, to save the press from itself.

Mr. President, a free society needs a free press. But a free press, as Mr. Irvine recently pointed out, "does not guarantee a free society. Unfortunately, history indicates that a free press may contribute to its own destruction and to the destruction of all other freedoms.

"There is some reason to question whether or not we have gone too far for our own good," Irvine says, wondering whether we may not have created a monster which may destory "many of the freedoms we cherish, including freedom of the press."

Mr. President, I share Mr. Irvine's concern that a media able to operate unchecked is open to potentially dangerous abuse of freedom. That is why I applaud Mr. Irvine and AIM in their fight to insure that the fourth estate is ever mindful of its responsibility to present the truth in a fair way.

Nor am I alone in my appreciation of Mr. Irvine and AIM. None other than Mr. Charles Seib himself has grudgingly admitted a need for Reed Irvine and AIM.

Mr. Sieb tells us:

> It sticks in my craw, but I'll say it: Irvine and his AIM are good for the press.
>
> The same logic that says the institutions of government require a vigilant and critical press must also say that the press needs vigorous criticism, including the Irvine brand.
>
> He is our carbuncle, and his function is to keep us in a state of healthy discomfort.

Mr. President, I believe my colleagues would benefit from a reading of Mr. Seib's article.

Mr. President, I ask unanimous consent that the article, "Media's Full-Time Watchdog," by Charles Seib, be printed in the Record at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HELMS. Additionally, Mr. President, I am sure that my colleagues would be interested in just why Mr. Irvine is the media's hairshirt and the American public's friend.

In a recent article, entitled "Canal Treaty: No Secrets Needed," Mr. Irvine takes the media to task for ignoring the fact that Panamanian Chief Treaty Negotiator, Dr. Romulo Escobar Bethancourt, had repeatedly stated in public that Panamanian interpretations of key elements of the recently negotiated treaties differed sharply with U.S. interpretations.

As Mr. Irvine points out, only after my distinguished colleague from Kansas, Mr. Dole, released a State Department cable to the same effect did the media pick up the story, and only then because Senator Dole released what was stated to be a "confidential" telegram.

Mr. Irvine is right, Mr. President, for taking the media to task for its lack of diligence and judgment in recognizing a good news story. But then, so many other good news stories about the Panama Canal treaties still remain to be looked into. Perhaps the only remedy is for someone to stamp "confidential" on each story, for the media to pay attention.

Mr. President, I ask unanimous consent that the column entitled, "Canal Treaty: No Secrets Needed," by Reed Irvine be printed in the Record at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Exhibit 1

Media's Full-Time Watchdog

(By Charles B. Seib)

One recent departure from the federal payroll will cause no joy in Mediaville. Reed Irvine has taken early retirement from his $44,000-a-year job with the Federal Reserve Board to devote full time to his own aggressive brand of press monitoring.

Irvine's name is not familiar to most customers of the news business, but it is well known in the media. It is particularly well known in the editorial offices and executive suites of the "New York-Washington axis"—The Washington Post, The New York Times, the networks and Time and Newsweek.

Irvine is the founder, chairman and driving force of Accuracy in Media, better known as AIM. It bills itself as a media watchdog devoted to "accuracy and fairness in reporting on critical issues facing America."

AIM takes the position that the media have exercised their vast power in a biased and therefore dangerous way. Its avowed mission is to correct that bias, which it sees as having a decided leftward lean. In the process, it reveals a tilt of its own to the right.

Irvine started AIM eight years ago. In its early days it was a shoestring operation, making its points mainly in a torrent of letters to the editor.

Several years ago, I reported that AIM's budget was about $60,000 a year. Now it is over $200,000 a year, and one staff member predicts it will soon cross the $250,000 mark. AIM does not disclose the source of its funds, except to say that they come mostly as small contributions from individuals.

Irvine puts pressure on the press in a variety of ways. He continues to be a prolific writer of letters to editors. He also writes a weekly column that he says is used "more or less regularly" in about 80 papers.

He has bought stock in The Post, The Times and ABC, CBS and RCA (which owns NBC) and regularly attends stockholder meetings. There, he engages corporate brass in discussions of their shortcomings as AIM sees them. While these confrontations seldom are given much attention in the press, Irvine uses them to good effect in his semimonthly newsletter, AIM Report.

AIM's main public exposure is through paid newspaper ads, a device Irvine uses both to get his points across and to raise funds. Sometimes the ads severely test news executives' commitment to a free and open press.

Early this year, when The Post printed an AP story on an AIM conference instead of a UPI story that stressed attacks on the media and The Post, Irvine had an ad prepared. It featured the UPI story, with the word "CENSORED" blazoned across it. The Post swallowed hard and accepted the ad, which included an AIM fund-raising pitch.

More recently, Irvine tried to place an ad criticizing The Post's coverage of Orlando Letelier, a former Chilean cabinet minister who was murdered. The ad charged The Post with a "whitewash" in a report on documents found in Letelier's briefcase.

The Post rejected the ad, claiming that it contained inaccurate, unsubstantiated and possibly libelous statements. The New York Times and The Washington Star also refused to carry it and it eventually appeared in the Eastern edition of The Wall Street Journal, slightly expurgated.

AIM now has a full-time staff of five, plus some part-time help, but the voice of AIM is still the voice of Reed Irvine. The ads, the letters, the AIM Reports and, of course, his signed column, all bear his stamp.

The AIM Reports probably give the best indication of his interests. Recent ones have dealt with Panama (AIM claims the press has been disgracefully soft on the treaties), articles on Cuba and Russia in National Geographic and allegations of press neglect of Communist atrocities in Southeast Asia.

Going beyond his specific concerns, Irvine's concept of the role of the press in a free society probably was stated best in a speech last fall to Missouri journalists. He put the question: "Is it true that the freer the press is the more secure will all our freedoms be?"

His answer was no. "No society is truly free without a free press, but the existence of a free press does not guarantee a free society. Unfortunately, history indicates that a free press may contribute to its own destruction and to the destruction of all other freedoms."

In other words, a free press is necessary but dangerous if misused. And is it being dangerously misused? Irvine thinks so: "There is some reason to question whether or not we have gone too far for our own good, perhaps creating a monster which may [destroy] many of the freedoms we cherish, including the freedom of the press."

So Irvine and his colleagues are, in their view, out to save the press from itself. They are going about it zealously, ingeniously and, if the increased budget is any indication, with growing support.

To what effect? It sticks in my craw, but I'll say it: Irvine and his AIM are good for the press.

The same logic that says the institutions of government require a vigilant and critical press must also say that the press needs vigorous criticism, including the Irvine brand.

He is our carbuncle, and his function is to keep us in a state of healthy discomfort.

Exhibit 2

Canal Treaty: No Secrets Needed

(By Reed Irvine)

Senator Robert Dole set off a storm on Oct. 4 when he released the text of a confidential, limited distribution telegram that had been sent to the Department of State by the U.S. embassy in Panama.

The telegram revealed that Carlos Lopez Guevara, one of Panama's treaty negotiators had taken issue with official U.S. interpretations of the new Panama Canal treaties.

In testimony before Congress, administration spokesmen had contended that the United States would retain the right, under the treaties, to intervene in Panama even after the year 1999 if the neutrality of the canal were impaired or threatened.

Administration spokesmen had also indicated that the treaty provided that U.S. warships would be given priority in transiting the canal in time of war, avoiding long delays.

The confidential telegram said that Lopez Guevara did not agree with either of these interpretations. He was quoted as saying:

"Intervention is simply forbidden by international law. Panama cannot agree to the right of the United States to intervene."

He also said that the treaty provision assuring U.S. naval vessels of "expeditious passage" did not mean that they would be given preferential treatment.

The Washington Post put the story of the leaked telegram on page one, saying: "The campaign to win Senate approval of the Panama Canal treaties was given a severe jolt yesterday by disclosure of a document indicating that Panama does not recognize U.S. claims to future military rights in the canal."

Senator Dole was criticized by State Department spokesman Hodding Carter and by some in the media for having released a confidential telegram. Walter Cronkite of CBS implied that this was akin to the release of the top-secret Pentagon papers by Daniel Ellsberg, pointing out that Dole had criticized that.

The irony is that the contents of the telegram were really not secret. Panama's chief treaty negotiator, Romulo Escobar Bethancourt, had made the same points publicly in Panama weeks earlier. Sr. Escobar Bethancourt on Aug. 19 said publicly that in the treaty negotiations Panama had successfully rejected the U.S. effort to assert the right to guarantee the neutrality of the canal.

On Aug. 24, he said that "expeditious passage" for U.S. naval vessels in time of war did not mean that our ships would go to the head of the line.

These statements were public, but they were ignored by the major media. Human Events, a conservative weekly published in Washington, reported them in its Sept. 17 edition, which came out more than three weeks before Dole released his bombshell. Escobar Bethancourt outranked Lopez Guevara, moreover.

Therefore it was no secret that the Panamanian negotiators interpreted key provisions of the treaties very differently from U.S. officials. However, if Senator Dole had given a speech in which he made this point on the basis of Escobar Bethancourt's public statements, it is unlikely that the news media would have even reported his speech. It is also likely that he would have been ignored if the telegram that he released had been unclassified instead of being classified "Confidential."

There is a feeling in government circles that the only sure way to get the media to pay attention to something is to classify it "secret" and then leak it.

The sad fact is that our newsmen for the most part failed to recognize that what Escobar Bethancourt was saying publicly was very significant and that the public had a right to know about it. It is unfortunate that the Panamanian official position became newsworthy only when our embassy labeled it "confidential."

SECRETARY OF COMMERCE JUANITA KREPS SPEAKS ON EDUCATION

Mr. HOLLINGS. Mr. President, on December 8, the Honorable Juanita Kreps, our distinguished Secretary of Commerce, delivered a most eloquent address on the occasion of the inauguration of Dr. James B. Holderman as president of the University of South Carolina.

I was privileged to be in attendance that day and was very impressed with her insights into education and its importance in our society today. Secretary Kreps speaks with a certain knowledge on this subject, having served with distinction as a leading educator for many years before joining President Carter's Cabinet. It is her solid academic background and deep commitment to public service that have made Secretary Kreps so effective in her new position, and it was these qualities that were especially reflected in her remarks in Columbia, S.C.

I think my colleagues would take particular pleasure in reading what the Secretary had to say, and I ask unanimous consent that her remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INAUGURAL ADDRESS BY SECRETARY OF COMMERCE JUANITA M. KREPS

Governor Edwards, Mr. Marchant, Dr. Holderman, distinguished guests.

Today marks a major step forward for this University, for higher education, for the common good. It is important on such an occasion to reassert the worth of what we are about, and to do so with pride.

Accordingly, I shall spend these few minutes in praise of higher education. I do so not only because the record of education's achievement is spectacular, but also because education's potential stretches to even greater heights.

By whatever measure we employ, the gains that flow from education are unmistakable: improved technology, higher productivity, and rising standards of living; greater understanding of other peoples and cultures: a heightened sensitivity to balance and to distortions. Indeed, progress is so wedded to education that knowledge has become synonymous with advancement, and learning with the good life.

But though the value of education is widely appreciated, it remains underreported. As a nation, we measure and record progress in other areas with regularity and in exquisite detail. Each day our newspapers note that one thing or another has risen or fallen.

For education, we do not do this. And that is unfortunate, for as a nation we depend for our view of how well we are doing—relative to other nations, to others in our own society and to previous generations—on numbers.

Moreover, the government uses these same numbers in the formulation of its policies. Numbers tell the government when to speed up the economy and when to slow it down; they determine the allocation of public expenditures. Numbers tell us whether we are underemployed; whether we are going about our business efficiently.

But these numbers by themselves have no normative or moral content.

Moreover, by relying on them to tell us how well off we are, we run certain risks. The first risk is that the assumed correlations between the numbers and the general welfare may not exist. A second is that through our devotion to measurement we may bias policymaking toward only those considerations that can easily be reduced to numbers, while excluding from our welfare calculus those determinants of happiness and justice that are less readily quantifiable.

This latter risk has, I fear, been realized, at least in part, in the case of education.

If we are to redress the imbalance in our public priorities, we must reexamine the supposed correlations between what we measure and what we value. We must recognize that the indices we rely on to mark progress are not and were never meant to be comprehensive measures of personal or social well-being. In particular, we need to accord greater importance to the sometimes difficult-to-measure impact of education.

Historically, educators have been reluctant even to entertain the notion that a cash value could be put on their product. Intellectual discipline, the exercise of reason, and the cultivation of the esthetic sensibility are not things that lend themselves easily to dollar denomination. Moreover, the pleasure and satisfaction the scholar derives from such pursuits have reinforced the notion that education is its own reward—a notion which historic levels of academic remuneration have done nothing to undermine.

Fortunately, we economists, being a crass lot, have rejected this view of things. Though the data are not cited as often as GNP growth or the trade balance, economists have demonstrated beyond doubt that there is a positive correlation between how much a person has learned and how much that person is able to earn. Moreover, it is a simple exercise in economic reasoning to proceed from that theorem to its corollary, which is that education raises the earning prospects not only of the individual but of the whole community.

Economic activity is not a zero/sum game, a matter of one citizen wresting income from a fixed pool of wealth at the expense of another. When one citizen's income rises, several results follow. Demand for goods and services increase, and with it demand for labor. The tax base of the community is increased, and with it the amount of funds available for public purposes, among them education. In this manner the economic benefits of education are distributed and compounded.

I need not dwell on this point before this audience. But I would like to stress the fact that the economic benefits of education have particular relevance to this time and to this place.

Let me start with this place. If you accept, as I do, the proposition that education is the most important determinant of economic well-being, then it follows that South Carolina has yet a few miles to go.

According to 1975 data, the State of South Carolina had a lower per capita income than any state in the country except Mississippi. Further, South Carolina's position had worsened in the preceeding five years. In 1970, the State had been fourth from the bottom in per capita income, ranking ahead of only Mississippi, Alabama and Arkansas.

Interestingly, these data correlate very closely with per pupil expenditures on public education. One can argue over the direction of causality—whether low education expenditures lead to low income, or the other way around—but one cannot argue that the two do not go hand in hand.

Further, if education has been an important determinant of income levels—both individually and regionally—in the past, it is likely to be so to an even greater degree in the years ahead. There are two reasons why this is so.

The first is the effect of increased specialization. Once upon a time, a rudimentary education and a modicum of common sense sufficed to do most of the jobs. In that world, an education was a privilege and a pleasure but not always an advantage in the marketplace.

But that world is fast disappearing. Today, there are fewer and fewer jobs for which common sense is adequate qualification. And even those tend to be the jobs that pay the least, and return the least in tax revenues to the state. More and more, employment demands specialized knowledge and skills. To be without such knowledge is to be condemned to the rear guard of economic progress.

Secondly, the importance of education has been and will continue to be enhanced by the extraordinary growth in the percentage of our GNP that is accounted for by service industries.

The recent economic resurgence of the South has been remarkable and encouraging. Much of that growth has been attributable to the migration of manufacturing enterprises to what has been a low-cost labor market. As a transitional development, this migration has been immensely beneficial to the South. But the future growth sector of the overall economy is not going to be in manufacturing, but in services. In the future, low labor costs can bring factories, but they will not bring the South a commensurate share of the nation's rising income. To claim that share, the South must equip its indigenous population with the knowledge and expertise it will need to compete with the world across the entire spectrum of economic activity.

Thus it will be for the South, and for education's particular relevance to this place.

Consider also the fact that education is of particular importance at this time.

The strength of our democracy lies in the fact that it rests on the consent of the governed. The question: for what is that consent given?

It was once true that deciding what we wanted was a fairly simple matter; Did we want a protective tariff? Did we want to build the Cumberland Road? Did we want an income tax? Did we want to be able to buy alcoholic beverages? These were issues everyone could understand. Everyone's opinion was not the same, but everyone was able to decide where his or her interest lay, and to vote accordingly.

But today we face issues of bewildering complexity: Should Congress have a say in the Federal Reserve Board's open market interventions? Do we want price controls or an excess profits tax? And if the latter, what kind of excess profits tax?

Today the problem the individual faces is not how to express his self-interest but how to figure out where his self-interest lies. For the truth is, the complexity of our affairs has been increasing more rapidly than our analytical capabilities.

There is danger here. The foundation of our democratic form of government is the notion that individuals voting their self-interest will produce the greatest good for the greatest number. The system has not always worked perfectly. But historically, its failures have occurred where the citizens' rights to express their self-interest have been thwarted.

Today the danger is of a different order. What is threatened is loss not of the citizens' rights to express their self-interest, but of their ability to identify that interest.

The business of managing our government has become so complex it is often unclear even to the experts where the course of one's interest lies. We face the spectre of a despotism in which the despot is not a usurper, but ignorance.

From this dilemma, there will be no easy escape. For there is little in the record of recent history to suggest that our affairs will become anything other than more complex. If an avenue of escape exists, surely it lies in education, in closing the gap between what we know and what we need to know.

This is a high charge, and a difficult one. For the sum of human knowledge is ever expanding. But if no one can today embrace all knowledge, we can aspire at least to the rational habit, and to the process of reasoned inquiry. I am reminded of the remarks of William Johnson Cory that used to be contained in the bulletin of Duke University:

"You go to a great school not so much for knowledge as for arts and habits; for the habit of attention, for the art of expression, for the art of assuming at a moment's notice a new intellectual position, for the art of entering quickly into another person's thoughts, for the habit of submitting to censure and refutation, for the art of indicating assent or dissent in graduated terms, for the habit of regarding minute points of accuracy, for the art of working out what is possible in a given time; for taste, for discrimination, for mental courage and mental soberness."

We may never be able to measure the value of these habits and these arts. You will not see the number of Americans acquiring them reported monthly or quarterly in the newspaper. You will never turn on your radio and hear, "The Commerce Department reported yesterday that the Nation recorded a six percent increase in wisdom and discernment."

Still, we must never forget that it is precisely that increase in wisdom and discernment that underlies the progress we can measure and announce; that it is in this splendid institution with its renowned leadership that we can gain such wisdom.

Thank you for inviting me to share this glorious day with you and your new President.

TRIBUTE TO ADOLPH F. RUPP

Mr. FORD. Mr. President, the people of Kentucky and our Nation were saddened this past Saturday to learn of the death of Adolph F. Rupp, the basketball coach at the University of Kentucky for 42 years and the winningest collegiate coach in history. Coach Rupp died at the age of 76 after a long illness and his death marks the passing of not only a great Kentuckian, but a great American as well.

Under Coach Rupp, the university's basketball teams won 879 games, 27 Southeastern Conference championships and the National Collegiate Athletic Association tournament four times. His reputation was worldwide. Eleven times Coach Rupp made overseas basketball coaching clinic trips for the U.S. Government. Coach Rupp once said that his biggest thrill came the year he helped coach the United States to the 1948 Olympic championship. Five of those 10 squad members were members of the Kentucky team that won the 1948 NCAA tournament.

Coach Rupp was a legend in his own time. I am privileged to have known and counted him as a friend, and on behalf of the U.S. Senate, I extend our sympathy to his wife and family.

In the past few days many people have paid tribute to Coach Rupp. In the December 13 edition of the Washington Post, Sports Columnist Dave Kindred, himself a former Kentuckian, wrote an especially thoughtful and moving essay that captured the true essence of Coach Rupp's spirit and philosophy, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE RIGHT MIXTURE OF LOVE, HATE KEPT RUPP ON TOP

That curmudgeon of a coaching genius, Adolph Rupp, was 70 years old when he stopped a basketball practice at the University of Kentucky. Some poor sinner had hesitated momentarily on a layup, allowing the shot to be blocked. Before there was Wooden, before McGuire, when Smith and Knight and Crum were babes, there was Adolph Rupp. And even at 70, in his last season, the sight of a blocked layup moved him to anger, sarcasm and inimitable theatrics.

"You get the ball like this"—in the khaki shirt and trousers that was his practice uniform forever, Rupp held his hands waist high, hefting an imaginary basketball which he raised slowly overhead as he spoke again to the sinner—"and then you say, 'Our Father Who art in Heaven, hallowed be Thy name, Thy kingdom come, Thy will be done, I am now going to shoot the damned basketball!' "

We hope our lives will be whole. There is a time for dying, a time when we have loved well and been loved, a day when our best work is finished. It makes sense that way, death does, and so it seemed good somehow that Adolph Rupp would die only minutes after Kentucky beat Kansas the other night. Death stole him from cancer's pain at 76 and the basketball game was undeniable evidence of the wholeness of his life.

Born of 19th-Century German immigrants who wrested survival from the dust of Southeast Kansas, Rupp played basketball in the early '20s at Kansas University. Kentucky hired him in 1930. In 42 seasons he won 82 per cent of his games by creating teams that were models of simplicity and fire. They took hold of the ball and ran like hell. They won national championships and endured point-shaving tragedies.

Rupp's career was epic. In a poor, rural state, he created an eternal wellspring of pride, the blessed Wildcats, and Kentuckians loved him for it. In turn, he gave them his life and it was good that the latest Kentucky team, coached by one of his old players, was ranked No. 1 in the country the night he died. It beat Kansas, 73–66.

The old man would have liked that. He had no patience with obvious namby-pambies who believed that playing well was reward in itself, that winning didn't really matter. "Why in hell do they keep score then?" Rupp said. He always worried about winning. "My stomach feels like I've swallowed a bottle of lye," he said one night before Kentucky played a patsy. "You'd think that after 40 years I'd get used to it, but I haven't." Kentucky won by 15.

His efforts to assure victory were mighty and unforgettable. "Rupp was unique," said Bill Spivey, one of his All-Americas. "He wanted everybody to hate him—and he succeeded. He called us names some of us had never heard before." The resulting fear, or loathing, worked two ways. Either the player quit or he worked twice as hard. "Those that stayed wanted to show Rupp we weren't the dirty names he called us," Spivey said.

The practice floor was Rupp's stage. He once thought Bob McCowan, a guard, dribbled too much. "McCowan," the coach thundered. Practice stopped, as if the Great Coach in the Sky had spoken. The arena was church-quiet. "McCowan, if you want to keep the ball, we'll just give you a ball to take to your room and you can sleep with it. But for now, will you by damn pass the ball?"

A center, Art Laib, timidly pursued a rebound. Rupp's Kansas-plains twang filled the air. His great fleshy ear lobes wiggled in time with his indignation. Sarcasm was the tone when Rupp said to Laib, "What's a nice Christian boy like you doing in a place like this?"

Beyond Rupp's ferocious ability to motivate players and his early realization that running was the way to win, he made basketball important not only in Kentucky but across the country by the power of his robust personality. He set records for vanity that will not soon be surpassed.

When asked in 1930 why he, a high school coach, should be hired ahead of 70 other applicants for the Kentucky job, he said, "Because I'm the best damned coach in the nation." And what was the secret to Kentucky's 1948 and '49 national championships? "That easy" Rupp said. "It's good coaching."

Newspapermen loved him. If a reporter had nothing to write about, he could always call Rupp, who liked to see his name in print. "Why, I'd put the center jump back and take off the backboards and net. Just leave the hoop. And raise the hoop five feet," Rupp once said to a New York writer who asked how the game could be improved. One of Rupp's players heard the outlandish suggestion and asked if Rupp meant it.

"Hell, no," Rupp said. "But anything for a column."

Rupp's appetites were large, whether the coach was hungry for attention or chile. "Gawdammit, what do you mean, writing that I 'wolfed" down my chili?" he said to an offending writer. Even as he spoke, Rupp wolfed down chili, the spoon disappearing into the darkness of his throat. Working on a steak, Rupp was ruthless. He said you could sort the prospects from the suspects by watching them eat.

"Why, if a boy is aggressive with his eating, then he's going to be aggressive on the basketball floor," Rupp said. "Lordy, you should have seen Cliff Hagan!" Rupp poked at his eight-ounce filet. "See this? Hagan would have eaten this in three bites—chomp, chomp, CHOMP!"

Rupp sometimes favored a liquid diet. "I'd check the pantry to see how the bourbon was doing," he said. His last year at work, a tired old man, Rupp sat at courtside before practice. His eyes dropped shut.

"The legislature should pass a law," he said, awakening with a smile, "that at 3 o'clock every afternoon, any basketball coach who is 70 years old gets a shot of bourbon. These damned bouncing, bouncing, bouncing basketballs are putting me to sleep."

But he didn't want to retire. At 69, he said, "Retire? Why, what would I do? Time would hang heavy on my hands. It's the competitiveness I like—taking a bunch of boys and seeing what I can do with them. These young squirts come in as coaches at other places, and they say they're going to put an end to Rupp and Kentucky. Well, we'll see about that."

His friend, Happy Chandler, the former Kentucky governor and U.S. Senator, once asked him, "Why Adolph? Do you want to die on the bench?" And Rupp said, "I can't think of any place better."

Though he threatened to fight the university's mandatory retirement-at-70 rule, Rupp finally gave in. He was a wealthy man with interests in cattle, land and tobacco. In retirement he yet appeared at coaching clinics, made speeches and, for a while, and his own television show. He kept an office in Memorial Coliseum, the 11,500-seat gymnasium his success built, and Kentucky gave him an easy chair in the front row at the dazzling 23,000-seat palace they opened last year. It's name: Rupp Arena.

A year and a week ago, Rupp sat in the living room of his home. Silver trophies given him in recognition of his coaching genius were scattered around the room. "I've got 40 more under my bed," he said. A tiny chair near the fireplace, left there for the happy times when his grandson visited, held a plaque certifying Rupp's induction into basketball's Hall of Fame.

Rupp talked for an hour. As he could be cantankerous, so could he be charming. He said he once stopped along a back road to buy a country ham and gave the store owner a check. "I signed it in big letters, Adolph F. Rupp, and said proudly to the owner, 'Do you know who that is?' The old guy looked at the check and looked at me and said, 'Well, sir, I'm a-hoping it's you.' "

The cancer was in Rupp then and he said so, but he asked that it not be written in the newspaper, "Just say I'm awful weak," he said. His voice, once thunder, was a whisper, "I'm as happy as I'll ever be. And I'm not a bit bitter about anything."

Walking his guest to the door, Rupp moved slowly, limping a bit. He'd had three operations in three years. It was a cold day and snow covered Rupp's yard. "It's been one of the worst winters I can remember," Rupp said. "I'm looking forward to the spring."

GSA'S MASTER BUILDER

Mr. SASSER. Mr. President, I wish to call to the attention of my colleagues an excellent article in the October 23 Washington Post about Joel W. "Jay" Solomon, the Administrator of the General Services Administration.

In just a few short months on the job, Jay Solomon has brought the GSA alive, injecting his personal enthusiasm and style into a job that others might consider to be thankless. Mr. Solomon's keen business sense is matched only by his deep appreciation for fine art and objects of beauty. Our Nation certainly benefits greatly from having a person of Jay Solomon's depth at the head of the GSA.

The Washington Post story also speaks well of Rosalind Solomon, an outstanding artist who has been an equal partner with her husband in all aspects of his life as a public servant. Their two children, Joel, Jr. and Linda, are themselves quite interested in politics and have devoted many of their efforts in recent years to election campaigns.

Mr. President, I commend this article to my colleagues, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GSA's MASTER BUILDERS IMAGES AND IDEALS

(By Sarah Booth Conroy)

For years, the General Services administrator was the bogeyman in good-design circles. The General Services Administration was the one who came in the night and tore down nice old buildings and came in the day and put up ugly new ones.

GSA got the blame for putting exit signs, clocks and neo-moderne water fountains where they disfigured ornate paneling and sculptured stone pillars.

GSA was blamed for acres of GI-green desks and filing cabinets. Say GSA, and most people thought of the Rayburn building or FBI headquarters.

In the six months or so since Jay Solomon was appointed to the $52,000-a-year top job at GSA, he has gone, as they say in his native Tennessee, "a piece" toward building a new reputation for the giant agency of 36,000 employees that spends about $5 billion a year.

GSA—the largest of the independent federal agencies—buys and doles out federal supplies, constructs and manages federal buildings, runs the computer and telecommunications services, preserves national records (including those at the Archives and the presidential libraries), and makes plans for the functioning of the government in a national emergency. Solomon, unlike previous administrators, attends the President's Cabinet meetings and reports to the President in a weekly two-page summary, and in other ways.

So far, those who deal with him agree that he's a nice man. He likes modern art and ancient buildings, and he doesn't play hide-and-seek with the press and the public the way some of his predecessors often did.

The first time he shook them up with his up-and-at'em ways was during presentations in a competition for the Old Post Office Building remodeling. A third of the way through the briefing, Solomon complained, "But I've never seen the Old Post Office. How do I know what they're talking about?" He grabbed a nearby reporter and off everyone went to the old building on Pennsylvania Avenue.

He insisted on walking through the building, climbing up into the dirty, dusty clock tower. And he listened to the complaints about the building by some FBI employees who were then quartered there.

His staff says he insists on having everything explained to him before he'll sign off on anything. He hasn't missed a dedication of a federal art project since he came to the office, getting First Lady Rosalynn Carter (once) and Joan Mondale, the Vice President's wife (several times), to come along with him as well. He seems to enjoy public appearances and does them well. He has a good bit of the show-biz pizzazz he learned in his years running a chain of movie theaters.

It may only be that he has a soft, Chattanooga-way of speaking and the courtly manners that make Southern men so charming. Though his name is Joel, he goes by his nickname Jay because his son is called Joel. He has an easy, friendly way about him, as though he's hungry to make friends. He likes to talk about what he's doing and obviously keeps up with it all.

It's far too early to say that Solomon is considered Santa Claus among architects, artists, and preservers. His first Christmas isn't even here. But it's hard to find anyone who can think of anything to crticize him about. John McGinty, president of the American Institute of Architects, for instance, calls Solomon "dynamic." McGinty cheers Solomon for being "certainly more actively involved in the operations of the public building service than in the procurement of paperclips at the federal supply service."

McGinty says he is encouraged by Solomon's "sensitivity to good design, his support of the art and architecture program and the public advisory panels, and his concern for the impact of federal buildings on local communities." McGinty adds, of course, that he hopes Solomn keeps up the good works.

James Biddle, president of the National Trust, also adds that he likes what Solomon says and "hope he succeeds in conserving our great public buildings."

Put it this way: A man can't be all bad whose prime requisite for a Washington apartment was that it accommodate his curved dining table/desk/sculpture by avant-garde artist/craftsman Wendell Castle.

Just because he comes from Tennessee doesn't mean he's just learning about art. He and his wife are long-time collectors. He's got a Castle desk at home in Chattanooga and in the subleased, two-bedroom (but with a sunken tub) Washington apartment; he's got a Castle chest as well. Not to mention ceramics by Charles Count, a life-size Jim Collins sculpture of a woman in copper, brass and lead—and several walls of 6-foot-high mural/photographs of rather decadent dolls by a fine professional photographer who happens to be his wife.

Their real art and craft collection is at home in Chattanooga, in the contemporary house they built 23 years ago that hangs on the side of a hill. They keep the house—and Rosalind Solomon's photographic studio—open, though he's only had a chance to get home once since he took office.

Back in 1968, the Solomon's began furnishing every office of his company, Arlen Shopping Centers, the nation's largest shopping-center development firm, with contemporary crafts and paintings by artists of the Chattanooga region. This week in cooperation with Joan Mondale, the voice of the administration's art conscience, he added to three GSA supply stores a $28,000 selection of handmade craftwork from Appalachia: ashtrays, wastepaper baskets, lamps and such. Solomon was right there the minute the first ashtray went on sale and he was back again the next day to show potter Mondale the collection.

"Rosalind doesn't like me to say it, but she was really responsible for introducing me to arts and crafts," Solomon said the other day, showing a visitor their apartment. "Every weekend, we'd go visit another studio or craftshop to select something for the offices. We had a very good time."

His office here in the 1912 General Services Building at 18th and F Street NW is the second-biggest office in government, originally intended as a hearing room. The joke goes that while Harold Ickes had the office when he was Secretary of the Interior, Postmaster General James Farley measured it and had his built a foot larger on every side.

The administrator's old dining room, which has now been turned into an office for three people, is said to be where the Teapot Dome Scandal was hatched. Solomon has replaced the rug, which matched the ceiling medallion's, to the consternation of some of the old-timers, and added original artists' models of artworks commissioned for public buildings. Solomon several years ago commissioned a large work of art by Jim Collins of Tennessee for the front of his firm's building in Chattanooga.

He liked to say that the door of his office is literally always open. "I don't have anything to hide; everybody is always welcome to sit in on any meeting they want to." Some of his staff said they thought he just felt lonesome in that huge echoing Tudor-paneled office. Solomon doesn't care much for the executive desk, the fancy Knoll chairs and the big conference table of his predecessor He prefers to run most meetings from the comfortable couches in front of the fireplace, the ultimate government status symbol.

The Solomons believe their feeling for art and people was broadened by Rosalind Solomon's years of work with the Experiment in International Living. She was director of the Southern regional office. Both of their children and Mrs. Solomon have lived with families abroad, and their home has practically been a hostel for international visitors. Old participants still turn up to see them.

It was on an Experiment trip to Japan that Rosalind Solomon began to take photographs, with an Instamatic camera. Today, her photographs hang not only in his office and their homes, but in the Bibliotheque Nationale de Paris and in New York at the Metropolitan Museum and the Museum of Modern Art. She will exhibit here at the Sander Gallery in February. Her photographs, including those shown here, are all copyrighted because she hopes eventually to have them published as a book.

Solomon, who seems immensely proud of his wife's work, says his part in her photography "is to give people cigarettes to get them to pose for her."

Rosalind Solomon is a rather reticent woman who seems to be rather shy on the other end of the camera. On the other hand, she is obviously a woman with her own opinions and her own career, though just as obviously extremley fond of her husband and interested in what he's doing. She's the sort of woman who, when leaving for a few days of work in her Chattanooga atelier, calls from the airport to find out what her husband's going to do for supper. Solomon says his wife and daughter "have educated me on woman's work. I'm all for it. I know I'm not sending Linda to Northwestern to learn how to sweep floors."

The family's other consuming interest is, of course, politics. The Solomons met on a blind date at a Democratic Convention in 1952. They were married in 1953. Their two children, Solomon says, "really got us involved with Jimmy's campaign, and talked me into taking this job." Rosalind Solomon said she thought about moving to Washington "for about an hour, and then said yes."

The children had worked before in the senatorial campaign of James Sasser (D-Tenn.), who heads the Governmental Affairs Subcommittee, GSA's overseer. The family last year contributed a total of $3,632 to Sasser's campaign. Both Joel Jr., 23, now an environmentalist in Driggs, Idaho, and Linda, 21, now a journalism student at Northwestern University in Illinois, worked for Sasser, who introduced them to Carter.

In 1974 Joel worked for presidential assistant Hamilton Jordan, when Carter was chairman of the National Democratic Campaign Committee. During the Carter presidential campaign, Solomon and his wife each gave $1,000 to Carter and helped raise other money for him. Solomon was

Democratic precinct chairman and a member of the Hamilton County Democratic executive committee as well. He and his wife remain close Carter friends.

Before Solomon came to GSA and Washington, he was chairman of the board and cheif executive of Arlen Shopping Centers Co. and a top officer in Arlen's related companies. Arlen owns and manages 184 shopping centers, residential complexes, office buildings and communities.

At Solomon's Senate confirmation hearings, it was brought out that Solomon owned about 300,000 shares of stock worth $900,000 in Arlen. The firm leases space to GSA in 13 buildings, paying Arlen about $1 million a year. Before his Senate confirmation, Solomon agreed to resign from Arlen and pledged not to take part in Arlen/GSA lease agreements, turning them over to his deputy. He was confirmed unanimously.

Solomon got his start through his father's Tennessee movie-theater chain, established in 1912. He still remembers working five nights a week, when he and Rosalind were first married. Solomon joined his father's firm after graduating from Vanderbilt University in Nashville in 1942.

In Chattanooga, the Solomons were busy in civic work. Solomon was chairman of the Chattanooga Housing Authority and a board member for 14 years. Like Rosalynn Carter, he was interested in mental health, serving as president of the local association. He also worked with the Jewish Welfare Federation and the Opera Association.

In Washington, the Solomons have been settling in by going to concerts every Sunday at the Phillips Gallery or the National Gallery. "Sometimes, when Jay is home early enough, we just walk over to the Kennedy Center," said Rosalind Solomon, "and take our chances on tickets." They try to see almost all the art shows in town. He bicycles often and walks to and from work every day.

Obviously Solomon isn't the first influence for good design in GSA. The Art in Architecture project has had previous time of blooming at GSA under years of prodding from career GSA officer Karel Yasko. The architectural competition for the Old Post Office remodeling was well under way before Solomon was confirmed.

But now that the Office of Management and Budget is looking into GSA's procedures for the first time since 1948, it seems to be high time that GSA looked to the repairs and remodeling of its own corporate structure.

Solomon likes to think he's made a start. He championed the selection of an innovative architectural design by Arthur Cotton Moore for the restoration of the Old Post Office Building, in response, he said, to a specific request from Carter to "look out for that building."

He upped to one-half of one per cent the amount of money GSA will allot for art in federal structures. He also worked out a way to allot a percentage of the repair cost on older buildings to add art objects.

Solomon has hired eight or nine women for high posts in GSA, including a black woman as a GS-18, the third-highest post held by a woman in the government.

He has worked unusually hard to try to get new architects to design government buildings, recently calling a conference on the subject of architectural selection.

Solomon says he favors multi-use federal office buildings, not only so they can earn their keep and be better city neighbors, but also so they will be more saleable if the government outgrows its need for them.

And he greatly favors the establishment of a National Design Center in the Old Pension Building, to be a showcase of American architecture and design. He and his wife have been to French, British and Scandanavian national centers, and he thinks the United States should have one, too.

His current pet accomplishment is in finding a tenant for the New York Custom House. "I really believe it's a shame to preserve these great historic buildings and then leave them empty for vandals. We need to put them back into use." He has also returned hundreds of acres of unneeded federal land to the states and territories for parks.

Solomon says he is "trying to open up GSA, make it more responsive to people, in and out of government." At least he's going about the job with great enthusiasm, and as they say in Tennessee, with a whoop and a holler.

Most of us hope it's catching.

CHILDREN, THE INNOCENT VICTIMS OF UNEMPLOYMENT

Mr. HUMPHREY. Mr. President, there is a growing tendency among those who have advocated bankrupt economic policies to defend the results by arguing that intractable unemployment—currently bouncing around the 7 percent official level—is really alright.

These apologists for failure tell us that 4 percent unemployment in the 1950's is equivalent to 7 percent today. They tell us that, for some reason, women, youth, and minorities who compose more of the labor force today are inherently less employable, but that primary white, male breadwinners are doing fine. Finally, they let us know in no uncertain terms that the 90-plus percent of the people with jobs are more worried about inflation—which they believe is exacerbated by fuller employment—than with jobs for the unemployed.

I totally reject this line of thinking. If we can't have stable prices and full employment, there we've admitted defeat for free enterprise.

I would like to point out that the most overlooked sector of our population that is suffering because of unemployment, is our children.

There has been a major debate in this country about the virtue of equality. Now, I am not a great philosopher, but I understand the gist of the debate is that we should not commit ourselves to the overly ambitious objective of "equality of result," which is a product of individual endeavor, but instead to "equality of opportunity." It agree with this, and have argued that the opportunity to work if one wants to should not be denied.

But for children growing up in deprived circumstances is the greatest denial of equal opportunity in America. If, during the critical formative years, they only experience conditions of hunger and stress, they cannot begin to think creatively about the possibilities for their future, and in any case, they will be denied the tools to fulfill it.

One of the greatest deprivations for millions of children is living in families where the parents cannot find work. Professor Harold W. Watts of the Social Science Research Center of Columbia University, and a member of the Carnegie Council on Children, has done excellent research on this phenomenon. It is of utmost importance that my colleagues study the problem and comprehend this chief source of family instability and decay.

Professor Watts tells us that unemployment means, among other things, lack of income with severe consequences on children. It causes a low "self-concept" in parents who don't fit into our economy, and this sense of worthlessness is transferred to children. And finally, it "trains for failure." We all know that children emulate their parents who are role models. But what if all they see is someone the system rejects? What if they have no exposure to successful coping and personal advancement?

Mr. President, I ask unanimous consent that a summary of findings prepared at my request by Professor Watts be printed in the Record.

There being no objection, the summary of findings was ordered to be printed in the Record, as follows:

UNEMPLOYMENT AND CHILDREN

INTRODUCTION

The Carnegie Council on Children is a small commission created by the Carnegie Corporation of New York, an educational foundation, to undertake a five/year study of what American Society is doing to and for children. I write as a member of the Council, in line with the Council's policy of making its materials available to all interested parties. I am also Professor of Economics and Director of the Social Science Research Center at Columbia University.

The children to whom the Council has paid particular attention are those from conception to around age 9—as we sometimes put it, from "minus nine to plus nine." Our major findings and policy recommendations are contained in a book released September 12 called All Our Children: The American Family Under Pressure, written jointly by Dr. Kenneth Keniston, Chairman and Executive Director of the Council, and by the other Council members, including myself.

The Council has not generated original scientific data. Instead we have tried to perform a different role. We have assembled, sorted and assessed the often fragmented research on children in the United States, the experience of those working with children and the history of childhood.

THE ROLE OF UNEMPLOYMENT IN CHILDREN'S LIVES

Unemployment plays a crucial and tragic role in children's lives, and is rarely emphasized by people who study and care about them. This conclusion is part of a larger concern of the Council with the neglected "ecology" of childhood.

It is somewhat surprising that anyone should have to defend the proposition that unemployment, to paraphrase the old poster, is not healthy for children and other living things. It ought to be taken as a given, that in a democratic society, citizens are free to realize their ambitions as long as those do not hurt others. Surely no one has suggested that working hurts others. It should be clear that for all citizens, whether adults or children, asking for the removal of obstacles to the use of one's head and hands is hardly a dangerous or revolutionary demand.

1. Unemployment and Poverty: Family economic stability, achieved for parents, is crucial to the way they raise their children, and unemployment is one of the most severe threats to a family's economic support. It is almost tautological to say it amid all the talk about welfare programs, but unemployment is a major cause of poverty. Many families are poor simply because their major wage earner or earners are unable to find work for major portions of each year.

As the Council points out in All Our Children, of all age groups in America, children are the most likely to be poor. In 1974, more than 17 million American children were living below our figure of half the median. For children, being poor means something more than eating simple meals and living in crowded quarters. The chances of dying in the first year of life are approximately two-thirds greater for the poor than for those living above poverty levels. To cite a simple matter taht middle-income families take for granted, low-income children aged six to eleven have an average of 3.4 decayed and unfilled teeth, but high-income children an average of only .7. Poor children (from families with incomes below $5,000) were four times more likely to be in "fair or poor" health in 1974 than children in families with incomes over $15,000—and the ratio has not changed substantially since. Yet although poor children are more often in poor health, they are only half as likely as high-income children to have seen a doctor in the past year. In Massachusetts, in 1971, 61 percent of children in foster care came originally from families with incomes under $5,000; only 6 percent came from families with incomes over $10,000. (Again, we have no reason to think the situation has changed much since then.) In the 1960's, among all students in the brightest 20 percent of their age group, those in the economically poorest 20 percent had only one-fifth the chance of attending college of those who came from families in the wealthiest 20 percent. Bright, well-off children, in other words, were five times more likely to attend college than poor children who were just as smart.

Now consider the special case of children who are not white. Here the statistics become truly chilling. Children in black families are four times more likely to be poor than white children; Native American children suffer even more terrible odds. In large metropolitan areas and in the rural South, the infant mortality rate for minority children is almost double that of whites. Nutritional deficiencies are over three times more common among black children (32.7 percent overall) than among white children. In South Dakota, Native American children are ten times more likely to be placed in foster care than other children. Where other types of data are available, they show the same trends; for example, minority children enter foster homes in disproportionate numbers, and they are more likely than their white counterparts to remain in the care of the state without being returned to their families or adopted.

2. A Special Linkage: The Pressure of the Future. Unemployment has a double effect on families. Not only is there the loss of income (which may be partly made up by public funds at substantial expense). In addition, the family undergoes a loss of self-respect and a loss of control in managing their affairs which is not lost on their children. The change in the parents' outlook on life not only changes the immediate situation of the children, but changes the children's outlook on what they are going to do with their own lives as grownups.

The Council has concluded that in important ways parental unemployment, particularly when it is sustained, makes a massive contribution to what could be called training for failure. Unemployment teaches children a covert lesson about their own futures. The children of chronically-unemployed parents as the Council says in All Our Children, are smart enough to sense from an early age that the world of mainstream America defines them and their parents as no-good inadequate, dirty, incompetent, and stupid. This sense of self, constantly reinforced, in fact is an accurate perception of the messages our society gives these children.

At school such children often do poorly and are labeled "culturally deprived" by professionals or "stupid" by their classmates. Their parents are referred to as down-and-out good-for-nothings, a disgrace to the community, or—less cruelly but probably no less hurtfully—problem parents. Handicapped children may find themselves the objects of doubly handicapping messages: they are made to feel, on the one hand, that they cannot do things because of their physical condition and, on the other, that they are somehow to blame for not "overcoming" their fixed condition. Parents and children absorb these images, often reluctantly accepting them as true, and because the children find their models of the future in those closest to them, they draw unhappy conclusions about their own adult fate.

What would you want to be when you grow up? is not just a game grownups play with children; it is a serious aspect of the present during every day of childhood. At the heart of childhood play is constant imitation of adult roles, as if to try them on for size. The three year old struggling to learn how to tie her shoelaces is already thinking of the day when she will grow up and go to school, and her parents are thinking beyond that to what kind of future she can reach for as an adult. School, once she gets there, is built on deep-running institutional assumptions about her future; thus she, and her peers, are classified and sorted by means of grades and tests and "tracks"—whether vocational or liberal arts, problem student or gifted, or the more subtle rankings and hierarchies that are vivid in the minds of every person in the classroom, including the teacher. ("She's a winner." "He's dumb, but what can you expect? Look where he comes from.") Ideas about a child's future can open doors, or they can present impenetrable walls to achievement.

Expectations are at the center of this process. People willingly—and, for the most part, readily—learn skills they see they are going to be able to use. Conversely, they do not learn—or they quickly forget—what they do not believe is going to be functional or relevant to their life's pattern. Many of the insults and injuries of poverty and race can be overcome by a child who foresees a reasonable chance for a good life as an adult. But without that vision of a good life, founded on the child's perception of the actual lives and achievements of the adults he knows best, he is likely to expect failure of himself just as the world expects it of him.

Statistical surveys document the special danger of the foreclosure of the future that affects nonwhite Americans. Black unemployment has been twice that for whites ever since World War II. In 1976 the Bureau of Labor reported unemployment of 39 percent among black teen-agers in the inner cities, compared to 16 percent for whites of the same age. And survey after survey has shown that blacks with the same education consistently earn far less than whites: for example, college graduates who were family heads in 1974 had a median income of $19,500 if they were white, only $14,000 if they were black.

Of course black children, Mexican Americans, Puerto Ricans, and Native Americans do not read these statistics—but they don't have to. The most crucial facts for them are daily experience. And when daily experience shows a black, Mexican American, Puerto Rican, or Native American child that the adults with whom he lives, no matter how capable, have difficulty in gaining education and work, what can he conclude about his own future? Why should he remember what he learns in school when the process has no real use for him?

Full Employment and Parental Working Condition. Social change in this country in various ways is working in the direction of realignments in the tensions between working and family life. The Council has taken this up in its considerations of expanded job opportunities for women and in its call for wider experiments with working arrangements such as "flextime" that allows parents to adjust their hours of work outside the home around some of the demands of their family responsibilities.

Unemployment is a crucial factor in slowing or accelerating these reforms, which would enhance parents range of choices over the time they can spend with their children. Clearly, these adjustments are likely to be a great deal easier in an economy with a strong demand for labor. Employers are unlikely to change much when they can get all the employees they want on their terms—and they will have more incentive to change when unemployment in the labor supply is reduced to fractional levels.

4. Unemployment and Welfare Reform. Methods for ensuring an adequate level of income for families are currently of great public concern. It is becoming increasingly clear that existing transfer payment mechanisms are becoming more and more expensive, difficult to operate, and politically unsupportable.

The core of the welfare "problem", of course, is that welfare funds are being used to replace earnings.

To be sure, there is a definite role for transfer payments to reinforce low incomes, even in an economy with full employment and even for people who are employed—the so-called working poor. But income support transfers cannot be themselves insure that families have adequate incomes when they are required to make up for the money that people would rather be earning themselves.

5. Unemployment and Other Social Services. All families, whether rich or poor, need services at various stages of their lives, whether for baby sitting, housekeeping, child care, early education, and routine health care of for more urgent health emergencies or foster care. Clearly, these services are important parts of the life of a successfully-functioning family, and in economic terms, purchasing or providing them involves the allocations of resources. In an economy with substantial unemployment, productive resources are being wasted, which in turn means that there are fewer resources to allocate to the services families and children must have. Full employment therefore is a crucial ingredient in efforts to give families a greater choice of high-quality services. Providing and producing services at the levels families need takes an economy that is not running on only three cylinders.

WHAT TO DO

The Carnegie Council on Children's recommendations about how the nation should handle unemployment are part of recommendations for a national child and family policy that will involve a comprehensive program of jobs and income supports. Such a policy would require that parents able to work do so, and would assure a decent, if modest, net income for all families with children. It would guarantee a job to all heads of households and provide income supports for those who either cannot work or whose job opportunities, even with a job guarantee, fail to produce an income adequate to family needs. This policy views the care of young children as a legitimate work choice for parents, and would assure a "living income" to a parent who makes that choice. And it would be addressed to the needs of all American families and children, not merely those who are stigmatized as inadequate by the fact of their unemployment or poverty.

CONCLUSION

To sum up, many children are excluded from the mainstream of U.S. society. Traditional U.S. efforts to help have placed a heavy reliance on schooling. But as the Council concludes, "Unless we as a nation also confront the economic deprivation that we know to lie behind much of this exclusion, many of the billions of dollars we today spend on remedial, corrective, or compensatory programs of those who bear its scars will treat the symptoms, not the cause, of a deeper disease. We must also attack the causes of the deprivation—the lack of jobs for those who can, should, and want to work, and the lack of a minimal income for those who cannot work, or should not have to, and even for many who do. If our society is determined that the family is to remain the basic institution for rearing children, and if all children are to have a chance to develop and use their potential, then it is necessary for the economic status of American families to be more secure."

The section of "All Our Children: The

American Family Under Pressure," addressing the need for full employment, follows:

FULL EMPLOYMENT

Most Americans work for their living and prefer it that way. It could scarcely be otherwise in a society so firmly rooted in the work ethic. Indeed, in any society, work and human dignity are inseparable. Earning a living is virtually synonymous with being defined as an adequate person, and failure to earn a decent income has adverse effects on the adults themselves, on their ability to be effective, caring parents, and on their children's image of them and of themselves. Unemployment, low wages, and discriminatory barriers to employment that affect parents are directly translated into harmful effects on their children. Young children, whether or not they understand what their parents do, form an impression of whether the work world esteems their parents. A parent does not have to say a word to communicate a feeling of helplessness, powerlessness, worthlessness, or futility to a child. Everything we know about children suggests that, to a substantial degree, they grow up to think of themselves in relation to the world much as their parents do. When children absorb their parents' sense of worthlessness or powerlessness, they often exhibit what psychologists call "low self-concept." Low self-concept is often viewed as a strictly individual pathology caused by the "failures" of the family; we believe that more often it is caused by the pathology of the labor market.

JOBS AND A DECENT INCOME

With children in the forefront of our minds, therefore, we believe that a family policy in the United States must provide all parents with the opportunity to choose employment at decent wages, and that jobs must be flexible enough to take into account certain fundamental demands of family life. Parents who might be restricted to full-time child care if they had to live by the ordinary demands of the familiar forty-hour week should be able to find at least minimally satisfying part-time jobs or jobs on flexible schedules. It is consistent with almost any interpretation of American traditions and values to insist that parents' efforts to secure an adequate income for their family not be thwarted by the brute fact that there are no jobs for them.

The goals of a jobs component of a family policy must be to make employment available, fair, and humanly possible—available, that is, to anyone who wants it, open at every level to all groups of Americans, and accommodating enough so that it is possible for adults to work at the same time that they are being parents. (Flexible work practices are further explored in Chapter 6.)

We do not believe that the entire task of reinforcing deficient incomes can or should be accomplished by giving parents jobs; we also recommend below policies aimed at reducing some of the inappropriate pressures on parents to seek employment outside the home. Jobs are, of course, only one component of a sound family policy. But the denial of jobs to people who are ready, willing, and able to work is a tragic waste of their potential and of the social and economic benefits their work would produce for the society. When families enjoy economic security from productive work, the social dividends reach far into the future, when children reach adulthood and can make their own contribution.

We believe that with conscious and sustained effort it would be possible, over the next decade, to combine a full-employment strategy with a system of income supports so as to yield almost all American families with children a minimum income of at least half the current median in any given year—the line most Americans consider the true poverty line. To be effective, both parts of this program must work together: full-employment strategies must be combined with income supports, for each one of these reaches certain families that the other cannot.

Since World War II, this country has frequently tolerated a rate of unemployment far too high, often well above that of other industrial democracies. The heavy penalty this imposes on great numbers of Americans, as we have said, can mark their children for the rest of their lives.

Who is "unemployed"? There is, of course, the obvious group of people seeking jobs and unable to find them, officially estimated at 7.3 percent of the labor force in January, 1977. The actual figures, however, tell only a small part of the story. Official unemployment at any time counts only those willing and able to work who have sought work in the last four weeks and were employed less than one hour in the previous work. Many more are willing and able to work but have been discouraged from seeking jobs by outright discrimination or lack of opportunities.

Defining the ideal of truly full employment is tricky. To begin with, there is always bound to be a certain amount of what economists call "frictional" unemployment as firms go out of business, seasonal jobs dry up, or workers search for different jobs. Second, if the number of jobs increases far beyond the number now considered to be in the labor force, the size of the labor force would also be likely to increase as people currently not seeking work were encouraged to do so by the increased ease of finding work.

Should a full-employment program predicated on the right to a job guarantee jobs to second—or third and more—job seekers in a given household? This would be a gargantuan task for the nation to undertake. To be realistic, and since heads of household are the one group of earners most relevant to families with children, we have limited our proposals specifically to that group.

The United States should make it a goal of the highest national priority to reduce unemployment for heads of households to 1 or 1½-percent range, the general unemployment rate must come down as well, probably to something in the range of 3½ to 5 percent.

Even with unemployment down to these levels, there will still be parents from time to time and place to place who want to work to support their families but cannot find jobs in the marketplace. These are most likely to be low-skill, low-income workers, always the most vulnerable to unemployment and its damages. Therefore, we believe that the United States must back up its commitment to children and families with a second plank in its full-employment policy; namely, to provide publicly guaranteed work for at least one parent in every family that contains a child—work that is safe, stable, full-time, and at wages no lower than half the average wage for full-time industrial workers for that year.

In late 1974, the average such wage was about $184 a week, or nearly $9,600 a year. Half this wage, which is what we propose as a minimum for these back-up jobs, would be $4,800—that is, $92 a week or $2.30 an hour, which is the current minimum wage. In a strong full-employment labor market such as we had in the late 1960's, there is not a tremendous call on this back-up, but it should be available to any family head who has been without employment for over three months.

Literally millions of American children would be affected if national policy took this definition of full employment seriously. In concert with an income-supplementation policy as described below, full employment would mean that virtually no child in America would grow up in a family with significantly less than the amount of money required to "get along."

It is very clear that the federal government is able to make choices that drastically affect the number of jobs available in the nation. Its tools for reducing unemployment consist in large part of fiscal and monetary policies that put more money into circulation, either by lowering taxes or by borrowing money to increase federal expenditures. The greater purchasing power that is produced by increased government spending indirectly creates more jobs. We are not recommending greatly increased deficit spending on a permanent basis. At full employment, or at the approximation we have established as a goal, the government will be taking in more taxes to cover expenditures. We do, however, advocate deficit spending when the economy is operating far below capacity, as it was in 1976.

Government can also increase employment by designing tax policies that give businesses an incentive to hire more people; it can undertake economic development programs; and, finally, the government itself can simply create more jobs in such areas as preventive health and protecting the environment—which is, of course, the most direct use of federal spending to lower unemployment.

Current policy includes elements of all these approaches but seldom if ever in the cause of achieving full employment and never on a wide, interlocking scale. Fiscal policies to stimulate private-sector demand, such as the 1975 tax cut, typically are adopted only in times of recession. Their contribution to a full-employment economy is offset, over time, by their equal and opposite countermeasures—fiscal and monetary policies that curb any resulting inflation by increasing unemployment. Furthermore, such measures by themselves in no way ensure improved allocation of jobs to areas of chonic unemployment, such as the inner cities. On the record so far, the best the Keynesian "new economics" can offer is not a full-employment policy but a seesaw employment policy, helping check cyclic ups and downs in the economy by trying to keep unemployment neither too far above nor too far below the rate considered "normal," which is too high to meet our criterion for a full-employment economy. This is not to suggest that fiscal, monetary, or tax policies do not have an important role to play, but simply that by themselves they are not an adequate approach to full employment.

Another means through which government can and ought to encourage fuller employment is economic development programs to increase available work in areas where there are high concentrations of unemployed persons, such as the inner cities. In such programs, government creates incentives for new industry to move in and establish an ongoing operation that will be self-supporting.

But probably the most direct way to reduce unemployment, and one of the most effective, is the creation of jobs by government action. This can take many forms, from laws and regulations that encourage self-employment to federal grants for school districts to hire consultants. To many people, "job creation" smacks of leaf-raking and boondoggling. But in fact, one student of such programs has remarked that the most successful job-creation program in American history is operated by the Department of Defense. In addition to employing millions of soldiers, sailors, and marines, the Department of Defense hires hundreds of thousands of civilians as part of its management and planning functions. Contracts for the production of military goods and materials, for weapons research, and for "basic research" that might eventually lead to military applications have directly provided millions of jobs to Americans, and have indirectly stimulated the entire economy. So it is clear that the public sector already operates enormous numbers of programs that have a job-creating and employment-stimulating effect. For example, the decision to divert federal taxes on gasoline to the Highway Trust Fund, which in turn underwrote the construction of the interstate highway system, used public tax monies not only to build roads but to support a vast construction industry, with indirectly stimulating effects on the steel industry, the concrete industry, the automobile industry, engineers, surveyors, planners, and so on.

TWO MILLION JOBS THAT LAST

Mr. BELLMON. Mr. President, over the last few months, we have heard much talk of tax cuts which may be needed to stimulate the economy. The unemployment rate has stayed at around 7 percent for the last 8 months with only insignificant fluctuations. The teenage and minority unemployment rates have remained strikingly high. The rate of growth of real GNP has fallen from 7.5 percent in the first quarter, to 6.2 percent in the scond, and 4.7 percent in the third.

Mr. President, my point is that this sluggishness was anticipated and a remedy proposed by the Senate Republican conference in a program proposal entitled, "Two Million Jobs That Last." This report was transmitted to the Senate nearly one year ago, on February 2, 1977.

In that study, we noted the tendency for slow growth caused by:

(1) Changes in demographic characteristics of the workforce—greater participation by hard to employ labor force segments;

(2) Recent experience with high rates of inflation;

(3) New Government requirements restricting economic decisions by business and labor; and

(4) Low investment in productive capital over the last ten years which reduces economic growth and adds to future inflationary pressures.

At that time the report estimated that even a 6 percent rate of growth at real GNP for 1977 would only reduce the unemployment rate to 7 percent by the fourth quarter of 1977. In fact we have experienced a 6 percent growth rate of real GNP over the first three quarters of 1977, and are, in fact, experiencing the expected 7 percent unemployment rate.

Mr. President, at that time the Republican conference suggested a two-prong approach to stimulating the economy through tax reductions. First, the report proposed a permanent personal tax reduction effective April 1, 1977. This would have reduced the unemployment rate below what it would otherwise be by 0.2 percent points in 1977 and by 0.5 to 0.6 percentage points by the end of 1978. The cost was $5 billion in 1977 and $13 billion in 1978. But now we hear talk of $25 billion required to achieve the same goals. By acting 1 year ago, we could have purchased better impact at a lower cost. Furthermore, the reduced unemployed would have begun paying dividends through reduced deficits.

Second, the report proposed a permanent corporate rate reduction costing $2 billion in 1978. Such a reduction at that time would have placed us further along in our quest for increased capital formation and subsequent future growth of output and employment.

Mr. President, there is little we can do now to change this omission. I raise the point for two reasons. First, to remind my colleagues of the wisdom of the Republican conference suggestions and offer credit for foresight for which credit is due. Second, Mr. President, I raise the issue to illustrate the economic fact that a well-timed economic policy can be less expensive and more effective than policy actions delayed.

LEGAL SERVICES CORPORATION REAUTHORIZATION

Mr. KENNEDY. Mr. President, I am gratified by the Senate's approval of the Legal Services Reauthorization which we worked out in conference with the House. I think the act strengthens the Legal Services Corporation, making it better able to represent its clients.

This is vitally important. The Legal Services Corporation tries to insure that the poor have their day in court, that they get that to which they are legally entitled. In this country the law has been made a turnkey for a better life, so we must see that the most vulnerable are adequately served.

I am especially pleased to see that this bill contains provisions which emphasize that Legal Services Corporation recipients must work out procedures to serve those who have problems getting to legal services offices, and those who have special legal problems. The elderly and the handicapped are particularly mentioned in this group. These people have not been adequately served in the past. Now that situation should change. The Legal Services Corporation will also undertake a study of other groups which may have difficulties getting to legal services offices, or which may have special legal problems. If it finds that these groups are underserved, it must devise procedures for serving them. These groups include migrants, those with limited English-speaking abilities, veterans' and Native Americans.

Mr. President, I must note that the reauthorization continues to forbid legal services lawyers from representing otherwise eligible clients in school desegregation suits. In the Senate we voted by a large majority to repeal this restriction. But the House insisted on maintaining it. The provision prevents people from getting an adjudication by our judicial system of whether their constitutional and statutory rights have been violated. It also prevents the parents of handicapped students, and those who are in bilingual programs, from being represented when a remedy is being devised. It is most unfortunate that this restriction has remained in the authorization. I can only hope that when this program is again reauthorized, this distressing mood will have changed.

Mr. President, on the whole, though, I believe that we have worked out a good bill. We have a 3-year authorization at levels sufficient for the corporation to implement its mandate; we have client representation on the boards of the national and local corporations. The bill protects legal service lawyers from differential burdens in court appointed cases, and allows for representation of juveniles, and representation in some selective service cases.

I am pleased to see this legislation pass through Congress.

ABORTION

Mr. BAYH. Mr. President, on December 7, the House and Senate completed action on House Joint Resolution 662, a continuing resolution for the Departments of Labor and Health, Education, and Welfare.

This resolution provides funding for these departments until September 30, 1978, the end of the current fiscal year, at the level previously agreed upon by the conferees on the fiscal year 1978 Labor/HEW appropriations bill and includes compromise language on the emotional issue of the use of Federal funds for abortion, ending a more than 5-month deadlock between the two Houses of Congress on this item. The enactment of this resolution allows program initiatives in the $60 billion fiscal year 1978 Labor/HEW bill to go into effect and ends the uncertainty throughout the country regarding funding of important projects in every State and the payment of salaries to employees of the Departments included in the bill.

During the protracted negotiations on abortion, the Senate maintained that there should be as few restrictions as possible on the use of Federal funds for abortion and the House preferred extremely restricted use of Federal money for this purpose. The final language which was contained in House Joint Resolution 662 reads as follows:

> *Provided*, That none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term when so determined by two physicians.
>
> Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.
>
> The Secretary shall promptly issue regulations and establish procedures to insure that the provisions of this section are rigorously enforced.

This language speaks to the issue in four instances. First, it repeats the language which was adopted in last year's Labor/HEW appropriations bill permitting the use of Federal funds for abortion in cases when the life of the mother would be endangered if the pregnancy were carried to term. In other words, if the woman might die if the pregnancy were completed, an abortion could be performed with Federal funds.

Second, the language would permit the use of Federal funds if abortions are necessary for the treatment of the victims of rape or incest when the incident is promptly reported to a law enforcement agency or public health service. It is the clear intent of this language to include medical procedures for victims of rape or incest after the fact of pregnancy has been established.

Third, abortions would be permitted if the woman's physical health would suffer severe and long-lasting damage if the pregnancy were allowed to continue, and that such damage is certified by two physicians.

Finally, the language repeats a portion

of last year's conference report permitting Federal funds to be used for drugs or devices which prevent implantation of the fertilized ovum and for medical procedures necessary for the termination of an ectopic pregnancy.

Even though this language would permit more abortions than would be allowed under the language adopted last year, the Senate made several significant concessions to the House. Reference to permitting an abortion in cases where the fetus would suffer health damage was eliminated. This particular concession is extremely difficult for me to accept. There are over 2,000 genetic diseases. Some of these disorders which result in certain death or extreme debilitation are able to be detected by the use of a process called amniocentesis. This is true in the heart-rending case of Tay-Sachs, but there are still genetic diseases such as Huntington's disease that have no foolproof test to determine if and when it is present. However, in all cases involving the possibility that the fetus will suffer a severe genetic disorder, the language will do nothing to provide a woman eligible for medicaid the option of choosing whether or not to proceed with the pregnancy.

In addition, by including the word "physical" to describe the type of health damage a woman must face in order to be eligible for Federal funds for abortions, the possibility of coverage for mental disorders has been abandoned. I would assume that the only mental disorders which would be covered by the language would be those that have the additional manifestation of physical damage to the health of a woman.

It has been my position from the beginning that a prohibition on the use of Federal funds for abortion does not belong on an appropriations bill. It is clearly legislation. Further, adoption of a prohibition on the use of Federal moneys for this purpose will not put an end to abortions in this country. All it will do is make it difficult or impossible for poor women to be able to choose a medical procedure that the Supreme Court has decided is the right of all women. It says that if you can pay for this procedure you may elect it, but if you cannot, and do not fall under our exceptions, you may not use Federal funds for an abortion.

Even though I support language in House Joint Resolution 662 as the best possible compromise at this time, I do continue to believe that every poor woman should, if she so chooses, have access to an abortion performed under safe conditions. Hopefully, in future years it will not be necessary to continue to compromise the lives of poor women. They deserve better treatment by the Federal Government and I will be working to see that they receive it. The issue of abortion is a deeply religious and moral one. It should not be decided on the basis of financial status.

Mr. LUGAR. Mr. President, each year at DePauw University, a small liberal arts college in Greencastle, Ind., hundreds of students participate in an extraordinary service program which is worthy of our special consideration.

Approximately one-half of the university's 2,200 students volunteer to share their time and talents to assist church-related agencies, inner-city housing authorities, and facilities for emotionally and physically handicapped persons. Last spring this service program was recognized by the Governor's Committee on Voluntary Action as the largest of its type in the State of Indiana.

The project is designed to work through the student living units, creating a healthy amount of competitive spirit and camaraderie. At the beginning of each school year, living units are paired for a specific service project. A representative from each unit is selected to serve as captain throughout the project's planning and implementation. The crews provide needed services including carpentry, painting, roofing, and general cleanup work.

The success of DePauw's program is due in no small part to the creativity and personal efforts of its director, Chaplain Fred Lamar. Under his guidance, two teams of 45 persons will travel to the Episcopal Mission of St. Stephen, Lake Izobal, Guatemala in January of 1978. These teams will construct medical and religious facilities and provide medical and dental care for the residents of the Guatemalan earthquake zone.

Since the program's inception 4 years ago, thousands of persons have benefited from the labors of DePauw students. Churches have been repaired, classrooms painted, campgrounds cleared, and buildings constructed. I am grateful for the opportunity to pay tribute to the students and directors who have participated in this outstanding service program. It is an excellent example of the commitment and concern displayed by our Nation's college students.

STERILIZATION REGULATIONS

Mr. KENNEDY. Mr. President, HEW has recently published proposed sterilization regulations for comment. The Medical Tribune has published an extensive series on this subject which provides important background for those wishing to comment to HEW. I, therefore, ask unanimous consent to print these articles in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

[From the Medical Tribune, Aug. 10, 1977]

CONGRESSIONAL PROBE OF ABUSE LOOMS: CONSENTEES TO STERILIZATION: HOW MANY TRULY UNDERSTAND?

I have asked for and received information about sterilization from ——— (*name of clinic or physician*). When I first asked for the information, I was told that the decision to be sterilized is completely up to me. I was told that I could decide *not* to be sterilized. If I decide *not* to be sterilized, *my* decision will not affect my future care and I *will not* lose any help or benefits from programs or projects receiving Federal funds that I am or may become eligible for.

I talked to ——— (*name of responsible person(s)*) about sterilization. —— (she/he/they) discussed it with me and gave me a chance to ask questions and answered them for me.

I have read all of this booklet. I agree that it is a true description of what was explained to me by ——— (*name of staff member*) of ——— (*name of clinic*) and that all my questions were answered to my satisfaction.

Federal consent forms inform patients that benefits are not threatened, but 72-hour waiting period is criitcized as far too short and designation of "responsible person" as counselor means a doctor could fill role.

As sterilizations burgeoned under Medicaid in the last decade, monitoring of the all-important informed consent mechanism has tended to get lost in the general shuffle of paperwork and financial squabbles. Obscured, too, were charges of less-than-fully informed consent by members of minorities. Now, in the wake of a government report giving credence to such charges, the question of a broad pattern of sterilization abuse is being raised. In a series of special articles Medical Tribune is reporting on the entire issue.

AMERICAN INDIAN WOMEN NOT FULLY INFORMED, GAO STUDY FINDS

(By Allan Chase)

WASHINGTON, D.C.—A Congressional investigation of all federally-funded sterilizations for the last decade has been called for amid these developments:

A Government Accounting Office probe has been unable to document whether the basic elements of informed consent were even presented orally, much less conveyed adequately, to thousands of American Indian consentees in spot checks of only four Indian Health Service regions. Nor was it evident that the Indians were properly assured that they would not lose welfare benefits if they declined to be sterilized.

The GAO itself has admitted that it failed totally to conduct personal interviews on this question.

HEW has responded to the GAO probe report with what Indian critics call a series of toothless promises and directives to improve the informed consent mechanism.

The Congressional probe was called for by Rep. Robert A. Young (D.-Mo) who told Medical Tribune he is requesting that the GAO investigate all federally funded sterilizations per se and hysterectomies (for the purpose of sexual sterilization) because "the entire issue of who is being sterilized with federal funds, and for what reasons, demands Congressional action. I think that our government is not fully aware of the extreme sensitivity of the sterilization issue, and the vast possibility for abuse within the government-funded sterilization programs."

"I am disturbed," he said, "by reports of Medicaid hysterectomies on 15-year-old girls, [for example]. Although such extreme operations on a child might be occasionally warranted, I believe some Congressional [overview] would insure that our government is not guilty of infringing on our own citizens' human rights. It is not possible that the issue of coerced or forced sterilization, supposedly resolved by the decision of federal Judge Gerard Gesell [in Relf vs Weinberger] in 1974 is still alive. . . . I want to be assured that sterilization guidelines established for the protection of poor people subsequent to Judge Gesell's decision are being carefuly folllowed."

SUPPORT FROM QUAKERS

Immediate support for a Congressional investigation came from the Friends (Quakers') Committee on National Legislation. It declared the probe was "needed in order to begin the moral effort to conform federal performance with existing sterilization regulations," citing "continuing reports of disproportionate numbers of sterilizations among Indian women."

Transformed from an almost exotic procedure to an operation of major numerical proportions with the advent of Medicaid in 1966, surgical sterilizations are believed to have increased five-fold in the last 11 years—to the point where 2 million of the procedures, about half of them on females, are now estimated to be done annually.

In the intervening years, a number of shocking, albeit isolated cases of sterilization abuse have been documented, notably in the class action stemming from the sterilization of the Relf sisters of Alabama, aged 12 and 16 years old at the time and apparently ignorant of what was happening to them. In his landmark decision of 1974, Judge Gesell also found that "an indefinite number of people have been improperly coerced into accepting a sterilization operation under the threat that various federally supported welfare benefits would be withdrawn."

In other words, female patients in particular were reported either not to have received the proper assurance that benefits would *not* be withdrawn if they didn't approve the operation, or else their fears overrode written or oral assurances to the contrary, and having not "talked out" the matter adequately because of cultural, language and comprehension barriers, they simply signed.

It was early in 1975, at the request of Sen. James Abourezk (pronounced Aboorisk) (D.-S. Dak.), that the GAO undertook its "sample" review in the IHS regions surrounding Aberdeen, S. Dak.; Albuquerque, N.M.; Oklahoma City, Okla., and Phoenix, Ariz. The review showed that for the fiscal years 1973–76, 3,406 female and 142 male sterilizations were performed in the four regions. And federal regulations and guidelines dealing with the informed consent of the patients may have been almost universally ignored since evidence (written summaries, etc.) other than the signed consent forms themselves was lacking to vouchsafe compliance. Many of the forms were originally unavailable and some were defective, too, failing to inform the patient, for example, that she could simply withdraw from the whole matter.

The GAO also found that 36 female minors had been sterilized, 13 of them after the HEW moratorium on sterilizations under the age of 21 had been declared in April 1974.

Sen. Abourezk declared later, in a letter to HEW Secretary Joseph Califano that "statements by numerous Indian people indicate that many . . . have undergone sterilization . . . out of fear of losing federal benefits or because of some other strong feeling of coercion. A simple statement of the patient's rights is not always significant to counteract such fears. Indian people have very distinct cultural and religious differences as well as language barriers."

It seems clear that the GAO might have resolved equivocations about the consent non-compliance by going directly to the consentees. However, quoting a Medical Tribune article (Feb. 25, 1976) in which investigators found that cardiac surgery patients were unable to recall, four to six months later, more than one-third of what their doctors had told them in taped conversations prior to surgery, the GAO concluded that "such an effort would not be productive."

In any case, HEW dragged its feet on a response to the GAO report, made in November 1976. The answer was more than four months late. The law requires a response within 60 days.

ENFORCEMENT HELD CRITICAL

And although Sen. Abourezk declared he was "extremely pleased to read that HEW has concurred with the over-all recommendations of the GAO," he reminded HEW Secretary Califano that "such recommendations will only be as good as their enforcement procedures."

The GAO report still leaves unanswered charges by such Indian leaders as Dr. Connie Uri of Los Angeles, a Cherokee physician, and Marie Sanchez, the Northern Cheyenne Tribal Judge, that medically unjustified hysterectomies are being routinely performed in IHS centers for the sole purpose of sterilization, and that Indian women have actually been in the midst of prolonged labor when they were given and signed consent forms for post-partum sterilizations. Also unanswered: Such basic questions as how many pregnancies the Indians in the four-region review had prior to sterilization, and their outcomes.

As a possible harbinger of future action, Rep. Young has already introduced a measure in the House that would revise the Foreign Assistance Act to prohibit the use of International Development Act funds for sterilization as a means of family planning, and would bar any attempts to force any person to submit to sterilization.

[From the Medical Tribune, Aug. 24, 1977]

Pro-Hysterectomy Stance, Consent 'Failings' Hit

(By Allan Chase)

Since Medicaid began funding upwards of half of all U.S. sterilization procedures in 1966, hysterectomy has become the third most common operation in this country and tubal ligation ninth. Despite guidelines that were written at the time to safeguard medical indigents, especially women, from sterilization abuse, despite a 1974 federal judgment that the guidelines for informed consent were being ignored, and despite a recent determination by the General Accounting Office that informed consent procedures are violated in federally funded programs serving American Indians, the Department of Health, Education, and Welfare itself remains a major infringer of the right to informed consent. HEW "plugs" hysterecotomy as an acceptable mode, too.

The GAO probe requested recently (MT, August 10) by Rep. Robert A. Young (D-Mo.) may help quantify and evaluate the current sterlization epidemic (the current estimate is 2 million a year, including males); the 638,000 tubal ligations done in 1975 represented nearly a ten-fold increase over the 1965 figure of 69,000, and is double the mere 319,000 appendectomies done in 1975. And abdominal and vaginal hysterectomies climbed from 505,000 in 1965 to 725,000 in 1975; the rate was 66.8 per 100,000 females in 1975, compared with 51.4 in 1965.

HIGH NUMERICAL RANK

Only biopsies (1,017,000) and D & Cs (977,000) outrank hysterectomies in number.

In 1974, Federal District Judge Gerhard Gessell found that HEW guidelines, set up to prevent sterilization abuse were being widely ignored. In federally funded family planning centers, "an indefinite number of poor people have been improperly coerced into accepting a sterilization operation under the threat that various federally supported welfare benefits would be withdrawn unless they submitted to irreversible sterilization," the judge ruled. Under court order, HEW drew up a new set of guidelines.

Since then, two studies of sterilization have both found that these 1974 guidelines were almost universally violated. One was a mailed questionnaire the American Civil Liberties Union sent to 154 teaching hospitals in 1975–6. The more recent one was the aforementioned GAO survey.

The questionnaire sent to the hospitals brought 51 responses. Based on what the respondents indicated, the directors of the ACLU study concluded that "in the absence of any enforcement by the HEW, the sterilization guidelines are being widely ignored, if not deliberately evaded."

In response to the GAO findings of guideline violations, HEW promised to tighten its compliance machinery. As an example of how it was now assuring informed consent, the department presented four informed consent pamphlets, each bearing the over-all title of "Your Sterilization Operation" but with different subtitles: "Laparoscopic Tubal Ligation," "Vasectomy," "Post-Partum Tubal Ligation," and, finally, "Hysterectomy." Much expert attention has been drawn to the hyster-sterilization booklet.

Dr. John McLean Morris, Chief of Gynecology at Yale University, described it to Medical Tribune as "a booklet advocating or at least recommending, hysterectomy for sterilization. My own opinion, and I think that of most doctors, is that there should be at least one clinical indication for hysterectomy [other] than sterilization alone." The HEW pamphlet, Dr. Morris says, "does not discuss any of the medical reasons for hysterectomy." In his view, "Hysterectomy is not indicated for multiparity."

YALE REVIEW PROCEDURE

At Yale, where the review committee maintains a list of every operation done, said Dr. Morris, "If you find that a doctor has taken out three normal uteri in 25-year-old girls, you'll want to know what the hell he is doing and why he's doing it. This type of review makes everyone, including me, more aware of the consequences of performing either unnecessary or inadequate operations."

According to Dr. Kenneth Ryan, Chief of Obstetrics and Gynecology at Harvard, "The HEW booklet gives the impression that hysterectomy is an acceptable form of surgery for sterilization in the absence of any other gynecological disease or disorder—and that for the patient who doesn't want to have periods, and is afraid of cancer in the future, it is a reasonable procedure to do." Dr. Ryan told Medical Tribune that in cases where sterilization is the sole reason for surgery, the HEW booklet neither stresses nor even "gives adequate information on the point that hysterectomy is probably an excessive maneuver for someone considering other kinds of alternatives [such as tubal ligation]."

COMPLICATING PROBLEMS?

In his view, the HEW publication "puts the HEW squarely, in making a medical determination, with those physicians who feel that hysterectomy is a reasonable procedure for sterilization in the absence of complicating problems such as excessive bleeding, pain, fibroids, and subclinical lesions."

Nancy Stearns, staff attorney at the Center for Constitutional Rights and an authority on informed consent, told Medical Tribune that "There is no possibility of this HEW booklet being legally acceptable as an instrument of informed consent, since the most critical piece of information is missing—and that is that hysterectomy should never be used for simple sterilization."

Former President of the American College of Surgeons, Dr. Charles McLaughlin, has observed that to perform a hysterectomy solely to sterilize a woman is "like killing a mouse with a cannon."

Is HEW Perpetuating Mal-Sterilization?

In a continuing series, Medical Tribune is reporting on the legitimacy of current sterilization practices among the nation's medically indigent. Already, the issue has prompted a critical government report and calls for a Congressional investigation of all federally funded sterilizations performed in the last decade. In the latest report, HEW's own role in possibly widespread sterilization abuse and grave charges by a medico-ethnic leader are examined.

"Genocide" Charged by Indian M.D. Investigator

(By John Elliott)

Los Angeles.—The sterilization of American Indians in Indian Health Service facilities with allegedly less-than-fully-informed consent is coming under renewed attack by Indian groups and government investigators. Some flatly call it "genocide."

Fully 20% of the already decimated population of native American women of childbearing age have been sterilized in the 51 IHS hospitals, mostly in the western United States, according to Indian estimates.

Dr. Constance Redbird Uri, a Choctaw-Cherokee physician now a full-time law student at the Whittier College School of Law in Los Angeles and leader of the group Indian Women United for Social Justice, accuses the U.S. government and the IHS of attempting to solve the "Indian problem" once and for all with a massive campaign of surgical sterilization.

"I believe the U.S. government is practicing genocide on the Indian people," she told Medical Tribune. "Whether they are doing this consciously or not, I cannot say. They are doing it nonetheless."

Of the fewer than one million Indians extant—there were 13 million in 1800, before they were cut down by war the incursion of settlers, and disease—the IHS provides health care to about half. Of these 500,000 care recipients, half are between the ages of 15 and 45 years—childbearing age. Dr. Uri estimates that at least 25,000 of these women have been permanently sterilized in the IHS facilities.

REQUEST FOR A NEW WOMB

She first became aware of the growing number of sterilizations being performed on Indian women in 1972 when an Indian patient asked her for a womb transplant. "I have heard of kidney transplants," the woman wailed, "and I want to know if you can give me a new womb." At age 20 the woman, then an alcoholic, had been hysterectomized for contraceptive purposes. Her two children had been placed in foster homes and her doctor felt that she should have no more. But several years later, her drinking problem overcome, the woman had remarried and, with her new husband, wanted more children.

Soon Dr. Uri encountered more cases of very young girls sterilized by IHS physicians. The girls were denounced as "polluters" for having borne children at an early age. In one case, she noted, a woman was hysterectomized to prevent discharge problems caused by the relaxation of outlet tissue pursuant to two childbirths. To explain why a simple anterior repair was not done, Dr. Uri said, the physician told her that "the Indian woman's tissue is different" and such a repair would be impossible.

Noting that thousands of sterilizations were performed in just four IHS regions during fiscal years 1973–76, Dr. Uri calculates that at such a rate, the IHS could wipe out all pureblood Indian races in less than 15 years."

"All the pureblood women of the Kaw tribe of Oklahoma have now been sterilized. At the end of this generation the tribe will cease to exist!" she says.

Dissatisfied with the GAO's explanation in a recent report (see accompanying article) that it didn't interview the patients personally because a study had shown that patients can't recall very much of the informed consent process after time has passed (MT, February 25, 1976), Dr. Uri has undertaken her own private research into the experiences of sterilized Indian women. "They remembered everything about the procedure," she reports, "even where they were sitting when the doctor talked to them, what he was wearing, everything, even months later. Indian women are not stupid. They may seem reluctant to communicate at times, but these are proud women and they often feel castrated by the sterilization procedure."

Dr. Uri tells of interviewing well over 1000 sterilized Indian women. All but one of them, she found, was influenced in her decision to be sterilized by an IHS doctor—only one had made the choice on her own. "The doctors will threaten to have the woman's welfare benefits taken away," says Dr. Uri incredulously. "Then they'll tell her how much fun sex will be after the fear of having children is removed, and they'll advocate sterilization as a cure for any number of medical and non-medical ailments. And the women have great faith in their doctor—they do as they're told." The fear of "subtle reprisals" against a woman's people, her reservation, is an invidious and powerful tool in repressing expressions of dissatisfaction," laments the Indian activist.

Perhaps the most startling example of abuse among the 51 IHS hospitals has taken place at the Claremore (Oklahoma) Hospital. Records for 1973 reveal that 194 sterilizations were performed there that year on Indians, one out of every four admitted to this 58-bed hospital. Furthermore, four tubal ligations were performed on women under 20 years old and 13 hysterectomies were performed on women under 30, including one on a 22-year-old. And it was at Claremore that a doctor averred that Indian tissue was medically different from his own.

"I just don't understand these doctors who want to sterilize us," declares Dr. Uri, herself the granddaughter of a physician. "It causes such psychological damage. Often the consent is obtained when a woman is admitted for childbirth, even while she's still groggy from anesthetics. The doctor's role should be to provide options for his patients, but IHS doctors provide no options. You spend more time just deciding whether to buy a house or car than the mandated 72 hours women have here to mull over permanent sterilization. Confused people can shoot their whole future in a moment. I ask you, what harm is done to the state if you let a woman have more time to think?"

In sum, she believes that the entire U.S. population has been sold a tragic lie about irreversible contraception.

Concludes Dr. Uri: "As the Cheyenne will tell you, the strength of the Indian nation is in their women. No matter how straight your arrows, no matter how strong your bows, no matter how brave your warriors, no nation is defeated until the hearts of the women are on the ground. When the women give up, you are in trouble."

YOUR STERILIZATION OPERATION: HYSTERECTOMY

Notice: Your decision at any time not to be sterilized will not result in the withdrawal or withholding of any benefits provided by programs or projects receiving Federal funds.

This consent booklet has been prepared as a sample by the U.S. Department of Health, Education, and Welfare. It describes one of several sterilization pocedures used in current medical practice and is a suggested format that fulfills the Federal requirements for informed consent.

This particular booklet is intended for use only in cases for which sterilization is the primary purpose of the hysterectomy procedure.

HEW's hysterectomy handout omits medical reasons for such an excessive sterilization mode, say experts.

[From the Medical Tribune, Sept. 7, 1977]

Sterilization: The Legacy and the Lack of Watchdogs

The question of possible sterilization abuse has been raised in Medical Tribune's special series, focusing so far on government and ethnic reports, the law's intent and current HEW policies. Presented here are early historic antecedents of the sterilization movement and a startling report on Medicaid monitoring.

Mediciad Monitoring of Hysterectomy Abuse Seen Inadequate

(By John Elliott)

Washington, D.C.—In 1976, federal funds financed nearly 100,000 surgical sterilizations, most of them in women and 67,101 of them under Medicaid. Medical Tribune has examined an elaborate monitoring system set up within the Medicaid Bureau to detect and crack down on possible abuses. The check shows that the system is hopelessly inadequate. Almost nothing is happening. Hysterectomy sterilizations, though endorsed by HEW via a special booklet (MT, August 24), apparently aren't monitored at all.

"I don't recall ever finding any suspicious trends in sterilization procedures after an analysis of monthly reports received here from our regional offices," says Dr. Paul Willging, Deputy Director of the Medicaid Bureau. One major reason that substantive abuses are almost never uncovered, Medical Tribune finds, is that the monitoring system functions merely as an administrative "checkpoint Charlie," seldom going afield and seldom reaching the provider level.

"There is some question about the ability of Medicaid to monitor anything, never mind sterilizations," is the way David Becker, an attorney with the HEW general counsel's office puts it. He adds, however that "we do try to be as rigorous as possible in insisting that the states follow the federal sterilization regulations."

Those regulations stipulate a 72-hour waiting period after consent and evidence that consentees are at least 21 years of age, are not mentally incompetent, and are fully informed—orally and in writing. But there is no investigation or monitoring from the top or middle echelons of the Medicaid system. Instead, top officials passed Medical Tribune to state and regional levels when asked about monitoring. And officials at these levels passed queries on down the line. Ultimately, enforcement is the states' responsibility, officials explained. The inadequacy of the monitoring becomes clear at the gut level. In New York city, for example, part of Medicaid Region II, a staff of 18 in the Medicaid, Fraud and Abuse section of the New York Social Services Department, must sift data covering all sorts of medical procedures from 6,000 providers. Concentrating on possible over-billers and specific procedural errors in the paper blizzard, there is little chance that these workers will spot a clue to abuse of informed consent.

NO COMPLAINTS?

"We would have the ability to monitor sterilization if things got out of hand," maintains Cynthia Cohen of the New York City office, "but we haven't had any complaints lately so we don't worry about it much." Of the current backlog of 350 varied Medicaid investigations, none involves sterilization.

In New Jersey, also in Region II, the front-line troops engaged in enforcement of federal sterilization regulations are the individual fiscal agents who process Medicaid reimbursement claims. Their instructions? Don't pay any claims that aren't accompanied by the proper consent forms with signatures in the right places.

Local Medicaid offices *are* required to perform random routine checks on providers. Between ten and 50 claims must be randomly investigated annually in each region, according to the Medicaid central office. But again, these are unreal investigations. No individuals are questioned. No physicians or patients are interviewed. The purpose is solely to identify broad trends of noncompliance, usually signified by errors in completing the consent forms, such as misplaced or incorrect signatures.

In Region II, no abuses have been uncovered since early 1975, when it was discovered that all of New Jersey was using an unsatisfactory consent form.

On a special report form, known as form 120, regional Medicaid offices keep track of basic sterilization data—number done, type, age of patient, etc. This audit report is submitted monthly to the central Medicaid Bureau in Washington. At the same time, noncompliance information is relayed back to the State Department of Social Services. For specific violations, federal funds are withheld. But hysterectomies apparently are not in the monitoring system at all, though many of the estimated 750,000 annual hysterectomies performed nationally are Medicaid hysterectomy sterilizations.

The Medicaid Bureau does an informational analysis at regular intervals to seek out trends of possible abuse. But since the analysis is based on superficial regional data, what could it be expected to find? In sum, the judicial consent mandate is unenforced.

TODAY'S TREATMENT OF THE POOR LINKED TO EARLY EUGENICS MOVEMENT

(By Allan Chase)

NEW YORK.—The social tragedy implied in recent findings of possibly coerced sterilization and related abuse did not develop in an historical vacuum—and from the beginning, physicians were involved. The current state of affairs traces to interactions of movements ranging from eugenics to fascism. Not the least of the reasons for the ideologic involvement of physicians was underscored by the report on American and Canadian medical education made for the Carnegie Foundation by Abraham Flexner in 1910. Said the introduction to the Flexner Report: "For the past 25 years there has been an enormous over production of uneducated and ill-trained medical practitioners . . . due in the main to the existence of a very large number of commercial schools."

These diploma mills produced the vast majority of American doctors, and their graduates were neither taught, nor prepared to learn for themselves, the vast differences between the pseudoscientific cult of eugenics and the important new biological science of genetics. Short-changed on life sciences, the doctors—like most American lawyers, legislators psychologists, philosophers, historians, journalists and social reformers—were for more than half a century to be easy prey to the egoinflating dogmas of Galton's eugenics. Few understood that eugenics is an elitist effort to advance human strains that the elite consider suitable, and weed out the "unsuitable," whereas genetics deals with the biochemical and physical realities of heredity and variation in living organisms—just the opposite.

WORLDWIDE MOVEMENT

The world sterilization movement came into being in London on August 11, 1891, when Sir Francis Galton, in an address to the Seventh International Congress of Hygiene and Demography, called for an attack on the fertility of what he termed the "overgrowth of population." As Galton's closest disciple, Karl Pearson, noted in his four-volume life of the founder of the cult of eugenics, "Galton is here foreshadowing the sterlization of those sections of the community of small civic worth, which has since become a pressing question of practical politics."

By 1930, when Pearson wrote these words, thanks to Galton's call and the efforts of Charles Benedict Davenport and other founders of the American eugenics movement, compulsory sterilization laws had become very practical politics in this country. By then, 30 of the (then) 48 states had enacted eugenic sterilization laws, starting with Indiana in 1907. The laws mandated sterilization of individuals whom the eugenicists labeled "hereditary" criminals, people with epilepsy, people who got low IQ tests scores, patients in state institutions for the mentally retarded, and other wards of the states.

The man who started it all, Sir Francis Galton, was a medical school dropout, Victorian racist and dilettante in the sciences. He was above all an enemy of democracy who spent most of his long lifetime counterfeiting "biological laws" to justify the wide gap between poverty and affluence in his native England.

Galton repeatedly wrote that people were rich because their blood overflowed with the inherited stuff that made for wealth; people were poor because they were born of inferior blood polluted with the biologic determinants of what Galton called "pauperism." While most well-educated British physicians spoke for sanitary reforms and other social measures of preventive medicine, Galton insisted that the preventable disease and disorders of poverty in Victorian England—from tuberculosis and measles to defective vision and low classroom test scores—were all due to the hereditary biologic and moral defects of the poor themselves. Galton wrote that the majority of mankind was composed of hereditary "mediocrities and ineffectives," of whom the most dangerous were the poor. He declared his own war on poverty by calling for the prevention of the breeding of the poor themselves.

ACTIVITIES IN AMERICA

No sooner was the American eugenics movement launched officially than it formed, in 1911, its powerful Committee to Study and to Report on the Best Practical Means of Cutting Off the Defective Germ-Plasm in the American Population. This was always referred to, by its leaders, simply as the Sterilization Committee. Members included the future Nobel Laureate in medicine, Alexis Carrel, and the Johns Hopkins professor of biometrics, Raymond Pearl. The great Harvard physiologist Walter B. Cannon was recruited for the committee by Davenport, his former Professor of Zoology and coauthor of Cannon's first published paper. Professor Davenport's second-in-command at the Eugenics Record Office, Harry H. Laughlin (Sc.D., Princeton), was secretary and de facto director of the sterilization committee.

The final report of the blue-ribbon committee considered and rejected "general environmental betterment," from improved nutrition and housing to better schools and better living, as a solution to the genetic problems of America. Their studies, the experts reported, "prove conclusively that much social inadequacy is of a deep-seated biological nature, and can be remedied only by cutting off the human strains that produce it." The ten major classes of hereditary race polluters were listed in order of their degree of menace. They were: (1) The Feeble-Minded Class. (2) The Pauper Class. (3) The Inebriate Class. (4) The Criminalistic Class. (5) The Epileptic Class. (6) The Insane Class. (7) The Asthenic [lacking in strength] Class. (8) The Diathetic [constitutionally susceptible to specific diseases, such as the infectious and deficiency diseases] Class. (9) The Deformed Class. (10) The Cacaesthetic [having defective sense organs, "as the blind or the deaf"] Class.

Unless these ten classes of Americans with hereditary defective germ-plasm (genes) were sterilized, said the pseudo-experts, crime and insanity would increase, overcrowding our prisons and asylums; our public schools would be packed with genetically ineducable and feeble-minded [mentally retarded] epileptics; and the nation's public welfare costs would bankrupt all solvent taxpayers. The panel's final report also attacked birth control. What bothered the eugenicists most about birth control was the fact that the college-educated and other affluent classes made ample use of such contraceptives as were then available, thereby depriving the American genepool of their germplasms for intelligence and wealth.

[From the Medical Tribune, Sept. 14, 1977]

STERILIZATION: THE ROOTS, THE BUDS . . .

In a series of reports, Medical Tribune has found that wide sterilization abuse may exist among the medically indigent. Amid allegations of overutilization, safeguards to insure that the federal informed consent mechanism is working as mandated by the courts seem lacking. The installments below report on current reaction in Washington, D.C., and continue an examination of the procedure's historic ties to the eugenics movement.

LAWMAKERS, HEALTH OFFICIALS REFLECT LITTLE CONCERN

(By John Elliott)

WASHINGTON, D.C.—Legislators and government health officials in Washington reacted variously with bureaucratic aplomb, indifference, or guarded concern to Medical Tribune reports of overpromoting and undermonitoring of sterilization procedures by the federal government. It is apparent that official concern over sterilization has waned since the clamor for federal guidelines in 1974, a result of the landmark Relf case, in which flagrant abuse was uncovered.

After repeated requests, Secretary of Health, Education, and Welfare, Joseph Califano declined to comment on sterilization and possible shortcomings of the Medicaid monitoring system operated by his department.

Dr. Julius Richmond, Assistant Secretary for Health in HEW did respond, but with an irrelevant platitude. "Voluntary sterilization is, in my opinion, a socially acceptable method of family planning," he said, "as long as it is performed with the informed consent of the individual."

"According to recently published reports," he added, "sterilization is becoming an increasingly popular form of family planning in the United States. As for hysterectomy, there are other procedures that are simpler and safer; therefore I do not regard it acceptable primarily for sterilization." An official HEW pamphlet dignifies hysterectomy as an acceptable mode of sterilization, without other medical indications, though it does indicate other operations may be simpler and safer. Says a spokesman for Dr. Richmond. "As long as there are physicians in this country who use hysterectomy for the sole purpose of sterilization, we must provide a means of informed consent. If we didn't have this pamphlet, and avoided full disclosure of the benefit and the risk, we'd be in bad shape."

WE TAKE NO POSITION

A spokesperson for the House Subcommittee on Health, headed by Rep. Paul Rogers (D-Fla.), took an ostrich-like posture. "We have no jurisdiction over sterilization. We plan no legislation. We take no position," she reported. "You'll have to check with whoever has jurisdiction over that issue if you want a statement."

Dr. Larry Horowitz, a special advisor to Senator Edward Kennedy's Senate Subcommittee on Health and Science, admitted that the committee had not been following sterilization since 1973. At that time, the Kennedy committee was instrumental in developing guidelines that now govern federally-funded sterilizations. But today, Dr. Horowitz concedes that he would be "speaking from a totally uninformed position if he were to comment on an Oversight, headed by Rep. John E. Moss (D-Calif.), is oddly enough the House body most closely concerned with sterilization abuse. The Moss committee has been investigating unnecessary surgery, including the boom in hysterectomies which has occurred in the past several years. A special representative for the Moss committee reports that the hyster-sterilization issue has been "reopened for examination, although no action is intended within a year."

MT'S SERIES IN REVIEW: MAJOR POINTS CAPSULED

Thus far in the sterilization series:

A Government Accounting Office report has revealed that there is no evidence that proper informed consent procedures were met in the sterilization of thousands of American Indians in a spot check of just four of 12 Indian Health Service regions.

Dr. Connie Uri, a Choctaw-Cherokee physician in Los Angeles has charged that the IHS is practicing genocide on the Indian people. She claims that fully 25 percent of all Indian women of childbearing age have been sterilized in IHS facilities.

Strong evidence suggests that HEW guidelines set up to prevent sterilization abuse are being widely ignored. In addition, HEW appears to be "selling" hysterectomy in an official consent booklet that ignores the necessity of medical indications to validate the procedure for sterilization.

An elaborate monitoring system set up by the Medicaid Bureau within HEW, has been found to be totally inadequate in its watchdog task of preventing abuse in sterilizations performed with federal funds.

An historic chain of connection has been traced from Sir Francis Galton, who called for the sterilization of "those of small civic worth," in 1891, to the American post-war eugenics movement, which was to involve many prominent U.S. citizens.

Abuses occur even in New York City, which has adopted a model sterilization statute.

MDs HELPED EXPLODE EARLY CONCEPTUAL BIAS, AND YET . . .

(By Allen Chase)

By the early part of this century, dogmas of the pseudoscientific cult of eugenics had spawned an elitist ideology in the U.S. and statutory sterilization of "defectives" to go along with it (MT, Sept. 14). Biologically under-educated American physicians were not immune to the eugenics cult and its ascribing—through a blue-ribbon "Sterilization Committee"—of underachievement to inferior genetic endowments sterilization laws. "The State," Hitler wrote in Mein Kampf in 1924, "must proclaim as unfit for procreation all those who are afflicted with some visible or hereditary disease or are carriers of it, and practical measures must be adapted to have such people rendered sterile."

In 1927, the Weimar republic passed a law permitting the voluntary sterilization of German women whose lives were threatened by pregnancy. When Hitler took power in 1933, this non-punitive law was replaced with an act—derived quite frankly from the Model Eugenical Sterilization Law published by Davenport's Eugenics Record Office in 1920—which called for the forced sterilization of the sick, the crippled, the blind, the deaf, the alcoholics, the epileptics, and the mentally retarded.

THE "HITLER CUT"

Under the voluntary therapeutic sterilization law of Weimar Germany, less than 500 German women—about 85 a year—were sterilized between 1927 and 1932. After 1932, forced sterilizations became so common in Nazi Germany that in the popular vernacular a sterilization operation quickly became known as a *Hitlerschnitt*—literally "Hitler cut," but actually a play on the word for Caesarean section, *Kaiserschnitt*. Two million Germans were found by the local Eugenic Courts that administered the Nazi sterilization code to be either afflicted with "some visible hereditary disease or are carriers of it," and were forcibly sterilized. This made for an average of 165,000 Germans sterilized annually for being "unfit."

Hitler had not only realized Galton's dream of extending the American eugenic sterilization laws to Europe; he had also done what British and American eugenicists had been demanding for more than a generation by "going public" and extending the horror of forced sterilization to two million non-institutionalized Germans living at large. Not until a decade after the fall of Hitler's Reich were the American eugenicists able to achieve the forced sterilization of the poor in equal numbers in this country.

EUGENICS RECORD OFFICE

(Committee to Study and to Report on the Best Practical Means of Cutting Off the Defective Germ-Plasm in the American Population.)

WORKING COMMITTEE

Bleecker van Wagenen, Chairman; W. H. Carmalt, Everett Flood, H. W. Mitchell, H. H. Laughlin, Secretary.

EXPERT ADVISORY COMMITTEE

Medicine—L. F. Barker.
Physiology—W. B. Cannon.
Surgery—Alexis Carrel.
Biology—Herbert J. Webber.
Thremmatology—Raymond Pearl.
Anthropology—Alex F. Chamberlain.
Psychiatry—Stewart Paton.
Psychology—H. H. Goddard.
Women's Viewpoint—Mrs. Caroline B. Alexander.
International Co-operation—E. E. Southard.
Criminology—Warren W. Foster.
Sociology—Franklin H. Giddings.
Economics—James A. Field.
Statistics—O. P. Austin.
Immigration—R. Dec. Ward.
Law—James M. Beck and Louis Marshall.
History—James J. Walsh.
Public Affairs—Irving Fisher.
Religion and Morals—Newell Dwight Hillis.

Expert advisers to "Sterilization Committee" of 1913 included two revered medical figures: Harvard Physiology Prof. Walter Cannon and the Rockefeller University surgical giant, Alexis Carrel, a Nobel prize winner.

[From the Medical Tribune, Sept. 21, 1977]

PASSING THE WORD ON STERILIZATION: 1937 TO 1977

(Has a racist sterilization rationale been passed on to this generation? If so, are blacks direct or indirect victims? MT's special series turns to published literature and black clinicians for an answer.)

(By Allan Chase)

Today's attitude of acceptance with regard to apparent sterilization abuse (MT, Sept. 21) may trace back to a climate of opinion created decades ago by popularizers who envisioned the procedure as a socially useful tool. Some analysts feel that the prosterilization generation gap between the Depression and postWorld War II was bridged, and a credulous public effectively swayed, by such "modern" eugenicists as H. L. Mencken, Elmer Pendell and William Vogt.

Back in 1937, Mencken apparently appropriated as his own the 1926 plan of Margaret Sanger to give low IQ scorers and other "social inadequates" $25 to $100 bonuses if "such polluters of the race" agreed to be sterilized. In "Human Breeding and Survival," a popular 1947 paperback, Guy Irving Burch and Pendell lauded the putative humorist for "basing sterilization on social criteria such as criminality, low earnings, poor health and lack of education."

This, the first of the major postWar Malthusian eugenic and sterilization tracts, endorsed by then U.S. Attorney General Tom C. Clark, went on to call for compulsory sterilization of Americans on welfare, "persons who are in bad health," "habitual criminals," and other "defective or socially inadequate" types. Burch and Pendell also proposed a U.S. Foreign policy, shaped by the United Nations, seeking adoption of laws that would "actually lead to sterilization of all persons who are inadequate, either biologically or socially, and encourage the voluntary sterilization of normal persons who have had their share of children." Otherwise, they reasoned, there would be a population explosion and food riots.

"SUBNORMAL CLASSES" TARGET

"Human Breeding and Survival" was a reprint of a 1945 monograph published by the privately funded Population Reference Bureau. Coauthor Burch was its director as well as a vice-president of the American Eugenics Society. Pendell, an economist, was a member of the board of Birthright, Inc., née the New Jersey Sterilization League, which in 1948 took over the lists of eugenicist Eugene Gosney's dormant Human Betterment Foundation and reorganized itself as the Human Betterment Association.

The Burch-Pendell viewpoint was soon echoed. In a biology textbook still used today, Prof. Garrett Hardin of the University of California urged the sterilization of people with low IQ scores and speculated that "more spectacular results could be obtained by preventing the breeding of numerous members of the subnormal classes higher than the feeble-minded."

PERIODIC CUMULATIVE GRAND TOTALS OF PERSONS STERILIZED UNDER STATE LAWS ACCORDING TO THE CATEGORIES COVERED BY THE LAWS, AND BY SEX, GATHERED FROM VARIOUS SOURCES

	Mentally ill	Mentally retarded	MR percent of CGT	Epileptic	Others	Male	Female	California total alone	Cumulative grant total	California percent of CGT
For the period 1907 up to—										
Jan. 1, 1921	2, 700	403	12. 5		130	1, 853	1, 380	2, 558	3, 233	80. 0

Jan. 1, 1941	18, 552	16, 622	46. 0		704	14, 900	20, 978	14, 568	35, 878	41. 0
Jan. 1, 1946	21, 311	22, 153	49. 0		1, 663	18, 830	26, 297	17, 835	45, 127	39. 0
Jan. 1, 1951	23, 466	26, 858	51. 0		1, 909	21, 250	30, 983	19, 698	52, 233	38. 0
Jan. 1, 1956	26, 047	30, 101	51. 6		2, 137	23, 368	34, 917	19, 962	58, 285	34. 0
Jan. 1, 1961	27, 592	32, 287	42. 0		2, 283	24, 474	37, 688	20, 041	62, 162	32. 0
Jan. 1, 1964	27, 917	33, 374	52. 4		2, 387	24, 716	38, 962	20, 108	63, 678	31. 6

Note: Annual averages of operations for the periods: 1907–21 (230), 1921–30 (849), 1930-41 (2,273), 1941-51 (1,636), 1951-61 (993), 1961-64 (505). Unpublicized institutional sterilizations, performed since 1907 in several States, had reached a grand total of 63,678 by 1964. Annual averages peaked in the 1930's. Typical patient through the years is mentally retarded female.

In *Road to Survival*, a 1948 best-seller, William Vogt also praised the Sanger-Mencken sterilization bonus plan, writing that "since such a bonus would appeal primarily to the world's shiftless, it would probably have a favorable selective influence." It was far better, Vogt added, for society to pay "permanently indigent individuals . . . $50 or $100 rather than support their hordes of offspring that, by both genetic *and social* inheritance, would tend to perpetuate this fecklessness."

Thousands of literate Americans took Vogt's Malthusian and sterilization preachments to heart. Their number included the wealthy manufacturer of Dixie Cups, Hugh Moore. No sooner did Moore read Vogt's book than he was to devote the rest of his life to putting Vogt's preachments into action.

When Burch's Population Reference Bureau went broke, Moore reorganized it, and helped raise its budget to $400,000 by 1966. Moore took over the Human Betterment Association, became its president in 1964, changed its name to the Association for Voluntary Sterilization, Inc., and raised enough money to hire a professional staff. Dr. H. Curtis Wood, Jr., the Philadelphia obstetrician who became president of Birthright, Inc. in 1948, remained as president of Human Betterment Association when it succeeded Birthright, Inc., and served as medical consultant to AVS until 1973, now began to make over 100 lecture, radio and television appearances a year as spokesman for the AVS. In these talks, Dr. Wood's message was the one he put in writing in 1973: "People pollute, and too many people crowded too close together cause many of our social and economic problems. . . . The welfare mess cries out for solution, one of which is fertility control [sterilization]." Dr. Wood is still on the AVS board.

LARGE AID GRANT

The AVS campaign was so successful that, when Moore died in 1972, the organization survived without his considerable help. According to its 1976 financial statement, AVS received the $1,696,393 from the federal Agency for International Development (AID) to set up sterilization programs overseas. Meanwhile, the literature of the AVS continued to advocate sterilization as a sound answer to the waste of "billions more of our tax dollars . . . on relief," and also "the critical need to control the population explosion.

The years 1960 through 1970, during which both the live birth rate and the fertility rate in the U.S. declined by 26 percent, saw the start of the present sterilization boom. Sparked by the preachings of Burch, Vogt, Moore and other malthusians, it caused many people to seek voluntary sterilization. Simultaneously, more and more physicians started to advise sterilizations and even hysterectomies.

The results of the first, or voluntary and privately funded phase, of the sterilization trend were clear by 1965. In 1965 alone, a total of 69,000 tubal ligations were performed on noninstitutionalized American women, as well as an even greater number of vasectomies on American men.

By 1975, tubal ligations had increased 433 percent, to 368,000 per year, and the total number of all male and female sterilizations performed annually was estimated to be over 2 million. Not all of the post-1965 sterilizations, however, were privately funded.

In 1966 that, under Title XIX of the Social Security Act, the U.S. began funding sterilizations of the working and welfare poor. Charges soon arose that federal and local guidelines for the protection of poor women and men from coerced sterilizations and other forms of sterilization abuse were inadequate.

Then came the upsurge in federally funded procedures, and in 1974, the Federal District Court finding that an "indefinite number of poor people have been improperly coerced into accepting a sterilization operation under the threat that various federally supported welfare benefits would be withdrawn unless they submitted to irreversible sterilizations."

STERILIZATION: NO COLOR LINE, BUT A POVERTY LINE

(By John Elliott)

Are black Americans, as some studies suggest, particularly hard-hit victims of sterilization abuse at the hands of white physicians? Unable to agree on this question, most population researchers, black health officials, and concerned MDs are sure of one thing—poor Americans, black and white, are more likely to be sterilized than those who do not live below the poverty level.

"Traditionally, the medical profession has had contempt for the poor," Dr. John L. S. Holloman, a black physician and former head of the New York City Health and Hospitals Corporation, told Medical Tribune, "They have had contempt for those who have been regarded as teaching material. Physicians have traditionally been trained at the expense of poor people. This charity concept of medicine has been subliminally taught to most physicians."

Dr. Donald Sloan, of Metropolitan Hospital, a large city hospital in New York, confirmed this statement. "We're a city hospital, so most of our patients are poor," he said. "They are considered chattle by the physicians here. We practice on the poor so we can operate on the rich. Hysterectomies and simple tubal ligations are performed all the time just for the practice."

Several studies add fuel to the racial debate surrounding sterilization. One study by Dr. Carl W. Tyler Jr., of the Family Planning and Evaluation Branch of the Center for Disease Control in Atlanta, deals specifically with the sterilization of minors. Dr. Tyler found that black women under 21 years of age were sterilized with greater frequency than white women in the same age group. More important, he found that welfare recipients under 21, regardless of race, were more likely to be sterilized than those not on welfare.

PRINCETON STUDY

A 1970 study by Dr. Charles Westoff, of the Office of Population Research at Princeton University, largely corroborates these findings. "The lower the socioeconomic class, the higher the incidence of sterilization in both blacks and whites," said Dr. Westoff. "The reason for this is that welfare recipients are the individuals most likely to come in contact with clinic establishments where they would get sterilization counseling, particularly if they already have two or three children."

However Dr. Roger Rochat, a colleague of Dr. Tyler at the CDC in Atlanta, questions the Tyler findings. "Dr. Tyler's work was federally funded and aimed at federally subsidized clinics which treat only poor women. This might tend to bias the results," he said.

Other experts cite more insidious reasons for the sterilization of the poor. Dr. Holloman raises the possibility that, as in the past, sterilization is being used as a tool for controlling "undesirables." He adds: "We cannot solve our problems by making people expendable and destroying them, a task some physicians feel is their duty. Compulsory sterilization is not the answer to any of our social ills."

Dr. Westoff's 1970 Princeton study offers the most recent data about the racial distribution of sterilization, although his findings are seriously flawed because only white subjects were interviewed. In that study, where only age is held constant, researchers found that black and white sterilization rates are approximately the same. The major difference cited by the study is that among blacks, 95 percent of sterilizations are performed on women, while among the white population surveyed, the procedures are split 50–50 between the sexes.

Several further analyses have been made based on the data collected by Dr. Westoff and his colleagues. Dr. Rochat in his own study based on the Princeton data, has reached several different conclusions. He found that, when blacks and whites are matched for income, education and number of children, sterilizations are equivalent no matter what the socioeconomic level. Dr. Rochat believes that the relatively early age at which welfare recipients complete their desired family size, accounts for the apparent higher rate of sterilization.

As with every phase of the sterilization investigation, the scanty racial data can very often confuse and mislead. Most experts agree, however, that the poor are sterilized at a greater rate than the nonpoor.

[Medical Tribune, Sept. 28, 1977]

COUNSELING CURBS UNWISE STERILIZATION

(By Allan Chase)

Early next year, investigators working for CREST—the Collaborative Review of Sterilization organized by the Center for Disease Control—will seek and interview large cohorts of sterilized women in a continuing follow-up. One question each will be asked periodically reads: "Since you were last interviewed, have you gone to your physician or hospital to ask about having your tubes untied so that you can get pregnant again?"

That question may seem absurd to the medically sophisticated, but there are indications that many women—and men—agree to sterilization without realizing the procedure is irreversible. CREST is particularly interested in answers from women who have undergone federally-funded sterilization, because the panel wants to gauge the effectiveness of HEW regulations which make informed consent a prerequisite to such operations.

Critics have charged that these regulations are not adequately enforced and not easily comprehensible to many lay people.

What proportion of the more than a million male and female sterilizations performed annually are subject to such charges of inadequately informed consent will not be known until about 1980, when the CREST study is fully operational. In the meantime, the federal General Accounting Office is studying government-funded abortions for evidence of abuse, but, rather than contacting patients, is confining itself to scrutiny of hospital records.

In some cities, such as Los Angeles and New York, Judge Gerhard Gesell's seminal 1974 decision in *Relf v. Weinberger* (MT, Aug. 10,24) resulted in significant advances in the presurgical counseling of sterilization patients. The Los Angeles Regional Family Planning Council, an intermediary federal and state funding agency, set up 12-week courses for sterilization counselors. Phyllis Paxton, R.N., who designed the courses, was aware from the start of "the vast gap between what we think goes into verbal messages and what is actually received. This is where training in counseling is as important as skill in foreign languages. This is also why sterilization counselors are not certified by the Council until after they are observed at work with patients during site visits."

Paxton believes that "for the average patient, I would say that at least two to three months of counseling is required before he or she is sterilized. This is particularly true for the woman who is thinking of having a postpartum sterilization. I've had patients who have had painful experiences during labor, and who have been coerced into having postpartums and ended up being really sorry since."

Sterilization counselors trained in this program are now at all Los Angeles County Hospitals, and at university medical centers and private hospitals in the region. At the LA County-USC Medical Center, one of the largest in the area, the average time spent in counseling sterilization patients is two hours. This includes the showing of a film on the specific sterilization procedure recommended for the two to five patients in each counseling group, which is followed by one hour of counseling. The patients are then given a four- or five-question test on the risks, benefits and permanence of the procedure. If they pass, they are allowed to sign the consent forms, which like the tests and the counseling are in English or Spanish.

Under a new regulation at the California center, if a woman is under 25, and has less than three living children, she has to be seen and interviewed by 2 members of the medical staff at separate interviews, either of whom can, and at times do, refuse sterilization to some women. The reason for this regulation, Dr. Robert Israel told MT, is that "women who were sterilized between the ages of 20 to 30 are the major group who then want to have their tubes 'untied.' So far, none of the women sterilized at this center after the new counseling system was set up, have come back asking for sterilizations to be reversed."

In New York, the special advisory committee set up by the city's Health and Hospitals Corporation—which operates the municipal hospitals—found the HEW guidelines to be inadequate. It proposed more stringent regulations, which were published in April, 1975. These new regulations, called not only for counseling by nonphysicians as well as the physicians involved, but also for a 60-day waiting period between the signing of consent and surgery. The HEW guidelines call for only a 72-hour waiting period. The new city guidelines were attacked by the Association for Voluntary Sterilization, Inc., and other groups, and by the time they were adopted later in the year the waiting period had been cut to 30 days. But the rigid counseling and auditor-witness requirements remained, as did a rule that initial consent can't be elicited during hospitalization for childbirth or abortion.

The twice-postponed new California state regulations, now due to be applied starting Dec. 1, call for a 14-day waiting period. Many California doctors, including Dr. Israel, oppose this longer period. "A 14-day waiting is too long," he told MT. "I think that the New York City 30-day waiting period is ridiculous because many of these patients will conceive. I'm not talking about private patients. But here we have a large population of illegal aliens from Mexico. If we don't get them while they're here—while the getting is good—we're in trouble."

While sterilization data for 1976 have not yet been compiled, the records do show that where a total of 1735 sterilizations were done in 1974 in New York's municipal hospitals, there was a 22% drop to 1,355 in 1975, when the new guidelines were revealed. In the only national survey of the HEW guidelines made since they were published in April, 1974, the American Civil Liberties Union questionnaire mailed to OBGYN chiefs of 154 teaching hosiptals a year later, (MT, Aug. 24), the 51 responses suggested to the study's author, Elissa Kraus, that "in the absence of any enforcement effort by the HEW, the sterilization guidelines are being widely ignored, if not deliberately evaded." The study also indicated, she said, that, in the 51 hospitals that responded, "there is a lack of understanding as to what constitutes adequate explanation of surgical procedures and purposes."

Subsequently, a number of unpublished and public government studies, including the 1976 GAO survey of sterilizations in the Indian Health Service facilities (MT, (Aug 10), have suggested that the violations of the HEW guidelines are even worse than the ACLU study suggested.

There are unmistakable signs, however, that the many civic and ethnic groups opposed to the shortcomings of both the federal regulations and their enforcement are not prepared to wait for the 1980 findings of the CDC sterilization programs to help them change both. Now in litigation are many individual and class actions brought by these groups. Especially notable is Madrigal et al v. Gulligan et al, a civil rights action field in the Federal District Court of Central California by 10 Mexican-American women against the directors and staff of the USC-LA County Medical Center and various state officials. The women claim various sterilization abuses were committed against them between June, 1971, and March, 1974. Eight of the women charge that their consent to sterilization was first elicited when they were admitted for childbirth or during labor. Four of the plaintiffs charge that they were sterilized without their consent.

PRIVATE PATIENT STERILIZATIONS NOT MONITORED

(By John Elliot)

Based on figures gathered from the Association for Voluntary Sterilization (AVS); an independent research firm, IMS America Limited; and the U.S. Department of Health, Education, and Welfare, an estimated 945,000 Americans, men and women, sought and paid for voluntary sterilizations in 1976. An informal survey of physicians, described by AVS as commonly performing voluntary sterilization for their private female patients, reveals a unique profile of those who seek sterilization services.

"The individuals who come to me or who are referred to my office for sterilization procedures are intelligent. They have, for the most part, given careful consideration to the operation," reports Dr. Richard Soderstrom, of the Mason Clinic in Seattle, Wash.

'The average patient who sees me about a sterilization procedure is between 30 and 35 years old with two children," says Dr. Don Edgerton, of Davenport, Iowa. "They have considered their situation carefully."

Informed consent, the hottest issue in the sterilization debate, seems of less importance in the private sector than in federally-funded procedures.

"We use the regular informed consent forms which are based on the HEW regulations," said Dr. Edwin Bronstein, of the Georgia Medical College in Atlanta. "We require all our patients to receive counseling from social workers specially trained in sterilization counseling."

Dr. Jordan Phillips, of the University of California, Irvine, Chairman of the American Association of Laparoscopists, seemed unconcerned with possible informed consent difficulties. "We use the standard HEW forms," he said.

"The HEW regulations are extremely cramping," added Dr. Edgerton.

All the physicians questioned expressed a willingness to sterilize women who had no children, who had never been married and who were under 21 years of age, as long as they felt the patient had approached her decision in a reasonable and responsible manner.

"We discourage some patients," said Dr. Bronstein, "but as long as the law is complied with, we will sterilize any woman."

"I often discourage patients who request sterilization," reported Dr. Soderstrom. "When a woman comes to me who is either very young, or has never married and has no children, and requests a sterilization, I will sterilize her if her request seems well thought out."

As for a monitoring system to check for possible abuse in the private sector, no such system appears to exist. Even the Blue Shield system has been found to be inappropriate as a watchdog.

"We don't keep any records at the central office," said Tom Mura, of Blue Shield in Chicago. "Frankly we just wouldn't need any sort of monitoring information in order to do business."

A strong peer review process, it seems, is the only way to insure against sterilization abuse among the private sector.

"In the end," said Dr. Donald Sloan, Director of Psychosomatic Medicine at Metropolitan Hospital in New York, "it is the conscience of each individual physician that must insure against abuse of the rights of the patient."

SENATOR BAKER'S REMARKS ON WELFARE REFORM

Mr. BELLMON. Mr. President, welfare reform has been identified as a major national goal. In view of this national concern and debate over this issue, I ask unanimous consent to include in the RECORD remarks made by our distinguished minority leader, the Honorable HOWARD H. BAKER JR., before the Institute for Socioeconomic Studies in New York City.

As indicated in this presentation, Senator BAKER and I are working on a bill which will take a different approach to welfare reform than that proposed in the Carter plan. The Carter plan proposes to tear up the present system and replace it with a new one. Unfortunately, we have no assurance that the Carter plan will work better administratively, even though it will cost a great deal more than current programs. The approach which Senator BAKER and I will propose will build on the strengths of the present system, correct weaknesses, and improve services at considerably lower cost than the Carter plan.

The issues raised by Senator BAKER are vital to a serious examination of the welfare system and I ask unanimous consent that the text of his remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS OF THE HONORABLE HOWARD H. BAKER, JR.

There is in America today a quiet crisis which threatens to explode in anger and in violence at any time and at the slightest provocation.

It is more than an economic crisis, although the sinister symmetry of high unemployment and high inflation lies at its heart.

It is more than a sociological crisis, although it involves tens of millions of Americans whose persistent failure to lead independent, successful lives is an indictment of our whole social system.

It is, more than anything else, a crisis of the human spirit. It is a crisis in the heart of the father who cannot support his family. It is a crisis of the mother who cannot feed or clothe or house her children well. It is the crisis of the child who faces the bleak prospect of a life of fear and desperation and joblessness and crime and punishment.

And it is a crisis not only for those who live in poverty and despair, but also for those of us who live in prosperity and comfort.

We face the stern and demanding test of restoring economic stability and finally achieving true social justice in the United States of America.

We have learned, at last, that these are not two problems, but one—and one we must solve without any further delay.

The blackout in this city last summer demonstrated with awesome destructive power how desperate some of our citizens have become, how isolated they have become from the mainstream of our society, how much they have become strangers in their own land, how profoundly and consistently our system has failed to provide the initiative and the skills they need to live successfully in America.

This problem transcends any narrow concern of the ideologue. The liberal and the conservative have an equal stake in its solution, and neither can claim the crisis solely as the other's fault or the other's responsibility.

I noticed an editorial in the New York Times a few weeks ago that suggested that it would be wise to attack the problem of high unemployment separately from the problem of urban decay.

Although we may be obliged on occasion to deal with the symptoms of each of these issues individually, I believe that there is no way to solve the twin dilemmas of unemployment and the decline of the cities, without a productive and optimistic economic infrastructure. The only way to encourage that optimism, that in turn stimulates investment and productivity, is by creating the conditions for steady and stable economic growth and social stability.

What ever kindles hostility among nations and within populations, whatever the roots of racism may be, it can surely be said that a solution to those problems is infinitely more difficult and probably impossible unless the system requires a large labor pool . . . a body of workers that adequately reflects the level of population . . . unless there is a sense of permanence about the underlying health of the economy . . . and unless we demonstrate the political and social competence to deal with its sea changes without casting millions of people into hunger and despair. The first to suffer that hunger, the first to be swept by that despair, are always the weakest, and those who have been historically deprived of the fruits of their labor. We cannot afford to ignore or fail to remedy the consequences of that racism that has stalked our national life from its very beginings. More than a century after the Civil War, more than a decade after the great victories of the struggle for civil rights, our cities' ghettos are packed with social dynamite. The staggering forty percent unemployment rate among young black people and the unemployment rate of fourteen percent of all black Americans is intolerable, if only because it's morally, politically, and socially unaffordable.

When we talk about unemployment statistics and about hunger and about the welfare syndrome, we sometimes hide behind the numbers. A "rate" declines . . . or a "curve" expands . . . or we go from seven million unemployed to six million nine hundred thousands . . . the trouble with statistics like that is that they obscure the fact that we're talking about people . . . about individual human beings . . . the fact that there are millions of them . . . doesn't for a solitary minute reduce the anguish of each human soul stunted in growth and deprived of the possibility for meaningful survival. The simple fact is that those individuals are bewildered, frustrated and angered by the image of the good life as advertised in living color on the nation's television screens: that image has nothing to do with the aimless lives they live on the streets of our large cities, and they have little reason to believe that it will be more than a television picture to them or to their children.

At the same time as this new "under class" boils in resentment at their displacement from what they cannot help but see as the national feast, millions of other Americans are equally frustrated by the rising costs of government welfare programs, at the same time as their own paychecks are eroded by inflation and as they feel increasing uncertainty about their own ability to hang on to the good things of life.

One recent poll indicates that the American people believe that they will be worse off ten years from now than they are today. That kind of defeatism is self-fulfilling and its manifestations are clearly seen in the stock market, in faltering capital investment, in an unhealthy balance of trade and in a labor force that is literally split in two; those who have the skills necessary to operate the levers of an advanced economy and those who don't! Our largest problem . . . our largest secular sin, is the fact that we have so many of the latter. Let's not fool ourselves about the nature of the problem. There are jobs available. Good jobs . . . well paying jobs, and many of them are going begging. The trouble is that they are in the wrong place for those who need them and they demand skills that we have failed to provide to millions of men and women who wish nothing more than to do a good day's work for a good day's wages. Millions of unemployed Americans want jobs—not welfare handouts. There are dozens of illustrations of that desire. When Western Electric Company in Oklahoma City advertised that it would hire fifty-eight workers on a Monday morning, two thousand men and women stood in line . . . many of them all night long . . . in the desperate hope that they would be among those chosen for the available jobs.

For too long we have locked these men and women and their children into a recurring cycle of dependency. We have watched the welfare system grow into a labyrinth of new programs to accommodate their larger and larger burden of a population unable to find work and unable to train themselves for the work that is available. The welfare system is not an entity unto itself. It's an expression of what's wrong with American society. Welfare is a mirror that reflects the dark side of a great success story. Perhaps that's why we find it difficult to think clearly about its function, about what it can do and what it can't do.

We don't need or want a welfare system that perpetuates and extends dependency from one generation to the next. Neither do we wish to emplace a system that enlarges the welfare structure; That's one of the problems I have with President Carter's sweeping proposal. If it is enacted, more than thirty million Americans will find themselves receiving welfare related checks from the federal government and that signifies to me a society in decline. That is not the kind of reform that I believe the great majority of the American people will tolerate. Let us examine the welfare system and the conditions that have fostered its growth. Let us take those measures that will improve the performances of the services it renders and let us create an economic and social climate in which its impact will be diminished and reduced.

We have invested many years and billions of dollars in the welfare system. It has many faults and the necessity for improvement is dramatic and demanding. But the impulse to eradicate the structure in an attempt to improve the results is symptomatic of the "Let's start all over" school of government. I believe that we should strengthen the system rather than throw it out. Let us take steps to remedy its inequities, to tie the system closely to opportunities for productive work and to relieve state and local governments of some of the fiscal burden they now bear.

In fact, today's welfare benefit programs powerfully undermine incentive to find work—to earn money. Keep in mind there are not just a few such programs. Research sponsored by the institute for socioeconomic studies has uncovered 182 federal income transfer programs at least partly designed for income maintenance. They involve 250 billion dollars in appropriations.

Cut off points and benefit reduction rates are part of many of them. Earning added income can severely penalize the welfare family. Because of the way welfare benefits overlap, an extra dollar of earned income can mean loss of *more* than a dollar of benefits. We must eliminate once and for all the outrageous discrimination against intact families in most states. No element of the present program better illustrates the gap between intent and outcome than the incentive that now exists for fathers to abandon their families.

We must end the senseless inconsistency in eligibility criteria among the many states. While continuing to recognize differences in costs of living throughout America, we, nevertheless, should establish standardized asset limitations and deductions from earned income. We must set a minimum and maximum benefit range so that no one receives federal assistance below a specific floor nor above a certain ceiling. For example, we should consider a national minimum of at least sixty percent of the poverty line and a maximum of at least one hundred percent of the poverty line.

We must help the states and localities responsible for administering welfare programs. For too long, they have been called upon to shoulder the preponderance of the increased cost burden. We can relieve that burden by substantially increasing the Federal match for AFDC to a potential ceiling of ninety percent. Under the terms of a bill that I plan to introduce with Senator Henry Bellmon of Oklahoma, New York City and other communities in the state would save at least half of their present share of AFDC costs.

But the most important thing we can do is to call on the great private American institutions to play an increasingly active role in providing the jobs and training that will assist and encourage the poor to move on to the mainstream of productive economic activity.

No one has all the answers to a problem that has haunted American society for decades. The issues of high unemployment and equitable welfare costs and solutions must be debated and resolved in the public forum. I intend to cooperate to the fullest extent with President Carter in achieving meaningful reform of the welfare system. We will sometimes differ in emphasis and approach. That is part and parcel of the process. But those differences are just as important as our shared objectives in shaping the end result.

I must suggest this evening that the President's proposal for 1.4 million pubic service jobs in the context of his welfare reform package is at best an expensive placebo and at worst a long stride down the road to organized make work. Public service jobs have their place. But they are band aids for the wounded, not cures for the disease of structural unemployment. The scale of the President's proposal almost assures most of the participants another dead end, instead of a genuine opportunity to participate in the productive life of the Nation.

I believe that the President of the United States and the leaders of both parties in Congress should convene a national employment conference of America's leading business institutions. (The so-called fortune 500.) The chief executive officers of those companies and of America's major labor unions must be asked to formulate a plan whereby unemployed and untrained workers would be introduced into the labor force in larger numbers than ever before, and in the context of training programs that would assure them that these new jobs could lead to increasingly significant opportunities.

The United States Government should make an effort to meet the national employment emergency with a program of major tax incentives designed to stimulate business commitment to introducing millions of Americans into meaningful and productive work.

There is no reason why each of the major companies should be unable to absorb a substantial number of potential trainees and employees. A variety of initiatives can be taken individually and collectively by a broad based group of business and community leader. But these initiatives will occur only if government offers a helping hand, only if Washington listens as well as speaks. A national labor exchange linking jobs to applicants from every part of the country might be developed in the context of travel subsidies for those who are willing to pull up stakes to make a new life. We should encourage people to go where the jobs are, at the same time as we plant the seeds for new economic growth where our working population lives.

We tend to forget in Washington that there are enormous resources of creativity and competence in the cities and towns across this country. Helping to create circumstances in which those resources can be put to work is the most important job the Federal Government can do. Here in New York, the Bedford Stuyvesant Restoration Corporation in Brooklyn, has worked steadily and effectively since its foundation 11 years ago under the sponsorship of Senators Robert Kennedy and Jack Javits, to improve the community itself and to create new businesses and new jobs for the people who live there. Of course they have only scratched the surface of the problem, but one major American corporation, IBM, has located a major facility at Bedford Stuyvesant. That experiment proved so successful that IBM decided last month to put up still another plant in the Bedford Stuyvesant area . . . a direct result of an effective working relationship between a community enterprise concerned with developing and utilizing community resources and a business that has linked its economic interests to its corporate citizenship.

I believe that if President Carter issues the call for a national employment conference, we will see the seeds planted for a multitude of similar relationships between business interests and local community services.

Let us lay the problem before those who have the most to gain from a solution. Let us help them to achieve local and regional answers to a national crisis in accord with local and regional needs, desires, aspirations and capacities.

Senator Bellmon and I intend to offer legislation that would create a jobs voucher program and a major expansion of job creation tax credits. But that is only a small part of what's needed. Our major efforts should be in the active encouragement of business and organized labor to develop the programs that we need to eliminate the problem of endemic unemployment, and to tell us the legislative framework that they need to get the job done.

A national employment conference is only a first step. I would hope that it would result, among other things, in the creation of a broad based jobs commission to monitor and implement the conference's recommendations. Such a commission might be similar in organization to the national commission on water quality, which has had major influence in the improvement of the environment. In that particular case, five members of the House of Representatives, five members of the U.S. Senate and five public members, appointed by the President of the United States, provided the impetus for a realistic and effective implementation of environmental goals. Certainly the employment crisis is worthy of an effort of even greater dimensions.

I have intended this evening to convey my belief that the problems we face are soluble, if we put our faith and trust in the ability of the American people to determine their own destiny.

I don't believe that there is a single blueprint or a magic wand that would solve all of our economic and social problems. Too often such blueprints are drawn in Washington with a precision that fails to reflect the essential untidiness of a process in which large numbers of people must contend with large social issues. I believe that untidiness is the mark of a creative and innovative people. If we remove the constraints of over regulation and if we develop new institutions and new mechanisms where the people live and where the people work, to do the people's will, the statistics that trouble us as harbingers of social upheaval will change for the better. I know that we're not going to place seven million, or two million of the unemployed into productive work overnight no matter how good our intentions, or how total our commitment. But let's make a meaningful beginning.

What we must avoid above all else is the creation in the United States of what Disraeli called more than a century ago . . . "two Englands," the rich and the poor. In our time and in this land, there is no room for "two Americas." Advancing media technology has brought and will continue to bring social injustice and human despair into the homes of every one of us, no matter how cushioned we may be from the personal pain of standing in an unemployment line or waiting at a welfare center. In the past, there have been many silent tragedies played out in social silence. We knew nothing of them and so, to some of us, they simply didn't exist. But in 1977, we cannot permit the untrammeled growth of an American underclass. Of course, there have always been the underprivileged among us (whether we have seen them or not) but there has also always been room at the top, in the middle and on every rung of the ladder along the way.

If this is in part a myth, it is a myth that must become the truth for today and tomorrow. If we are to end this quiet crisis of alienation and despair, we must respond to those who cry out . . . "we're Americans, too . . . we belong" . . . with the recognition that they are and that they do.

A VIEW OF NEWS BROADCASTING

Mr. RIEGLE. Mr. President, in recent days, the pioneer all-news Washington area radio station WAVA was sold by its owner, Arthur Arundel, and will operate in the future with a new programing format. In a recent article, Mr. Arundel had some reflections on the broadcast industry born of his own experiences, and I want to share those thoughts with my colleagues and other readers of the Record. The following remarks appeared in the Fauquier Democrat, Warrenton, Va., on Thursday, November 17, 1977, and I ask unanimous consent that they be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

Straight Ahead—A View Of News Broadcasting

(By Arthur W. Arundel)

To people in Washington over the years it has probably always seemed that their own times were the worst, the pressures on leadership and the burdens of power never greater. We journalists here, along with government leaders, have not always been immune from exaggerated notions of our self-importance to the national destiny.

But stone age man probably also thought that he bore in his hands the fate of all living things when he invented the hatchet, as did Martin Luther when in another time he declared that with gunpowder man had finally developed the ultimate weapon.

And less than a century ago, leaders in Britain, then the world's leading power, were appalled at the burden of human survival they carried when Lord Kitchener first used the machine gun to mow down the hordes of the Mad Madullah in the Sudan.

SINCE VIETNAM

It has been different in Washington since Vietnam, perhaps our last ground war, and Watergate. In the quieter, laid back early months of President Jimmy Carter, visible and newsmaking military combat seems all the more on the way to being replaced by the weapons of nuclear warfare. In nuclear energy man is equally capable of either limitless good or of quickly flattening civilization to a pile of dust and rubble.

So perhaps people in Washington today are indeed not just another generation consumed with indulging their own self-importance. We all, politicians and journalists alike, possess human frailties. But our generation also possesses the capacity by the mere pressing of a button to change all of human destiny. There is something less in this than Armageddon, but there is also more than Chicken Little seeing the sky falling.

After some 20 years here with CBS news and all-news broadcasting in Washington, I am now selling all-news WAVA to move on into new fields of journalism and public affairs. I am moving into a new home in beautiful Fauquier County where the air is clean and clear for all things—breathing, dreaming and speaking. But from the experience I have a few thoughts on the shape of broadcasting and broadcast journalism.

THE VAST WASTELAND

Many will remember FCC Chairman Newton Minow's much publicized reference to television 15 years ago as a "vast wasteland." He was right about that then and, while we can be proud of the occasional rays of brillance in broadcast news and specials, he would be right about that today. Television programming continues to sink toward the lower common denominators of the public taste.

And even as television has replaced radio as the nation's principal live entertainment medium, radio has made a shotgun marriage to become essentially the promotional loudspeaker of the record industry.

Going across the radio dial today, from classical to rock music stations, modern radio can be measured as little better than a glorified jukebox, spitting out just so much news and public service material as will keep Federal Broadcast regulators off its back. There are brilliant exceptions, WMAL radio here and three all-news stations among them, in Washington.

RATINGS TYRANNY

The most frustrating part of my own 20 years experience in both television and radio has been to see this industry sinking measurably deeper into lockstep with the audience ratings numbers.

It is not that TV has not changed; it is that new and imaginative programming is strangled in its birth by the tyranny of the ratings. Over these years of putting WAVA all-news on its feet, I have awakened at night feeling much like those people in the recent book and film about broadcasting, "Network," who one evening threw windows to shout, "I'm mad as hell, and I'm not going to take it any more."

We have an extraordinary thing in this country with private broadcast station ownership. In most of the rest of the world, radio and television is owned and programmed by the government. Yet out of our very stupid failure to do better with private ownership, we are inviting our own government to move into the gap with its now growing support of Public Broadcasting networks and educational television and radio stations. It may be heresy to think such thoughts, but if private ownership does not get off its tail and do better by the native intelligence of the American people, then the government is going to do it for us. And that would be worse.

ALL-NEWS RADIO

WAVA made its break from the cacophony of radio music to begin something we then called "all-news" broadcasting in this Washington area in January 1962. It seemed to me then a simple enough idea, with some 40 radio stations here doing news on the hour, that there ought to be one place on the dial where you could just push a button and get the news anytime.

Advertisers laughed at the idea. It was a long gamble as the young new owner with all the family eggs in one basket was told then that no one would listen to continuous news. But we made it. And, with success, the concept gradually spread to other stations across the nation. The imitation was flattering.

Then six years later, The Washington Post announced that it would change its WTOP to all news. We didn't need that much flattery, the Post company possessing the huge combined network news, audience promotion and financial resources of the area's largest daily newspaper, Washington's CBS television station, Newsweek magazine, as well as Washington's most powerful 50,000 watt radio station.

Yet WAVA and WTOP together survived six years of all-news competition. Then two years ago, WRC radio entered all_news here backed by the added resources of NBC television and radio. These two corporate network giants became good tough competition for independent WAVA. It made all of us work harder.

But looking at our success in all-news radio now, I have realized one very special thing which helped make all-news radio succeed and which challenges it today.

It is that all-news was born here in the high exhilaration of the early 1960's with John F. Kennedy and grew in years of nearly continuous national anguish with the Cuban missile crisis, assassinations, Vietnam, Lyndon Johnson's withdrawal, more Vietnam, Nixon, China and Watergate.

If Jimmy Carter means quieter times he also means people are recovering from a prolonged state of something like national war nerves. It is better for the country if slower for the news daybook.

Reports of the death of all-news are premature. It simply presents a sharp new challenge to all-news broadcasters to adapt all-news radio to quieter times. It can be done.

NEW IDEAS

We find, and I found at WAVA, that everything has not yet been discovered. The horizon, we have learned, is not the boundary of the world. Somebody is always finding out that it isn't and being very successful by doing what he believes in.

The star I have tried to follow in this game, Edward R. Murrow, once said that "the trouble with broadcasting in this country is that it underestimates the native intelligence of the American people." But I have found that broadcasting in fact still lives more by the advice of the late H. L. Mencken who said that "nobody ever went broke underestimating the taste of the American people."

There are innovators and there are cowards in this industry, and they may be identified largely by which advice they follow. If you reach for the stars at least you won't get a handful of mud.

Perhaps if WAVA's success says anything, it is that opportunity for new things is still out there and that you don't have to drop to the next lowest common denominator of the public taste to prove it. If there is pride, even arrogance in that, there is also truth.

Once in a while in this industry we have got to put a principle before a buck, to reach for our dreams as journalists and play to the higher grounds of the native intelligence of the American people. Each man owes something more than a paycheck to the upbringing of his own profession.

SENATOR CLARK ADDRESSES THE ANNUAL MEETING OF THE ARMS CONTROL ASSOCIATION

Mr. BIDEN. Mr. President, I ask unanimous consent to have printed in the Record a speech which Senator Dick Clark will deliver tomorrow at the annual meeting of the Arms Control Association regarding SALT and call it to my colleagues attention.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

Remarks by Senator Dick Clark

I am fortunate to be able to appear before this distinguished group today since prospects for arms control appear brighter now than they have for years.

In fact, we have had very few arms control achievements to date. The arms control atmosphere which began dramatically with the Limited Test Ban Treaty of 1963 has diminished with the passage of time.

We can hope—and do our best to ensure—that this bleak period for arms control is behind us. Due to the President's personal interest, new life has been breathed into arms control.

At his initiative, the United States and Soviet Union are now exploring a number of arms contol initiatives. For example, there appears to be a reasonable prospect of military stabilization in the Indian Ocean. One can hope future agreements will actually reduce the outside naval forces in that ocean region.

The negotiations for a Comprehensive Test Ban are also progressing, and there is a reasonable prospect that the United States, Soviet Union and Great Britain can agree on a draft treaty to be submitted to the Conference of the Committee on Disarmament in 1978. I expect that this treaty will stop both nuclear weapons tests and so-called "peaceful" explosions—a long-standing problem. Earlier this year, however, the Committee on Foreign Relations held hearings on the proposed Threshold Test Ban and Peaceful Nuclear Explosions Treaties. Witnesses representing all points of view were unanimous in their judgment that the United States should not engage in a comprehensive ban which does not prohibit "peaceful" nuclear explosions. That concept has now been embraced by the executive branch, and, as you know, Chairman Brezhnev has indicated the Soviet Union would be willing to have a moratorium on "peaceful" nuclear explosions, together with a ban on weapon tests.

Most importantly of all, the Strategic Arms Limitation Talks in Geneva appear to have reached a point at which agreement will soon be possible. Certainly, I would expect SALT to be concluded within a few months, unless something goes seriously awry.

Today I would like to focus on SALT in my talk to you. Let me state my central contention at the outset: We have a stronger case for SALT than we have so far succeeded in publicly projecting. We have a broad base of support in the United States. The key to our awakening this broad constituency is ourselves.

Specifically, I contend that we in the arms control community have failed to frame the debate and, thereby, have forfeited this advantage to the critics. Second, we have permitted the false impression to arise that our approach to national security issues is less realistic than the approach of the critics. Third, we have failed to make clear the national security advantages of SALT. Fourth, we have failed to show the weakness of the contentions of the critics. Finally, we have failed to make clear the danger to our nation which would arise if there were no SALT agreement.

Let's look at each of these in turn.

If there is merit in arms control—and I believe strongly that there is—the American public has had scant opportunity to understand that advantage in recent years. The arms control community has not been visible enough on a number of key issues. Furthermore, we have, all too often been on the defensive. Unless those who understand and support arms control are active and effective, the public discourse on these vital issues will be narrow and ill-informed. Under such conditions, we would have little reason to expect national decisions supporting arms control.

If our most pressing current arms control concern—a SALT II treaty—is to be ratified, and if SALT III is to be a serious effort, which will actually accomplish significant things, those who care for arms control and who understand how arms control can enhance our national security objectives must be involved, now and in the period ahead. We must move now to reframe the debate so that the public can appreciate the advantages SALT offers to our national security. I am here to ask your support in this effort.

In the past, advocates of strategic arms control have not done a good enough job of establishing the terms for the debate. We have left the terms of reference to those who prefer to see arms limitation as the enemy of our security. I see no reason why we should allow the opponents of arms control to determine the issues of the debate on arms control by default.

An example of this was the confirmation hearings for Paul Warnke as Director of the Arms Control and Disarmament Agency and SALT negotiator. Nearly everybody in this audience knows Paul Warnke and his record as an extremely tough negotiator. He believes strongly in preserving American interests and takes a very positive view of arms control as a means of advancing those interests. He has the backing of the President and the Secretary of Defense.

And yet, during the confirmation hearings, and on the floor, his detractors were far more effective than this friends in shaping the debate. Though in the end he was confirmed by a solid majority, I am bothered by the extent to which we, as his supporters, permitted his career to be debated on the terms chosen by his opponents. This is a political advantage we cannot continue to give to the critics of SALT and of arms control.

Let me say at the outset, as a member of the Senate Foreign Relations Committee, I am not prepared to stand aside and allow the terms of this debate to be determined by those more vocal than myself. Nor do I believe it is right to permit selective criticism, accompanied by a steady trickle of leaks of classified information, to prejudice the public understanding of these issues, and to preempt our opportunity to stimulate discussion of issues we think are vital to this issue.

We have allowed what is essentially a debate over the fundamental strategic interests of this nation to be distorted by those who are hostile to the objectives of arms control. The result is that many people believe that arms control is the enemy of our security instead of an effective and necessary way to reinforce our security.

The critics argue that SALT II is too restrictive, that it seriously limits United States military programs. That, simply, is rot. I will support SALT II if it comes to the Senate in the form I anticipate, but I must tell you frankly that I will do so without any certain sense that SALT II is a significant achievement toward controlling the arms race. Simply put, SALT II, like SALT I and Vladivostok, still allows the two sides to move ahead with most of the programs under way. Accordingly, SALT II will be an achievement meriting public support. But SALT II is a good—rather than great—achievement. We would be deluding ourselves in thinking otherwise. We will not really have a significant SALT agreement until both sides are willing to cross over that painful threshold which requires reductions and constraints which actually curtail favored and approved programs in a meaningful way.

All too often, the critics of SALT have done a disservice to public understanding by focusing selectively on narrow, hardware issues, neglecting those provisions which benefit the United States and brushing aside the broader military and political advantages of SALT. Fears are being fed by simplistic ratios and projections of strategic threats and by far-fetched, alarmist and unrealistic scenarios which overlook the distinction between a fantastic, paranoid nightmare on the one hand, and the military planner's "worst plausible case" on the other. Verification issues in particular have lent themselves to demagogy, when they should be discussed as difficult and complex matters.

Opponents of arms control have consistently poor-mouthed and downgraded our very substantial, capable, flexible, and durable nuclear forces. They propagate these distortions in spite of the testimony of the President, the Secretary of Defense, the Joint Chiefs of Staff and the intelligence community. These self-defeating distortions can help neither our negotiators nor our allies. All too often, they poison the climate of the domestic debate with half-truths and untruths—and degrade the credibility of our deterrent. The critics of SALT imply thereby, that our security is only to be guaranteed by more and more military weaponry.

Defining his view of national security, Robert McNamara wrote recently:

"We still tend to conceive of national security . . . almost solely as a state of armed readiness: A vast, awesome arsenal of weaponry. But . . . if one ponders the problem more deeply, it is clear that force alone does not guarantee security, and that a nation can reach a point at which it does not buy more security for itself simply by buying more military hardware. . . . There is a point at which an additional dollar of defense simply no longer buys an additional dollar's worth of security . . . is the ultimate objective somehow to armor-plate the entire planet? The question is grotesque. And yet, not any more so than the premise on which much of the world's thinking about security appears to be based." (International Security, Fall 1977)

Of course, much of the debate will center on hardware issues. As President Eisenhower's science adviser, Dr. George Kistiakowsky, a creator of the atomic bomb and a man who understands the horrors the nuclear age can entail, noted in his important recent article, "Is Paranoia Necessary for Security?" (New York Times, November 27, 1977):

"Part of the answer (to the difficulties of SALT) has to do with the technicalities of missile performance, and with differences between the strategic doctrines and negotiating tactics of the two sides."

He goes on to point out, however that:

". . . another, and perhaps major reason, (in the attitudes of SALT) is to be found in the domestic politics of arms control. Once again, as so often in the past, there are powerful voices in this country, urging intensification of the Cold War and rejection of efforts at moderation—efforts that are construed as serving Moscow's aggressive designs."

A former ambassador to the Soviet Union, George F. Kennan, wrote in last Sunday's Washington Post, of his efforts to understand the arguments of military enthusiasts about strategic arms:

"I come away from this exercise frustrated, and with two overpowering impressions. The first is that this entire science of long range massive destruction—of calculated advantage or disadvantage in modern weaponry—has gotten seriously out of hand; . . .

"But my second impression is that there is a distinct unreality about this whole science of destruction—unreality, that is, when you view it as the plane on which our differences over policy have to be resolved. I doubt that we are going to solve our problems by trying to agree as to whether the Russians will or will not have the capability of "taking out" our land-based missiles at some point in the 1980s. I doubt that this is the heart of the problem. I suspect that something deeper is involved. And if I had to try to define that deeper something, I would have to say that it is the view one takes of the nature of the Soviet leadership and of the discipline exerted upon it by its own experiences, problems and political necessities."

What Kistiakowsky and McNamara and Kennan are saying is that the debate must not be limited to narrow and merely technical conceptions of SALT and national security; nor should the debate be driven by paranoia about the Soviet Union.

What we must do instead, I believe, is put the debate on a new, clearer, and more realistic footing. While not for a moment neglecting the hard technical issues, we should make sure that people realize that these are not the only issues. We must view SALT in terms of its contribution to our overall national security, seeing not just numbers of delivery vehicles on each side, but also the relevant strategic incentives, constraints and interests on both sides. We must not see SALT as freezing either nation in awkward positions but as a step in a process from which both parties gain in their security.

We must enter the debate forcefully and maintain a tenacious and continuing involvement in SALT II and later SALT efforts. Otherwise, we will find ourselves going into battle each time a treaty or agreement comes around to rally support largely because what is in hand is better than the alternative. Once we do this, I'm convinced, the broad national constituency in our union for SALT will be activated.

The members of the Arms Control Association must understand that the Senate cannot carry alone the burden of consideration of SALT. The Senate will not get ahead of the American people on SALT—and no one can expect otherwise in a democracy.

But once the national support for SALT becomes apparent in a properly framed debate, neither will the Senate fall behind the American people on SALT.

This brings me to my second major point: we must reject the implication that arms control is less tough-minded than the critics' view. Ours is the realistic and the practical view.

Our calculations about nuclear deterrence show more realism and a better understanding of how nations behave than the estimates of those who glibly attribute a first-strike or war-winning strategy to the Soviet Union. As our former ambassador to Germany, Martin Hillenbrand, wrote recently about the American deterrent:

"If one looks for absolute assurance and certainty, one will always be fearful that we have somehow fallen short of perfection. Likewise, from the Soviet point of view, to be deterred does not require absolute certainty that an attack on the West would inevitably escalate into a strategic nuclear exchange. What is required is a sufficient degree of uncertainty about the potential development so that the ultimate risk cannot be taken . . . I do not want to suggest that the Soviet leadership thinks in terms of the calculus of probability, but some rudimentary application of this highly sophisticated logic must lie in the minds of any rational leadership, including an anxious Soviet leadership. Whatever else may be said about that gerontocracy, no one has yet accused it of rashness or a propensity for precipitate action." (International Security, Fall 1977)

I think Ambassador Hillenbrand's remarks make good, common sense. We all remember what happened to Hiroshima with a single, small atomic bomb, yielding less than 20 kilotons. By comparison, each side can now create thousands of Hiroshimas on the territory of the other. And nothing can be done to deny that terrible power to us. I find it more than a little ludicrous when people suggest that the Soviet leadership would find a far more devastating retaliatory attack acceptable—economically, politically, or militarily.

Much of the effort to generate fear about SALT is based on the fact that we have only a dim view of Soviet nuclear strategy and of Soviet intentions, now and in the future. Soviet writings permit contradictory interpretations. This permits all kinds of fantasies to pass for knowledge. Although, over the long term, I foresee no breakthrough in our imperfect knowledge of Soviet strategy and intentions, a proper SALT agreement and the SALT process itself can help bound, even reduce, these uncertainties.

It should be obvious that equitable arms control agreements aid strategic nuclear planners to reduce these uncertainties. If you know the size and shape of a potential adversary's forces for some period into the future and you can verify the reliability of this information, then clearly your own calculations become much simpler. If you can negotiate a stable strategic balance and mutually avoid or restrain destabilizing initiatives, you not only have the security advantages of such an agreement, you reap significant planning benefits—and avoid needless programs and expenditures.

Thus, while I can agree with the alarmists that we do not fully understand Soviet strategy and intentions, I do not agree with the suggestions that we must therefore expect the Soviets to act contrary to their own national or party interests. I have no doubt that the Soviet leadership wants to stay in power and that they want to preserve their political system, their economic status, and their territorial integrity. So long as the Soviets have these real and tangible interests, I doubt their willingness to risk these fundamental values in the forlorn hope that, by some miracle of planning, a nuclear war can be won, in the sense that they will escape major retaliatory destruction. In my judgment, the opposite view is nonsense, and we should say so plainly.

There is further ground on which I would challenge the realism of many SALT critics. Somehow, these critics seem to believe that we must "win" this negotiation with the Soviet Union; that we must "out-fox" the Soviet negotiators and obtain terms which enhance our strategic advantages and undermine theirs, and, failing this, that we should forego a treaty.

This is either naive or deceitful. Certainly, it is a fundamental principle of diplomacy that you cannot negotiate an agreement which is clearly prejudicial to the interests of one of the negotiating parties. In the case of SALT, if one side can't live with the contract, then it won't be concluded. In short, we cannot change the strategic balance in our favor through negotiations. Nor are we going to "give away the store" in unsuspecting concessions to the Soviets.

Even if one were able to gain a strategic advantage at the bargaining table, the other party would shortly awaken to this and either violate the agreement or renounce it. No treaty we can possibly negotiate will reduce the Soviets or us to an inferior position. As Paul Warnke emphasizes, you must begin with the recognition that you are striving for an arms agreement which is fair, which is balanced, which has equal restrictions on both sides, and which provides equal security for both nations.

Our rejection of the fantasies of nuclear war-fighting, our appreciation of SALT as a tool to our military planners, and our more practical expectations of the opportunities and pitfalls of the bargaining process, demonstrate our realism and practicality.

The failure of the public to appreciate this is due to our own lack of energy and assertiveness, not to the skill of the critics.

The same is true about our case for the current SALT package under negotiation. Our case for the emerging agreement is stronger than we have appreciated, more commanding of broad public support than we had realized.

After all, the fundamental test of SALT is whether it serves our national interest, primarily our national security interest, broadly understood. We need not and should not argue that a SALT agreement is the millenium. Once we demonstrate clearly that a SALT accord is a means of enhancing our vital national defense; once we show, as such, SALT is a far less dangerous and less costly option than an unregulated arms race; once we make it clear that arms controls are not opposed to national security, but rather bolster it, then the American public and the Senate will rally to its support.

The package under negotiation promises to enhance our national security in several ways.

For the first time in strategic arms control, there will likely be a reduction of deployed weapons. Some 300 fewer Soviet missiles and heavy bombers will be aimed at the United States. This may not be the sizable reduction many of us would like to see, but it is nevertheless a significant achievement and clearly in our national security interest.

The agreement will provide for equal aggregates of strategic nuclear forces on both sides. This accomplishes the objectives defined in 1972 for SALT II. It, too, is an important achievement, when you consider the difficulty of achieving this type of equality between forces which are responsive to different geopolitical circumstances and different technological capacities. When you consider that the Soviet Union faces four nuclear forces on or within reach of its borders, this becomes an even more significant accomplishment.

The expected limitations on missiles with multiple, independently targetable re-entry vehicles (MIRVs), and particularly the sublimit on MIRVed ICBMs are important steps to a more stable balance. A limit to Soviet land-based MIRVs will force them to a greater proportion of MIRVs at sea and to thereby rely on a more balanced, more survivable, and more stable force than in the past.

The agreement will tell us just how many missiles in each category to expect the Soviets to build. This will curb the strategic guessing game that leads to uncertainty, worst-case estimates, and hedges.

By putting limits on these systems which concern us the most in the eight-year treaty, and by putting the limits on our systems which concern the Soviets the most in the three-year protocol, the SALT package is shrewdly conceived to enhance our bargaining leverage in the next round.

Depending on the final content of the protocol, the agreement may ban their mobile missile which is ready for deployment and may delay the development of the fifth generation of Soviet ICBMs.

These are all sound, understandable arguments for SALT. Taken together, they make a compelling case that SALT II is assuredly in our national interest.

It is not enough, however, to have a positive case. Presenting our case positively is the most important thing, but we must also deal with the criticisms in a serious and forthright way. We must disabuse the public of any notion that SALT would affect our national security adversely.

To begin with, we must make it clear that the press reports indicating the United States has conceded too much to the Soviet Union are the product of highly selective leaking which focuses on these features of the negotiating document that bind the United States in some form or other. People should remember the cynicism of this effort when the final document itself becomes available, because it will then be clear that the Soviets have come a long way toward meeting our security interests by binding themselves to certain provisions. But let me address some specific charges:

On the question of Minuteman vulnerability—it has been alleged by the critics of arms control that the levels for MIRVed ICBMs in this agreement have been set too high, so that the Soviets could destroy a large portion of our Minuteman ICBM silos. First of all, those who make this charge have failed to be completely frank and acknowledge that Minuteman missile silos are vulnerable in any case and that they would be even more vulnerable without SALT II. The critics are not being exactly candid in stressing what has long and intentionally been the smallest part of our deterrent force while ignoring our large and durable bomber and submarine-based delivery vehicles.

Even now, there is considerable disagreement over just how vulnerable Minuteman is now and how vulnerable it will be in the future. Even if vulnerability can be demonstrated at some future point, it is hard to translate that threat into something bearing upon the real world. To be confident of eliminating our Minuteman force, an adversary must deliver on each silo two re-entry vehicles with precise timing, and with near-perfect reliability and accuracy. I find it very hard to believe that any Soviet military official or leader would stake the future of the regime, the Soviet economy or the Russian people on a technically perfect attack involving some 2,000 separate re-entry vehicles and 300 or so missiles which even then would not touch our sea-based retaliatory forces or our bomber forces. To seriously propose such a scenario is to enter the realm of mystic philosophy.

In the final analysis, we can conclude that Minuteman vulnerability is a matter which cannot be resolved by SALT. Of course, SALT can help. It certainly will not increase Minuteman vulnerability. If steps are needed to deal with the vulnerability matter, they should be taken independently of SALT in the context of our decisions on our strategic programs. I do not expect that SALT will hinder that process in any serious way.

One final note on this—the poverty and narrowness of this brouhaha over Minuteman vulnerability in the SALT context can be seen in the proposed solution—the MX. This proposed mobile missile would give much greater throwweight and more and more accurate warheads in each deployed missile than in our existing Minuteman III. Thus, the MX program would increase the hard-target threat to the Soviet Union under the guise of decreasing the hard-target threat to us.

How could the Soviet Union fail to react as our hard-liners would expect us to do under the same circumstances? Three hundred MX's could in theory destroy virtually all of the Soviet ICBMs. Soviet planners thus face the possibility that three hundred MX's, a fraction of one leg of our Triad, could, in 30 minutes, destroy 70 percent of their strategic forces in a first strike. This would put a hair-trigger on nuclear war in a period of crisis, because the Soviets would be faced with a choice of using their ICBMs or losing them The MX would increase the Soviet's targeting problem, but one could imagine theorists who would project a theoretical threat capable of destroying the MX force. Even if the MX were to reduce the threat to Minuteman, it might well increase the threat to our society, by increasing the invitation to attack our heartland and increasing the devastation of any such attack. To really reduce the threat and enhance stability, you need a really mobile missile—like a submarine.

Related to the vulnerability issue is the question of Soviet heavy missiles, that is, ICMSs with a large lift capacity or throwweight which gives them the ability to carry numerous MIRVs. What bothers people is that the so-called heavy missiles have over doubled the throwweight of standard missiles. The Soviet SS–18 has 15,000 pounds of throwweight, as compared to the 7,000 pounds of the SS–19. Though the Soviets are having difficulties with their MIRV program and though it is not clear they will MIRV all of these heavy ICBMs to their maximum extent, I think the more important considerations are accuracy, reliability, and the practical utilization of throwweight. We should remember that, beyond a certain point, additional throwweight provides diminishing returns. With technological advances and miniaturization, massive throwweight is not necessary to secure potent forces. For this reason, informed analysts conclude that the totality of MIRVs missile forces is a far greater concern than the MIRV potential of the super-heavy missile. Accordingly, a ceiling on MIRVed ICBMs is at least as great an achievement as tight reins on the MIRVing of heavy ICBMs—which are limited in total numbers now and will stay limited.

As to the reported 2,500 kilometer range limitation on air-launched cruise missiles, critics are now charging that this prevents complete coverage of Soviet targets, if the cruise missiles are fired from stand-off bombers outside Soviet airspace. This criticism seems founded on the assumption that not only must each leg of the Triad in itself be capable of saturating the Soviet target system, but that even each component of each leg of the Triad must be capable of doing so. Here we have another case of holding the emerging agreement up to a false and irrelevant standard and then finding it wanting on the basis of such a standard.

In response, I would quote a recent and unanimous report of the Senate Armed Services Committee, which says:

"In a mixed force . . . manned penetrating bombers combined with aircraft carrying cruise missiles would be able to reach 100 per cent of the target base."

The report concluded that reasonable range limitations "would not diminish the military effectiveness of our bomber force."

Of course, if we need greater range in later years, we can insist upon greater range in later negotiations. Any cruise missile range limit agreed to in SALT II will be in the three-year protocol, not the eight-year treaty. So, in effect, range will be an open issue. If, for reasons now hard to imagine, we decide that our cruise missile carriers will not be able to get much closer to the Soviet Union than the English Channel at some future point, we still have the option of considering deploying a longer range cruise missile. We should also, in that event, consider sacking a goodly number of those who have designed our strategic force for us.

Regarding the issue of the Soviet Backfire bomber, it is ridiculous that this has been allowed to play such a central role in the debate. Fundamentally it is irrelevant to the strategic balance and has been from the moment it was brought up. My inclination is to say: "Yes, on a straight-line, high altitude, sub-sonic mission, this small payload plane could hit targets in the United States—and so what." Compared to a Soviet strategic force of 2,500 missiles and heavy bombers with some 4,500 warheads, the addition of a couple of hundred Backfires arriving a few hours after the exchange serves only, as Winston Churchill said, "to make the rubble bounce."

A word is in order about the Soviet civil defense program, of which SALT critics have made so much. This subject has been under intense scrutiny in the intelligence community and the Congress for nearly two years.

Studies confirm that, while the Soviet programs are larger than their American counterparts, as they have been for over thirty years, their utility in limiting widespread and devastating damage from a major nuclear attack is dubious even under ideal conditions. It is worth remembering that we gave up a major civil defense effort in the 1960s because our studies indicated that, even at prohibitive cost, you could purchase only ineffective protection. This cost-benefit ratio has become even poorer with the qualitative and quantitative development of offensive missile forces in the last decade.

Ultimately, I think, it is logical to assume the opponents of SALT will fall back on charges that verification of the SALT agreements will be inadequate. This appears to be the case from the Warnke confirmation hearings and from recent allegations about Soviet violations of the interim offensive weapons agreement.

As for verification, it is one of SALT's firmest critics—Paul Nitze—who this year set forth what I think are the proper guidelines when he told the Senate Armed Services Committee (February 28, 1977, p. 203):

> "I have always taken the position that the significance of verification is to be related to the significance of the thing you are verifying. If it is not very important, it doesn't make that much difference. In other words, it is the product of the strategic importance of the things being limited and the verifiability of the limitation which is important, not just absolute verifiability."

The point then is that you don't have to be able to verify the most minute details. What you need to be able to do is confirm any development that would reveal significant Soviet cheating. That I am convinced we are fully capable of doing.

Despite obstacles here and in Geneva, there is a reasonable chance that the negotiators will conclude a SALT agreement which we can readily and responsibly defend because it will be in the national security interests of the United States. To argue, as some critics, do, that it does not achieve President Carter's March proposals misses the point. We cannot dictate Soviet interests to the Soviets any more than they can dictate our interests to us. We should not let arguments of this kind undercut the merits of the agreement.

We must puncture the notion that SALT is, as the games theorists say, a "zero-sum" game in which the gains of one side are precisely proportional to the other side's losses. Nothing could be further from the truth. Our security will benefit from a SALT agreement; so will the Soviet Union's and so will world security.

Finally, we must understand the dangers to our nation of a failure to achieve a new SALT agreement. We must combat the idea that the world will be a safer place if there is no SALT agreement. To do this, we must describe the consequence of no SALT treaty.

Briefly, and without speculating too much, the failure to sign or ratify an acceptable accord could have any or all of the following outcomes:

It could call into question and perhaps lead to termination of the very useful strategic arms dialogue we have been conducting with the Soviets now, for a decade.

It could engender a strategic arms race more furious than we have seen to date, producing more provocative and destabilizing weapons.

It could stimulate the spread of nuclear weapons to countries about to cross the nuclear threshold if they conclude from the Soviet-American example that nuclear weapons do increase usable military power and diplomatic leverage without accompanying disadvantages and penalties.

It could jeopardize the continuance of existing arms control agreements related to outer space, the seabed, ballistic missile defenses and nuclear weapons tests, some of which are already under pressure from technological innovation.

It could increase the mathematical probability of nuclear war, whether or not such a war is planned or desired.

It could reduce the opportunity for verifiable strategic arms control agreements, as technology carries the arms race more and more in the direction of so-called "gray-area-systems" which are difficult to locate, count and evaluate with the present verification techniques.

It could increase the burden of defense spending in our own and other countries.

It could eliminate the possibility of mutually controlling dangerous new weapons technologies.

It could cast an added pall over the already difficult problem of Soviet-American relations, perhaps, eventuating a return to the confrontations of the high Cold War period.

And finally, it could reduce or remove the possibility of success in other arms control efforts, such as chemical weapons control, a comprehensive Test Ban Treaty, or the Mutual and Balanced Force Reduction talks, where the cooperation of the two superpowers is essential to progress.

I do not wish to make a gloomy prognosis. But we cannot ignore, as the opponents of strategic arms controls seem to, that SALT is inescapably linked to many other elements of the international scene, either practically or symbolically in terms of the atmosphere for cooperation.

However, I do not believe this dark picture will be realized. It is within our power to prevent its occurrence. There is a new awareness, I think, of what it takes to win on the issue of arms control.

The advocates of strategic arms limitation have learned that, however good, these measures do not sell themselves in a climate of opinion still partly paranoid or at best ambivalent, where simplistic and narrow attacks on SALT can successfully exploit long-standing fears. We have learned that to support arms control effectively means much more than a reasonable discussion among reasonable people, but requires a recognition of—and a willingness to join in—the frankly political nature of the ratification process. We have come to understand that the effort to dampen and then shut off the nuclear arms rivalry must be buttressed by a thorough knowledge of the technical complexities of weaponry, of the strategic balance and of the negotiating process.

We have seen that we cannot confine ourselves to a definition of national security restricted to military and hardware issues but instead must broaden the debate to include all of the factors that influence our security and the security of the world we inhabit. We have realized how important it is to demonstrate that strategic arms controls are in our best national security interest, that the threat of open-ended arms racing constitutes a real threat to the continuation of civilization as we know it, and that nuclear arms control is not soft-headed, foolish or weak, but realistic, necessary and wise.

The challenge to SALT has been presented, and as we have seen today, there are sound and realistic answers to those challenges. We know that there are inherent weaknesses in the arguments of the SALT critics, and that there are considerable strengths to our arguments that SALT has clear national security advantages. We know further that the alternative to SALT II—no SALT—is untenable. We have a solid and supportable case.

Now, we must go out and make that case.

A TRIBUTE TO JOHN McCLELLAN

Mr. GRAVEL. Mr. President, I would like to join my colleagues in expressing deep sorrow at the passing of the distinguished Senator from Arkansas, John McClellan.

I admired him as a man who had the courage of his convictions and a personal sense of responsibility for the Nation's welfare. His 35 years in the Senate were a record of service to the principles in which he believed and the people he represented.

It was John McClellan in the early 1950's as ranking Democrat on the Permanent Subcommittee on Investigations who led the walkout on Senator Joseph McCarthy for his abuse of power as subcommittee chairman. When John McClellan became the subcommittee's chairman in 1955, his first action was to write a set of rules for congressional inquiries. Thus, he made sure to protect any witnesses from McCarthy-type tactics in the future and demonstrated his commitment to fairness and respect for individual citizens' rights.

It was also John McClellan as chairman of the Permanent Subcommittee on Investigations who tackled crime in organized labor.

His concern for the Nation's welfare was underscored by his commitment to creating conditions that would restore greater respect for authority. Landmark anticrime legislation, the Omnibus Crime Control and Safe Streets Act of 1968 and 1970, the Organized Crime Control Act of 1970, and finally the monumental revision of the U.S. Criminal Code are the results of John McClellan's commitment to law and order and his concern for the welfare of his fellow citizens.

It was John McClellan, chairman of the Appropriations Committee, who remained committed to fiscal conservatism. It is not an easy task and almost always a thankless one to be the "no" man when it comes to Government spending. John McClellan was fair, but he remained tightfisted with the taxpayers' money.

John McClellan's concern for the Nation and his commitment to principles was equaled by his commitment to represent the people of his home State, Arkansas. While we may point to any number of great achievements, John McClellan believed his greatest accomplishment to be the development of the Arkansas River navigation system which bears his name. The Arkansas Senator secured the $1.2 billion Federal funding to launch tremendous new economic growth and prosperity at home.

I consider it a privilege to have known John McClellan. His passing is a loss to the Senate and the Nation he loved so much.

I extend my sincere sympathy to his beloved wife and family and respectfully suggest that they may take comfort in knowing that his example will live on in the Senate.

THE ESCALATION OF THE BALANCE OF NUCLEAR TERROR

Mr. ABOUREZK. Mr. President, a terrible new escalation of the balance of nuclear terror may be taking place at this moment concealed from the world, and the American people, in the heart of Africa. Tragically, this international subterfuge has come about with the apparent knowledge, and perhaps even the support, of our own Government.

I refer to the charges raised by veteran diplomatic correspondent Tad Szulc in an article prepared for Penthouse magazine, in which he makes a strong case to demonstrate that the West German Government has taken over Shaba Province in Zaire to develop and test both the deadly cruise missile and the intermediate range ballistic missile.

This testing appears to be in utter disregard for the spirit of the 1954 Treaty of Brussels, which forbids the production by West Germany of "long range missiles and guided missiles" on German territory. It is apparent that by roping off an area of Africa as big as Colorado for these tests that the Bonn government planned to circumvent and violate the spirit of that treaty.

Not only has the German Government through its apparent dummy Orbital Launch and Rocket Corp. (OTRAG) kept the German people from the true knowledge of the deadly missile development, but our own Government has, at the very least, kept the American people from knowing of the program.

Equally disturbing author Szulc raises the point that the United States may have made available to the West Germans the technological know-how for the deadly cruise missile and the IRBM. Only last December 7, the NATO Defense Minister's meeting was told by Defense Secretary Harold Brown that "the United States has made no commitment not to transfer cruise technology to its European allies."

Mr. President, if it is in the interests of the American people to rearm the West Germans with the deadliest weapons mankind has yet devised, I submit that this is a serious decision that ought to have been the subject of the widest possible debate. Since this issue raises the question of nuclear holocaust, since it raises the question of the spread of nuclear delivery capability, since it raises the question of whether the SALT talks may be undermined, it is of urgent import to every human being on this planet, and not only the American taxpayers.

Next January 8, it will be exactly 60 years since President Woodrow Wilson stood under this very dome and told a joint session of the Congress of his dream for world peace in his famous address on the Fourteen Points. I think it is instructive that we hark back to his remarks on that occasion. For it was his first point that called for "open covenants of peace openly arrived at, after which there shall be no private international understandings of any kind, but diplomacy shall proceed always frankly and in the public view."

Let us also recall the famous fourth point, in which President Wilson appealed for "adequate guarantees, given and taken that national armaments will be reduced to the lowest point consistent with domestic safety."

Mr. President, the Members of this distinguished body 60 years ago failed to heed the warning and the vision of President Wilson. Historians will tell of the tragic result of that failure for centuries to come. Now, I believe, we have a new opportunity, and not only an opportunity but an obligation, to proceed to bring this matter out into the open, into the light of day.

We need more than just an investigation of the extent of American involvement in this matter. We need more than a demand that this tragic new escalation of the arms race be halted. We need to seize the initiative now for peace, for a peace arrived at in the light of day, not for this continued balance of nuclear terror built up increasingly in the dark by men who mistakenly believe their national prestige depends upon having the ultimate weapons of terror. We must ask ourselves how much longer the taxpayers of the great powers can go on being harvested by their governments to feed the military monster.

In an age when we have atomic overkill so staggering that sane men everywhere wonder what keeps proliferation and escalation rolling, those who make their dirty little secret treaties in the heart of darkness should be the first to be called to account.

Today Bonn is demanding the cruise missile. Tomorrow it may be Poland or some other nation. France and Britain are already hard at work on it. And the day after tomorrow who will it be: Brazil? South Africa? India?

Mr. President, we should commend Tad Szulc and Penthouse magazine for this article which exposes the distinct possibility of further escalation of the arms race through secret arrangements to test the ultimate weapon of terror. They have made a great contribution to the cause of putting truth on the public record and, therefore, I ask unanimous consent that Mr. Szulc's article for Penthouse be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ZAIRE

(By Tad Szulc)

With the knowledge and approval of the United States, West Germany is secretly testing the cruise missile—potentially the most deadly weapon of the nuclear age—and the Intermediate Range Ballistic Missile (IRBM) at huge proving grounds in eastern Zaire in the heart of Africa. This program is in deliberate disregard of international agreements on the limiting of West German rearmament—specifically, the 1954 Treaty of Brussels.

Carter administration officials have privately confirmed that both the Central Intelligence Agency and the Bundes Nachrichtendienst (BND), its West German counterpart, have played a crucial role in this program through the recruiting of American-trained scientists and political coordination in Kinshasa, Bonn, and Washington. Kinshasa, formerly Leopoldville, is Zaire's capital.

Zaire, known until 1971 as the Congo, is one of Africa's largest countries, and it is rich in copper and uranium, the latter being the principal element in the development of nuclear energy. Both Zaire's location and wealth have made it a highly strategic part of Africa, and for that reason it has been Washington's favored client state since it won independence from Belgium seventeen years ago.

Under the corrupt and inept administration of President Mobutu Sese Seko, however, Zaire has been tottering for years on the edge of virtual bankruptcy and political collapse, notwithstanding vast American economic and military assistance during these years. This state of affairs, plus West German and U.S. pressures, have resulted in Mobutu's agreement, in 1976, to turn over roughly one-tenth of his territory, a 100,000-square-mile area (the size of the state of Colorado) to the West Germans for their missile program in exchange for annual payments of $50 million and deliveries of small arms by Germany to his disorganized army. The proving grounds are located in the Shaba (formerly Katanga) Province.

Nominally, the German Operations in an approximately rectangular forbidden zone along Lake Tangyanika in the east are run by what Bonn euphemistically describes as a "private company" for purely scientific purposes. But there is massive evidence, as will be seen below, that the whole West German military-industrial complex is behind this enterprise and that the Bonn government is the ultimate recipient of the missilery produced in Zaire.

The secret cooperation by the United States in the Zaire undertaking through the supply of cruise-missile and other advanced technological know-how constitutes another aspect of the deepening American involvement in Africa. But, essentially, this is a back-door approach to West Germany's rearmament on the most dangerous level: unable to help Bonn develop advanced missilery on German territory for political and legal reasons, the United States has been doing so clandestinely through Africa since the closing years of the Nixon administration.

Bonn had long wanted its own cruise missile (both France and Britain are in advance stages of development). But since the United States has not thus far been willing to provide the actual cruise-missile weaponry to Germany, the Germans decided to develop it themselves. That they had U.S. cooperation in this endeavor was, in effect, confirmed by American Defense Secretary Harold Brown when he told the NATO Defense Ministers' Meeting last December 7 that "the United States has made no commitment not to transfer cruise technology to its European allies."

The Zaire situation is one of the most closely held secrets in Washington, D.C. Although American officials acknowledge publicly that West Germany is experimenting with "rockets" in Africa, they go along with Bonn's cover story that the Zaire project is nothing more than research on weather satellites. No United States participation is officially admitted. This article is based on information obtained in private discussions with highly reliable sources, who have access to most of the relevant knowledge, in Washington as well as in Western Europe. In Washington some of the information was made available because of the concern on the part of certain individuals that the United States is engaged in improper activities in the context of the Zaire situation.

Specifically, the West German missile production and test are in direct and flagrant circumvention of the 1954 Treaty of Brussels, which places clearly defined limits on German rearmament. Aside from the prohibition on the manufacture of nuclear, chemical, and biological weapons, the Brussels Treaty—signed on Bonn's behalf by the late Chancellor Konrad Adenauer—forbids the production on German territory of "long-range missiles and guided missiles." This is spelled out in Paragraph 4 of Annex III of the Brussels Treaty. Neither Defense Secretary Brown nor anyone else in the December NATO meeting made the slightest public reference to these treaty limitations.

This treaty was conceived by the Western powers as a guarantee against excessive rearmament by West Germany after she was admitted to the North Atlantic Treaty Organization (NATO), and the decision was made to let her develop modern armed forces. Only nine years had elapsed since the Nazi defeat in World War Two, and, quite naturally, the European allies were nervous about the notion that Germany would once again become a danger to them. Europeans have long memories, and they remember how Germany moved to rearm herself after losing World War One. By 1954 the Germans were already on their way to becoming an economic power in Europe, and NATO felt that while Germany should have an army, there must be safeguards. Thus Germany committed herself under the Brussels Treaty not to produce strategic bombers, certain types of naval vessels, and biological, chemical, and nuclear weapons.

However, the Brussels agreement had a flaw: its phrasing did not rule out the German production of missiles *outside* of German territory. Perhaps at the time no one thought that this would be possible, and perhaps it was a deliberate loophole not to foreclose German options in the future; it cannot be ruled out that at the apogee of the Cold War with the Soviet Union the idea of loopholes was not wholly distasteful to the United States. Besides, according to officials, there is in the treaty a "classified" section that may allow for such contingencies.

In any event, the work going on today in Zaire is obviously designed to equip West Germany with the most sophisticated delivery systems for missiles with conventional or nuclear warheads.

Although there are no indications that Bonn is developing actual nuclear weapons—the Bonn government has signed and ratified the Non-Proliferation Treaty banning the production of such arms—the acquisition of such a delivery capability may well be the first step in the direction of West Germany's going nuclear some day if it judges such action necessary.

And West Germany's neighbors on both sides of the Iron Curtain—France in the West and East Germany, Poland, and the Soviet Union—are deeply concerned and even suspicious about a missile-delivery capability in Bonn's hands. Rightly or wrongly, these countries—particularly the Communist ones—tend to link the Zaire program with the existence, in Germany, of a small plant that reprocesses spent uranium from nuclear power plants into plutonium, which is the core element of nuclear weapons. The same concern extends to the agreement under which West Germany is developing a $10 billion nuclear-industrial complex in Brazil, ranging from the prospecting of uranium to its enrichment, the construction of power reactors, and the installation of a plutonium-reprocessing facility. Even the United States is upset over the German-Brazilian deal because of its plutonium-production aspects, but the Carter administration has failed to dissuade the two governments from pursuing it. Washington, of course, does not wish to see a nuclear capability in a Third World country.

Both the Zaire testing and the deliveries of small arms by West Germany to Mobutu have led France to raise these matters with Bonn in an urgent manner and on a high level in the mid-1970s. Paris had asked Bonn to explain clearly the nature of the Zaire activities, but French officials are known to be unconvinced about the German cover story on weather satellites.

The Soviet ambassador in Kinshasa has delivered a formal protest to the Zaire government, but, not surprising, he has received no satisfactory reply. The Polish government is equally upset, and officials in Warsaw have been talking privately about acquiring a nuclear capability for Poland—with Soviet assistance—if West Germany went nuclear.

Bonn, for its part, has been very defensive about the whole Zaire matter. Not only has it been insisting on the scientific nature of the project and on the private character of the company that runs it, but also it has gone to the lengths of allowing a West German television crew into the forbidden zone to film a story about the project. Predictably, the film did suggest that the Germans in Shaba were busily preparing their area for weather-satellite experiments.

However, American experts dispute the need of an area as large as Colorado for testing weather satellites. But the cruise missile and especially the IRBM do require a vast operational area so that they can be recovered within the proving grounds after the launch.

Curiously, Bonn has allowed glaring contradictions to affect its Zaire cover story Thus a photographic blowup of a cruise missile was displayed at the 1977 air show at the Le Bourget, near Paris. There was no explanation as to where, when, or how the Germans had produced a cruise missile. American specialists who studied the photograph have concluded, however, that the missile was flying over what appeared to be African terrain.

Knowledgeable informants in Washington, speaking privately, do not buy the German cover story. I have been told flatly that the cruise missile is being tested in Zaire and that preparations are underway for IRBM launches. Officials also said that West Germany has already developed four or five cruise-misslie prototypes that have flown over the leased Shaba enclave.

Still in private, officials in Washington have said that the Zaire enterprise represents a colossal international deception. Bonn, they said, not building missiles on its own territory, has not violated the letter of the Brussels Treaty. But doing it in Africa certainly violates the spirit of the 1954 pact.

There are major international implications in the German missile program. The Soviet Union, for example, may well take the view that a German missile-delivery capability would alter the strategic balance in Europe. It may demand that the German missiles be counted under the ceilings being negotiated in the current phase of the Strategic Arms Limitation Talks (SALT) between the United States and the Soviet Union.

Up to now, the ceilings have applied only to American and Soviet missiles—in 1969 the Russians had agreed not to count French and British nuclear weapons under SALT—but the German developments may change this situation. The United States stores nuclear warheads in West Germany for its own forces under what is known as the "double key" arrangement, meaning that Bonn has to agree to the use of atomic weapons located on its territory by American forces. But the Soviet fear is that West Germany, with its own delivery capability, may prevail in an emergency on the United States to be allowed to use American nuclear warheads on German missiles.

The most troublesome is the cruise missile. This is a missile, that was perfected by the United States in the early 1970s and is launched with a nuclear head from a "mother" launcher, such as a bomber or a submarine. The cruise missile, with its own engine and guidance systems, can be fired at a target with extraordinary precision. It is the ultimate guided missile, which has the additional advantage of following the contours of the terrain with its own guidance mechanism. It was the introduction of the cruise missile that deadlocked the Soviet-American SALT discussions since 1974 although, in the latest round of talks, the United States has agreed on limiting the range of the new weapon. There are extraordinary security measures surrounding the Shaba testing area (which lies between Lake Tanganyika in the east and a north-south line at 26° 55″ of longitude in the west; the boundaries are delineated in the north by the river Lukuga and in the south by the tenth parallel along the Zaire-Zambia border).

The lease contract, signed on March 26, 1976, between the Zaire government and OTRAG (a German acronym for "Orbital Launch and Rocket Corporation") constitutes an unprecedented waiver of sovereignty for the twenty-four-year duration of the contract. OTRAG, a West German service corporation operating the test site on behalf of German defense contractors, may act in the area "as if it were sovereign," according to an American government legal expert. The only similar situation in the world currently exists in the 1903 Panama Canal Treaty.

Article Two of the contract provides that Zaire "expressly and without restrictions grants to OTRAG the right to take all measures that it deems necessary for the exercise of full and complete power in the territory" and undertakes to draft implementing legislation. Furthermore OTRAG enjoys exclusive "disciplinary" powers over all its personnel and their families, who thereby are not subject to Zaire laws and law enforcement.

The same article establishes the "permanent" closing by the government of air space over the leased territory to all aircraft except OTRAG's and the Zaire Air Force's. OTRAG is also free to construct airports wherever it pleases in the leased zone.

Article Three, a provision without parallel in international law, vests in OTRAG the decision as to which persons may live in the enclave. Undesirable persons may be kept out by OTRAG. The government, likewise, has taken the obligation to "evacuate," if so requested by OTRAG, all persons, including Zaire citizens, whom OTRAG does not wish in its territory. Such persons are to be "kept away" from the zone by the Zaire government. The government is also responsible for maintaining security for all OTRAG facilities and personnel if the company's operational needs require such precaution.

Finally, Article Three provides that no "observations"—in writing or through photography—may be taken in the forbidden zone without OTRAG's authorization.

The official German claim that the sole purpose of the Shaba operation is to develop cheaper weather satellites and the insistence that OTRAG is a "private company" are contradicted by the 1976 contract, as they are by new evidence that identifies two powerful West German military-industrial complex consortia as the driving force behind the overall Zaire project.

The opening section of the contract, which the Germans never made public, declares that OTRAG "needs a vast operational area lending itself to the launching into the atmosphere and space of payload missiles and to all activities in every domain that, directly or indirectly, are related to it."

There is no mention of weather satellites in this contract, and only in its final section does it refer to OTRAG's commitment to place it in orbit—free of charge—an experimental reconnaissance satellite for the Zaire government. As an American expert remarked to me, "I can't see why Mobutu needs a recon satellite unless he thinks he can spot Angolan guerrillas with it—and this is nonsense."

Should Zaire wish to have its own communications satellite, however, OTRAG, according to the contract, is prepared to launch it into space at a 20 percent discount from the price it charges its other "clients" for placing space vehicles into orbit. These provisions appear to be intended to "sweeten" the deal for President Mobutu, in the opinion of American experts.

But the real giveaway of the German project appears in the section of the contract dealing with OTRAG's payments to Zaire. Thus Article Five provides that Zaire will receive $50 million annually in lease payments after OTRAG receives its full remuneration for the launching of a payload rocket from a "client."

OTRAG's "clients" are not identified in the contract, but it is obviously improbable that cruise missiles or IRBMs would be purchased by private companies. And the identity of OTRAG's technological backers—and that of its real clients—makes it quite clear what the Germans are doing in Shaba.

The principal consortiums engaged in the production of the missiles being tested in Zaire are the German aircraft company Dornier, which provides the airframe, the German Messerschmidt company, of World War Two fame, providing the engines, and the French Thompson-CSF company, which builds the navigational-guidance systems for the German missiles. What remains unclear is why a French company is involved in this secret deal when one considers the French government's deep concern over the German circumvention of the Brussels Treaty.

According to highly placed Western European informants, OTRAG is producing the cruise missile and the IRBM for the West German consortium formed by the Messerschmidt, Belkov, and Blaum companies, the principal defense contractors in the German Federal Republic. At the proper time, it is believed, the missiles will be turned over to the West German armed forces.

And there are other strange aspects concerning OTRAG. Although Bonn claims OTRAG is a private company, it enjoys full tax exemption in West Germany. As an operating company with control and command functions in Zaire, it is puzzlingly divided into three divisions.

The "headquarters" division is located in Neu-Isenburg, a city near Frankfurt. According to reliable informants, it is this division that works in direct liaison with the BND, the West German intelligence service. This is where the whole Zaire operation is being coordinated.

Under OTRAG's reorganization early in 1976, before the final contract with Zaire was signed (an earlier contract had been signed in December 1975), two separate divisions were created. One was OTRAG, AG, concentrating on operations and research, and the other was OTRAG, S.A.-Africa, with offices in Vaduz in the principality of Liechtenstein. Vaduz is a tax haven for multinational corporations and, clearly, a convenient channel for a concealed flow of funds for the Zaire project.

OTRAG's president, the man who signed the contract with Zaire is Dr. Lutz T. Kayser, a mysterious figure described as a top missile expert. Dr. Kayser reportedly had worked in the 1960s for the National Aeronautics and Space Agency (NASA), at the height of its space program, but this affiliation is not shown in curent NASA records. The agency says that its employment records are stored at the federal archives center in St. Louis, Mo. CIA officials have refused to provide any background on Dr. Kayser, although the CIA routinely keeps files on foreign missile experts. One CIA official explained privately the refusal: "This is too sensitive to discuss."

American officials, speaking privately, have indicated that there is a strong possibility that the United States has made available to West Germany the required technology for the cruise missile and IRBM projects under the so-called Program of Cooperation (POC). This is a secret program (dating back to the late 1950s) under which highly classified military technology is provided to NATO allies, including West Germany. In some instances, POC operations have been conducted between the Pentagon and NATO defense ministries and top military commands, bypassing the State Department in Washnigton and foreign ministries in the European capitals.

In general, West Germany's entry into the Zaire picture has solved some problems for the United States in terms of keeping the Mobutu regime afloat. Because of congressional strictures, American military aid to Zaire has been kept down to a small volume. In the fiscal year that ended in October 1977, the United States gave Zaire $28.5 million in "nonlethal" military equipment, including a C–130 transport aircraft. The plane was authorized after guerrillas from Angola had attacked the Shaba province in March, not far from the German proving grounds. The proposed figure for the current fiscal year is $17.5 million, although the State Department had originally wanted it to be $30 million.

Thus the Germans have picked up the slack. During 1977 West German transport planes belonging to a "private company" (an American official commented that this company "is as private as the CIA's Air America was in Vietnam") have delivered several million rounds of 9-mm ammunition and an unknown number of submachineguns to Zaire. At the height of this airlift, around September 1977, there were three weekly flights of this type.

To provide the appearance of noninvolvement, the Carter administration has also encouraged other Western European governments to come to Mobutu's aid. In March, French aircraft flew Moroccan troops to Zaire to help Mobutu fend off the guerrilla attacks from Angola because his own army was disintegrating.

Since July 1977, French, Belgian, and Moroccan advisers have been attached to the Zaire army, which is undergoing a major reorganization after its catastrophic performance in the spring.

To a large extent, however, the Europeans—acting with American blessings—are beefing up Mobutu's strength as much for his internal survival as for defense from abroad. Though the Mobutu régime is widely recognized as highly inept and corrupt, the conventional wisdom in Washington and Western Europe is that there is no real alternative to him. The fear is that he may be replaced by an anti-Western leftist leadership.

But there is no assurance that, given the volatility of the Zaire situation, he can keep power for an extended period, With inflation running at a 70 percent annual rate and with unemployment spreading, violent strikes erupted in 1977 in Kinshasa and Lubumbashi in the Shaba "copper belt." Besides, Mobutu is totally broke. Zaire's external debt is $3 billion, and a consortium of American banks, led by New York's Citibank, has been thus far unable to refinance an urgently needed $250 million credit line for Mobutu. There is the danger of Zaire's defaulting on its debt, and even the international Monetary Fund can no longer allow Mobutu to draw on new funds (except for oil imports and as compensation for the extremely low copper prices this year). Much of the fund's help to Zaire in 1976 and 1977 resulted from American pressure.

Under the circumstances, Mobutu seems to look for salvation in the Shaba deal with the Germans. The $50 million annual payments from OTRAG are highly appetizing to Mobutu, who hopes for additional German assistance.

For the Germans the 1976 contract is an ideal arrangement. The lease on the Shaba territory runs until the year 2000, and no Zaire government—neither Mobutu's nor his successors—can cancel the contract. From a German viewpoint, the cost in terms of payments to Mobutu is negligible. The investment in the facilities in the Shaba proving grounds—air strips, launching ramps, housing and a hospital for OTRAG personnel—is calculated at around $300 million, but most of it comes directly or indirectly from the West German defense budget (although the budget does not show it). OTRAG personnel in Zaire enjoys full diplomatic privileges and immunities, another indication that this is a West German government operation.

The question, however, is whether the Western public opinion is prepared to stand still for this extraordinary new dimension in German rearmament and for the American involvement in it.

WHO'S WRONG—RALPH NADER OR THE VOTERS?

Mr. HANSEN. Mr. President, Mr. Ralph Nader has released another report on the U.S. Congress, revealing to American consumers those of us who are "the best" and those of us who are "the worst." The report will quicken the loss of Mr. Nader's credibility as the "spokesman of the American consumer."

Nothing better illustrates this point than an article by Mr. Stewart Lytle that appeared in a recent issue of the Birmingham Post-Herald. The article notes that both of the very distinguished Senators from Alabama, Senators SPARKMAN and ALLEN, scored very poorly with Mr. Nader, yet both are enormously popular with Alabama voters. Since voters are all consumers, some might consider the situation paradoxical where consumers consistently reelect Senators who, according to Mr. Nader, continually vote against consumer interests.

The article explains that, in fact, there is no paradox. The issues facing Government leaders are many-faceted and as such, have no clearly right or clearly wrong answers, as some would have us believe.

Decisions regarding natural gas deregulation, automobile airbags, and nuclear power, for instance, all involve questions of price, supply, demand, safety, and other variables. The effects of these decisions on consumers are both short and long range and are sharply debatable. Yet Mr. Nader often tends to ignore this, autocratically declaring where the "interests of consumers" lie and branding anyone who disagrees with him an enemy of the people. Thank goodness the voters have learned to penetrate this shallow point of view.

As for the "consumer interest," it is obviously the person back home who is in the best position to determine where that is—not Ralph Nader and not some Government bureaucrat insulated both literally and figuratively from the real world of consumers.

It requires no political wizardry to understand, if voters sense that their Senator or Representative consistently sides against them, they would hardly return him or her to office the following election. Who's wrong, Ralph Nader or the voters? The two highly respected Senators from the great State of Alabama answer that question daily with the tremendous services that they perform day in and day out for Alabamians and all Americans.

Mr. President, I ask unanimous consent to have Mr. Lytle's article printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Birmingham Post-Herald, Dec. 5, 1977]

Sparkman Only Inch Ahead of Allen in Nader Consumer Book

(By Stewart Lytle)

Washington.—Ralph Nader thinks Sen. James B. Allen is little better than the black-hooded hangman of consumer justice. Sen. John J. Sparkman has a long way to go before Nader will call him a "friend of the consumer," but he is doing better.

In this year's ratings of consumer votes, Allen voted as Nader wanted only seven times out of 40 chances. Sparkman improved on his last year's record, which Nader described as even more "anti-consumer" than Allen's, by voting with Nader 15 times.

Since voters are consumers, has Nader sealed the fate of both men?

If Sparkman decides to run again, the voters might consider giving him another term, but only because the nation's foremost "consumer advocate" would prefer having even Sparkman over Gov. George C. Wallace.

With Allen there's no hope. Nader sees the junior senator as hopelessly under the influence of big business.

Nader is not likely to affect Allen's future. Not only can Allen stay in the Senate as long as he wants, but he is probably the state's most popular politician in recent history.

Thus, either the people of Alabama are badly misinformed, which is unlikely considering the mass of information published about Allen and his voting record each week, or the self-proclaimed consumer advocate is wrong.

It is very possible Nader is wrong—not about how Allen voted, but about what the consumer interests really are.

This should not be interpreted as meaning Allen is decidedly pro-consumer. Too often he has carried the water for big business and industry, as when he filibustered several times a measure that gave the Justice Department more power to fight monopolistic tendencies and price fixing in big business.

But just because he declares himself a consumer advocate or even because he won a big fight with General Motors over the Corvairs, Nader should not be allowed to decide for all of us what the consumers' interests are.

In some of the complex issues before Congress, it is not always clear how the consumers would be best served. Here are some examples taken from the list of 40 votes Nader used to determine if members of congress were for or against consumers.

Nader believes it would be in the best interest of the consumer if Congress required the automakers to install airbags in cars. Sparkman voted for airbags, Allen didn't.

Clearly it would be safer for all cars to have better protection devices, but Nader must know that anything the carmakers add from an fm-radio to airbags make the car cost more. Is it in the consumers' interest to have cars cost more? Or is it in their interest to be given a choice between better protection and lower cost?

Nader says keeping the price of natural gas regulated by the government is best for consumers. Ask those consumers who went cold last winter because there was not enough natural gas whether they would rather pay more for gas and be warm.

Allen voted for deregulation, Sparkman was against it.

Nader thinks it is in the best interest of consumers to have campaigns for Congress financed by the government. Since taxpayers are consumers too, and it would be the taxpayers who would finance the campaigns, the consumers' interest would also seem a bit fuzzy here.

Allen opposed public financing of congressional campaigns, while Sparkman favored it.

Nader fears nuclear power because he thinks it unsafe. Thus, he considers any vote to help expand nuclear power as anti-consumer. On the two votes relating to nuclear power he used for the senators, Allen voted against Nader twice and Sparkman voted against him once.

It would seem in these days of skyrocketing utility bills, the consumer's interest would lie with cheaper sources of power. Once built, nuclear power plants are cheaper than all other sources of power except hydroelectric.

If anything, Nader's ratings serve as a guide to the liberals' point of view on most issues. Thus, we may conclude that Sparkman is conservative, but not as conservative as Allen.

Only on issues of government reform did Allen's votes match Nader's views. Allen cast four of his seven "right" votes for such measures as limiting outside income and the size of campaign contributions for senators.

Five of Sparkman's "right" votes were also on such issues.

TRIBUTE TO SENATOR McCLELLAN

Mr. STEVENS. Mr. President, it was with great personal sorrow that I learned of the death of the distinguished and respected Senator from Arkansas, John McClellan. It is written that "The days of our age are threescore and ten; and though men be so strong that they come to four-score years, yet is their strength then but labour and sorrow. . . ." In the past week we have all been reminded of both the great personal tragedies and the outstanding public service of this wise and honorable man.

I was privileged to serve with the Senator from Arkansas on two committees: Government Operations and Appropriations. Under John McClellan those committees were run in the best tradition of the Senate: Free and open discussion was encouraged and we operated by consensus not coercion. In his work in Congress, Senator McClellan broke fresh ground because he had the courage to go ahead without asking whether others were following. He had no need for divided responsibilities in which some seek to be safe from ridicule because he had been granted a faith which required no confirmation and a firm contact with reality.

Two years ago, Senator McClellan and Norma accompanied me and several other Members of the Senate on a rather extensive trip to Alaska. After watching him work with and speak to Alaskans, there was no doubt in my mind as to why the people of Arkansas had selected John McClellan to represent them for more than a generation in Washington. He was a man from the people and for the people. Had he wished, John McClellan could have been elected to the Senate as easily from Alaska as from Arkansas. He was a man worthy of the highest ideals of this Nation who will be sorely missed by all whose lives he touched.

TRIBUTE TO LAURENCE WOODWORTH

Mr. TALMADGE. Mr. President, I join the Senate in mourning the passing of Dr. Laurence N. Woodworth. Dr. Woodworth was one of the Nation's leading experts on tax legislation and related economic matters, and he will be greatly missed by Congress and the administration.

He was a dedicated servant and his assistance and guidance in developing tax policy for the Nation was invaluable to the Senate and particularly to committees which deal with tax legislation. In my service on the Senate Finance Committee and the Joint Committee on Taxation, I came to know and respect Dr. Woodworth as a true professional in the performance of his duties and a fine gentleman.

I extend my heartfelt sympathy to his wife and children.

RURAL HEALTH IN ARKANSAS

Mr. BUMPERS. Mr. President, the University of Arkansas for Medical Sciences had had an intense and growing interest in the health needs of rural communities in Arkansas.

Arkansas has an extreme health manpower shortage at the present time. According to an American Medical Association survey, as of December 31, 1974, Arkansas ranked 48th among the 50 States in physician-population ratio. Arkansas has 92.4 physicians for 100,000 people. The national average is 169 physicians for 100,000 people.

The Public Health Service has declared 23 counties in Arkansas areas of critical medical shortage.

Arkansas is also faced with a problem of extreme maldistribution of physicians and other health manpower. At the present time there are 1950 patient-care physicians working in the State. Approximately one-half of these physicians are located in Sebastian and Pulaski Counties, where only 20 percent of the State's people live.

Recognizing the extreme shortage of physicians in rural areas, the University of Arkansas is attempting to influence physicians to locate in the small towns of Arkansas through several programs.

When the State failed to get Federal support for an area health education centers program, it proceeded to develop the program on its own. Six area health education centers have been established in various parts of the State in the last 4 or 5 years, opening up more than 30 new residencies. National statistics show that a doctor is likely to establish his practice in the community where he does his residency, and until recently there were no opportunities for residencies outside Pulaski County.

Another program started by the medical school was recently described in the November 21, 1977, edition of the American Medical News. The Arkansas Practice Opportunities Familiarization Program introduces communities in Arkansas to medical school graduates. The program for junior and senior medical students includes sessions in health-care delivery systems in Arkansas and a weekend bus tour of three to five communities throughout the State for students and spouses.

Mr. President, I commend the University of Arkansas for this innovative approach to attracting physicians to rural communities and ask unanimous consent that the article from the American Medical News be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARKANSAS SMALL TOWNS LURE SOON-TO-BE MD'S WITH COMMUNITY TOURS

Arkansas is one of the last strongholds of legendary Southern hospitality.

"The townspeople, they're waiting for you with open hands. They'll say, 'you're not married? Here, take my daughter, and everything else,' " observed a native and student at the local medical school.

The towns dotting Arkansas' Ozark mountains have a particular interest in maintaining this cordial image. Many have been designated by the Dept. of Health, Education, and Welfare as medically underserved and physician shortage areas, yet have built hospitals and nursing homes with the hope that physicians would settle in the community.

The U. of Arkansas College of Medicine (UAMC) also has a stake in having its graduates remain in the states to practice. Such commitments would not only please the legislature, but also aid those students in need of loan forgiveness—attainable only by practicing in a community with less than 6,000 people, according to the terms of certain state-funded scholarships.

The Arkansas Practice Opportunities Familiarization Program is the College of Medicine's brainchild that introduces the physician-hungry communities to soon-to-be MDs.

The program has three parts. The first is a Berlitz-type immersion session on Arkansas. In one evening, junior and senior medical students learn about the state's health care delivery systems, health planning, demography, topography, geography, industry, agriculture, and recreation.

The third session is a follow-up discussion on the second and most important part, a weekend bus tour of three to five communities throughout the state.

During the last weekend in October, a Greyhound Trailblazer took some 25 juniors, seniors, and some of their spouses to four towns in North-central Arkansas, a roundtrip of 400 miles.

They were plied with everything from homemade biscuits topped with cream gravy to the local Jaycees' hard-sell spiel.

Such hard sell speeches, however, were not necessary. The students already were sold on remaining in Arkansas and raising their families in a rural setting. At issue for them was the size of the towns and what limitations small size puts on the practice of modern medicine.

UAMC Junior Richard Hayes said, "The statistics show that our graduates—who are originally from small towns—go back to small towns, but they go back to slightly bigger small towns than their homes—and so will I."

The Saturday stops on the tour illustrated his point.

Clarksville, first on the agenda, has a population of about 8,000 and a nearly new county hospital.

The local approach to recruitment was low-key. Two of the town's five physicians met with the student's in the Johnson County Hospital cafeteria to describe their practice and personal lifestyle.

"We have everything in equipment that you can imagine for a population base of 40–50,000, even though we don't have that big a population," Royce West, MD, told the gathering.

"For example, we have a satellite coronary care unit, monitored from Fort Smith (second largest city in Arkansas) 24 hours a day.

"There are good schools here, a small college, hunting, fishing. It's country living, but not rural medicine."

Added Jack Patterson, MD, president of the county medical society, "You can make as much money here as you want, but you have to work for it." Both told the students that there is room for more MDs in Johnson County, "whether they become associates of ours, doesn't matter."

"What's important, though, about choosing a place to practice," said Dr. Patterson, "is, can you practice good medicine and are you happy living there."

After an intensive question and answer period with these physicians about the facilities and availability of specialists, the students toured the hospital, were given lunch, and sent on to Waldron, Ark.

While the students were responsive to the recruitment pitch in Clarksville, most appeared bored and disappointed with Waldron.

Waldron has a population of 2,000 and is located in a dry county that has 44 churches, mostly Baptist.

Th oldest physician of the three who practice in the county met with the students before they all had coffee and cookies with the Ladies Aid and civic leaders in an old war memorial building.

Where the Clarksville physicians had a take-it-or-leave-it attitude that seemed to say that practicing medicine in their town was an exciting challenge backed with modern facilities, Waldron's lone doctor representative, who has a daily patient load of 40–60 people, implored the students to overlook his town's bad points and hope for the best when practicing there.

In Clarksville, the students were urged to join a group practice in order to have the time to enjoy the rural life they were opting for. In Waldron, the three practitioners were emphatically in solo practice.

The students were unimpressed. Said one third-year student, "When you're trying to convince a bunch of young people to come to your town, you don't send your oldest doctor to come to talk to them," and allow the young ones to completely ignore them.

Of course, the difference in recruitment techniques depended on the economy of the town, which must pick up the bill for everything but the bus. It also depended on the imagination and energy of the civic leaders.

Van Buren's presentation, for example, was "impressive," said the students, even though the majority felt that at 12,000 it was too big and too near "metropolitan" Fort Smith.

Groups of students were matched up with local couples, who became their host through Sunday morning.

The students initiated Van Buren's new motel and were treated to a big Sunday breakfast, which they ate with their host couple. The hosts then took their charges on personalized tours of the community. A walk-through of the hospital ended the stay in Van Buren.

Said third-year student Jim Ashabranner, who has participated in the tours since they started last year, "The individual tours of the hospital and town was something we haven't seen before. It was a nice touch, well done."

Had the students been polled that weekend, Morrilton, their last stop, probably would have won the most new residents.

Morrilton's 7,000 people live near Petit Jean State Park, a rural resort, yet have immediate access to Little Rock via a major interstate highway.

Most of the towns' leading citizens, including the pastor and deacon of the First Baptist Church, the president of the bank, and local politicians, turned out for the UAMC welcome luncheon.

Following the tour of the hospital facilities and talk with the town doctors, the students gathered in a hall with all the citizens who wanted to meet them earlier, but who could not be accommodated in the restaurant at lunch.

Besides the small talk with members of the Garden Club, the students participated in an event that drew them even more to the town.

The U. of Arkansas at Fayetteville Razorbacks had won that day. So the townspeople were in the mood "to call the hogs," the state university's unspellable football cheer. Led by the bank president, some 60 people yelled "sooee, pig, pig, pig," several times. With that out of their system, the students boarded the bus once more for Little Rock to go back on call.

"I enjoyed seeing the hospital," said senior Jim Perkins. "The hospital I'm going to practice in is going to have to have a good operating room and modern facilities.

"I've made a decision to settle in a town like Morrilton. I'm selfish about my time and the way I want to live. I don't want to kill myself by the time I'm 55 in order to provide quality health care in a rural area," said junior Reggie Henderson.

All such opinions are considered valuable feedback for both the schools and the communities. The information is used for planning future tours by the Director of the UAMC Office for Community Affairs, Bill North.

"We had a difficult time on the first trip. We only had seven students and three spouses, who experienced some arm-twisting from the dean. It was cold and trying to rain. I've seen better morale at wakes. But on Sunday night, they all seemed up to go on the next one," North said.

"Last year by the end of trip number four, we had about 198 students (some repeaters), who had visited some 15 communities," North said.

"One of the things we've learned," he added, "about the trips and scheduling is football. If a school is playing either at Little Rock or Fayetteville, we don't go."—JUDY ALSOFROM.

FARM STRIKE

Mr. DOLE. Mr. President, on Saturday, December 10, 1977, a substantial number of farmers expressed in a rather dramatic way in State capitols and in the Nation's Capitol their concern over the farm crisis which they and their families are experiencing. Today, December 14, not only are they calling attention to their plight but they will "strike" to help redress their grievances. I heard the appeals being made by members and representatives of the American Agriculture Movement last Friday in Topeka, Kans., and last Saturday here in Washington, D.C.

Following is a list of their "demands" presented to me at their Saturday rally:

> One hundred percent parity for all domestic and foreign used and/or consumed agricultural products.
>
> All agricultural products produced for national or international food reserves shall be contracted for at 100% parity.
>
> Creation of an entity or structure composed of agricultural producers to devise and approve policies that affect agriculture.
>
> Imports of all agricultural products which are domestically produced must be stopped until 100% parity is reached. Thereafter, imports must be limited to the amount that American producers cannot supply.
>
> All anouncements pertaining to any agricultural producing cycle shall be made far enough in advance that the producer will have adequate time to make needed adjustments in his operation.
>
> Unless these demands are met by midnight, December 13, 1977, we will strike.

I have discussed farm issues, policies, and problems with them, and can understand why they are frustrated. They do not want sympathy; they want a fair price for their crops, livestock, and other farm products.

To their credit, they have repeatedly stated that they do not want a Government handout. They deserve the gratitude of all Americans for calling attention to the seriousness of the situation on the farms and in rural America. Since we cannot have a healthy national economy without a healthy agricultural economy, all Americans, particularly consumers, have a vital interest in the issues of concern to farmers.

I do not endorse a strike. I did not support the meat boycott by consumers in 1973. Neither did I support the soybean export embargo in 1973 nor the grain export moratorium in 1975. I do, however, feel that we have a real responsibiilty to do what is feasible in helping farmers everywhere achieve parity.

I assured the representatives of the American Agriculture Movement that the Senate Agriculture Committee will hold field hearings within the next 30 days where they can present in a more formal manner specific ideas for action by the Congress and the administration.

In the meantime, I urge the administration to move more speedily in implementing existing legislative provisions. I am concerned about the lethargic manner in which the Carter administration has addressed the most serious farm situation that has confronted our Nation since the days of the Great Depression. It is not enough for the administration to say it is sensitive to farm problems or to the needs of hungry people overseas: Sensitivity means nothing unless it is translated into action. This lack of action in the form of implementation of constructive programs and policies by the administration has prompted the angry mood being expressed by farmers in their tractorcade.

I have been especially concerned that the Canadians, the Australians, and virtually all our competitors seem to have done a better job in marketing their farm products in world markets than we have. World trade in wheat and coarse grains this marketing year (July–June) is estimated at 149.5 million metric tons, up from 144.5 million metric tons last season. We need a more aggressive export policy to capture a greater share of this increased world trade.

I sincerely believe that the best way to assist farmers in their escape from the vicious cost-price squeeze, which they are experiencing, is through an aggressive export effort which will increase the U.S. share of world trade with consequent benefits on market prices.

MORE AGGRESSIVE EXPORT POLICY NEEDED

Let us together review some of my recent recommendations to the Carter administration—proposals with which I feel you will agree.

We need a more aggressive and realistic export policy to better meet the competition that we are facing in world markets. We must not be residual suppliers. The following recommendations, if implemented, will help both the farmers' income and the economy of the entire Nation:

First. Commit additional CCC credits immediately.—In a letter of October 20, 1977, to President Carter, 16 of my colleagues on the Senate Agriculture Committee and I asked that the administration double the funding level of $750 million for CCC credits, announced on August 18, 1977. On November 17, 1977, Secretary Bergland announced that the CCC credit allocation of $750 million would be increased to $1.5 billion. This increase, if committed promptly, should help U.S. farm exports more readily compete with credits offered by Canada, Australia, and others in world grain and other commodity markets.

The CCC credit program, as Secretary Bergland has testified, "make money for the Government" since the interest rates received by CCC are higher than the rates paid by them to the U.S. Treasury for money. The repayment record also has been excellent. I am pleased that the administration has now responded to the need for additional CCC credits and I urge that these new credits be committed as lines of credit for our overseas customers at an early date in order to maximize export opportunities.

Second. Expand Export-Import Bank credits.—On September 8, 1977, I wrote the President of the Export-Import Bank, asking that the Eximbank's farm commodity export policy be revised. I suggested that the meager $70 to 95 million financing of argricultural exports in recent years be increased to at least $500 million annually. Farm exports, which annually represent over 20 percent of total U.S. exports, deserve a more equitable share of the $6 to $10 billion of annual U.S. export financing. If farmers do not get a better break from Eximbank in the near future. I will introduce legislation in the next session of Congress to accomplish that objective.

Third. Support CCC credit legislation.—Moreover, I invite the administration to support my bill and that of Senator HUMPHREY to authorize CCC credits to such nonmarket economy countries as the People's Republic of China, the Soviet Union, and Eastern European countries such as East Germany and Czechoslovakia. In my views, credits to the Soviet Union would be contingent on increasing the numbers of those desiring to emigrate.

I also oppose extending such credits to Vietnam, North Korea, Cambodia, Laos, and Cuba. I will work with the administration to obtain legislation which will provide "intermediate" CCC credits so that we can take advantage of export opportunities that require credits with terms longer than the current maximum of 3 years.

Fourth. Better use of food for peace.—Another important export tool that is not being sufficiently utilized is the Public Law 480 or food for peace program. This legislation was signed by President Eisenhower back in 1954. During the last 23 years, with bipartisan support, over $30 billion worth of farm commodities have been exported under its provisions. The great value of this program, in terms of lives saved and new markets developed, is impossible to comprehend. It is one of the great practical humanitarian steps of this and any other generation.

In a letter to Secretary Bergland, I recommended that $1 billion worth of grain and other farm commodities be exported under title I of Public Law 480 to help meet the food needs of developing countries in fiscal year 1978. The administration was nearly a month late in announcing their fiscal year 1978 allocation of only $800 million worth of commodities. This allocation compares with the Ford administration's allocation of September 22, 1976, of $866 million worth of commodities for fiscal year 1977.

A year ago, title I agreements for $311 million worth of farm commodities representing almost 2 million metric tons were signed in October and November. On November 16, 1977, most of my colleagues on the Senate Agriculture Committee joined me in a letter to Chairman TALMADGE asking for committee hearings on the unusual delay in Public Law 480 programing this fiscal year. Additionally, I have asked President Carter to personally intervene to obtain immediate resumption of Public Law 480 programing and shipments which are still delayed. Only two agreements (Egypt and Guinea) have been signed since the new fiscal year began on October 1, 1977.

I am concerned that the Public Law 480 leadership in the Carter administration is good at conducting seminars and appointing task forces but appear to be a bit short on their capability to execute programs that are timely and meaningful to American farmers, as well as to hungry people in developing countries. Starving and hungry people do not eat seminars or option papers. Yesterday's hungry people cannot eat twice as much tomorrow.

Fifth. More attention to market development.—I would like to see the administration spend less time at international commodity agreement conferences and direct more of their resources into market development activities. The USDA-industry cooperator market development program is not receiving the attention that it should be getting. There is far less real activity by these programs in world markets than there was 10 years ago.

We need to be carrying the message to overseas markets more vigorously than is being done that we are not only a dependable supplier but that we have the widest range of commodity qualities of any exporting country in the world. We should follow up these messages by servicing more adequately the markets in which we sell.

Sixth. Use of Public Law 480 to improve storage and handling facilities.—I urge the administration to make use of existing authority provided under section 104 (b)(1) of Public Law 480 to write into title I agreement provisions for the generation of foreign currencies to be made available to the Secretary of Agriculture to fund projects in Public Law 480 recipient countries to improve storage, handling, and distribution of farm commodities. This would materially assist in the consumption, distribution, and reduction of waste of food. Such facilities would be used for both Public Law 480 and commercial imports as we have seen demonstrated in India in the past following U.S. assistance provided that country for storage facilities.

Seventh. Implement legislation enabling importers to store purchases in United States.—Also, I urge the administration to implement immediately the provisions of legislation that I sponsored to enable commercial grain importing countries to purchase U.S. grain, and store it in the United States for 12 months or longer for subsequent export without export restraints or controls.

Eighth. Geneva trade negotiations.—Further, I would urge that the administration's trade negotiators in Geneva not be "mousetrapped" into any agreements that would work to the detriment of U.S. farm exports. I believe that we must not give away easier access to U.S. markets for industrial goods or agricultural commodities by reduced tariff or nontariff barriers without attaining greater access to the markets of the world for U.S. agriculture. Greater access to world markets is the most important objective for U.S. agriculture. Both industrial and farm items must be brought along together as the trade negotiations proceed. We must not be the forgotten relatives as we were during the Kennedy round.

SUMMARY OF RECOMMENDATIONS

In summary then, I would like to urge the administration to facilitate farm exports by:

First. Committing the additional CCC credits immediately to lines of credit so that export opportunities do not slip away;

Second. Increasing Public Law 489, title I, $1 billion worth of commodities, up from the $800 million annouced for fiscal year 1978 and speed up programing immediately;

Third. Expanding Eximbank financing of farm commodities from the $75 million allocated to finance cotton to Japan to at least $500 million for the export of farm commodities;

Fourth. Supporting CCC credit legislation to provide financing of commodities to better meet competition in countries such as the People's Republic of China, the Soviet Union, and certain Eastern European countries;

Fifth. Supporting with adequate resources and new ideas a more vigorous market development effort;

Sixth. Making the most of the U.S. agriculture efficiency and gain concessions for U.S. farm exports in the Geneva trade negotiations;

Seventh. Using Public Law 480 to improve storage and handling facilities for U.S. grain and other commodities imported in developing countries; and,

Eighth. Implementing legislation enabling commercial grain importers to purchase U.S. grain and store it in the United States for subsequent export.

In addition to my recommendations to stimulate exports, I urge the Secretary of Agriculture to use the disaster reserves provision of the new farm bill. This section permits him to purchase wheat, feedgrains, hay or other livestock forages for disposition in disaster situations where CCC stocks are not available at locations where they may be economically used. During the current period of low prices it seems prudent for the Secretary to use his authority to acquire such stocks which would be of great value in case of natural disaster.

Seizing opportunities for greater domestic demand and utilizing export authority is extremely important to farmers. Recent failures have been reflected in prices received at lower levels. I have suggested administrative actions and sponsored legislation which would help farmers achieve parity for their commodities. It is my contention that farmers would today be in a much better mood and financial condition if the Carter administration would have moved quickly to reflect the true situation. Let us have less rhetoric and position papers and more constructive action.

MARK McCLOSKEY

Mr. MOYNIHAN. Mr. President, I rise to speak to the memory of my old and dear friend, Mark McCloskey. His death last month saddened those who loved him, and were loved by him, including especially my family and me. Words are somehow inadequate to describe this wise and wonderful man. I may say without any exaggeration that few on this Earth are endowed with the gift of friendship so abundantly as he was—the gift of giving it and the gift of nurturing it.

I had the privilege of delivering his eulogy at his funeral in New York City's Calvary Episcopal Church. I ask unanimous consent that the eulogy be printed in the RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

EULOGY BY DANIEL PATRICK MOYNIHAN AT THE MEMORIAL SERVICE FOR MARK McCLOSKEY

"This house." Mark McCloskey would declaim as he raised his glass at a friend's table, and because he was "blessed and had the power to bless" a transubstantiation of sorts would occur. A place where one lived became a seat. Family acquired dimensions in time: reaching back, going forward. Friends attained to an estate in their own right, a fixed and dependable circumstance of one another's lives.

This was his gift: to make connections. Between persons and between persons and places, such that no one touched by him was ever again wholly alone.

This was his vocation, also made, as with all the great commitments of his life, with the utmost care, followed by perfect fidelity, and ever growing understanding. Before anyone else, I think, of his age he sensed the anomic disintegration that threatened this, the great city of the Western world. We were indeed becoming a dust of individuals. To somehow make connections in spite of this was the central social challenge of the time. He saw this early and gave the whole of his long and wonderfully full life to helping others hold onto something. Showing how. Hence his beloved Tenth Avenue and the teeming life of the tenements of Hell's Kitchen. He never let that leave him. It was his way of saying to others: Only connect.

He lived so long a life and such a full one that many of us, ourselves no longer young, only knew him as rather an old man and then in time an even older one. One was never finally able to decide whether the New York of his youth truly existed, or whether he had imagined it because it ought to have done. Tallyrand said that those who had not known the Old Regime in France would never understand the *douceur de vivre*. So it must be for anyone who never knew the New York of Mark McCloskey's youth as he described it in his old age.

What a grand old age it was. I have cited Yeats once, I will do again: his line from *Land of Heart's Desire:* "A land where even the old are fair. and even the wise are merry of tongue." Mark McCloskey never ceased sharing his wisdom and his merriment with others. This was a choice he made and in a certain sense imposed on his own family who perforced were asked to share more of him with others than they might have wished on their own to do. All the more is our debt to his house.

A simple enough statement, and yet it seems odd to think of him as in any way apart from his family, especially as in any way separate from his wife Winifred from whom he was truly inseparable so long as she lived.

In 1917, as America entered the war, he wrote to her from Princeton where he was thinking of joining the Army, as shortly thereafter he did. His letter describes a relationship that continued for most of half a century.

"DEAR WINNIE, this is the hardest letter I have had to write in a long time. . . . You do not know how hard it would be for me to be away from you for a year. That is the only thing that holds me back. The college degree is but a label—if you have not grown correspondingly what does the degree represent? Men in England are in their elemental stages now. War does debase men. I in all probability would be put in some London "hut" as an assistant. A handshake and a smile and a few words from my heart would perhaps be all I could give to each of the men I met. . . . The work might bridge me over from boyhood to my manhood—it might sober me so as to make me a real first man to give help to others. Sweetheart, I love you. From my soul I say I do. I don't want you to tell me to do what I think is best. I want you to sit down and think it out. You will say you can't, but if ever you have had to—let it be now. You must keep absolutely nothing to yourself. Think clearly just how you stand. You are equally responsible for me. I can say no more than that I love you—All that it implies and has ever meant goes with it. God bless you!

"Your devoted boy,

"MARK McCLOSKEY."

God blessed them both in their life together and all the thousands on thousands of us whose lives touched theirs. He was truly our brother in Christ and even as we pray for his soul we look to his intercession in the world to come as we looked to him in the world he now has left.

WHAT IS RIGHT WITH AMERICA

Mr. ROBERT C. BYRD. Mr. President, the junior Senator from Alabama, Senator ALLEN, is necessarily absent as he is filling commitments in Alabama which he made some months ago. In accordance with his request, I ask unanimous consent that the following statement by Senator ALLEN be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR ALLEN: "WHAT'S RIGHT WITH AMERICA" ESSAY CONTEST—1977 WINNERS AND RUNNERS-UP

In 1975 I sponsored an essay contest on the subject of "What's Right With America" for all 12th grade students in Alabama's public and private high schools.

The quality of all of the entries in that contest so impressed me that I decided to make the contest an annual event. The 1977 contest ended on November 1 and winners and runners-up were selected and prizes awarded after Thanksgiving.

One of the few rules established for the contest limited the essays to 200 words. I felt that this would be a challenge to the students, because some of the world's greatest thoughts have been expressed in fewer than 300 words: The Lord's Prayer contains 66 words, the 23rd Psalm has 118 words, and the Gettysburg Address was expressed in 267 words.

In sponsoring this contest, it is my hope to offer a forum for Alabama's junior citizens who I think are quite representative of other young people in America, to express themselves on what they feel to be the strengths and virtues of our system of representative Government and the state of affairs in our Nation as we begin our third century of existence.

The more than one thousand essays which poured into my office this year confirms my belief that the vast majority of our young people feel a great sense of optimism and faith in the future of our country. America's youth has always been its most valuable resources and I strongly believe that today's young men and women have the potential to cure many of today's problems and that they will lead our Nation to greater heights in the years ahead.

We have read of polls which show a supposed credibility gap between the American people and their Government and of a lack of confidence by the American people. Well, the polls evidently failed to take into consideration the views of America's young people as expressed by these some one thousand Alabama high school seniors. I believe that my enthusiasm will be shared by anyone who reads these essays, and in order to give at least a sample of the views they contain, I ask unanimous consent that the four winning essays and the six runners-up in the 1977 "What's Right With America" contest be printed in the RECORD.

WINNERS

First Place: $100 U.S. Savings Bond—Gary Farris, Deshler High School, 811 Volunteer Drive, Tuscumbia, Ala. 35674.

Second Place: $75 U.S. Savings Bond—Cherry Lynn Martin, Huffman High School, 200 Sam Pate Drive, Birmingham, Ala. 35215.

Third Place: $50 U.S. Savings Bond—Lana Buckner, Carroll High School, 66 Endl Avenue, Fort Rucker, Ala. 36360.

Fourth Place: $25 U.S. Savings Bond—Jeff Jennings, B. B. Comer High School, 18 Tuskegee Street, Sylacauga, Ala. 35150.

RUNNERS-UP

Elizabeth Burton, Springwood School, 1432 North 7th Avenue, Lanett, Ala. 36863.

Paul Froede, Houston Academy, 1804 Berkshire Drive, Dothan, Ala. 36301.

Shawn Patrick Henrikson, Robert E. Lee High School, 604–A Avenue D, Gunter Air Force Station, Ala. 36114.

Susan Keith, Alliance Christian School, 1352 Springville Road, Birmingham, Ala. 35215.

Lisa Spencer, Daleville High School, Route 2, Box 86, Daleville, Ala. 36322.

Lisa Williamson, Litchfield High School, 1109 Hoke Street, Gadsden, Ala. 35903.

WHAT'S RIGHT WITH AMERICA

(Gary Farris, Deshler High School,
Tuscumbia, Ala.)

FIRST PLACE

Today, people across the globe are being continuously denied basic human rights by powerful, tyrannical governments who could care less about civil injustices carried out in their country. However, one nation is consistent in world standing as a known leader in helping the needy and returning basic human dignity to the lowest and poorest citizens of the world. These traditional attitudes and beliefs have existed in America for the past two hundred years, Through revolution, civil war, depression, racial conflict, and the world wars this nation has continued to uphold its time-honored reputation. Many times it would have been easy for the United States to turn her back on someone in her own interests, but she was always there to back up her commitments. America has indeed been blessed with numerous riches, all of which have been enjoyed by nations throughout the world. Basic kindness is in the blood of America, and when it dies, America dies along with it.

WHAT'S RIGHT WITH AMERICA

(Cherry Lynn Martin, Huffman High School,
Birmingham, Ala.)

SECOND PLACE

Just think of the tragedy of teaching children not to doubt, because to doubt is only to seek the truth. What is right with America is the spirit of individuals seeking the truth. America owes its discovery to that spirit. Without men seeking truth this country would not have been settled. The search for truth is what makes this country free.

If everyone had believed that the world was flat, the entire Western Hemisphere would have remained occupied only by the people whom Columbus called Indians. It took courage to sail into the unknown. America's roots are those of a search for truth.

America would never have been settled if it had not been for the rejection of accepted doctrine by Englishmen, who could not believe that the King's religion must be their religion. This country was settled by men who would not conform. Neither should its present citizens be anything but individuals who refuse to be forced into society's mold.

Americans continue to cling to their right to be individuals. They cling to their privilege to disagree. Most importantly, they continue to search for the truth.

WHAT'S RIGHT WITH AMERICA

(Lana Buckner, Carroll High School, Ozark,
Ala.)

THIRD PLACE

Americans are the most fortunate people in the world today. They possess by birth what many people spend their entire life striving to achieve—freedom. The numerous freedoms they receive are a result of the United States being a democracy.

The people make up a democracy. A democratic country is as fruitful and successful as the diversity of people who compose the land. The early people of America brought with them a love of freedom, which is the basis of our government today. From this love of freedom, they derived the Declaration of Independence, which declares that "all men are created equal," and they have the right to "life, liberty, and the pursuit of happiness."

Everyday Americans are enjoying the freedom and privileges that the founding fathers had the foresight to establish. Americans reap the benefits from freedom of religion, freedom of education and freedom of choice which are guaranteed by our form of government.

Grover Cleveland summed up what is right with America when he said, "The suffrage which executes the will of free men is yours; the laws and the entire scheme of our civil rule from the town meeting to the state capitals and the national capital is yours".

WHAT'S RIGHT WITH AMERICA

(Jeff Jennings, B.B. Comer High School,
Sylacauga, Ala.)

FOURTH PLACE

America's democratic form of government is what's right with America. In our country's form of government the people hold the power of the government and it is conducted only by their consent. Americans have dignity, and the worth of every individual means a great deal to the nation. Our government is the "government of the people, by the people, for the people." The equality of all men in our nation contributes to the system which we have; therefore, every individual is very important to our nation. Our country's faith in majority rule and minority rights is the most outstanding concept of democracy and the most vital part of our government, because it stresses the individual worth, rights, and dignity of our people and the nation as a whole. That's what's right with America!

WHAT'S RIGHT WITH AMERICA

(Elizabeth Burton, Springwood School,
Lanett, Ala.)

America, magnetic and controversial, the place for new ideas and dreams to be born. We are right in striving for equal opportunities, even though we are critiiczed for not doing it soon enough. We are right in advocating human rights throughout the world, even though we receive hostility for doing so. We are right in moving toward peace for all nations, even though we are accused of not attending to our own affairs. We are right in assuming responsibility for the hungry, even though we are criticized for not giving enough. We are right in fighting for all the things we believe in, because if we do not, the things we believe in will be no more. We are right in accepting criticism gracefully, even though the critical ones are those who do nothing. We are right in pursuing the good, for as long as we are in pursuant we will never be wrong.

WHAT'S RIGHT WITH AMERICA

(Paul Froede, Houston Academy,
Dothan, Ala.)

Football is one example of what is right with America. Sometimes before a game, when I'm standing at attention as the flag runs up the pole, I'll look over at the other team, and see them saluting the same flag I salute, respecting the same country I respect. It's something to be proud of, to know that we are free enough to pit our forces against each other, body against body, and still love the same country to the degree of dying for it, side by side. The competition of the game is analogous to our party system. The analogy can be described as two teams, both vying for the most points, moving the ball to different sections of the field, trying to put their ball in the end zone. Finally when the game is over, the players overlook their injuries and reach out in friendship to shake the hand of the minute-ago opponent, knowing their battle was only temporary, and that their Americanism is always.

What's Right With America

(Shawn Patrick Henrikson, Robert E. Lee High School, Montgomery, Ala.)

In a world of ever increasing corruption of political leaders, America remains great, because the majority of our national, state, and local leaders still hold truth, honesty, and high morals to be more important than personal glory and wealth. In addition, our leaders improve our country by coming from all walks of life and from all economic levels; whereas, the leaders of other countries usually come from political backgrounds and upper socio-economic brackets. Many foreign leaders are self-appointed or gain their positions by right of birth; therefore, they do not truly represent the people of their nation. Our leaders are "of the people and by the people;" thus, representing the people as they work "for the people". The moral standards and priorities of our leaders, the diverse backgrounds of our leaders, and our American inheritance of democratically-elected leaders make our country great and assure us of the continuance of that greatness.

What's Right With America

(Susan Keith, Alliance Christian School, Birmingham, Ala.)

What's right with America?—Her people. America's citizens are her greatest asset, for they have formed her government, shaped her history, and molded her into what she is today—a truly great nation.

The pilgrim searching for religious freedom, the colonial soldier shivering at Valley Forge, the pioneer pushing westward into a harsh and unknown land, the inventor seeking to improve the quality of man's life, the twentieth century soldier fighting on unknown soil, the scientist experimenting to find an answer to man's questions, and the parent guiding his child in the light of God's word have each played an important role in the growth of our country from a newly-independent group of thirteen states to a nation of 220 million people two hundred years later. This growth would have been impossible without the sacrifice of the American people. Americans have sacrificed their time, their money, and their lives for the country they love.

In these times of doubt and disillusionment America's people stand as a shining example of true patriotism. Though times have often been difficult, Americans have been and continue to be the backbone of a free nation.

What's Right With America

(Lisa Spencer, Daleville High School, Daleville, Ala.)

Sir Winston Churchill once described democracy as "the worst form of government except for any other that has been tried". The American political system is founded on the principle of democracy. Our basic belief is that man is able to rule himself. Even while mistakes are made by the people in a democracy, the past two hundred years in the United States have shown that a democratic government can bring about the highest degree of individual freedom and progress known to man. No other government has succeeded as well in emphasizing the dignity and importance of each individual. Therefore, the American democracy, though it may have imperfections, is still unsurpassed by any other system of government in the world.

What's Right With America

(Lisa Williamson, Litchfield High School, Gadsden, Ala.)

First and foremost what is right with America is Americans. Everything that America is, was or ever will be is because of the actions and beliefs of the American people. Time and time again the American people have proven themselves worthy of the patriotism they claim in America. It was Americans who wrote the Constitution and assured everyone here those unalienable rights of life, liberty, and the pursuit of happiness. Although it was Americans who enslaved people, it was also Americans who freed them, gave them citizenship, and the right to vote.

Americans do not limit their good works to America. After two world wars Americans have helped beaten and torn countries to rebuild; they have sent not only financial aid, but, in many cases, food and clothing also. Every time mother nature chooses to inflict a disaster upon this earth in some form or fashion American aid is there.

The American people are truly America's greatest asset. No matter the circumstance, they always seem to be there to help. There are many great things about America, but like the Constitution and the Bill of Rights, they all link back to the people. Americans are truly one thing right with America.

SENATE NEEDS EARLY OAS REPORT OF HUMAN RIGHTS CONDITIONS IN PANAMA

Mr. STONE. Mr. President, at hearings on October 13 of Senate Foreign Relations Committee on the proposed new Panama Canal treaties, my colleague, Senator CASE (pages 9-45 to 9-46) said:

> I am disappointed in the reports so far from the Secretary of State in regard to the condtion of human rights in Panama. It does not seems to me to meet the requirements of the statute or the Congressional intent with which it was passed. I intend to pursue that myself.

That date's hearing summary pointed out that Senator CASE asked the Department of State to give the Foreign Relations Committee an updated report on human rights conditions in Panama.

On October 11, 1977, before the House International Relations Committee, the respected and prestigious civil rights attorney, David Carliner, expressed concern about that day's statement by William P. Stedman, Deputy Assistant Secretary of State for Inter-American Affairs, who said:

> It is gratifying that on September 13 the Panamanian government invited the Inter-American Human Rights Commission to visit Panama to investigate the varous charges of human rights violations which have been made and to report its findings. Torrijos promised that if any political prisoners were found, they would be released.

Mr. Carliner commented:

> Incidentally, although the Inter-American Human Rights Commission has completed its visit, its report is not likely to be published for a few months, and even then, only if Panama or the Council of the Organization of American States authorizes publication.

Mr. Carliner is a board member and associate treasurer of the International League for Human Rights. That oganization includes such present and past honorary president and vice presidents as Roger N. Baldwin, Rene Casin, Gunner Myrdal, Fenner Brockway, Jan Papanek, and Andrei D. Sakharov. On November 28, the Lawyers Committee of the International League for Human Rights wrote to the Organization of American States as follows:

NOVEMBER 28, 1977.

Re Panama.

Mr. CHARLES MOYER,
Inter-American Commission on Human Rights, Organization of American States, Washington, D.C.

DEAR MR. MOYER: I am an attorney at law and a member of the Lawyers Committee of International Human Rights. I am sending this letter on behalf of the International League for Human Rights.

We have reviewed a considerable amount of material and have conferred with several individuals who are familiar with the human rights situation in Panama. Based upon the foregoing, we have reason to believe that there are violations of human rights in Panama which warrant investigation by the mission which your organization will be sending to Panama. What follows is a brief summary of those alleged violations, together with copies of several supporting documents and references to other printed materials which are not annexed but which can be furnished at your request.

On the island of Coiba it is reported that there exists a penal colony where prisoners are allegedly subjected to inhumane treatment.

In Panama City is Carcelo Modelo, where prisoners are detained after arrest. Conditions there are reportedly brutal. Torture is reported to be practiced there as a matter of routine, particularly upon political prisoners.

The National Guard appears to be beyond the reach of the law. Arbitrary arrest, torture and illegal detention by the National Guard appear to prevail throughout the country.

Political prisoners can be held without trial for a period of 15 years.

With the exception of the recent debates preceding the plebiscite which ratified the Treaty, public assembly has been severely curtailed. Political parties and professional and labor organizations which oppose the government are prohibited. News dissemination is subject to government approval, and in some instances broadcasts have been interrupted and newspapers closed down for presenting anti-government views.

Many political opponents of the government have been exiled. Some have reportedly been assassinated; others have disappeared without explanation.

The constitution adopted in 1972 guarantees most basic freedoms and due process of law. In practice, none of the constitutional guarantees applies to political prisoners.

Article 277 of the constitution establishes General Torrijos as the "maximum leader" giving him full power for six years to make all major executive, judicial and military appointments.

Three cabinet decrees promulgated in 1969 are applied independently of the constitution. Decree 341 prohibits public meetings in Panama City and Colon. Decree 342 authorizes detention without trial for 15 years. In a recent statement made on November 12, 1977, the President of Panama publicly admitted that this practice is "not right." (New York Times 11/13/77). Decree 343 imposes self-censorship upon all forms of media.

In support of the foregoing, I have annexed copies of the following documents which should be studied carefully for factual details not fully set forth in this letter:

1. Manuscript of Leopoldo Aragon describing conditions at Coiba.
2. Statement of Leopoldo Aragon of his intention to immolate himself in protest against violations of human rights in Panama.
3. Letter dated 9/20/77 from Rose M. Aragon.
4. Letter (undated) from the Panamanian Committee for Human Rights to Amnesty International.
5. Statement of Antonio Poore dated September 15, 1976.
6. Resolution of the Inter-American Press Association (dated October 1977) and Report of its Committee on Freedom of the Press and Information concerning Panama.
7. Excerpt from New York Times article (11/13/77, p. 1) containing an admission by General Torrijos that holding political prisoners without trial is "not right."

Reference is made to Volumes I and II published by the Panamanian Committee for Human Rights in 1976, particularly Chapters 1 and 5.

Reference is also made to the testimony of Rose Marie Aragon and Winston Robles before the Senate Foreign Relations Committee on October 12, 1977, and the testimony of Winston Robles and Eusebio Marchosky before the House Subcommittee on Foreign Operations of the Committee on Appropriations on March 30, 1977. This testimony is quite detailed and informative as to alleged human rights violations which have occurred and reportedly continue.

We are still endeavoring to obtain further relevant information. If successful, we will forward such information to you.

It is respectfully requested that the onsite investigation to be conducted in Panama be directed to the reported violations referred to herein.

Very truly yours,

RICHARD NADELMAN,
Lawyers Committee.

Mr. President, as a member of the Senate Foreign Relations Committee, I, too, have found the representatives of the State Department less than candid on human rights abuses in Panama. I take this occasion to call upon the Organization of American States to send us their report on their November 29 to December 7 factfinding mission to Panama as early as possible.

PANAMANIAN INVOLVEMENT IN INTERNATIONAL DRUG TRAFFICKING?

Mr. DOLE. Mr. President, I feel the time has come to comment on the lack of cooperation I have received in my efforts to secure information on the possible involvement of Panamanian General Omar Torrijos in drug-trafficking operations. My efforts to gain copies of U.S. Drug Enforcement Administration files on this matter, through legitimate and customary channels, have met with delay and excuse at every turn. It is one of the best examples of "stonewalling" that I have had the misfortune to experience.

It has now been a full 2 months since I first filed a "freedom of information" request for copies of specific DEA files. To date, not so much as a single paragraph from those files has been provided to me by DEA officials, despite their repeated verbal promises that my request could and would be complied with. Let me briefly review the events surrounding this case.

EFFORTS TO SECURE INFORMATION

Mr. President, the Members of this body will recall that, on October 13 of this year, I advised the U.S. Senate of certain allegations I had received of direct involvement by Gen. Omar Torrijos and other members of his regime in drug trafficking in the United States and elsewhere. I suggested that these charges, if true, could prove relevant to the Panama Canal treaty issue. Certainly, the credibility and the personal integrity of General Torrijos and his colleagues would bear upon their reliability as Panama's guarantors of the new treaty; and, since ratification of these treaties would definitely strengthen the political and financial status of the Torrijos regime, it is important for us to know in advance if we will be bolstering a corrupt government which facilitates the transport of illegal drugs to our own shores. For that reason, I stated that the Justice Department should make its findings on this matter known immediately to Congress, prior to consideration of the treaties.

The following day, October 14, I filed a "freedom of information" request with the Drug Enforcement Administration, requesting access to 45 specific files which allegedly contain information on Torrijos' involvement with the drug-trafficking operations. At the request of the Administrator, I did not release those 45 file codes to the public media.

One week later, on October 21, I sent a second letter to DEA Administrator Bensinger containing excerpts from documents that were represented to me as copies of documents in DEA files. Those excerpts made specific reference to Omar Torrijos as being involved with narcotics and contraband traffic. I asked the Administrator to confirm the authenticity of those documents, and to advise me in writing as to whether the reports on Torrijos had been verified or disproven by DEA investigators. I have never received a response to that letter.

On October 26, I met with DEA Administrator Peter Bensinger on this matter. He advised me that some of the files in question had been turned over to the Senate Intelligence Committee. Mr. Bensinger further advised me that before any of the files could be turned over to me, they would have to be screened for removal of any information which might endanger national security or violate personal privacy rights. I acknowledged this, and reaffirmed my "freedom of information" request for those documents.

A phone call to my office on November 8 from the DEA Administrator's office advised me that I could expect to receive approved documents during the week of November 13. A week later, another phone call from the Administrator's office informed me that the documents would not be forthcoming as promised. This was attributed to special difficulties in securing all of the information I had requested. At that time, the Administrator's office was unable to advise just when I might receive the first delivery of some of the files I had requested.

Consequently, in accordance with established procedures under the Freedom of Information Act, I filed a formal appeal with the U.S. Attorney General on November 18. I advised the Attorney General at that time that I considered the information I had requested from the DEA clearly releasable under the Freedom of Information Act, and requested his review of the case. I also requested a written response from the Attorney General within 20 working days. Those 20 days have now elapsed without an official response to that appeal.

I also want to emphasize that it has been a full 2 months since my initial "Freedom of Information" request was submitted.

WHY THE DELAY?

Mr. President, it seems totally unreasonable that, at the end of 2 months, the U.S. Drug Enforcement Administration has not even been able to provide me with sanitized versions of the files which they agree I am entitled to under the Freedom of Information Act. And I think their delay and uncooperativeness on the matter can only fuel public suspicion about what those documents may say about the involvement of Panamanian General Omar Torrijos and his colleagues in illegal operations.

As a member of the U.S. Senate who is being asked to pass judgment on proposed Panama Canal treaties, I think I am at least entitled to a direct denial of my request if these files are not to be provided to me. Instead, the administration seems determined to extinguish the matter through procrastination and excuses. If this is their strategy, then they must accept the consequences of public opinion and Senate reaction.

Mr. President, I hope that the U.S. Drug Enforcement Administration, and the Department of Justice, may yet see fit to cooperate and comply with my legitimate request for access to files containing information on General Torrijos' involvement with drug-trafficking operations. But I have yet to see any evidence of an earnest effort on their part to facilitate my investigation of the matter.

WELFARE LEGISLATION

Mr. JAVITS. Mr. President, on Tuesday, December 13, the distinguished minority leader gave an address to the Institute of Socio-Economic Studies in New York City. I believe that Senator BAKER's incisive and thoughtful discussion of welfare reform as it relates to structural unemployment, demands an equally thoughtful consideration by Members of the U.S. Senate.

Mr. President, I offer Senator BAKER's address, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS OF HONORABLE HOWARD H. BAKER, JR.

There is in America today a quiet crisis which threatens to explode in anger and in violence at any time and at the slightest provocation.

It is more than an economic crisis, although the sinister symmetry of high unemployment and high inflation lies at its heart.

It is more than a sociological crisis, although it involves tens of millions of Americans whose persistent failure to lead independent, successful lives is an indictment of our whole social system.

It is, more than anything else, a crisis of the human spirit. It is a crisis in the heart of the father who cannot support his family. It is a crisis of the mother who cannot feed or clothe or house her children well. It is the crisis of the child who faces the bleak prospect of a life of fear and desperation and joblessness and crime and punishment.

And it is a crisis not only for those who live in poverty and despair, but also for those of us who live in prosperity and comfort.

We face the stern and demanding test of restoring economic stability and finally achieving true social justice in the United States of America.

We have learned, at last, that these are not two problems, but one—and one we must solve without any further delay.

The blackout in this city last summer demonstrated with awesome destructive power how desperate some of our citizens have become, how isolated they have become from the mainstream of our society, how much they have become strangers in their own land, how profoundly and consistently our system has failed to provide the initiative and the skills they need to live successfully in America.

This problem transcends any narrow concern of the ideologue. The liberal and the conservative have an equal stake in its solution, and neither can claim the crisis solely as the other's fault or the other's responsibility.

I noticed an editorial in the New York Times a few weeks ago that suggested that it would be wise to attack the problem of high unemployment separately from the problem of urban decay.

Although we may be obliged on occasion to deal with the symptoms of each of these issues individually, I believe that there is no way to solve the twin dilemmas of unemployment and the decline of the cities, without a productive and optimistic economic infrastructure. The only way to encourage that optimism, that in turn stimulates investment and productivity, is by creating the conditions for steady and stable economic growth and social stability.

Whatever kindles hostility among nations and within populations, whatever the roots of racism may be, it can surely be said that a solution to those problems is infinitely more difficult and probably impossible unless the system requires a large labor pool . . . a body of workers that adequately reflect the level of population . . . unless there is a sense of permanence about the underlying health of the economy . . . and unless we demonstrate the political and social competence to deal with its sea changes without casting millions of people into hunger and despair. The first to suffer that hunger, the first to be swept by that despair, are always the weakest, and those who have been historically deprived of the fruits of their labor. We cannot afford to ignore or fail to remedy the consequences of that racism that has stalked our national life from its very beginnings. More than a century after the Civil War, more than a decade after the great victories of the struggle for civil rights, our cities' ghettos are packed with social dynamite. The staggering forty percent unemployment rate among young black people and the unemployment rate of fourteen percent of all black Americans is intolerable, if only because it's morally, politically, and socially unfavorable.

When we talk about unemployment statistics and about hunger and about the welfare syndrome, we sometimes hide behind the numbers. A "rate" declines . . . or a "curve" expands . . . or we go from seven million unemployed to six million nine hundred thousands . . . the trouble with statistics like that is that they obscure the fact that we're talking about people . . . about individual human beings . . . the fact that there are millions of them . . . doesn't for a solitary minute reduce the anguish of each human soul stunted in growth and deprived of the possibility for meaningful survival. The simple fact is that those individuals are bewildered, frustrated and angered by the image of the good life as advertised in living color on the nation's television screens: that image has nothing to do with the aimless lives they live on the streets of our large cities, and they have little reason to believe that it will be more than a television picture to them or to their children.

At the same time as this new "under class" boils in resentment at their displacement from what they cannot help but see as the national feast, millions of other Americans are equally frustrated by the rising costs of government welfare programs, at the same time as their own paychecks are eroded by inflation and as they feel increasing uncertainty about their own ability to hang on to the good things of life.

One recent poll indicates that the American people believe that they will be worse off ten years from now than they are today. That kind of defeatism is self-fulfilling and its manifestations are clearly seen in the stock market, in faltering capital investment, in an unhealthy balance of trade and in a labor force that is literally split in two; those who have the skills necessary to operate the levers of an advanced economy and those who don't! Our largest problem . . . our largest secular sin, is the fact that we have so many of the latter. Let's not fool ourselves about the nature of the problem. There are jobs available. Good jobs . . . well paying jobs, and many of them are going begging. The trouble is that they are in the wrong place for those who need them and they demand skills that we have failed to provide to millions of men and women who wish nothing more than to do a good day's work for a good day's wages. Millions of unemployed Americans want jobs—not welfare handouts. There are dozens of illustrations of that desire. When Western Electric Company in Oklahoma City advertised that it would hire fifty-eight workers on a Monday morning, two thousand men and women stood in line . . . many of them all night long . . . in the desperate hope that they would be among those chosen for the available jobs.

For too long we have locked these men and women and their children into a recurring cycle of dependency. We have watched the welfare system grow into a labyrinth of new programs to accommodate the larger and larger burden of a population unable to find work and unable to train themselves for the work that is available. The welfare system is not an entity unto itself. It's an expression of what's wrong with American society. Welfare is a mirror that reflects the dark side of a great success story. Perhaps that's why we find it difficult to think clearly about its function, about what it can do and what it can't do.

We don't need or want a welfare system that perpetrates and extends dependency from one generation to the next. Neither do we wish to emplace a system that enlarges the welfare structure; that's one of the problems I have with President Carter's sweeping proposal. If it is enacted, more than thirty million Americans will find themselves receiving welfare related checks from the Federal Government and that signifies to me a society in decline. That is not the kind of reform that I believe the great majority of the American people will tolerate. Let us examine the welfare system and the conditions that have fostered its growth. Let us take those measures that will improve the performances of the services it renders and let us create an economic and social climate in which its impact will be diminished and reduced.

We have invested many years and billions of dollars in the welfare system. It has many faults and the necessity for improvement is dramatic and demanding. But the impulse to eradicate the structure in an attempt to improve the results is symptomatic of the "Let's start all over" school of government. I believe that we should strengthen the system rather than throw it out. Let us take steps to remedy its inequities, to tie the system closely to opportunities for productive work and to relieve State and local governments of some of the fiscal burden they now bear.

In fact, today's welfare benefit programs powerfully undermine the incentive to find work—to *earn* money. Keep in mind there are not just a few such programs. Research sponsored by the Institute for Socioeconomic Studies has uncovered 182 Federal income transfer programs at least partly designed for income maintenance. They involve 250 billion dollars in appropriations!

Cut off points and benefit reduction rates are part of many of them. Earning added income can severely penalize the welfare family. Because of the way welfare benefits overlap, an extra dollar of earned income can mean loss of *more* than a dollar of benefits. We must eliminate once and for all the outrageous discrimination against intact families in most States. No element of the present program better illustrates the gap between intent and outcome than the incentive that now exists for fathers to abandon their families.

We must end the senseless inconsistency in eligibility criteria among the many States. While continuing to recognize differences in costs of living throughout America, we, nevertheless, should establish standardized asset limitations and deductions from earned income. We must set a minimum and maximum benefit range so that no one receives Federal assistance below a specific floor nor above a certain ceiling. For example, we should consider a national minimum of at least sixty percent of the poverty line and a maximum of at least one hundred percent of the poverty line.

We must help the States and localities responsible for administering welfare programs. For too long, they have been called upon to shoulder the preponderance of the increased cost burden. We can relieve that burden by substantially increasing the federal match for AFDC to a potential ceiling of 90 percent. Under the terms of a bill that I plan to introduce with Senator Henry Bellmon of Oklahoma, New York City and other commodities in the state would save at least half of their present share of AFDC costs.

But the most important thing we can do is to call on the great private American institutions to play an increasingly active role in providing the jobs and training that will assist and encourage the poor to move on to the mainstream of productive economic activity.

No one has all the answers to a problem that has haunted American society for decades. The issues of high unemployment and equitable welfare costs and solutions must be debated and resolved in the public forum. I intend to cooperate to the fullest extent with President Carter in achieving meaningful reform of the welfare system. We will sometimes differ in emphasis and approach. That is part and parcel of the process. But those differences are just as important as our shared objectives in shaping the end result.

I must suggest this evening that the President's proposal for 1.4 million public service jobs in the context of his welfare reform package is at best an expensive placebo and at worst a long stride down the road to organized make work. Public service jobs have their place. But they are band aids for the wounded, not cures for the disease of structural unemployment. The scale of the President's proposal almost assures most of the participants another dead end, instead of a genuine opportunity to participate in the productive life of the nation.

I believe that the President of the United States and the leaders of both parties in Congress should convene a national employment conference of America's leading business institutions. (The so-called fortune 500) The chief executive officers of those companies and of America's major labor unions must be asked to formulate a plan whereby unemployed and untrained workers would be introduced into the labor force in larger numbers than ever before, and in the context of training programs that would assure them that these new jobs could lead to increasingly significant opportunities.

The United States Government should make an effort to meet the national employment emergency with a program of major tax incentives designed to stimulate business commitment to introducing millions of Americans into meaningful and productive work.

There is no reason why each of the major companies should be unable to absorb a substantial number of potential trainees and employees. A variety of initiatives can be taken individually and collectively by a broad based group of business and community leaders. But these initiatives will occur only if Government offers a helping hand, only if Washington listens as well as speaks. A national labor exchange linking jobs to applicants from every part of the country might be developed in the context of travel subsidies for those who are willing to pull up stakes to make a new life. We should encourage people to go where the jobs are, at the same time as we plant the seeds for new economic growth where our working population lives.

We tend to forget in Washington that there are enormous resources of creativity and competence in the cities and towns across this country. Helping to create circumstances in which those resources can be put to work is the most important job the Federal Government can do. Here in New York, the Bedford Stuyvesant restoration corporation in Brooklyn, has worked steadily and effectively since its foundation eleven years ago under the sponsorship of Senators Robert Kennedy and Jack Javits, to improve the community itself and to create new businesses and new jobs for the people who live there. Of course they have only scratched the surface of the problem, but one major American corporation, IBM, has located a major facility at Bedford Stuyvesant. That experiment proved so successful that IBM decided last month to put up still another plant in the Bedford Stuyvesant area . . . A direct result of an effective working relationship between a community enterprise concerned with developing and utilizing community resources and a business that has linked its economic interests to its corporate citizenship.

I believe that if President Carter issues the call for a national employment conference, we will see the seeds planted for a multitude of similar relationships between business interests and local community services.

Let us lay the problem before those who have the most to gain from a solution. Let us help them to achieve local and regional answers to a national crisis in accord with local and regional needs, desires, aspirations and capacities.

Senator Bellmon and I intend to offer legislation that would create a jobs voucher program and a major expansion of job creation tax credits. But that is only a small part of what's needed. Our major efforts should be in the active encouragement of business and organized labor to develop the programs that we need to eliminate the problem of endemic unemployment, and to tell us the legislative framework that they need to get the job done.

A national employment conference is only a first step. I would hope that it would result, among other things, in the creation of a broad based jobs commission to monitor and implement the conference's recommendations. Such a commission might be similar in organization to the National Commission on Water Quality, which has had major influence in the improvement of the environment. In that particular case, five members of the House of Representatives, five members of the U.S. Senate and five public members, appointed by the President of the United States, provided the impetus for a realistic and effective implementation of environmental goals. Certainly the employment crisis is worthy of an effort of even greater dimensions.

I have intended this evening to convey my belief that the problems we face are soluble, if we put our faith and trust in the ability of the American people to determine their own destiny.

I don't believe that there is a single blueprint or a magic wand that would solve all of our economic and social problems. Too often such blueprints are drawn in Washington with a precision that fails to reflect the essential untidiness of a process in which large numbers of people must contend with large social issues. I believe that untidiness is the mark of a creative and innovative people. If we remove the constraints of over regulation and if we develop new institutions and new mechanisms where the people live and where the people work, to do the people's will, the statistics that trouble us as harbingers of social upheaval will change for the better. I know that we're not going to place seven million, or two million of the unemployed into productive work overnight no matter how good our intentions, or how total our commitment. But let's make a meaningful beginning.

What we must avoid above all else is the creation in the United States of what Disraeli called more than a century ago . . . "two Englands," the rich and the poor. In our time and in this land, there is no room for "two Americas." Advancing media technology has brought and will continue to bring social injustice and human despair into the homes of every one of us, no matter how cushioned we may be from the personal pain of standing in an unemployment line or waiting at a welfare center. In the past, there have been many silent tragedies played out in social silence. We knew nothing of them and so, to some of us, they simply didn't exist. But in 1977, we cannot permit the untrammeled growth of an American underclass. Of course, there have always been the underprivileged among us (whether we have seen them or not), but there has also always been room at the top, in the middle and on every rung of the ladder along the way.

If this is in part a myth, it is a myth that must become the truth for today and tomorrow. If we are to end this quiet crisis of alienation and despair, we must respond to those who cry out . . . "we're Americans, too . . . we belong" . . . with the recognition that they are and that they do.

REPORT TO THE PEOPLE OF MISSISSIPPI FOR 1977

Mr. STENNIS. Mr. President, as the end of the 1st session of the 95th Congress approaches, it becomes my privilege once more to make a report to the people of Mississippi. My purpose is to tell them of some of the matters on which I have been working this year, and which I think may be of particular interest to them.

This report also gives me the opportunity to thank the people of Mississippi for the trust placed in me as Senator, and for the gratifying way in which they have given me their assistance, encouragement, and support. My thanks also go to the other members of the Mississippi delegation in Congress for their cooperation and helpful teamwork in various legislative matters. My office staff, although relatively small, has worked hard and effectively, I believe, on your behalf, and I appreciate their diligence and loyalty. The committee staffs with whom I work are also due my thanks.

This year has been, of course, the first year for a new President, and the new cabinet secretaries and new agency heads who have accompanied him into office. As is inevitable, it has been necessary to have what might be called a familiarization period during which the members of the new administration have learned to know each other, and to become acquainted with Congress.

In a sense it has been a testing period also, during which those in the new administration have tested their relationships with Congress, and have established their concepts of where the dividing lines are between matters that can be undertaken unilaterally within the executive branch, those that are more properly within the prerogatives of Congress, and those that must be worked out cooperatively between the two branches. This orientation period appears to be over, and a working relationship is being established that promises to be effective in the future. I trust this will be the case. Confrontations within Government may sometimes be necessary, but as a general rule they are not conducive to effective and timely actions.

Looking back to the beginning of 1977, I would define the three foremost domestic problems facing our Nation as inflation, unemployment, and the need for a strong national energy policy. As the year reaches the end these three remain our greatest problems, although progress is being made. Inflation has been dampened somewhat, although it is still too high, and it is necessary for the Government to temper all its actions with the fact that inflation is the greatest single threat to the prosperity of the average American family.

Some progress is being made as to unemployment, also. Programs established by legislation are getting underway and effects are being felt. Major relief in providing jobs, however, must come within the private sector, through business expansion. The present period of business growth began about 31 months ago, and historically, such growth periods tend to last much longer, so the prospects for the coming year look bright for more business investment and more jobs, barring unforeseen world or national events.

Progress has been made also toward agreement on and implementation of a national energy policy. I will discuss these steps elsewhere in this report, in more detail. What has been done is a start, at least, in what has been vitally needed and what must be pursued forcefully in the years to come.

Domestic problems are not all we must cope with, of course. The world changes around us, and our Nation must adapt to those changes, as well as attempt to influence them for the best. How to influence them is what makes up foreign policy, and this has been a somewhat trying year so far in this regard. The relationships between nations are volatile, and sometimes unpredictable in terms of our own strong persuasions and deep-seated beliefs. We can demonstrate our beliefs by attempting to set an example, which we do quite well, although not without our own failures. We cannot, however, impose our standards on others, just as we cannot impose upon them our form of government.

I view our foreign policy endeavors in the coming year as extremely important. The President has set in motion a great many initiatives in this field—perhaps more than should have been undertaken simultaneously. How well they are carried forward in the next year will have potentially profound effects for perhaps many years, and the Senate will have heavy responsibilities in meeting its share of this task.

So again, as is the case in looking back at any year, there are accomplishments in government to view with satisfaction, and other matters which must be improved on in the future. Nevertheless it has been a year of constructive effort. Of the occurrences of the year, and of the work of the Congress that I consider of most interest to Mississippians, I submit this report, under several headings, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT

ENERGY MATTERS

The Congress quickly approved the President's recommendation that a new Department of Energy be established. This newly created agency is still being organized and consolidated. It inherited formidable and extensive powers from the Federal Power Commission, the Energy Research and Development Administration, the Federal Energy Administration, and other agencies.

The President sent to the Congress a comprehensive national energy plan which included a wide collection of conservation and regulatory programs as well as tax and nontax incentives and disincentives. The House and Senate passed widely divergent versions of the President's plan. The differences are now in a Senate-House conference and will not be resolved this year.

There are a number of major areas of disagreement between the Senate and the House in the energy legislation which has been passed separately by them. Some of the more important issues which are in conflict are mentioned below.

The Senate voted to remove price controls from (or to deregulate) "new" natural gas and declined to extend regulation to intrastate gas. The House adopted the President's recommendation by voting to raise the price of natural gas while keeping it under control and to extend regulation to intrastate markets.

The House voted approval of the crude oil equalization tax at the wellhead and to rebate this tax to the public. The Senate rejected this tax. The Senate and House both voted for modified versions of the tax on the industrial use of oil and natural gas. However, there are sharp differences in these versions with the House bill being more comprehensive.

I believe that this country must have a definite, positive and affirmative energy program. Therefore, I hope that early next year the conferees will agree on a plan which can be adopted and approved by both the Senate and the House, and which will serve the national interest and promote the national welfare in this critical field.

THE NEW FARM BILL

The new Farm Bill passed by Congress in September is one of the most important bills considered by the Senate this year. Agriculture is the largest industry in the United States. Together with the industries that support it, farming accounts for a fourth of our gross national product. The number of people working in agriculture equals the combined employment of the steel and automobile industries, plus all workers in transportation industries.

The productivity of American agriculture is a matter that basically concerns every citizen of the nation, and further is a key factor in the survival of many of the people who live in the hungry nations of the world where food requirements exceed production.

The bill as it was signed into law contained a number of compromises between Congress and the President, who had threatened to veto a bill that did not meet certain criteria he proposed. It will result in improved farm programs in comparison with the present ones, but in a bill of such broad scope it is inevitable that there are aspects that do not fully satisfy all who are engaged in agriculture or involved in the legislation.

It is a bill to cover four years, beginning next year. I particularly welcome the fact that target prices, the floor prices at which crops will be supported, are to be set at the cost of production. This does not guarantee a profit to the farmer. It just means that what he harvests he need not sell at a loss.

I suppose no farmer ever harvests as much from his acreage as he hoped he might when he planted it. He is fortunate when he can harvest a reasonable expectation—his average yield over recent years. Too frequently he may get much less than that, because of the vagaries of weather and the onslaughts of insect pests and other hazards. With all these factors working against him it is not too much to ask that what he is able to raise be sold at what it cost him, and not at a loss. For profits he is still going to have to look to his own skill, good luck with weather, and a good world market price.

I say world market price because of the importance of exports in disposing of our agricultural production. Conversely, of course, to much of the rest of the world access to American grain, at least in bad crop years elsewhere, is absolutely essential. Our export markets are needed to maintain a reasonable balance of trade, they are needed by the farmers so they can continue the present policy of maximum production, and they are needed by American consumers because maximum production means lower unit prices to domestic users. The P.L. 480, Food for Peace provisions of this bill are an important part of export marketing.

Also important is the provision for establishing farmer held wheat reserves, using extended loans. Given the vagaries of the world climate in recent years, and steady demands of the export market, it is prudent that we establish a reserve. It protects our people, and it protects the farmers against export embargoes that might otherwise be considered if carryover stocks become dangerously low. It goes without saying that when you create reserves you must also create safeguards against destroying market prices by dumping reserves, which is done in this bill by triggers geared to the loan levels.

Extending farm commodity programs for four years is proper, for farmers need to know where they stand for a reasonable number of years ahead. The farm disaster programs, which come into play when drastic drought or floods affect farming areas, are extended two years. They need evaluation and revision and ultimately are expected to be replaced by comprehensive crop insurance programs.

The food stamp program is included in the Farm Bill only because it is administered by the Department of Agriculture. The Senate bill would have extended the program for only two years. That certainly is long enough, in my view. There is disquiet in the nation about this program because of extensive abuses. It was a minor program when it started, and it became open-ended and ran away with itself. However, in conference the four-year extension proposed by the House was accepted. The bill does remove food stamp eligibility above certain income levels by using standard deductions, and efforts are made to reduce fraud and abuse by increased penalties.

The bill does away with the requirement that recipients pay cash for part of their stamp allotment. This change, recommended by the administration, raises grave doubts in my mind, and members of the Senate were divided in their views on this. Food stamps started out as a means of bringing balanced nutrition to families of limited means. It has now gone full circle to join the welfare system as a payment in lieu of cash. It is just another means of income redistribution, and we might as well recognize it as such.

Congress is going to have to come back to this subject, and go over it again very thoroughly, preferably next year.

One of the difficult things about farm legislation is that it is not well understood by many citizens, particularly those in large urban areas, who are so heavily represented in the House of Representatives. Good farm legislation is important to every consumer, perhaps more so to him than the farmer himself. I wish all consumers knew that the farmers are their allies, not their adversaries. I wish they all knew that there is nothing in this bill for the beef producers, for example, who are trying to ride out an extremely difficult market cycle, and their degree of success is going to be very important to the public. I am afraid that long after this bill became law there will still be many, many people who believe farmers get paid for not growing crops; many people who believe that the high retail price they pay for food is going into the farmers' pockets; and too few people who realize that the farmers' return on investment is much less than in other industries.

The farm commodity support programs are good for the consumers, for they protect the source of their food supplies. They protect the farmers against catastrophic market conditions, and put him on his own, like any other businessman, when it comes to making profits. The 1977 Farm Bill insures that these programs will continue for another four years.

WATER RESOURCES PROJECTS

In my capacity as Chairman of the Public Works Subcommittee of the Senate Appropriations Committee it is my responsibility each year to see that a bill is brought before the Senate to provide the annual appropriations for Federal water resources projects. This requires extensive hearings, where testimony is received from the Corps of Engineers, the Bureau of Reclamation, and the Tennessee Valley Authority. Then public witnesses, either individual citizens or civic organizations, present their views, pro or con, on each of the projects under consideration.

The Subcommittee then presents a proposed appropriation bill to the full Appropriations Committee, and the bill then goes to the floor, where I am the floor manager for the legislation until its passage. Thereafter we must go to conference with the House to resolve differences and it is my duty to lead the Senate conferees in the conference discussions, and to bring back the conference report to the Senate floor for final passage.

This year this procedure was unusually complex and difficult. Soon after assuming office President Carter announced a list of water projects which he stated he intended to stop as being economically unsound or environmentally undesirable. The list was established and the announcement made without any consultation with Congress, where many of the listed projects had been under consideration and careful study for several years. The many interested members of Congress were understandably surprised at the precipitous action, and some felt that the President had received inadequate and sometimes erroneous advice from inexperienced but zealous staff appointees with preconceived opinions.

In any case the President had committed himself publicly, and a confrontation appeared inevitable when he announced that he would veto any appropriation bill that contained money for these particular projects.

The House acted first, as it does on all appropriations bills, and not only appropriated money for all the projects on the list, but also voted to start a substantial number of new projects as well. This was the situation faced by the Senate Public Works Subcommittee when it met to prepare the Senate bill.

It has been my experience that in a confrontation between the President and the Congress little is gained. Vetoes may or may not be overridden, but time is lost and the projects suffer. Then the procedure may have to be repeated the following year. It is much better to try to work something out that both parties can live with, and get on with the construction of needed projects.

In the Subcommittee we established a set of criteria which had to be met by a project in order to receive funds for fiscal year 1978, and applied it to all the projects on the President's list. Those that did not fully meet the criteria would not be eligible for funding until fiscal 1979. We also agreed that there would be no additional new construction projects started in the coming year. Planning of some new projects, however, was approved and funded.

On this basis we brought the bill through committee and to the floor. The situation was complicated because the bill contains the appropriations for the Energy Research and Development Administration, as well as water projects, and the neutron warhead and the proposed Clinch River breeder reactor were items of strong controversy. After strenuous debate the bill was passed, and I took it to conference with the House. Again there was considerable debate, but in the end the House conferees agreed that it would be best to adopt the Senate bill, which we believed the President might agree to sign. The conference report was agreed to by the House and Senate, and the President did in fact sign the bill, although he repeated his objections to some of the water projects in the bill.

One of the projects on the President's list was Tallahala Dam, which is to provide flood protection below the dam and water supply for Laurel. This project met the criteria in the Senate subcommittee and remained in the bill, as signed, to be funded for construction with $5 million for fiscal year 1978.

I was particularly pleased with the outcome of discussions on the Tennessee-Tombigbee Waterway. This great project was on an originally long list of projects which the President questioned, and on which he sought further information. A public hearing on the Tennessee-Tombigbee was held by the Executive Branch, and the economic and environmental justification thoroughly analyzed. Based on this careful examination the President agreed that the project has full approval and shall proceed as scheduled. This should ensure the progress to completion of this vital regional project.

The Tennessee-Tombigbee was budgeted for $157 million. The House added $7 million and the Senate $8 million more, to a total of $172 million, which is the full capability of the Corps of Engineers for fiscal 1978.

I receive regular progress reports from the Engineers on the Waterway. I am glad to say that the recent reports show that fine progress is being made, and I have verified this by personal visits on the ground. The recent bids, especially for excavation, have been lower than hoped for. This means that other contracts can be let sooner than planned, and some parts of the project are being moved forward as much as two years on the schedule. Highway bridge construction by the State is on schedule, so that the Waterway work is not delayed in any way. The progress of the Tennessee-Tombigbee, and the clarification of its fully approved status are very gratifying.

I am pleased also that many other Mississippi projects were funded in this bill. We provided substantial increases for the flood control work in the Yazoo River Basin, and the first money was included for planning the Yazoo River navigation project. Increases were made for the Mississippi River main levees and for the navigation channel work. Further project studies on the Gulf Coast were funded, and maintenance money provided for harbors. For TVA, $17.6 million was provided for the Bear Creek system in East Mississippi and Alabama. Many other smaller but also vital projects were funded in the bill.

This has been the most difficult appropriations bill for water resources projects that I have encountered since becoming Subcommittee Chairman years ago. I am very gratified that the situation has been resolved and that our Mississippi projects are proceeding on and ahead of schedule.

MISSISSIPPI ARMY AMMUNITION PLANT

As Chairman of the Senate Armed Services Committee and as Acting Chairman of the Defense Subcommittee of the Senate Appropriations Committee, I worked long and hard this year, with the help of others, to remove legislative restrictions on and to secure additional funds for the construction of an Army ammunition plant at the National Space Technologies Laboratory in Hancock County. Although $45 million had been approved by the Congress in 1975 for the construction of the ammunition plant, a provision of the law prohibited the use of this money for the construction of new ammunition plant facilities except in areas where existing ammunition plant facilities were being closed or where production had been curtailed. This was not the case, of course, in Hancock County. The Army testified that of the 91 sites they examined, the Bay St. Louis facility was the most cost-effective. We were successful in getting the Congress this year to review the situation and to approve an additional $8 million for construction of the facility as well as to remove the restriction on the $45 million previously approved, making a total of $53 million available to begin construction of the plant in Hancock County. Construction will begin early next year.

The Mississippi Army Ammunition Plant is an essential element in the Army's program to modernize and upgrade this country's capability to produce military ammunition. There is a strong need to modernize our ammunition production capability. Ammunition is the backbone of our land forces in Europe.

The Mississippi facility will mark the beginning of a new concept of ammunition production. Rather than have parts of the ammunition produced at several sites, shipped to and assembled at yet another site, the Mississippi plant will handle the entire manufacturing and assembly operation at one site. This promises a tremendous cost savings to the Federal government and, thereby, to the American taxpayer.

In addition to construction employment to build this $400 million facility, this ammunition plant I believe will create 1,000 to 1,500 new jobs in the area. The facility would employ 2,000 to 3,000 people should military requirements call for maximum production. I am extremely pleased with the additional jobs that will be created for Mississippians and the long-term benefits that this new plant will bring to the area.

FORESTRY PROGRAMS

Our forests are of course one of our best resources in Mississippi, and forest products are among our leading industries. It is natural therefore that over the years I have taken a very strong interest in forestry matters, such as the Forestry Incentives Act of 1973.

The demand for wood in the United States is expected to double in the next 30 years, and most of it is going to have to be grown on small, privately owned non-industrial tracts. To accomplish this end, a Federal program of incentives was essential.

In 1972, I introduced the Forestry Incentives Act, and it was signed into law in August, 1973. It provides cost sharing of 75 percent by the Federal government for planting seedlings and for timber stand improvement. The first money became available in February, 1974, and the program has been very effective and successful in Mississippi.

Later in 1974 the State Legislature passed the "State Forest Resource Development Program," which is financed from timber severance tax. The two programs complement each other very well, and I think that it is safe to predict that within a few years over a million acres of our forest land will have been planted, or the timber stand improved. The State Forestry Commission and its staff is providing very efficient leadership, through county foresters, in making Forestry Incentives a success.

One of the problems involved has been the reluctance of the administration to budget the Federal funds for Forestry Incentives. Consequently Congress has had to add the money, and there were subsequent efforts by the administration to rescind or defer the money. The efforts were always prevented by Congress, but they meant delays in funding which sometimes caused all or part of a planting season to be missed.

This year Congress again added $15 million to the Agriculture Appropriations Bill for Forestry Incentives for fiscal year 1978, and also directed that $7.5 million in previously appropriated funds be obligated as well. I feel that in this current fiscal year, which began October 1, we can build up confidence in the stability and continuity of the program which has so often been shaken by administration resistance. Once this has been done we can seek a higher level of annual funding, perhaps to $25 million, and can expand the program to meet the demands for food products that must be met in the future.

Another necessary action to increase wood production and the effectiveness of forest management is to increase forestry research. This is an effort which must be shared between industry, the Forest Service, and the State colleges and universities that conduct forestry instruction at the graduate level.

The latter is a very important part of the research effort. In 1962 I was the co-author of legislation on cooperative forestry research, together with then Congressman McIntire of Maine. The resulting research has become known as the McIntire-Stennis program.

Under this program research in forestry-connected endeavors is carried out at 61 state universities and land grant colleges throughout the nation. The research is carried out by graduate students, working under professionally qualified supervision. It is financed on a 50-50 cost sharing basis, half by the Federal funds, which are runing about $9 million a year now, and half from State or industry funding. This has been an extremely successful program. It has the enthusiastic support of the universities, industry, and the Department of Agriculture, which administers the program. I am confident that it will continue to grow and prosper, and as one of its founders I am proud of its success. Ultimately it must become equal in magnitude to the very substantial research efforts in the Federal forest laboratories, and I intend to continue to seek the necessary increases in annual funding.

The Federal forestry research is at a stage where it needs new legislative authorizations and guidance. In May of this year I co-sponsored, with Senator Hubert Humphrey a bill to accomplish this. The bill is now under consideration by the Senate Committee on Agriculture and Forestry.

The passage of comprehensive forestry legislation in the last two Congresses establishing national forestry policies, and the passage of time since the basic law on forestry research, make it very appropriate that the research legislation be brought up to date.

The bill Senator Humphrey and I introduced will be an additional title to the Forest and Renewable Resources Planning Acts of 1974 and 1976.

The bill will repeal the McSweeney-McNary Act of 1928, which has served well as basic authority for research on forestry, but needs to be broadened in some ways and made more specific in others, in order to meet the objectives established by the legislation of recent years.

The Renewable Resources Planning Act requires specific processes for assessment, program, and planning purposes, and our bill provides for research to improve those processes. It is also aimed at the expanding scope of multiple-use forest management for environmental purposes, and it recognizes the growing importance of forestry research to meet urban needs.

The bill gives the Secretary of Agriculture better flexibility and broader authority in cooperative research efforts and the acceptance of contributions thereto, it stresses weather, climatic, and other environmental conditions as they affect forests, and it recognizes the great importance of rural community fire protection.

The McIntyre-Stennis grants will continue In addition, this bill will specifically authorize the Secretary to make competitive grants for forest and rangeland research, and permit him to involve selected sources across the scientific community. By competitive grants is meant not only a dollar comparison, but the inclusion of qualitative factors.

This bill will strengthen forestry research that is aimed at the objectives set forth in the Forest and Rangeland Renewable Resources Planning Act. It will help to show the nation how to attain the growth in forest productivity that we know we must have in the foreseeable future, and it will improve research management and cooperation.

I am confident that in the coming session this new forestry research bill will be passed by the Senate, and I am hopeful that the House will also act and that the legislation will become law in 1978.

THE NATCHEZ TRACE PARKWAY

The increased rate of construction on the Natchez Trace Parkway is encouraging, although I will not be satisfied until a firm plan is adopted to complete the entire length in a period of five years.

This year, for the first time in many years, the administration included money for the Natchez Trace in the annual budget request. The amount of $29.2 million was requested for fiscal year 1977, and was appropriated by Congress.

In preceding years the Department of Interior consistently declined to request money for the Parkway, and in fact resisted the efforts of Congress to appropriate money to keep construction progressing.

In spite of this resistance however, with the help of others I have been able to add money for the Natchez Trace each year. In the last three years a total of $26.1 million has been added by the Senate Appropriations Committee, and approved by the Senate. In each case it was necessary to surrender a part of the amount, which was larger than in the House bill, in conference. We were able to keep a total of $20.2 in the three years, and the construction has been progressing well.

This year the Senate added another $8 million through my amendment for construction in fiscal year 1978, and this was agreed to by the House.

Further there is a commitment from the Carter administration that they will submit requests in 1979 and 1980 for $26.7 million under the Bicentennial Land Heritage Program. This is a nationwide effort to improve facilities in the National Parks, and I am certainly pleased that the Natchez Trace Parkway will share in the program.

The progress is good, but there is much work to be done, in Tennessee and Alabama as well as Mississippi. I intend to continue to press for a five-year plan to fully complete the Natchez Trace.

APPALACHIAN COMMISSION PROGRAMS

Portions of 13 states are included in the area covered by the Appalachian Regional Development Act of 1965. Within that area, the Appalachian Commission sponsors programs to further economic development, education, and health care.

As the 1965 Act was originally passed, Mississippi was excluded, but by an amendment which I sponsored in 1967 the 20 northeast counties became eligible to participate in these programs. Since then over $61 million in Appalachian Commission money has been spent in our State, with matching funds coming from other Federal programs and from State and local sources.

About a third of the money has been spent in education, and another third in community facilities, for the most part for water and sewer facilities. A sixth went for health projects, and the rest for child development, recreation, and transportation. In addition there have been substantial investments in highways, especially access highways for economic development purposes.

Also the 1965 act authorized socalled Appalachian development highways, which are major highways linking population centers in the Appalachia area, and connecting with the Interstate Highway System. Because Mississippi and Alabama were not included in the original act we did not receive an allocation of development highway mileage. However, after considerable effort this was rectified three years ago. Now a development highway under Appalachia programs is authorized, and will run from Huntsville through Tupelo, and join I–55 west of Oxford.

The budget requests for Appalachian program money are sent to the Senate Public Works Appropriations Subcommittee, of which I am chairman. We hold hearings and recommend to the Senate the amounts to be appropriated for the various programs. In this way I have an opportunity to see that the programs are adequately funded, and to monitor the way in which the appropriated money is expended.

Within the 20 county area many fine vocational and technical education facilities and health care facilities have been provided, as well as other projects intended to stimulate the economy and enable the people to take full advantage of the additional economic opportunities presented. These authorizations and the funding of them are important to our State and will continue to receive my attention and strong support.

NAVY SHIPBUILDING PROGRAM

Our Navy today stands at a critical turning point in its history. Having witnessed a steady decline in the number of ships in commission, both the Navy and the Congress must wrestle with the question of what kinds of ships will be built in the future.

As our first line of defense, our Navy must be flexible in order to fulfill its double mission of providing military superiority and presence overseas, as well as keeping the oceans open for commercial and military traffic of all kinds.

I am convinced that in the areas of really vital concern, our Naval forces today are superior to any in the world, but we must face the fact that Russia is now a major naval power. We must take prompt and decisive action to provide our Navy with the ships, weapons and weapons systems necessary to fulfill its missions.

Our Senate Armed Services Committee this year authorized, and Congress has appropriated, funds for 18 new ships. In so doing we gave the Navy several choices and insisted that both the Navy and the Administration make basic and fundamental decisions as to the course they desire to follow with respect to future ships.

However, we must keep in mind that we cannot build a modern Navy merely by passing bills and appropriating money. We must have naval and civilian executive officials who will make decisions and then wisely use the money the taxpayers and the Congress have provided.

Shipyards utilizing innovative techniques and dedicated workers and management will be needed to build the Navy of the future. Certainly Ingalls Shipbuilding in Pascagoula will play a significant role in this process.

Primarily because of the success of the Spruance Class destroyer program, I have a strong belief that Ingalls Shipbuilding will be successful in obtaining a reasonable level of new business. Ingalls has now completed preliminary work and will be in the competition for the contract to build the DDG–47. This ship has a hull and propulsion system based on the Spruance destroyer, but incorporates brand new weapon systems.

Another possible off-shoot from the Spruance construction program is being given consideration for development of an air-capable DD–963 with extended accommodations for additional helicopters and possibly aircraft with short take-off and landing capabilities.

Additionally, this shipyard is interested in major ship conversion programs such as the updating of the DDG–2 class of guided missile destroyers, a program that is ideally suited to Ingalls because of its extensive destroyer experience and capability.

I will continue to lend my full support to providing funds necessary to build the Navy of the future and utilize the proven capability of our privately owned shipyards.

THE CONGRESSIONAL BUDGET PROCESS

The Congressional Budget Act of 1974 established for the first time procedures by which Congress can establish its own limitations and priorities on Federal expenditures, independently of the budget submitted by the President each January. These procedures have been put into use gradually, and are now in full use for the present fiscal year.

Under the Act Congress must pass two budget resolutions each year, one in May and one in September, establishing a budget for the upcoming fiscal year which begins 1 October. The first resolution, made after reviewing the President's proposed budget, estimates Federal revenues for the year, and sets limits on the size of the various appropriation bills. After the latter are passed during the summer, and expected revenues again estimated, the second resolution is adopted either reaffirming or revising the earlier resolution. This establishes a binding ceiling on expenditures and a floor on anticipated revenues.

As the new system became fully operational, the process established clearly that the system can be effective, but the full potential of this process has not been realized. In September the Senate adopted the Second budget resolution for fiscal year 1978 accepting and confirming federal outlays and expenditures of $458 billion and a deficit of more than $61 billion. The public debt was projected at $775 billion.

My vote for the resolution was an endorsement of the new budgetary process, but not an endorsement of such a huge deficit and public debt. The Congress must do a better job in holding down the deficit in future years and working toward a balanced budget. However, we must not let ourselves fall victims to thinking that simply because a proposal comes under the arbitrary ceiling, that in itself is sufficient justification for its approval. The limits so set should be considered as ceilings on spending, rather than both a ceiling and a floor. The best way to reduce the federal deficit and bring about a balanced budget is to keep the expenditures as far below the ceiling as possible.

If diligently supported over the years these procedures will bring about a balanced budget. Frankly, this will take several years, but the new system is sound.

An issue which has been extensively debated in Congress this year is the question of the amount of user charges to be imposed on barge traffic on inland waterways. The Senate and the House have both passed bills addressing this question, but they differ substantially, and the differences had not been brought to a vote on the floor of the Senate when the session ended. I anticipate that the matter will be brought up again early in the next session.

User charges have been under consideration for several years, and heretofore the debate has been whether any such charges shall be imposed. I have opposed them as being inflationary and expensive to the average American consumer, to whom they would necessarily be passed on by the barge line operators, who operate in a highly competitive business.

Now, unfortunately, the question has become not whether such charges are proper, but how much they shall be. This has been brought about by a combination of circumstances which include the urgent need to replace a lock and dam near St. Louis, and the President's announcement that he will not permit this unless user fees are imposed on barge traffic on all waterways.

In my view the two issues are separate and one should not be made hostage to the other. It is a matter of general agreement that Lock and Dam 26 at Alton, Illinois, is dangerously obsolete, and that it must be replaced because it is a vital link in traffic moving on the Mississippi River and the Illinois Waterway, which goes to Chicago and the Great Lakes. The President has said, however, that he will veto a bill to authorize its replacement unless it is accompanied by user charges.

Obviously the imposition of user charges is too weak to stand on its own feet as an issue, and Lock and Dam 26 is being used as leverage to pass a measure which would otherwise not have the necessary votes.

The need for Lock and Dam 26 is so urgent that both the Senate and the House have passed bills authorizing a replacement and imposing user charges. The Senate bill, which I voted against, has charges that will become very large over the next several years. The House bill is much more moderate, using a tax on diesel fuel, initially 4 cents a gallon on diesel fuel, increasing later to 6 cents. I intend to support this moderate charge.

In the next session the Senate will consider the bill passed by the House. The Senate supporters of high user charges will attempt to so amend the House bill. Whether they will be successful cannot be predicted, but I will oppose the effort. Little is known of the economic effects of waterway user charges, but they can be profound, especially on grain movements for export and farm production in general. It is prudent to start with a low charge, under such circumstances, although I would prefer to see none at all.

The bitter controversy over user charges and Lock and Dam 26 has delayed consideration of a number of other authorizations for water resources projects. Included are three in Mississippi: the deepening of Gulfport Harbor, periodic dredging in the Yazoo River, and a study of stream flooding in the Buffalo River-Bayou Pierre area. These three have passed the Senate but are not in the House bill. I am hopeful that they can be added when the House bill is debated in January or February.

APPROPRIATIONS FOR MISSISSIPPI PROJECTS

Elsewhere in this report, in my discussion of committee work in the Senate, I mention my membership and responsibilities on the Appropriations Committee, and comment on the fact that this gives me an opportunity to participate in specific appropriations that directly affect Mississippi. I thought you would be interested if I were to list those items in appropriation bills passed this year.

Of course every such bill, whether it be for education, health, housing, highways, and so forth, contains lump sums which are divided between the states by various formulas which are set forth in the authorization bills. In that sense there are thousands of appropriation items that affect Mississippi. However, there are many that pertain particularly to our state, and to which I gave individual attention as the various bills were agreed upon in committee and passed on the Senate floor. The partial list below will probably contain items that are of some direct interest to each Mississippian who may read this report.

The first appropriation for the new Army Ammunition Plant in Hancock County.

$15 million for the Federal Forestry Incentives program.

McIntyre-Stennis Cooperative Forestry Research at Mississippi State increased.

Fire Ant program funded.

Increased funding for rural water grants and loans, and rural housing loans.

$100,000 increase for the Oxford Sedimentation Laboratory.

Two appropriations, $29.2 million for fiscal 1977 and $8 million for fiscal 1978 for the Natchez Trace Parkway.

$1.8 million to finish the National Battlefield Highway in Vicksburg.

A new fish and wildlife research unit at Mississippi State.

$3.5 million for the Rural Fire Protection Program run by State Forestry Commissions.

Increased money for magnetohydrodynamics research at Mississippi State. This is a new process for direct conversion of heat to electricity.

$770,000 for the Gunboat Cairo at the Vicksburg National Military Park.

$5 million for special assistance to schools impacted by the Tennessee-Tombigbee Waterway.

Two appropriations for highway bridges crossing the Tenn-Tom Waterway: $15 million for fiscal 1977 in the Economic Stimulus Appropriations in May, and $20 in Transportation Appropriations for 1978. With the $35 million appropriated last year this makes a total of $70 million.

Public works appropriations

$172 million for the Tennessee-Tombigbee Waterway.

$5 million for Tallahala Dam.

$22 million for the Yazoo Basin.

Increased funding for Mississippi River levees and channel.

$5 million increase for Appalachian programs, and $6 million increase for Appalachian highways.

$17.6 million for the TVA Bear Creek water project in East Mississippi and Alabama.

Soon after the beginning of the year the hearings will begin on the appropriations for fiscal year 1979, and the items of importance to Mississippi will again be receiving my close attention.

COMMITTEE WORK

The discussions above have dealt primarily with matters of direct concern to Mississippians. These, together with individual problems or endeavors brought to my attention by constituents have taken a large part of my time and effort this year, as they always do. In addition, however, I have other legislative duties, as does every Senator. Each of us speaks for his State in matters of national importance, and each has a part of the responsibility for the formulation of legislation dealing with these matters.

This work is for the most part carried out in committees. When a bill is proposed by a Senator, or received as a recommendation from the administration, it is referred to the Senate committee that has jurisdiction over the subject matter of that particular bill. The committee holds hearings, obtaining the views of citizens, interested organizations, and the appropriate agencies of the Executive Branch. The facts are established, and in committee deliberations the final form of the legislation is worked out, with differences of opinion being decided by majority vote of the committee members. When the bill is sent to the full Senate for debate and vote on passage, it is normally accompanied by a committee report that explains the committee reasoning in resolving the various aspects involved in the bill. In the debate on the bill, the committee chairman serves as the floor manager, and when the bill goes to conference to reconcile differences between the Senate bill and the comparable bill passed by the House, the committee chairman is the leader of the Senate delegation on the conference committee.

Senators are allowed to belong to only two major committees, and they become specially knowledgeable of the subject matter handled by those particular committees. I welcome my committee work as an opportunity to participate in formulating legislation that by serving our nation well also serves the State of Mississippi. I believe that I am fortunate in my own committee assignments, in that many matters of direct interest to our State, as well as to the nation, come under their jurisdiction.

A Senator may be chairman of only one major committee, and of course to be a chairman at all, he must be quite senior in terms of length of service in the Senate and must be a member of the majority party. I am privileged to serve as Chairman of the Armed Services Committee, a major committee of the Senate, which deals with all military matters involving preparedness, the protection of the American people, and the security of the free world. As Chairman, a position I have held since 1969, I am involved in many national policy matters because the subjects with which my committee is concerned are so broad and are so vital to our nation.

To date this year over 60 bills or resolutions were referred to the Committee. The committee has considered and reported to the Senate 17 bills and thousands of nominations of military officers and civilian officials for appointment or promotion.

Each year the major work of the Armed Services Committee is the annual military authorization bill. This bill authorizes the funding for the procurement of military weapons and research and development and authorizes the manpower levels for the active forces, reserves, civilians working in the Department of Defense, and military student training loads. After months of defense, and military student training loads. After months of detailed examination and investigation of the facts, the committee presented a bill to the Senate for its consideration. As Chairman, I endeavor to see that no money is wasted and that a strong national defense is ensured for our security.

The committee reviewed a budget request of $35.8 billion. Hundreds of items were scrutinized carefully over a 4-month period. The committee and 5 of its subcommittees held a total of 52 hearings compiling a hearing record of 10 volumes totaling 7,016 pages. After 14 meetings to mark up the bill, the committee approved a bill totaling $35.9 billion. After two days of important debate in the Senate, including votes on six amendments, the Senate passed the bill 90–3. It was my job and privilege to serve as floor manager of the bill and to serve as chairman of the conference in formulating agreement between the Senate and House bills. After seven conference sessions and approval of the Senate and House on a final bill, the bill was signed into law by the President.

The United States has the ability to protect its vital interest by prevailing in the major areas that might test her military strength. I feel that the military authorization bill for this year will provide the nation with the strength we need for the present and into the future.

In an associated matter of great importance, as Chairman of the Armed Services Committee, I became aware of a problem that presents a clear and distinct danger to our military establishment and discipline—military unions.

Military unions, in my opinion, are inconsistent with the military chain of command. A soldier cannot serve two masters—his military commander and a union. Military unions are also incompatible with the discipline necessary for a strong military. Finally, military unions would interfere with the readiness of our forces.

The committee held extensive hearings on this subject and unanimously reported to the Senate a composite bill to outlaw military unions. It combined the ideas of a bill introduced by me and by another bill submitted by Senator Thurmond. Let me point out that this is not an anti-union bill. Labor unions have contributed greatly to our nation but they have no place in the military.

The bill would make it unlawful for a member of the active or reserve forces to join a military union or to solicit or maintain membership. It would be unlawful for a union to enroll military members, to solicit or accept dues, to negotiate or bargain with the government for military members or to represent military members in grievance proceedings. It would prohibit any military or civilian official from the Department of Defense from negotiating or bargaining with a military union or for allowing government property to be used for union activities. Finally, it would prohibit any individual from bargaining on behalf of military members or organizing or carrying out a strike involving military members against the government.

The bill does not prohibit membership in military and veterans associations so long as they do not espouse any of the prohibited objectives. It would also not interfere with the right of military members to join civilian unions in their off-duty employment. This bill would, however, make dual-status civilian technicians employed by the Reserves and National Guard resign from their civilian unions.

The Senate approved this bill in the form as worked out in our committee by a vote of 72–3, after defeating all amendments offered on the Senate floor. It is now before the House of Representatives for its consideration. I have urged them to address this issue with utmost speed.

The Senate Appropriations Committee is the second major committee on which I serve. I value this assignment particularly, for it affords special opportunity to participate in the very early stages of allocating funds to specific programs and projects, many of which are particularly important to Mississippians. I chair the Public Works Subcommittee of the Appropriations Committee, as I mentioned previously, and I am a member of four other subcommittees. Those on which I serve deal with the money for funding the programs for agriculture, environmental and consumer protection matters; defense; housing, space, science and veterans and transportation. Membership on these subcommittees also permits me to serve on the conference committees which resolve appropriation differences between House and Senate bills, and which have much to do with the substance of these bills as they are signed into law. Committee work is demanding, but in my judgment the time is well spent. All of my committee assignments, especially the work of the Appropriations Committee, give me a chance to look out for the interests of Mississippians in the formulation of national programs. I am pleased to have the opportunity to serve on these committees.

APPRECIATION TO THE NEWS MEDIA

Mr. President, during this past year this Senate has labored long and hard in seeking solutions to the many problems before our nation. Quite often we get so wrapped up in our duties here that we fall short on telling our constituents what we are doing and how it will affect them.

I for one am extremely thankful for the excellent service the Mississippi news media renders to the citizens of my home state in this regard. Certainly many worthwhile news stories have been printed and aired during this year that have helped the people we represent interpret our actions and understand the reasons for these actions.

In this regard, I would like to express my personal appreciation to the Mississippi newspapers that help keep our citizens informed.

CONCLUSION

In this report to the people of Mississippi I have limited my remarks to a relatively few subjects that I thought might be of particular interest to you. There are many other bills that affect our citizens, and many other matters that are of intense interest to some Mississippians. Space has not permitted covering them all, but I want you to know that they, also, have had my interest and attention, especially when you have written to me or talked to me about them.

Looking back at the year, Congress and the new administration have accommodated to a reasonable degree. Some good legislation has resulted, though not as much as I had hoped. However, the groundwork has been laid for a constructive second session of the 95th Congress, next year. A great deal of committee work and fact finding has been done on bills that have not yet been brought to the floor, and of course these bills retain their active status from one session to the next of the same Congress. Only after the election of a new Congress does the legislative process have to start over again.

The coming year will bring new challenges, and some that are not new but are old problems, with which the Nation and the Congress are familiar, but for which adequate solutions have not been established.

I firmly believe that the worst problem that faces our Nation is the constant practice by the government of spending more than its income each year. Clearly, this simply has to stop. A balanced budget can be attained, but it will take determination and tenacious effort over a period of several years, and many actions that will not be pleasing to portions of the population and therefore will be opposed by their representatives in Congress. Nevertheless, it is essential to control government spending to the level of government income, and it can be done.

We are still dependent on foreign oil, and on the face of it this is not sensible and it cannot be permitted to continue indefinitely, leaving us at the economic mercy of foreign producers. Steps have been taken. More are necessary, for this problem is with us for the years to come. The price of energy independence is not going to be a pleasant one, but the alternatives are unacceptable if they are viewed realistically.

We are having our own domestic problems in the wise development of our vast natural resources. The last decade has seen a rapid rise of concern about environmental matters, and unfortunately some overreaction to this concern by portions of the public, the Congress, and the courts. Laws passed by Congress, and the interpretation and construal of the laws by the courts have brought about some incongruous situations never contemplated. One example is the Endangered Species Act, where the presence of one variety of a tiny darter fish would halt an almost completed multimillion dollar TVA project. Another is where one variety of sandhill cranes has held up an essential highway project in Mississippi, and may cost the taxpayers millions to purchase refuge lands.

These laws have to be reviewed and changed. In the process of doing so Congress must be more explicit in its legislation. Some of the lawmaking has simply been too vulnerable to various interpretations in courts, and this must be improved in the future.

There is much work to be done in 1978, and I look forward to it with anticipation. Strengthened by the support and confidence of the people of Mississippi, I will dedicate myself wholeheartedly to that work. I want to do it the way you want it done. You will help me if you continue to give me your suggestions and constructive criticisms.

It has been a pleasure for me to have this opportunity to make this report to the people of Mississippi about my work in the Senate in 1977. I thank you for your part in it, in guiding and assisting me, and I extend every good wish for 1978.

EXCESSIVE PAPERWORK IN THE BANKING INDUSTRY

Mr. MORGAN. Mr. President, I recently received a copy of an editorial from the American Banker, entitled, "A Profits-to-Paperwork Ratio." I think the editorial is worth sharing with my colleagues and with the public via the RECORD.

The editorial argues that the paperwork burden of Government regulation of the banking industry—already the most regulated component of our economic structure—has reached an intolerable level. Not only has the cost of compliance with the myriad of Government regulations soared, but the time and energy required on the part of bankers has also grown enormously. Consequently many banks, according to the editorial, "are beginning to abandon functions that otherwise might serve the community, because it is not worth it to follow up with necessary regulatory procedures."

Bankers themselves are the first to agree that governmental regulation of the banking industry is essential to the economic health of our country. No one quarrels with that. But what bankers, and many small and not-so-small business people throughout the country do take issue with is the steady trend toward requiring more and more detailed information which simply ends up in some bureaucrat's or congressional staffer's file "unread, unused, and unremembered." I also strongly take issue with that trend, and I hope that those of us on the Banking Committee can take the lead in reducing rather than adding to the paperwork burden of the banking industry.

I ask unanimous consent that the editorial be printed in the RECORD.

There being now objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROFITS-TO-PAPERWORK RATIO

Every once in a while an individual statistic teaches us more than all the generalities. This has happened recently with regard to bank paper work required by governmental units.

Banks are subject to more reports and regulations than almost any other industry. Yet when one well run bank with a high return on assets reported that its net income before taxes was $16 million, while its cost of paper work to meet regulations was $1 million, this brought the whole point home.

Here is a bank of over a billion dollars in assets, working all year to generate a return on stockholder's equity. And its cost of simply filling in the reports required by the state, the Federal Reserve and the Federal regulators involved in banking cost it one dollar out of every 16 of pre-tax profits. It is a hard percentage to accept, and it makes bankers wonder where the industry is going.

In part this rise in costs of paperwork is due to developments that bankers themselves brought about.

Just as the ill-fated first attempt at the Real Estate Settlements and Procedures Act was a result of the abuses of a handful of banks and thrifts in mortgage closings, each new report is the result of some practice of a few banks that leads to more paperwork and new onerous procedures for all.

A legacy of the Bert Lance affair is more paperwork, for example, as the regulators and examiners try to insure that the practices followed in that case are not repeated.

But the result is not only heavy cost to banking but tremendous consumption of bankers' time and effort that might better be directed elsewhere.

Many bankers report, for example, that because of new regulations and forms that must be filled out on virtually everything that a bank does, it impossible to finish a day's work without breaking some law or other.

Others find they get so involved in paperwork that they simply have decided to abandon functions that otherwise might serve the community, because it is not worth it to follow up with necessary regulatory procedures.

This is the sad state of affairs. It helps explain why so many bankers find ironic humor in the joke that the least believed statement in America today is "I'm from the Government, I'm here to help you."

But on the other side of the coin, bankers recognize that the industry must be subject to procedures that insure the safety of bank deposits. It also must make sure that the tremendous power given to bankers is used for the community in which each bank operates and for the nation and the economy as a whole.

Some harassed bankers wish a compromise could be achieved so that the paperwork demanded of them would be limited to the meaningful parts of the examination and regulatory process and that the procedures that involve deep examination into the letter of the law rather than its spirit could be eliminated.

It is frustrating for bankers to devote hour after hour to meeting requirements on spelling out what they have done and how they have done it, only to find that the material ends up in a file, unread, unused and unremembered.

In this era of zero based budgeting, in which we look at operations of businesses and banks and try to see if the old procedures as well as the new ones are really necessary, maybe it is time for zero based budgeting on bank reports, too.

We would be likely to find that while some of the new reports are necessary and valuable for safe banking, some of the traditional ones taken for granted can be eliminated. The savings would help cover the cost of new requirements.

When well run banks find that one-sixteenth of pre-tax income is absorbed in filling out reports, something needs to be done. This is just too much dedication of bank resources to one small segment of the industry's operations.

AREA PLANNING GUIDES

Mr. WALLOP. Mr. President, the National Forest Service released three preliminary area planning guides for the southern and central Rocky Mountain, and the Great Plains areas, in July of this year. Public comment was solicited and is now being evaluated, and the final area planning guides are expected in February.

These guides are aimed toward determining a program direction for the planning areas, based on an assessment of national, regional, and local demands and needs for national forest resources. The program direction will become in turn the area plan, to provide a common management direction to individual Forest Service land managers.

Several area guides are now in operation throughout the Nation; however, these three area guides are the first ones to formally incorporate the concept of key values. The Forest Service has informed me that the idea of key values grew out of a Wyoming study undertaken in 1971 by a group of nationally recognized scientists. Entitled "Forest Management in Wyoming," that study determined that the key values of wildlife, recreation, and scenic beauty were paramount in the Rocky Mountain region, and these key values should be considered as part of every management decision. Since then, the Forest Service claims it has informally incorporated this key value concept into all of its land management decisions for these forests. Rather than prohibiting other kinds of land uses, the Forest Service feels that consideration of these values during each management decision will enhance all resource values. For example, the Forest Service considers how a particular timber operation will affect wildlife, scenic beauty, and recreation, and strives to preserve those values as much as possible within the scope of the timber operation. My office was assured that key values have not, should not, and would not inhibit traditional multiple-use activities in the forest—they are meant only to be taken into account in determining the best means to carry out multiple-use activities.

Nevertheless, there has been much concern voiced to the Forest Service and to my office regarding this key value concept. The people of Wyoming and nearby States are justifiably concerned that key value consideration will cripple or prohibit traditional land use activities in the national forests. In spite of the Forest Service's explanations to the contrary, I can appreciate and share their concerns. A Forest Service handout which was available at area planning guide workshops painted a quite different picture of the key value concept. That memorandum stated:

> In developing the action plan all resource potentials would be considered, and within the constraints of the key values objectives, other resource outputs such as water production, board feet of timber, or livestock forage would be identified as spinoff or secondary effects. *In no case would secondary outputs be permitted to have a negative impact on any of the key values.* So what does all this mean? It means that when tradeoffs between two or more resources are necessary, key value objectives are always prominent.

Another example of this kind of interpretation is found in the Great Plains Area Planning Guide. On page 49, that publication states:

> All National Forest System lands will be managed with wildlife as a key value. This means that when conflicts arise which cannot be mitigated at reasonable cost, wildlife will take precedence.

I think it is understandable that forest users and legislators are confused and worried about the futures of our national forests. Under the key value concept as described here, a timber sale, grazing lease, water project or mining operation which has a negative impact on key values would not be permitted. While it is well known that timbering, for example, often can be a wildlife management tool, it is all too obvious that timbering will not always enhance wildlife. The Central Rocky Mountain Area Planning Guide also lists wilderness as a key value. I do not see how traditional multiple use activities are always going to enhance wilderness. While wilderness has a fine and necessary role to play in this Nation and our national forests, it is not the only wise use of the central Rocky Mountain area. Other activities which do not necessarily enhance wilderness must continue.

The Forest Service has received thousands of comments from concerned citizens of my State and elsewhere regarding these problems with the area planning guides. I am pleased to see so much public involvement, and I hope the Forest Service will consider and implement all good suggestions. When doing so, it should recall that the National Forest system is designed to manage five major resources: timber, water, forage, wildlife, and recreation. While some areas should and will be managed primarily for their wilderness characteristics, the vast majority of our forest lands must continue to be devoted to multiple and sustained uses. To borrow from a Forest Service publication:

> The philosophy behind good forest management is utilitarian and democratic. It recognizes the need for all segments of forest users rather than just one. It motivates foresters toward managing public and private lands in a way that will benefit the most people. It defines a forest that benefits the most people as a planned land stewardship where all resource uses and services are geared to keep the forest healthy, secure, enjoyable, and productive.

The Wyoming Resource Coalition, on behalf of its members associations, has submitted the following comments and suggestions on the three preliminary planning guides to which I have been referring. I believe this statement sums up succinctly the feelings of many on this issue, and contains some excellent suggestions. The concerns of this group and many others need to be addressed promptly, so that the final area planning guides can address future planning priorities clearly, without ambiguities, and in response to all the needs of this Nation.

I ask unanimous consent that the text of this letter be printed in the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Wyoming Resource Coalition,
Cheyenne, Wyo., October 28, 1977.

Mr. Craig W. Rupp,
Regional Forester, Forest Service, U.S. Department of Agriculture, Lakewood, Colo.

Dear Mr. Rupp: Attached is a statement of the combined views of the member associations of the Wyoming Resource Coalition. Comments and analysis contained herein pertain to the preliminary Area Planning Guides for: The Southern Rocky Mountains, the Central Rocky Mountain Area, the Big Horn Mountains, and the Black Hills portion of the Great Plains Area Planning Guides. Our membership emphatically endorses the principles of full multiple use/sustained yields of National Forest values and potentials. Area planning guides that embody the multiple use/sustained yield principles of the Act of 1960 are therefore acceptable to the Coalition.

Since the Area Guides presented stress certain key value outputs and subjugate important multiple uses to these key values, it is apparent that full multiple use-sustained yield management will be cast adrift upon the waves of indecision and inactivity. These are complex times with difficult and perplexing problems confronting management of resources and services derived from the National Forests. These complexities require that, forest principles, letting the character and nature of the area help determine the appropriate use or uses to be applied to specific areas. To broadly state, for whatever rationale, that certain key values will predominate over large areas is very simplistic and a return to the conditions that existed prior to the enactment of the Multiple Use/Sustained Yield Act of 1960.

To prioritize certain National Forest resource uses over other resource uses is simply a repeat of the *older dominant use theory* that was found unusable and scrapped at an earlier time. Dominant use, as would key values, envisions a grand scheme wherein broad policy directives would dictate which uses or management practices are to be applied to National Forest lands. We believe the Forest Service by this time should realize that such narrow approaches to managing National Forest values is to manage by omission rather than to face the complexities of the times which call for comprehensive and intensive analysis of all the issues concerning public land management.

The emphasis of scenic values, recreation, wildlife and wilderness is at the expense of other fundamental National Forest resource potentials of the National Forests—The Multiple Use/Sustained Yield Act of 1960 and the principle thereof. (We refer specifically to the following sections of P.L. 93–378 as amended by P.L. 94–588; Section 2, (3); Section 3, (d) (1); Section 4, (5) (A, B, C, D, E); Section 6, (C) (1 & 2), (9) (B), (K); Section 9.)

These above-cited excerpts of the 1974 Forest and Rangeland Renewable Resources Planning Act as amended by the National Forest Management Act of 1976, clearly call for the management of full multiple use/sustained yield resource outputs on the National Forests.

The preliminary area planning guides for Region 2 are poorly done and should probably be rewritten. The language is frequently vague, and there is insufficient data to sustain the stated conclusions. The issues appear simplistic and seem to have been arbitrarily limited to seven for each planning guide.

The lack of important factual data to support conclusions derived lends credence to the need for the Forest Service to begin anew. The member associations of the Coalition would welcome the opportunity to participate with the Forest Service and other interested conservation and preservation groups, in the preparation of a comprehensive program to support and complement the principles of the Forest and Renewable Resources Act as amended by the National Forest Management Act. We believe it important for us to offer positive assistance as well as constructive criticism of this program plan. We would appreciate an opportunity to meet with you soon to discuss our offer of assistance.

Respectfully yours,
DEAN T. PROSSER, Jr.,
Acting Chairman,
Wyoming Resource Coalition.

On behalf of the following organizations: Wyoming Stock Growers Association, Associated General Contractors of Wyoming, Wyoming Farm Bureau Federation, Wyoming Mining Association, Wyoming Wool Growers Association, Outdoors Unlimited, Inc., Wyoming Public Lands Council, Petroleum Association of Wyoming, Wyoming Timber Industry Association.

cc—Dr. Rupert Cutler, Assistant Secretary of Agriculture; Hon. John R. McGuire, Chief, U.S. Forest Service; Wyoming Congressional Delegation: Congressman RONCALIO, Senators HANSEN & WALLOP, The Honorable Ed Herschler, Governor of Wyoming, The Honorable Richard D. Lamm, Governor of Colorado.

COMMENTS ON CENTRAL ROCKY MOUNTAIN AREA AND THE SOUTHERN ROCKY MOUNTAIN AREA PLANNING GUIDES AND THE BLACK HILLS AND BIG HORN MOUNTAIN PORTIONS OF THE GREAT PLAINS AREA PLANNING GUIDES

I. *Key Values:* The program direction for the area (1980–2020) emphasizes the so-called "Key Values" of wildlife, recreation, scenic beauty and wilderness. *WE STRONGLY OPPOSE THIS KEY VALUE DESIGNATION.* The true key values for this area are water, timber, range and minerals. We feel there is sufficient existing wilderness. Aggressive multiple-use management programs for the renewable resources listed above, and practical access for reasonable development of the non-renewable resources will enhance the forest visitor's experience for a wide variety of recreational pursuits, as well as contributing a "fair share" to our citizens' commodity needs. The distinction between citizen *needs* and *desires* has not been made. Accurate definitions must be formuated; and amenity and commodity *needs* must be accurately and validly quantified in terms which can be dealt with through a sensible system of public land management. As such, the program direction emphasizing scenery, wildlife, recreation and wilderness should be scrapped, new directions should be drawn, and management objectives should be made more realistic. Program direction should also include comprehensive cooperative management programs among the various federal and state management agencies involved with programs in the area.

II. *Issues:*

(1) RECREATION FACILITIES

The appropriate role of the Forest Service is to provide developed recreation facilities and to adopt an aggressive system of recreation management for lands under Forest Service jurisdiction. Emphasis should be placed on a well-planned transportation system which *fits* with recreation needs and commodity uses. Motorized recreation, including driving for pleasure, is extremely important to this area, and a key to recreation management is cooperation with those who are in the "business of forest management". The land manager should take the lead in information service programs which help create understanding and cooperation in a productive multiple-use forest.

The growth of campground facilities on private land near national forest lands and national parks certainly fills a need. Perhaps the extension or establishment of trail heads nearer to adjacent private lands would encourage the development of campgrounds to alleviate pressures on the Forest Service campground facilities.

Recreation use and livestock management programs are not at issue under a true multiple-use concept, nor should potential conflict be elevated to "major issue" status unless Key Value concept is used. Without meat, recreation experiences would diminish for the majority. Good management in all areas, including adequate planning for livestock allotments and developed recreation facilities, will alleviate most problems before they start. Livestock and wildlife use of Wilderness is also traditional and part of the "heritage of American wilderness". Animal use should predominate in Wilderness and man should be duly understanding of that fact. Man in Wilderness, after all, is a "visitor who does not remain".

Hard evidence is lacking to substantiate a compatibility problem between livestock and recreation use. To unilaterally exclude or displace one use in favor of another use seriously undermines the intent of the Multiple Use-Sustained Yield Act of 1960. The Forest Service appears to be trying to expedite solutions to situations by adjuration.

(2) WATER

National forest lands should be used for improved water yield to the maximum extent possible. The arid climate of this area makes usable water yield the single most important area value. All other management programs suffer without adequate water. Manipulation of the vegetative cover and storage and distribution systems are crucial to good water management. Water is the limiting factor in the area and water programs should be paramount.

The Area Planning Guides fail to identify specific programs to increase water yields during periods of projected increases for local area use. Another problem is that downstream commitments are not tied into the total water picture. The original Organic Act of 1897 calls for the direct yield of water from the National Forests. The water issue is not adequately covered in the Guides.

(3) THE GRIZZLY BEAR

The objectives for grizzly bear management in terms of habitat and population are chiefly to remember that "people needs are paramount to bear needs" on unrestricted public lands. The Endangered Species Act dictates how management agencies will deal with most basic grizzly problems. National park management offers the grizzly a haven. Designated habitat is adequate in the national park and designated wilderness systems. The Forest Service programs should consider and be consistent with management programs of all other interested agencies in the interests of a comprehensive management effort, whether they relate to grizzlies, water or anything else. Perhaps the key phrase is: The system should make good sense!

(4) THE ELK

The objectives for elk in terms of habitat and related herd size have long been an issue in this area. Habitat and population can more easily be dealt with if good multiple use/management programs are in place. There will be an adequate, sensible National Forest and grassland transportation system for hunter access and forage production programs; there will be timber management programs to enhance elk habitat with forest openings and edge protection; and there will be adequate water management programs which will benefit *all* wildlife. Elk hunters, recreationists and ranchers would all benefit from cooperative multiple use programs.

The acquisition of big game winter range for the stabilization of big game herd size would require the purchase of additional lands from the private sector. The private land owner, who provides winter range, is in most cases better able to manage his lands for full forage production. The Forest Service, on the other hand, is prone to accept lower forage outputs.

The stated objectives of moderately increasing elk herd size and substantially increasing deer populations through management and improvement of winter habitat could just as easily be handled on a "business as usual" basis. These programs, if not already underway, should be started immediately.

With winter habitat considered the single most limiting factor to populations of deer and elk in the Southern Rocky Mountains, it appears that unless an increase in the quality and quantity of winter habitat is obtained, deer and elk herds must be stabilized to match the ability of the National Forest lands to maintain these animals.

Whether or not wildlife should be a key value or not for the Rocky Mountain area hasn't been properly justified by the presentations made in the area guides.

(5) WILDERNESS

The Central Rocky Mountain Area comprises some 8.5 million acres of national forest lands; 23.5% of this land area, 2.0 million acres, is currently part of the National Wilderness Preservation System. The preliminary Area Planning Guide recommends that by 1985 there be a total of 4.2 million acres of wilderness, which would place a total of 49.4% of National Forest acreage in a very limited single use category. The outputs by time period table on page 33 of the Preliminary Central Rocky Mountain Area Planning Guide shows that by 1985 a total of 16.8 million visitor days per year is planned for the 1985 level of use. Wilderness use represents 1.7% of the total visitor days for a year. Does a 1.7% of the total visitor days per year in 1985 justify setting aside 49.4% of the land area in the Central Rocky Mountain Area for wilderness usage only?

The issue properly addressed should be: "Should additional area be added to the present wilderness system in the Central Rocky Mountains?"!

Increases in Wilderness from 1.1 million acres to a level between 3.6 million and 4.8 million acres in the Southern Rocky Mountains appear to be unwarranted in view of the low amount of actual Wilderness visitor days. It is surprising to find that an agency of the United States representing the citizens of this country can arbitrarily, without proper and full public involvement, set target levels for Wilderness acreage. The total acreage of Wilderness should be set only after thorough, exhaustive, on the ground investigations have been conducted to assure quality Wilderness. Quantity of Wilderness as an objective is unsophisticated for the times in which we exist.

To recommend substantial increases in the size of the Wilderness System in the Southern Rocky Mountain area cannot be justified in view of response of the RARE II Program wherein 8–1 were opposed to further increases in Wilderness. The Forest Service in Region II by recommending large increases in Wilderness is reflecting the views of a few in the present administration who favor Wilderness expansion, discounting local impacts in the West. Wilderness expansion is incompatible with local social and economic needs of communities.

To state that the Southern Rocky Mountains are to be the nation's playground is overly simplistic and fails to recognize full multiple use potentials of the area. Recreation is just a part, not the total resource output, of the National Forests in Colorado and Wyoming.

(6) TREE MANAGEMENT

Tree management, semantically, fails to fully describe the developed science of silviculture and forest management. The management practices relating to wildlife and recreation values are management sciences in their own right, requiring intensive study and oversight. The coordination of certain silvicultural activities with other multiple-use values of our National Forests can be achieved within the Forest Service through interdisciplinary planning programs. In no manner should the Forest Service attempt to drop current timber management plans which are based on multiple use-sustained yield management of the forest and timber resources.

This issue, for thoroughness, must address the subject of timber management directly. Vague references to managing trees by way of enhancing scenic, recreation and wildlife values is an abdication of responsibility in fulfilling the intent of the National Forest Management Act of 1976.

The statement that poor growing conditions, excessive mortality, and difficulty of management also limit timber availability, is a statement and shouldn't be taken to indicate a final conclusion. There are excellent timber growing sites in the Southern Rocky Mountain area. Land withdrawals seem to be closing in on accessible timbered areas and yet there is a tremendous potential for forest growth to be obtained on National Forest lands outside of the Wilderness System. The problem is one of the Forest Service allowing vast amounts of timber to be wasted annually. Current mortality is far greater than stated here. Mortality is in excess of 600 million board feet per year. Total growth annually is approximately 1.5 billion board feet. To harvest only 220 million board feet annually is to doom the forests to a waste of about 1.1 billion board feet annually at some future date.

The Forest Service still fails to recognize that there is a tremendous growth potential of wood in the Southern Rocky Mountains and to "maintain timber supplies for local wood-using industries" is an abdication of responsibilities. Enlightened and aggressive forest management policies must be presented for the future. The present form of political-silviculture is an expense that our society can no longer afford to bear. The knowledge and tools are available to meet future timber and wood needs; all that is needed is a solid commitment. Tree management-timber management, call it what you like, has been given a solid go-ahead under the RPA and National Forest Management Act. We believe it's up to the Forest Service to get out from behind the defenses of innuendo and perform professionally.

6(a) MOUNTAIN PINE BEETLE

Under professional and intensive forest management, the Forest Service role in controlling the Mountain Pine Beetle infestation would be apparent. To stand back and reflect on what actions to take, as has been happening, is not going to solve the problem. The presence of an established front range forestry industry could have helped this situation greatly. As it is now, individual treatment of infested trees will prove to be expensive and discouraging when one realizes the cost to benefits of this kind of substitute program.

The front range Mountain Pine Beetle problem is representative of the type of problems that will occur in our forests in an unmanaged condition. Colorado has had a history of insect infestation in the spruce type through the 1940's and 50's. A diligent and thoughtful effort must be made to keep a young and healthy forest on the lands of the National Forest system in the Southern Rocky Mountains. Political expediency to further short term problems has no place in the long term commitment of growing of trees.

(7) MINERALS, GAS AND OIL

Every study which has been conducted during the past several years by government and industry has reflected that the United States is becoming progressively more dependent on foreign sources to supply its requirements of mineral resources. Out of 32 basic mineral resources needed to sustain the U.S. standard of living 14 are imported at a percentage of more than 75% of consumption, and 9 are imported at a percentage of more than 50% of consumption. As such, these reports also indicate an ever-increasing dependency on a greater number of minerals and an increasing percentage of parts of such minerals. With continuing restrictions on availability of federal lands for mineral exploration, this trend cannot be reversed.

There have been four studies conducted on the national level within the last two years which reflect that there are moderately high restrictions or withdrawals on 75% of the federal lands for leasable minerals and 68% for locatable minerals. These numbers reflect the composite of all federal land managing agency decisions as they cumulatively have an adverse effect on the mining industry.

Out of the 14 million acres of federal lands managed by the U.S. Forest Service in Colorado, approximately 54% will be restricted or withdrawn from mineral entry because of Wilderness and Primitive classifications coupled with lands inventoried in RARE I and RARE II programs. Such restrictions will tend to reduce the $982 million per year mineral production from the state, which has a direct employment of approximately 12,500 mining personnel, plus administrative and support personnel.

The Bureau of Mines has studied the surface impact of mining from the years 1930 to the present time. Reliable information is not available prior to 1930; however, disturbed acreage was relatively minimal because of the characteristically small mining operations and small earth moving equipment available to miners. Between the years 1930 and 1971, 3.65 million acres were disturbed by all forms of mining activities, constituting 0.16% of the U.S. surface. By 1975, 1.64 million of these acres or 42% had been reclaimed. Eighty percent (80%) of the lands disturbed in 1971 had been reclaimed by the year 1975. These statistics will place the level of surface disturbance through mining in its proper perspective.

An issue that the Forest Service has failed to address is the need to develop these important resources on National Forest lands. Reference is made only to the need for energy minerals. There is also a need for non-energy minerals which should not be overlooked.

One of the unique aspects of mineral resources is that more often than not, they cannot be located and inventoried in the same manner as renewable surface resources. Even after thorough evaluation indicates areas may not have potential for mineral development, the possibility for discovery and development still exists. This may sound like a paradox, but new exploration, interpretation, theories, and methods make this possible. In other words, the target being sought is so small in comparison with the area being evaluated, the odds are over 10,000 to one against finding a good ore body.

We believe that this serves to explain why the public lands should be kept open to mineral entry. Large areas are needed for the exploration phase. Exploration causes a minimum of disruption and damage and is compatible with other uses. Regulations controlling the effects of exploration have been promulgated by the Forest Service and are currently undergoing development by the U.S. Bureau of Land Management.

We are concerned about the continual erosion of public lands available for mineral exploration and development and the subsequent effect on our nation's well being. Domestic mineral availability and the dependence on foreign imports of raw materials is a theme that has been repeated time and again by members of the mineral industry and others. Our concern with the long-term mineral needs of the nation has not diminished.

Public lands should be used in as many beneficial ways as their resources permit. No area should be closed to exploration for minerals or to mining in the absence of a compelling national interest. Lands previously withdrawn from entry under the General Mining Laws should be reviewed periodically and, absent a higher national interest, such lands should be restored to mineral entry.

We believe that this serves to explain why the public lands should be kept open to mineral entry. Large areas are needed for the exploration phase. Exploration causes a minimum of disruption and damage and is compatible with other uses. Regulations controlling the effects of exploration have been promulgated by the Forest Service and are currently undergoing development by the U.S. Bureau of Land Management.

(8) LIVESTOCK USE

As the preliminary planning guide indicates, for over 100 years, farming and ranching have been the area's economic mainstay. If recreation and wildlife uses are developed as planned, livestock grazing on forest lands will surely be affected.

Even though farming and ranching may be overshadowed at the present time by mineral development, there is a real need to preserve the agricultural economic base.

The economic affect of restricting livestock grazing on forest lands should be evaluated. 47.8 percent of Wyoming is Federal land. Wyoming livestock operators depend on Federal lands to put together a viable economic unit. If use of Federal lands for grazing is drastically curtailed, many operators cannot continue in the livestock business, thus taking their private lands out of agricultural production also, and resulting in economic losses to the community.

In 1975 approximately $239 million worth of cattle, calves, sheep, and wool was marketed in Wyoming.

The American consumer has come to expect an abundant supply of food and fiber at reasonable prices. If the western livestock operator cannot use Federal lands for grazing the American public will be the ultimate loser.

The stated objective to "resolve livestock and recreation conflicts" would appear to mean that livestock grazing AUM's will be "adjusted" to provide for increased winter sports and developed recreation. Since a large percent of the area is Federal land, the remaining percent of State and private land would be forced to support the increased wildlife and recreation.

With no predator control allowed in Wilderness areas and with limited water development, grazing of livestock would be effectively halted, regardless of the objectives of the Forest Service area planning guides.

Restrictions on livestock grazing to accommodate the "key values" could mean that some operators could not continue in the livestock business. Subsequently, their private lands might be taken out of agricultural production. If that occurs, several communities would suffer substantial economic losses since many are dependent upon the livestock industry. County governments would also lose their income from the federal grazing fees. There could be regional impacts as well.

Another loser could be the American consumer, who has come to expect an abundant supply of food and fiber at reasonable prices. If livestock men in the West cannot use federal lands for grazing, the ultimate loser could very well be this nation's consuming public.

III. *Current Situation:* Many broad generalizations are made in this section which appear to be based upon assumptions or gleaned from literature left uncited. Without a bibliography of source materials, the reader is left with no option but to accept the guide data at face value.

IV. *Program Direction:* The program direction for the area (1980–2020) emphasizes the so-called "key values" of wildlife, recreation, scenic beauty and wilderness. We strongly oppose this key value designation. We believe the true key values for this area (and all public land areas) are water, timber, range and minerals. We feel there is sufficient established wilderness. Aggressive multiple-use management programs for the renewable resources listed above, and practical access for reasonable development of the nonrenewable resources will enhance the forest visitor's experience for a wide variety of recreational pursuits, as well as contributing a "fair share" to our citizen's commodity needs.

By recommending large increases in Wilderness, the Forest Service in Region II is reflecting the views of a few in the present administration who favor wilderness expansion. Wilderness expansion is incompatible with local social and economic needs of communities.

To state that the Southern Rocky Mountains are to be the nation's playground is overly simplistic and fails to recognize full multiple-use potentials of the area. Recreation is just a part, not the total resource output, of the National Forests in Colorado and Wyoming.

V. *Program Outputs*: One thing is appallingly evident in this Area Guide document: there are no losers! No consideration is given to the day-to-day user conflicts, or the tradeoffs which inevitably must be made. We see only that there is plenty for everyone if the area is properly managed. This may well be true, but this would be hopelessly idealistic and naive if we "bought it". Every day new conflicts surface, new legislation finds its way to the hopper, new lawsuits and appeals are filed and new areas of controversy are found. The land manager's job these days does not involve land management; it deals instead with attempted resolution or management of conflict. Insofar as the program outputs deal with policy proposals, i.e., "this is what we'd like to see happen", they are fairly reasonable. However, in terms of the realities of national forest management, they don't stand a chance! The Area Guides documents are so bland as to be meaningless, and if such planning is to become custom, it must at least include the political realities.

We have taken issue with the "Key Value Concept". We do not agree with your conclusion . . . "that the term 'Values' was not synonymous with 'Importance'." We are sure this is not the way the concept would be interpreted by those not familiar with the details of the concept. We suggest that the mining of an ore deposit would be the highest and best use for the small amount of surface used relative to the benefits to the Nation and its citizens.

The rehabilitation of disturbed areas cannot take place until mining operations are finished. In the case of many metal mines, this can be several decades.

The withdrawal of lands from mineral entry within or adjacent to access already established appears to be contrary to keeping surface disturbance to a minimum.

Exploration and mining can be compatible with most other land uses. As much of the public land as possible should be administered under multiple use. A multiple use administration system permits flexibility under changing needs and priorities for all of the available resources. The multiple use concept can work to the benefit of the American people as a whole.

GENERAL COMMENTS

VI: *Objectives:* None of the objectives as shown on the graphs can be verified. The most likely result will be a continuance of maintenance of the present level of routine duties. The number of acres to be treated to enhance scenic values, wildlife habitat, and recreation falls too short of the total necessary to sustain harvesting levels of 200 million board feet plus per year.

Under land management planning the text of Guides makes reference to the economic impacts of recreation, but fails to match up or account for the benefits of having thriving wood products, livestock and mineral-gas industries in the socio-economic big picture.

Rural community dependence upon the natural resources of the surrounding lands is a proven factor. State, private and Federal lands all contribute to local community stability in the form of product sales and employment. National Forest programs that fail to recognize the importance of the local situations over Eastern or other outside pressures is a failure to understand and to cope with these pressures.

There are, as of 1976, 390,000 persons living in Wyoming. A large percentage of these people are highly dependent upon rural communities. National Forest management policies that impact local situations can never really be properly justified. The social resource units described fail to tie land management objectives to definite National Forest boundaries and responsibilities, or would call for the reorganization of local Forest Service management units to match the social resource units.

Increases in wilderness appear to be unwarranted in view of the low amount of actual wilderness visitor days. The total acreage of wilderness should be set only after thorough, exhaustive, on-the-ground investigations have been conducted to assure quality wilderness.

The issue properly addressed should be: "Should additional area be added to the present Wilderness system in Region II?"

RESEARCH AND DEVELOPMENT INTO PASSIVE SOLAR SYSTEMS

Mr. DURKIN. Mr. President, one thing has increasingly become clear during the deliberations on this year's energy legislation: All of the energy taxes, all of the energy regulatory programs, and all of the energy reorganizations are merely stopgap measures. We will not wean ourselves from our foreign oil addiction without significant breakthroughs in energy technology. The decisions on energy research, development, and demonstration we make today are the ones by which our children ultimately will evaluate our Nation's creativity and will to cope with the new energy reality.

Passive solar systems are one technology which deserve an extensive research, development and, most importantly, a demonstration effort in the future. Passive systems are those with few, if any, moving parts. They offer the chance of improved efficiency at lower cost. The Energy Research and Development Administration's efforts to develop passive systems, discussed during the debate on S. 1340 last June 13, have been notably deficient.

That is why I ask unanimous consent that a paper by Dave Magnon of the Kalwall Corp., Manchester, N.H., to be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DURKIN. Mr. President, it was part of a presentation to the New England Solar Energy Association. This brief discussion of the merits of passive solar energy will provide my colleagues with an idea of the advantages this approach may hold. It shows that passive solar systems are valuable even in frosty New Hampshire.

Obviously, solar energy must be applied in different regions and to different situations in a wide variety of ways. Only through diversity will citizens ranging from New Hampshire to New Mexico be able to free themselves from the stranglehold of the oil octopus. This article highlights one approach which deserves the Energy Research and Development Administration's full attention.

EXHIBIT 1

PASSIVE AND CONTROLLABLE—PASSIVE SOLAR SPACE HEATING: TWO CASE STUDIES

With advent of the current Energy Crisis, the solar industry has grown at an amazingly accelerated pace, its main object being to discover and provide a viable alternative to using expensive—and expendable—fossil fuels for space heating. That growth is evident in the unprecedented amount of research, development and implementation in the field of solar assisted space heating, and is physically manifested in a great variety of components and systems that are being manufactured and marketed.

Any attempt to understand specialized types within that profusion must be preceded by the task of sorting out and placing at least generalized categories into some form of meaningful perspective. Therefore, in order to define Passive and Controllable Passive systems, it is perhaps most advantageous to first construct a scale against which the myriad types can be measured and understood clearly.

Consider a *Scale of Solar Complexities* that begins with the simplest forms of solar utilization and progresses, by degrees, toward more complex applications. Envision it as a continuum, or number line, that develops from a value of One to a value of Ten (see attached diagram). The lowest numbers represent the "softest" technological approaches. The scale then proceeds through various levels of increasingly intensive technical, capital, and materials input, culminating with the approaches that are the most complex. As the numerical values along the scale increase, then, the combinations of components and systems begin to reflect greater initial costs, longer payback periods, greater on-going maintenance investments, and significantly less operating efficiencies.

Appearing at the beginning of the scale, Passive and Controllable Passive solar space heating techniques are characterized by their close dependence on the principles of the greenhouse effect, thermosyphoning, and thermal mass storage. Passive systems make use of some form of "solar window" oriented toward the south in order to intercept the greatest possible amount of solar radiation (insolation). As the rays of sunlight pass through the glazing layer(s), their potential heat energy is converted to sensible heat and is absorbed by the air behind the orifice.

Some form of heat absorbing material (thermal mass) such as concrete, stone, slate, or containerized water is placed in close proximity to the solar gain mechanism, and also absorbs direct heat energy. Then, via convection (air movement), conduction, and radiation, heat is made available to the "required" spaces.

The unique characteristic of Passive solar systems is that they are able to provide the homeowner with a substantial amount of solar heat gain at a minimum expenditure. They function relatively autonomously, utilizing extremely little conventional power input since they have few, if any, mechanical, moving parts (except for some form of movable insulation, perhaps, which is usually removed and replaced at appropriate times by the building's owners). Initial costs are low, as are long-range expenditures for system maintenance and repairs. The overall simplicity of design and function of such systems determines that they are generally "more efficient" than more complex systems.

On the basis of these observations, it can be recognized that passive forms of solar utilization potentially provide a greater number of Btu's per dollar invested than other forms of solar utilization for space heating (see *Scale of Solar Complexities* below). This quality is demonstrated in the Seny Lake residence in Canterbury, New Hampshire. Designed by Don Booth of Community Builders, Inc. with solar engineering assistance by Drew Gillett (formerly of the Kalwall Corporation and now with Brookhaven National Laboratory's technology transfer program), the structure makes use of the Kalwall Corporation's SOLAR FURNACE, a passive solar heat gain system.

The Lake home design is based upon the principles of *sound energy conservation*. The longest axis runs east-west to ensure that the 1100 Ft.^{2} building has maximum exposure to the south. The solar system consists of 192 Ft.^{2} of double-glazed Sunlite fiberglass reinforced polyester as its "solar window", with blackened water-filled fiberglass tubes placed behind it as its thermal mass storage medium. In addition, the same southfacing wall contains 304 Ft.^{2} of thermopane glass windows. Dark gray slate flooring tiles, set into the top of a built-in window seat, act as additional thermal mass to store the conventional solar heat gain. The heat energy obtained through these apertures functions in conjunction with an electrical resistance baseboard heating system.

The building has a calculated heat loss of 67 X 10^6 Btu/season, and a potential solar heat gain of 32 X 10^6 Btu/season, and therefore a solar space heating assist of 48%. The house shows a payback period, based on amortized mortgage payments and heat savings dollars, of 9.33 years for the glass windows and 7.5 years for the Solar Furnace configuration.

Of similar interest is the Sweeney residence, designed and constructed by Richard Sweeney of Weare, New Hampshire. Engineering assistance was provided by Tom Minnon of the Kalwall Corporation. Although the solar space heating system operates primarily according to passive principles, it does make use of minor mechanical input in the distribution mode, and must therefore be defined as a "controllable" passive system (see Scale of Solar Complexities).

A traditionally shaped Saltbox Colonial, this 1950 Ft.^{2} New England home has 80 Ft.^{2} of south-facing insulated window glass, and a southerly exposure roof sloped at 58°N. It was designed with emphasis on the principles of energy conservation as key parameters.

The structure's solar collector is a 500 Ft.^{2} Sunwall I "skyroof"—a highly insulated ("U" = .46) transluscent sandwich panel which utilizes the attic space behind it as a thermal storage "heat sink". From there, a blower moves the heat via ductwork to the basement where it is both absorbed by the concrete foundation and slab and allowed to thermosyphon to the upper levels. A differential thermostat, which has a nighttime set back mode for reduced energy consumption, performs the system's control function, initiating the oil-fired furnace when back-up heat becomes necessary.

The Sweeney structure has a heat loss of about 128 X 10^6 Btu/season, and a heat gain through the solar systems of more than 81 X 10^6 Btu/season. During the winter of 1976–1977, nearly 65% of the house's heating requirement was gained from solar. The saltbox's payback period for glazing is approximately one year, and 3.4 years for the "skyroof" system.

It can be concluded from these two case studies that passive and controllable-passive solar space heating systems are economically viable alternatives to conventional fossil fuel consumption. The fact that they are operating in an area of the United States which is far from being ideal for the utilization of solar energy substantiates the idea that solar energy for space heating is cost-effective.

(The scale was not reproducible.)

REPORT TO THE SENATE ON THE WORK OF THE SENATE SELECT COMMITTEE ON INTELLIGENCE

Mr. INOUYE. Mr. President, as the 1st session of the 95th Congress draws to a close, it is appropriate to report to the Senate on the work of the Senate Select Committee on Intelligence.

I have had the honor to serve as chairman of the committee since it was formed on May 19, 1976. The Senate, in its Resolution 400, assigned to the committee a broad range of duties, all of which were designed to carry out rigorous oversight of the intelligence activities of the U.S. Government. After a period of a year and a half, I am of the opinion that Senate Resolution 400 provides the necessary scope and the workable means for exercising vigilant legislative oversight over the intelligence activities of the United States.

In recent years the intelligence community, particularly the CIA and the FBI, have been the targets of suspicion and abuse. There is no question that a number of abuses of power, mistakes in judgment and failures by the intelligence agencies, have harmed the United States. We, of course, hope that these abuses are behind us and will not occur again. These events did not happen in a vacuum. In almost every instance, the abuses that have been revealed were a result of direction from above, including Presidents and Secretaries of State. Further, in almost every instance, some Members of both Houses of Congress assigned the duty of oversight were knowledgeable about these activities.

The recent Helms case illustrates this pattern. If Mr. Helms should be subject to public blame, as some contend, then others in higher authority in both the executive branch and the Congress should also share the blame.

Every organization, whether Congress, the White House, the CIA, corporations, universities, or churches, is made up of men and women with their full share of excellences and failures. With the exception of a very small number who broke the law or failed in their trust, we owe a great debt to our intelligence community. It is made up of men and women of unusual dedication and ability who serve our country under the most difficult of circumstances. We can be proud that they have come through the trials of the past several years with a clearer sense of purpose and with a strengthened belief in the value of a life of service to our Nation.

The intelligence community has been in a turmoil over the past few years. It has been the subject of a number of congressional inquiries, internal investigations and intense criticism from the press and the public. With the support of the President and under the firm direction of Stansfield Turner, the intelligence community is in the process of creating a new organizational structure which should lead to more efficient coordination of its worldwide activities and a better overall intelligence product. It is my view that the intelligence agencies of the United States are now functioning under strict guidelines set forth by the President and the National Security Council, which lay out clear missions, limitations and accountability, as well as rigorous oversight by both the House and the Senate. While many improvements and reforms are called for, it is my evaluation that the present quality of the work of the U.S. intelligence community is good, and shows every sign of becoming better.

I firmly believe that under our constitutional system, the license for the executive branch to undertake secret intelligence activities requires a full awareness of the nature and detail of these activities by the legislative branch. The abuses of power by the intelligence agencies revealed over the past few years make it clear that the executive branch should not be authorized to undertake secret intelligence activities unless the legislative branch, through its appropriate committees, is fully knowledgeable and concurs in the purpose of such intelligence activities.

The necessity for a large and extensive secret intelligence system imposes great demands upon our open Democratic constitutional society. Secret intelligence activities, by their very nature, require that only a delegated few in the Government, in both the executive and legislative branches, have detailed knowledge of the overall activities of our intelligence agencies. I am convinced after my period of first-hand observation that much of the information produced by our intelligence system is not only useful but necessary to the Nation's security and well-being.

It is perhaps not surprising that as chairman of the Select Committee on Intelligence I have read my share of spy novels and books on the world of intelligence. There is one passage written by John Le Carré in an introduction to a book entitled "The Philby Conspiracy" that I find of almost daily pertinence to those of us who serve on the committee.

> * * * no secret service can be more clearheaded than its government. Everything rests upon a clearcut statement of requirements by those who formulate the nation's policy. If the secret services is properly used, it is a fighting arm, an extension of Government policy. But in times of dismay and national corruption it sinks swiftly into intrigue, slovenly security and interdepartmental rivalry.

The proper balance between maintaining the secrecy of information provided to it by the executive branch, and the right of the public to know what its Government is doing in its name has not been an easy issue for the Select Committee on Intelligence. Section 11 of Senate Resolution 400 gives to the select committee the right to full and complete information about all intelligence activities. No other legislature in the world has this right to secret information. The insistence that activities executed in the name of the United States by the executive branch shall be known, approved, or modified by the legislature, and the courts, as appropriate, has enabled the American republic to survive as a vigorous, free society. In a Democratic society some kinds of secret activities may not be possible because the circle of those who must know of the activities is relatively large. Our constitutional system of checks and balances and of shared responsibilities between the branches demands shared knowledge as well.

One requirement for effective oversight is the certainty that the Senate as a body has confidence in its delegated oversight committee. The committee must reflect the views of the Senate as a whole and should not favor the policies or predispositions of those who may be in power at any given time. The present membership of the committee reflects the full spectrum of Senate views from left to right. We are a non-partisan committee. As chairman, I have made it a rule, which the President, Director of Central Intelligence Stansfield Turner, and each of the executive branch agencies understand, that whatever information is conveyed to me will be shared with every member of the committee. On occasion this sharing process may have caused some contemplated activities to be dropped. Such a result is a function of the oversight process.

The obverse of Congress' right to access to information is its duty to protect the valid secrets of our country and to disclose validly classified information only in accord with an agreed-upon rational process of consultation. The committee has made use of the process and thus far it has worked well to the satisfaction of both the Legislature and Executive that it is a fair and reasonable procedure.

In the past, one of the reasons given for not sharing sensitive information with the Congress is the fear that the Congress would not be able to keep confidences given to it. Without question, unauthorized disclosures have come from Congress in the past and it is reasonable to expect they will occur in the future. It is also quite clear that in the past most disclosures of sensitive information have come out of the executive branch, including, on occasion, deliberate leaks from the highest authorities. Sometimes these leaks of information were intended as feelers to test public opinion—or in the worst cases, for narrow political purposes.

I am satisfied that the Senate Select Committee on Intelligence has demonstrated that it has the discipline necessary to protect the valid secrets of this country entrusted to it. We have met the challenge of proving that Congress can and will, with educated awareness of the substance and its fragility, with proper authority, and through reasonable procedures, keep the valid secrets entrusted to its care. We have done this in such a way that makes it possible for the most sensitive information to be available to each of the 100 Senators that make up the Senate.

As the Senate knows, the authorization bill and its report, which contain some of this country's most fragile and precious secrets, has been available to every Senator under the security provisions of Senate Resolution 400. Further, this committee has made its reports available to other standing committees and other individual members as appropriate.

In view of the demonstrated success of the formula for the handling of classified material and the process of determining the disclosure of valid national security information, I recommend to the leadership and the Senate as a whole that the formula contained in Senate Resolution 400 be extended for all classified information provided to the Senate. I think this provides the requisite balance between the right of access and the corresponding duty to protect our Nation's secrets.

The committee has just completed work on a unique joint effort with the executive branch on an executive order which will serve as an interim measure, as well as a blueprint for permanent statutes, which we hope will be passed sometime in the next year. Since July, committee members and staff have worked with the executive branch in the writing of this executive order. This joint effort marks a commitment on the part of President Carter and the committee to work as closely as possible to set forth clearly the principal missions and purposes of our national intelligence system, and to provide for its governance under the Constitution and the laws.

I am convinced that the most important work of the committee lies ahead—the passage of the statutory charters and guidelines which will place all the principal aspects of intelligence work under the governance of the Constitution and the law.

The committee intends to recommend passage of a legislative charter which will contain a number of separate titles. The first title is a general charter authorizing the scope of our national intelligence activities. It focuses responsibility for national intelligence activities upon the director of our national intelligence system, giving him the authorities necessary for the effective management and coordination required by our vast and diverse national intelligence system. It authorizes by statute—rather than by executive order—intelligence activities for the United States, but unlike the now obsolete National Security Act of 1947, it specifically authorizes the collection of intelligence and covert action. The bill, however, is not a blank check for the intelligence community. Detailed procedures are provided for the review of clandestine activities. Certain forms of covert action are prohibited. For example, the employment of members of the clergy or journalists for intelligence purposes is barred.

By establishing clear responsibility and accountability, and by defining what the intelligence community can and cannot do, the first title of the national act is intended to insure that intelligence activities are properly and effectively directed, regulated, coordinated, and administered and that these activities do not infringe upon individual rights protected by the Constitution and the laws of the United States. In addition to this general charter, there are, as separate titles, specific entity charters for the National Security Agency--NSA, the Central Intelligence Agency—CIA, and the counterintelligence activities of the Federal Bureau of Investigation—FBI. Further, there are titles which deal with the limitations upon intelligence activities which affect Americans overseas as well as in the United States.

During its work on charters over the last year and a half, the major issue that has faced the committee concern the question of balancing between detailed specifications of what may or may not be done, and the need on the part of the intelligence agencies for a degree of flexibility to meet exigent circumstances.

I am certain that the public hearings held by the committee over the next few months on charters will be of considerable national interest, particularly those hearings which deal with the relationships between the press and academics and the intelligence community. I have come to the conclusion that no intelligence agency should be involved with working journalists. The problem of the flowback of propaganda to the United States is a far greater danger than any benefits which might accrue from the services that a journalist working for an intelligence agency might be able to perform.

It is this kind of balancing question measured against the practical details of intelligence needs that lies at the heart of meaningful oversight. One of the limitations that our constitutional democratic government imposes upon intelligence activities is the constraint imposed by the mores of our own society. We in America value a free and open press. This deeply held value must be reflected in legislation defining the limits upon the use of journalists by the intelligence community.

The major underlying premise for the committee's work is that the most sensitive national security questions including secret intelligence activities can be resolved by our constitutional system and through regular constitutional processes. Full congressional awareness of the nature, extent, and details of intelligence activities and a process of rigorous oversight by an intelligence committee in both the House and the Senate is now a practical reality.

While Congress has taken significant steps to fulfill its constitutional role and responsibilities to share in the governance of all activities of the U.S. departments and agencies including their secret activities, effective means have not yet been devised to enable the courts to meet their constitutional responsibilities. Recent espionage cases, and the recent Helms decision underline the difficulties the Justice Department and the courts have in the consideration of secret national security questions. It is clear that our judicial system must develop a better system of proceedings for classified intelligence matters or secret national defense or foreign policy questions. It will not be an easy task. The dangers of creating a star chamber must be avoided on the one hand; on the other hand, the vital national secrets should be protected from unnecessary disclosure.

The committee intends to include in its statutory charters for intelligence activities provisions to enable the courts to address more effectively cases involving classified information. In the next few months, hearings will be held calling upon the best advice that the legal profession can give: from the Justice Department, and other departments and agencies, the courts, the law schools, from the bar associations, and from interested public groups and individuals. The courts must be given the procedural means to do their part in the constitutional process. When this task is completed, we will have enabled the three branches to fulfill their duties in the area of secret national security matters and will have largely removed the "national security loophole" which has so strained our constitutional system.

Much attention has been focused upon the shadowy, glamorous, and necessary world of secret agents. But by far the most significant and useful portion of our intelligence community is in the analyses and estimates they provide to our national leadership both in the executive and the Congress and the solid information they give to our executive departments and agencies. It is in this area that the Select Committee on Intelligence, I believe, will be able to serve the rest of the Senate in the future as a conduit to other committees and individual Senators to do their assigned tasks. Senate Resolution 400 already places a duty upon the select committee to provide other committees, individual Senators, and the Senate as a whole, with information that comes to it which may also be of benefit to them.

For example, the committee has been engaged in the past year on a study of the verification capabilities of the intelligence community. It is obvious that an authoritative objective study of our verification capabilities will be of use to the Senate when it takes up consideration of any future SALT treaty. The committee's study is being prepared with that duty and with that service in mind.

The intelligence community is now in a state of transition. The familiar romantic world of spies and counterspies, while still a vital necessity, is less central to our needs than our new technological means of collection. Without question, the U.S. Government now has a vastly larger and more detailed data base of information with which to understand the world than a decade or two ago. There has been an information explosion in the world of intelligence just as there has been in other sectors of our society and Government. It is not surprising, therefore, that the greatest need for improvement lies in the area of assuring more cogent analysis of this vast and burgeoning body of knowledge.

Further, there is a need for more rigorous analysis of political, economic, and cultural problems. This is not to say that military questions are less important; rather, it is only to assert that at the present time, the major problems and opportunities that face the United States are increasingly political, economic, and cultural in character. One area that the committee has been examining over the past year is the quality of our forecasts of worldwide crops and other vital materials and resources such as soil. It is problems of this kind that the Select Committee on Intelligence has been pressing the intelligence community to focus its efforts to improve the quality of its analytic work.

A very good example of the need for this new focus on a more universal approach to analysis, is in the area of arms control. I do not intend to diminish the great advances that have been made in analysis of military weapons intelligence. We have moved in the past 30 years from information derived primarily from spies to information gained largely from technical means: the U-2, satellites, and other technological marvels. The possibility for far more certainty about military events and for making more reasonable judgments about nuclear deployments is now greater than ever before. There is, for example, a direct correlation between the possibility of arms control agreements and the degree of verification that agreements will be observed. Our so-called national technical means of verification, that is, our satellites, made the SALT I agreement a reality, and further SALT agreements a real possibility. Without such means of acquiring accurate reliable military information, we would still be in an atmosphere dominated by fear and uncertainty—an atmosphere which characterized the early fifties, preparing for all-out war rather than seeking ways to reduce unnecessary arms.

But as we have come to know with more certainty, the nature and disposition of potential enemy forces, and as the doubts about the exact nature and quality of weapons capabilities recede, the questions of why military forces are assembled and for what reasons and purposes they might be used become more critical. Great advances have been made by our intelligence agencies in the hard areas of quantifiable information, but the so-called soft areas: the policies, the economics, the behavior patterns of men and nations, deserve far more attention and the application of many of the methods used for hard subjects. Yet, the very fact that we are coming to grips with these questions, and that our attention is focused on this area is directly attributable to the improving quality and sophistication of our intelligence system. We have moved from a preoccupation with the fearful questions of mere survival to serious considerations of ways to devise political or economic means of resolving fundamental differences between such rivals as the Soviet Union or China. In this respect, the growth and increased importance of our intelligence system over the past 30 years has served to strengthen the possibilities of a continuing peace. And it has done so even as it has increased its abilities to detect quickly any movements by potential enemies toward war.

Although there is no specific rule in Senate Resolution 400, I have chosen to resign at the end of this session as chairman. I am doing so because I believe rotation of chairmanship is the best way to assure the combination of close detailed work with the agencies and a vigilant attitude toward their activities can be maintained. I am resigning because I believe it is important for the Senate and for the intelligence agencies who are under the charge of the select committee to have overseers who come to the issues as I have come to them—with an open, fresh and relatively objective point of view, so necessary for the important task of oversight. An aware, yet detached point of view is necessary because the world of intelligence activities, as John Le Carré so cogently observed: "* * * spill over into almost every area of public life; its viability depends upon our tolerance, upon our money and to a sizable extent, upon our complicity."

I would like to establish a precedent which would be reflected in an amendment to Senate Resolution 400, which would require a regular rotation of chairmanship, as well as a limitation of the number of years members of the committee may serve, which is already in the Senate resolution. In my view, the chairman of the Committee on Intelligence should not serve more than a 2-year term. It is my considered opinion that this system of rotation of members and chairmanship will serve to create a growing body of better informed Senators, as well as a legislative constituency that can speak authoritatively on the needs of the intelligence community.

As the first chairman of the permanent intelligence oversight committee, I have found the task to be challenging, demanding, and extremely interesting. I do not give up this chairmanship without regrets. But I think it is vital to insure that the chairman be objective and impartial. I believe one reason for the failure of congressional oversight in the past years was that too close a relationship developed between the intelligence agencies and their overseers.

Because the committee began without any precedents and in a virtually unknown area, everything the committee has done has been a pioneering effort. I think we have accomplished much in these first years.

In summary, for the first time, we have had a full and complete annual authorization for intelligence activities. We have examined in detail all of the intelligence activities of the United States, including a line-by-line review of the most sensitive activities such as covert action.

Effective oversight of the intelligence community requires the regular review of covert action projects and what are called sensitive collection programs. The committee has devised a pattern of reviews on a quarterly basis, as well as a case-by-case review of all covert action programs approved by the President prior to their implementation.

Perhaps the most effective means of oversight is the authorization process. The power of the purse is the legislative body's most compelling means of working its will. In covert action, for example, the committee, in its last authorization, voted on each project, yea or nay. This process of voting on detailed specific activities was carried out in every area of intelligence activity.

The committee has had very heavy responsibilities but has earned the respect of the executive branch and the intelligence agencies. In fact, the President, at our meeting with him at the White House on August 4, commended the committee for its record of security saying that it was better than any other part of the U.S. Government.

The members have worked hard and I think we now have a staff of outstanding quality which is respected for its abilities and performance throughout the Government.

I thank my vice chairman, Senator BARRY GOLDWATER for sharing the burden with me in the difficult yet gratifying work of this committee. We have worked closely together on every committee issue and I have gained much from his counsel and views.

I want to commend the work done by Senator BIRCH BAYH, who will be the next chairman of this committee, for the consistent and careful efforts made to protect the rights of Americans as they may be affected by intelligence activities. Senators MORGAN, GARN, MOYNIHAN, CASE, and CHAFEE have worked with Senator BAYH in this vital area.

Senator HATHAWAY has performed the very difficult task of putting together the first annual authorization for intelligence activities that has ever been presented to Congress. It required months of hearings and an unusual devotion of time. This first authorization is the result of the time and effort of Senator HATHAWAY and his Subcommittee on Budget Authorization, Senators WALLOP, HART, and MATHIAS.

Senator DEE HUDDLESTON as chairman and Senator CHARLES McC. MATHIAS as vice chairman of the Charters and Guidelines Subcommittee have been working with Senators BAYH, STEVENSON, BIDEN, GARN, and LUGAR over the past year and a half, writing the legislation for the governance of the intelligence agencies. Senators HUDDLESTON and MATHIAS have worked carefully and effectively with the executive branch. It is our expectation that in most respects the draft statutory charter will have the full support of the executive branch. The 1947 National Security Act provided an inadequate statutory base for the intelligence activities of the United States. One reason for its inadequacies was that the legislative branch was not significantly involved in the drafting of those authorities for intelligence activities. President Carter and Vice President MONDALE have told the committee at several meetings that the best interests of the country will be served by working as closely as possible in this very difficult area of national policy.

Senator STEVENSON and his Subcommittee on the Quality of Intelligence have done outstanding analytic work on the product of our national intelligence system. The vice chairman of the Quality Subcommittee, Senator CASE, and Senators HART, MOYNIHAN, LUGAR, and WALLOP have supported this subcommittee ably. The subcommittee laid the foundations for use by other committees, other individual Senators, and the Senate as a whole, of intelligence information germane to the Senate's legislative duties. It is our hope that the work of this subcommittee can be expanded with the view in mind of enabling the Senate as a whole to make the decisions it must make on the basis of the best possible fact and analysis.

Senator BIDEN has been working on the difficult question of secrecy with his subcommittee, Senator PEARSON, as vice chairman, and Senators HATHAWAY, HUDDLESTON and CHAFEE. It is our hope that in the coming year comprehensive legislation can be introduced to deal fairly and effectively with the problems of classification of national security information which has bedeviled the U.S. Government for decades.

The burdensome task of investigations has been undertaken by Senator MORGAN and his Subcommittee on Special Investigations, with Senators GOLDWATER and I serving with him. Senator MORGAN's subcommittee has established a pattern of careful, rigorous investigation which has served the committee and the Senate well.

The committee as a whole has taken on responsibility for examining major questions such as the oversight of covert action. It is my expectation that the committee will continue to do so because of the obvious value that comes from the sharing of views and experience that a broadly based committee such as ours can offer.

I thank the majority leader, Senator ROBERT BYRD, and the minority leader, Senator HOWARD BAKER, for the confidence and support they have given to me and the committee while I have been chairman.

It has been a privilege and an honor to serve the Senate as chairman of this important committee at the time of its creation.

COLLEGE TAX CREDITS

Mr. ROTH. Mr. President, as you are well aware, my legislation to provide a tax credit to help offset college tuition costs has created a considerable amount of controversy in the past few weeks. Public awareness of the need for this legislation has increased substantially, and a number of issues have been raised. I believe legislation to provide college tax credits is an idea whose time has come, and I am confident that legislation to provide tax relief to the millions of parents struggling to send their children to college will be enacted into law in 1978.

The legislation I have introduced, the College Tuition Tax Relief Act (S. 311), provides tax credits for education expenses paid by an individual for himself, his/her spouse, and dependents. To be eligible for the credit, an individual must be a full-time student at an institution of higher education, including a vocational school. The amount of the credit is to be $250 the first year, increasing in stages to $300 the second year, $400, and then $500.

My college tax credit amendment has passed the Senate three times in the last 15 months. In August 1976, the Senate adopted the college tax credit as an amendment to the tax reform bill by a 68-to-20 vote. The House conferees refused to accept the amendment on the tax reform bill, and House leaders gave Chairman LONG and I their commitment they would give the House the opportunity to work its will on this provision on a separate bill.

Subsequently, the Senate added the amendment to a tariff bill by a 62-to-21 vote in September 1976. However, a member of the Ways and Means Committee objected to a unanimous consent agreement to go to conference on the bill and no action was taken.

In September of this year, the Senate (by a vote of 59-to-25) and the House (by a 311-to-16 vote) reduced the revenue levels in the second budget resolution by $175 million to allow room for the college tax credit.

The Senate then adopted the college tax credit as an amendment to the social security bill on November 4, 1977, by a 61-to-11 vote.

Increasing college costs, higher prices, and a growing tax burden are making it more and more difficult for qualified middle-income students to go to college. According to the statistics, there is a growing number of qualified students who are prevented from obtaining a higher education, because of increasing costs.

In the past few years, the cost of a college education has skyrocketed. According to the College Entrance Examination Board, the average annual total cost of a public university has increased more than 40 percent in the past 5 years, from $1,782 to $2,906. For a private university, the average annual total cost has increased over 35 percent, from $2,793 to $4,811. And according to a New York Times survey, the total annual costs at many colleges and universities are as high as $7,000.

Tuition costs will continue to increase. If a parent has a 1-year-old baby today, it has been estimated that it will cost $47,000 to send that child to a public university and $82,000 for a private university in the 1990's. For a student entering college next fall, the total cost will be $17,500 for a public university and $30,000 for a private college.

These increasing costs are a primary reason why college attendance has declined in the past few years. The U.S. Census Bureau reports that there has been a significant decrease in the percentage of 18- to 24-year-old dependents attending college full time. In addition, U.S. Census Bureau data shows that families are especially hard hit right now because many of them have more than one child of college age at the same time. These families face the difficult problem of educating two or more children over an 8- to 10-year period.

Middle-income families are especially hard hit by the increasing college education costs. There are millions of families today who are neither affluent enough to afford the high cost of college nor considered poor enough to qualify for the many different Government assistance programs which their taxes make possible.

As a result, college attendance of middle-income students has declined substantially in the past few years. Between 1969 and 1974, college attendance for children of middle-income families declined at a rate of 22 percent, while enrollment for lower- and higher-income students remained fairly stable.

Mr. President, we are rapidly approaching a situation in this country where only the very affluent and the very poor will be able to attend college, and I am convinced that action must be taken to ease the financial plight of middle-income families.

Despite the claims by the administration and other opponents of this legislation, this legislation will not provide benefits merely to "wealthy doctors, lawyers, and businessmen." In fact, nearly 90 percent of the college tax credit benefits will go to those earning less than $25,000 a year. According to an analysis of my bill by the American Council on Education, a group representing 1,500 public and private colleges, 32 percent of the benfits would go to those earning less than $10,000, 56.6 percent of the benefits would go to those earning between $10,000 and $25,000 a year, and only 11.4 percent would go to those earning more than $25,000.

A breakdown of the benefit distribution is shown on the following chart:

DISTRIBUTION OF COLLEGE TAX CREDIT BENEFITS

Income:	*Percent of benefits*
$0 to $6,000	9.7
$6,000 to $7,500	7.6
$7,500 to $10,000	14.7
$10,000 to $15,000	31.4
$15,000 to $25,000	25.2
$25,000 plus	11.4

As this chart clearly shows, the college tax credit provides relief to middle-income families, those who are not eligible for the many Government assistance programs already on the books.

These Government aid programs have increased substantially over the past 10 years, but they are aimed almost exclusively at lower-income students and are denied to middle-income students. For example, as of January 1975, less than 4 percent of the basic educational opportunity grants, the main Federal college assistance program, went to families earning more than $12,000 a year.

I strongly support financial assistance programs for lower income families, and I do not believe that the enactment of college tax credits would lessen Congress' commitment to these assistance programs. But we must not lose sight of the fact that the families who are paying the taxes to finance these programs are themselves finding it more and more difficult to educate their own children.

As a New York Times editorial has said, the difficulty that these parents are having in sending their children to college suggests:

> Outright disaster for the vast majority of American middle-class families in the $12,000-$20,000 range who are considered too affluent for federal or state scholarship aid.

The editorial goes on to urge the Federal Government:

> To open its eyes to a clear and present danger—that college gates are being shut to increasing numbers of able, middle-class young people on economic grounds alone. Nothing less is at stake than the future of an open, upward-mobile democratic society.

The administration and other opponents of college tax relief now claim that if any increased financial aid is to be given, it should be in the form of a Federal grant, based on financial need.

An expanded system of Federal grant is not the solution for the financial burdens of the middle class. America was built on hard work and perseverance. We cannot and should not sap the productive energies and self-reliance of our working people with more and more Government aid programs. Rather, let us build on the spirit that made America great by enabling our working people to keep more of what they earn to pay their own bills and not the Government's.

I believe there is something fundamentally wrong in the growing concept that working American taxpayers should come to Washington to apply for Government aid programs financed by their own taxes. Rather than "helping" people by requiring them to fill out detailed forms, baring their personal finances and pleading poverty in order to receive a portion of the money they have already paid in taxes, Congress should allow taxpayers to keep a larger portion of their own income to spend on education expenses.

Working Americans, caught in the middle, do not want a Government handout. They merely want to keep more of what they earn to spend on such basic American rights as a college education for their own children.

I believe there is clear and vital need for the adoption of this legislation. I realize that many Members of Congress are concerned about the revenue impact of this legislation—which according to the Joint Committee on Taxation, begins at $175 million in fiscal 1978 and increases to $1.9 billion in fiscal 1981 when the full $500 tax credit is in effect. If the credit remains at $250, the revenue impact would stabilize at $1.2 billion.

But how much more expensive is it to deny millions of young Americans the

the United States Congress take steps to reconstitute the draft of physicians into the military in order to insure adequate military medical care of the active military and their dependents and retired military and their dependents; and

c. That the Department of Defense and the United States Congress immediately consider the hiring of civilian surgeons and physicians on a contract basis, in order to insure adequate medical care for active military and their dependents and retired military and their dependents; and

d. That the Department of Defense immediately investigate the current distribution of military physicians on the various military installations throughout the United States in order to determine whether the military hospital at Fort Sill, Oklahoma, is adequately staffed in comparison to other Army hospitals in the continental United States; and

Be it further resolved that certified copies of this resolution be forwarded to the Secretary of the Department of Defense, the Secretary of the Army and the Representatives to the United States Congress in the State of Oklahoma.

AVERELL HARRIMAN AS THE AMBASSADOR AT LARGE

Mr. PELL. Mr. President, the noted columnist Mr. C. L. Sulzberger recently proposed in an article published in the New York Times that Gov. Averell Harriman be accorded the special title of the Ambassador at Large in recognition for the extraordinary contribution he has made as an envoy and statesman. Now, there are several Ambassadors at Large, but Mr. Sulzberger proposes that Governor Harriman be given the unique honor of being the Ambassador at Large, a rank comparable to the five-star rank of General of the Army that various military officers have attained through the years.

I heartily endorse this proposal and earnestly hope that President Carter will so honor Governor Harriman. Although Governor Harriman is not a career diplomat, I can think of no one who better exemplifies the kind of personal and professional traits required of the true diplomat. Governor Harriman has been associated with more great foreign policy endeavors than any man alive today, and it is wholly appropriate to pay tribute to his many accomplishments by creating this new rank and according it to him now.

With the creation of such a new rank and by according it for the first time to someone of the stature of Governor Harriman, a splendid model and standard of achievement and public service would be established for all career and non-career Ambassadors in the future. Effective diplomacy is, in a very real sense, our country's first line of defense; and it is thus fitting that those who excel in the practice of diplomacy should be honored in a manner comparable to their military counterparts.

Mr. President, I ask unanimous consent that Mr. Sulzberger's fine article be printed in full in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AMBASSADOR AT LARGE

(By C. L. Sulzberger)

PARIS.—Only two officers in American history have been granted the military rank of General of the Armies. Technically, the first to be so honored was John J. Pershing, as of Sept. 4, 1919, although the U.S. World War I commander never wore more than four stars.

In fact, George Washington was given the title by Congress in 1799, even if no record exists that the appointment was ever made. It is one of history's oddities that the award was formalized posthumously only on Oct. 11, 1976.

There have, of course, been several officers who were Generals of the Army. Of them, those who wore only four stars on their shoulders were U.S. Grant (as of July 25, 1866), W. T. Sherman (March 4, 1888) and P. H. Sheridan (June 1, 1888).

Those who wore five stars were G. C. Marshall (Dec. 16, 1944), D. MacArthur (Dec. 18, 1944), D. D. Eisenhower (Dec. 20, 1944), H. H. Arnold (Dec. 21, 1944) (subsequently changed in 1947 to "General of the Air Force"), and O. N. Bradley (Sept. 20, 1950).

Four naval officers were given equivalent five-star grade of Fleet Admiral: W. D. Leahy (Dec. 15, 1944), E. J. King (Dec. 17, 1944), C. W. Nimitz (Dec. 19, 1944) and W. F. Halsey (Dec. 11, 1945). Of all these top United States officers the only living survivor is Gen. Omar N. Bradley.

I cannot understand why an equivalent highest honor has never been conceived for another career service of the United States, the State Department's Foreign Service. There have indeed, since Philip Jessup was first awarded the title on March 14, 1949, been 17 men ranked as ambassador at large. Five still hold the title: Ellsworth Bunker, Arthur J. Goldberg, Elliot Richardson, Gerald Smith and Marshall Shulman.

But this is not comparable to the military rank. It implies that a distinguished American civilian is working for his Government in a broad capacity deserving protocol and public recognition. It does not imply—as in the armed forces—that the diplomatic honor tops off a lifetime of professional public service. No present ambassador at large is a career man—although all are unusually able patriots.

The point is important. One man alive today should be singled out for special civil equivalence to the exceptions to the normally highest military rank: that is Averell Harriman. He is not a career diplomat but, Lord knows, he has been devoting his life to public service for over forty years, has held numerous Cabinet, ambassadorial, gubernatorial and Presidential advisory posts and is the oldest active elder statesman.

Harriman, now 86, is a physical miracle. Despite the fact that he fractured a hip two years ago, he has no limp and takes brisk walks for exercise. In every respect he is a generation younger than his birth certificate testifies. I attended his anniversary party 25 years ago (along with Dean Acheson, General Eisenhower and a fistful of dignitaries) while Harriman wandered about saying: "I can't be sixty; I won't be sixty; I refuse to be sixty."

He wasn't—any more than he is 86 today. President Carter continually calls on him for counsel and help—if always discreetly and on the sidelines. I suspect Harriman probably does as much truly *effective* work per week right now as a great many high officials on the Government payroll (even if the latter are of notably less distinction).

In foreign policy terms he has without question involved in more and more varied problems than any other American in our country's history: Britain, France and Russia during World War II; China, Vietnam, Africa, the Marshall Plan, Greece, Turkey, the third world, the Common Market—et cetera and including such problems as nuclear disarmament, energy and the Panama Canal.

If Presidents want his advice—which six of them have, at various times—they have asked it—either directly or indirectly. And there he is, still available, and on request, frequently consulted and used by and for the Carter Administration.

Harriman is—and since New Deal days has been—a vigorous and partisan Democrat. But, east of Sandy Hook and west of Hawaii, Harriman is nonpartisan.

It is high time—though he successfully "refused to be sixty" and now refuses to be 86—that he be given the honor he merits. George Washington, so much too late, and Pershing, more in a burst of national conceit than merit (vis-a-vis Eisenhower who commanded armies rather than an army), were awarded unique military titles.

Harriman, in his far-ranging field, has done well, devotedly, and with fervent, sincere success. He deserves the signal distinction of being named—and by acclamation—*the* ambassador at large.

CITIZENS AND BUSINESSES NEED RELIEF FROM GOVERNMENTAL PAPERWORK

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Maryland (Mr. MATHIAS).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MATHIAS

Among the complaints which come to me as a member of Congress, none is repeated more often than the burden of paperwork that the federal government is imposing upon the people of this country. It is not only a burden but it is becoming a positive evil, because it's contributing to the rising cost of living.

When unnecessary labor has to be expended to complete government forms, that labor sooner or later becomes a part of the cost of producing goods or services. This means that the resulting costs of those goods and services are higher than necessary. As a result, when the consumer goes to the marketplace to buy goods and services, he is forced to pay more than he should. I believe government should bear a part of the responsibility for this aspect of the rising cost of living.

Of course, in all fairness, this is not a purely federal problem. State governments, county governments, city governments—each have their own sets of forms. Citizens and business with relationships to these levels of governments are also required to fill out forms, as well as those required by the federal government. Congress has not been unaware of this problem. In fact, we appointed a committee to do something about it, but that committee, I regret to say, has so far submitted a report which is 2,200 pages long. That, in itself, is enough to say about the committee.

I believe we have to do something more effective. That's why I have introduced a bill to deal with one form of this evil—the complex area of state taxation of interstate commerce.

Now, that sounds like a complicated subject, but actually it deals with the problems a small businessman faces with a store or business located near a state line serving customers on both sides of the line. He is required to fill out forms in two states. Some sidered appropriate to keep the canal open and operating.

STATUS OF CANAL ZONE EMPLOYEES

On September 26, Representative ROBERT J. LAGOMARSINO inserted in the CONGRESSIONAL RECORD a statement by Alfred J. Graham, president of the Canal Zone Central Labor Union and Metal Trades Council, AFL-CIO. In his statement, Mr. Graham dealt with political and security, as well as labor matters, and criticized the treaties on several different grounds. He stated that he was dissatisfied with the lack of treaty provisions that would resolve the dual citizenship problem; that employees now engaged in Canal Zone operations which would become DOD functions might lose their Washington, D.C., paybase and Canal Zone leave benefits; that he considered the Panamanian Government an oppressive regime and that U.S. citizens remaining in Panama to operate the canal were concerned with the prospective loss of their civil rights under it; that, under the neutrality treaty, the United States could find itself in the position of forcing an ally to desist from attempting to impede the passage of an enemy warship through the canal; that, as leader of the free world, the United States should conclude a treaty only with a "Constitutional Government in Panama"; and that he was convinced the canal would be in Communist hands by "shortly after the year 2000", if not sooner.

Each of these points is subject to refutation. For example, the treaty has provisions which assure that the U.S. citizens who are in Panama for purposes of the canal treaty will be treated as U.S. citizens for purposes of the treaty despite the fact that some of them may be considered to be Panamanian citizens under Panamanian law. This means that they will be entitled to enter and leave Panama on a U.S. passport and the other documentation required by the treaty and will be entitled to all of the rights, privileges and immunities provided for U.S. citizens under the treaty and its related agreements.

The treaty, of course, does not address the status of private U.S. citizens who may be in Panama or seek to enter Panama for purposes other than the Panama Canal treaty and who may be considered Panamanian citizens under its law. Panama may treat such persons born in the Canal Zone as Panamanian citizens, for it is a well-recognized principle of international law that each nation has the right to establish its own criteria for citizenship under its law.

Under the Panama Canal Treaty, in general the terms and conditions of employment for current employees who will be employed by the new Commission will be no less favorable than those now in effect. The Secretary of the Army has assured current employees that they will keep the tropical differential and the present leave system and will suffer no reduction in pay.

The Panamanian Government, while authoritarian, has a legal basis in the constitution of 1972, which, moreover, guarantees common basic rights and freedoms to all Panamanians. At the same time, however, political or other activities which are deemed to be aimed at the overthrow of the regime are not permitted. Until the year 2000, under the terms of the treaty, all U.S. citizen employees and their dependents are assured basic civil rights in Panamanian courts similar to those that apply in U.S. courts, as well as other benefits and protections similar to those enjoyed by other U.S. Government employees overseas.

The neutrality treaty insures passage through the canal of the warships of all nations at all times. But the canal waters are only to be 3 miles under the new treaty, as they are presently. Outside of that area such vessels would be fair game.

No one can predict what the world political situation will be in the year 2000. However, one of the most important elements of the regime of neutrality, which the United States has the right to maintain permanently, is that no nation but Panama will operate the canal or maintain military forces and military installations in Panama after 1999. Panama favored this provision as much as we did as explicit proof that it will not come under foreign domination in the future.

ARMY DOCTOR SHORTAGE

Mr. BARTLETT. Mr. President, our military services are facing a shortage of physicians which is projected to continue well into the 1980's and which may reach a critical level in the next couple of years. In testimony before the Senate Armed Services Committee earlier this year, the Defense Department estimated that by the end of this year the uniformed services will be 8 percent below the authorized strength of medical doctors with the U.S. Army being short 13 percent.

By 1984, the Army still expects to be 14 to 25 percent below the level of active duty physicians required to maintain its nonmobilization readiness requirement. The Army's ability to mobolize doctors in case of war is even more constrained. The Army projects doctor levels in 1980 approximately 60 percent below that authorized for the Army National Guard and 75 percent below that authorized for the U.S. Army Reserve. At the same time, the number of USAR medical doctors in the Individual Ready Reserve will have declined 60 percent since 1973. In each of these cases, the trends continue downward.

This massive military doctor shortage endangers our Nation's ability to field an effective fighting force in time of war. It also endangers maintenance of an all-volunteer Army in time of peace because it reduces medical services to military personnel and their dependents, both retired and on active duty.

To help my colleagues understand the impact of the shortage of military physicians, I ask unanimous consent that a resolution I have received from the city of Lawton, Okla.—which is near the Army post at Ft. Sill—be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION No. 77-125

(A resolution of the City Council of the City of Lawton expressing the city's urgent concern over the current status of medical benefits available to the retired military personnel and their dependents in the Lawton-Fort Sill community; and urging and recommending that the Department of Defense and United States Congress take appropriate actions to immediately remedy the deficiencies in the medical care system for military retirees and their dependents.)

Whereas, over 12,000 retired military personnel and their dependents reside in the Lawton-Fort Sill community, and make a significant contribution to the social, economic and political well-being of the City of Lawton; and

Whereas, the City Council, and all residents of the community are vitally concerned over the health and welfare of retired military personnel and their dependents; and

Whereas, Fort Sill and its medical facility, Reynolds' Army Hospital, have recently found it necessary to drastically curtail medical care for military retirees, due to shortage of military physicians and trained medical personnel; and

Whereas, the Department of Defense (DOD) and the various branches of the Armed Forces through recruitment and reenlistment programs consistently and steadfastly assured retired military personnel that they would receive guaranteed medical care during their retirement years; and

Whereas, despite repeated assurances of adequate medical care during retirement, curtailment in medical benefits have occurred, which have a particularly devastating economic effect upon older veterans and their widows; and

Whereas, it is clearly apparent that the CHAMPUS program promulgated by the United States Congress as a substitute for military medical care for retirees has serious defects which work additional hardships on retired military personnel; and
